Strongly made of fine tan leather with a flap and patent snap clasp. Every man who loves a good chew will prize this handsome, handy leather pouch to carry his tobacco in.

Pouch is 3 3/4 x 3 in. size.

Just holds a 10c cut of PIPER Heidsieck.

PIPER Heidsieck

CHEWING TOBACCO (CHAMPAGNE FLAVOR)

Sold Everywhere in 5c and 10c cuts

PIPER Heidsieck is the *highest type* of chewing tobacco in the world. Every leaf of ripe, golden brown tobacco used in "PIPER" is carefully selected from Nature's choicest crops, clean, sweet and mellow. The flavor of "PIPER" is different from all other tobaccos made—a rich, wine-like, delightful taste which never fails to make a friend.

We Want You to Try PIPER Heidsieck

Send 10 cents and we will send a full-size 10c cut of "PIPER" and this handsome leather pouch FREE.

The tobacco, the pouch and mailing expenses will cost us 20 cents—and we are glad to spend the money to get you to try "PIPER" just once.

We know that once you have started, you will become a permanent friend of this wonderfully wholesome, healthful and satisfying tobacco.

In writing us please tell us the name of the dealer of whom you buy your tobacco.

Farmers Interest Seed Corn Will Increase Your Yield 10 to 30 Bu. Per Acre

We care not what corn you have now, if you plant FARMERS INTEREST WHITE DENT alongside of it it will beat it 10 to 30 bushels per acre.

Farmers Interest has been bred for 18 years. Barren stalks have been eliminated, the ears grow very large and the quality is high. This variety has always won the highest honors at the great International Corn Expositions, open to the world, from the first one held in Chicago in 1907, down to and including this year, 1914.

The selection, breeding and improvement of this corn has conferred on farmers, and all the people, greater benefits than all the work of Luther Burbank, the plant wizard of California.

The least expensive and most certain way to improve a corn crop is to let others do the breeding and you buy the result at a small price per bushel. For a farmer to produce a bushel of corn like we will sell him for a couple of dollars would require the work of years—worth a thousand dollars or more.

Send your name for a FREE sample and further particulars and photo reproductions of grand sweepstakes exhibits. Better write NOW. The photographs of prize-winning corn are well worth seeing.

Records for Sitting Hens

By R. Hewes

SETTING AND HATCHING RECORD Season of 1914

Date Set	Hen No.	No. of Eggs	Hatching Date	Chicks Hatched	Remarks
Mar. 4	# 21	15	Mar. 25	12	A good Sitter and Mother
" "	" 8	12	" "	8	Fussy and quarrelsome
" 10	" 16	15	Apr 1	11	Good Sitter, but poor as a mother. Left chicks early.
" 12	" 9	12	" 3	None	Left nest the ninth day.
" 12	" 2	15	" "	15	Excellent. Fine hen.

It can be readily demonstrated that the man who keeps records of his farming operations is a man who is making farming pay. The disposition that inquires into the how and why of things is the one that discovers the best thing to do and the best way of doing it. Keeping records forms profitable habits of study and keeping careful account of things. It encourages and stimulates extra effort and helps a man to avoid the unpardonable blunder of making the same mistake twice, for it enables him to discover his mistakes and their cause.

A farm system of accounting need not be elaborate. Don't get a professional bookkeeper to provide a system. Plan your own, or copy from a practical farmer who has ability and experience along the line.

For the benefit of those who may be interested I am giving my system of a simple but efficient hatching record for the poultry business. Its value can only be fully appreciated by its use. You learn your hens; you are forewarned of hatching dates, and being forewarned is being forearmed, we are told.

Where hens are used for hatching this system will prove valuable in many ways, and, as I have said, must be used to be fully appreciated. The hens should, of course, be numbered by leg bands.

CARE OF THE INCUBATOR

By Archie E. Vandervoort, Sidney Center, N. Y.

It is altogether probable that our very good friends, the makers of incubators, will not thank us for calling attention to the fact that more incubators are worn out by carelessness than by use. An incubator should last an ordinary life time if it is given good care, and we know of several that have been in use for periods ranging from ten to fifteen years, and are still in fairly good working order.

When the hatching season is over clean the incubator thoroughly. If it is a hot water machine, empty the water tank and leave it open at the place where the water is put in and where it is taken out. This will allow the inside to dry out and prevent any of the possible evil effects of oxidation. If your machine is a hot air machine, with a diaphragm of any textile in it, take out the diaphragm and beat it gently with a switch until all the dust and down is beaten out of it and it is as porous as when it was new. Empty and clean the lamp, take out the whole wick and store the lamp, thermometer and regulator bar inside the machine. Store the machine in a dry place where it will be safe from rats and mice and leave it in perfect order next season. This will save trouble and delay when hatching time comes again.

The same advice will hold for the care of the brooders. Take them down and give them a good cleaning and store them where they will not be injured by the weather. If they are outdoor brooders a coat of ready-mixed paint will do no harm, and prevent the wood from becoming full of minute cracks that will allow the rain to pen-

etrate the wood next year. I also give the brooders a thorough whitewashing before putting them away. This keeps them sweet and clean, and if there should be any presence of lice or mites it will exterminate them. Attention in all these things in the care of the incubator and brooder will save money and chickens and improve the appearance of the poultry yard surroundings. As a prevention of white diarrhoea it is a very good plan to thoroughly disinfect the incubator with creolin before putting it away. And this will keep that musty smell out.

EGGS IN WATER GLASS

In the last two or three years the method of preserving eggs in water glass has been often tested both in a practical way and in laboratories.

By experiment a 10 per cent solution of water glass preserved eggs so effectually that at the end of fourteen weeks the eggs appeared perfectly fresh. In most packed eggs the yolk after a time settles to one side and the egg is then inferior in quality. Again, most packed eggs will not beat up well for cake making or frosting, while eggs from water glass solution will give the same results as one freshly laid.

"Water glass" is the popular name for potassium silicate or for sodium silicate, the commercial article often being a mixture of the two. Water glass is commonly sold in two forms, a syrup-thick liquid and a powder. The retail price varies, although 10 cents per pound seems to be the price commonly asked.

A solution of the desired strength for preserving eggs may be made by dissolving one part of the syrup liquid water glass in ten parts water. Only pure water should be used, for an alkaline water will not preserve eggs well. It is best to boil the water before mixing it with the water glass.

The solution should be carefully poured over the eggs, packed in a suitable vessel, and stored in a cool place.

Do not wash the eggs before packing, but select the cleanest eggs for preserving.

About one gallon of water glass is estimated by the North Dakota Experiment Station as being sufficient for making a solution in which fifty dozen eggs may be packed.

It is easy to see that enough may be saved by packing eggs at a season when prices are low, to last during the season of scarcity, to repay one for the small expense of packing.

By home experiment I have known as high as 27 cents on a dozen to be saved by packing eggs in water glass solution.—Grace F. Smiley, Colorado Agricultural College, Fort Collins, Col.

MAKING THINGS INTERESTING FOR PROFIT

I am a school boy, attending the Essex Agricultural School, and I have a small poultry plant that I am making pay me, both in pleasure and profit. I have found that if poultry farming is carried on as a business, like other businesses should be carried on, failure

is not probable. A man must understand his business to succeed.

I shall not attempt to describe my methods, for I could not do it comprehensively in such small space; besides, tested, poultry and eggs packed, etc. And, though this may be surprising, it is well lighted by electricity from my own plant, which cost me only \$1.15 in cash and my own labor. Two dry, batteries cost me 50 cents each; two lamps and sockets, 50 cents; wire, 15 cents.

I believe if the boys on the farms were taught the business side of farming, and encouraged to make use of business principles and improved equipment, farm life would be so interesting to them they would dig right in and make it pay, for they would like it. This, in my opinion, is the way to keep the boys on the farms.

Here is my poultry account for 1913: Feed for 100 hens (at market price)\$164.71 Miscellaneous expenses..... 51.96 Total expense.....\$216.67 Eggs sold.....\$306.34 Poultry sold..... 102.22 Total income.....\$408.56 Profit (from 100 hens).....\$191.89 —Dick Hayden, Essex Agricultural School, Hawthorne, Mass.

Let Me Tell You How the TEMPLE ENGINE Revolutionized Engine Building

—by radical improvements that make its service as superior to that of the "common herd" engine as the Thoroughbred is superior to the Scrub, without increasing the cost to you.

I cannot undertake to describe this engine—HERE. But drop me a postal and I will tell you how it does away—almost altogether—with ruinous VIBRATION and FRICTION—with excessive WEIGHT and BULK—with many other features that render ordinary engines so costly, so short-lived, so inefficient and so cumbersome. In the meantime—note in sectional view of the "TEMPLE" above, three of its radically "different" features, and what these mean to ENGINE USERS:—

INVERTED CYLINDER with HEAD on BASE—close to the ground—eliminating vibration, causing engine to run quietly and smoothly, delivering maximum power with minimum consumption of fuel (gasoline, kerosene, alcohol or distillate).

BELL-SHAPED WATER JACKET—(see letter A) flaring toward the base, giving three times the usual volume of coolest water where it's needed—around the explosion chamber, the hottest part of the cylinder.

SMALL, LIGHT, BASE—cutting out two-thirds of floor-space and BULK and one-half the WEIGHT of other engines—making it much lighter and easier to move from one job to another.

PROFITABLE ALL-AROUND SERVICE—The extraordinary lightness, compactness and quiet running of this low speed, heavy duty engine, make it IDEAL for running Thrashers, Grist Mills, Sawing Outfits, Shredders, Huskers, Sprayers, Pumps, and all other INDOOR and OUTDOOR machinery, requiring 2 H. P. to 60 H. P.

Just a PENNY—apost for the postal you send me—brings you ENGINE INFORMATION that will be worth hundreds of dollars to you in your season's work. Now "take a chance"—risk a CENT (for the postal)—and LEARN SOMETHING YOU DIDN'T KNOW BEFORE.

Department of Organization

Practical Organization, Federation and Co-Operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, \$2.50; Dues, \$1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

Members of the Board

J. A. Everitt, Indianapolis, Ind., president.
W. H. Mitchell, Hutchinson, Kas., vice-president.
C. Hayes Taylor, Indianapolis, Ind., treasurer.
A. Y. Satterfield, Sterling, Idaho; national organizer.
S. W. Morris, Rochester, Minn.
C. B. Lozier, Robertsedale, Ala.
J. Harris Lenker, Sunbury, Pa.
David Holmgren, Tremonton, Utah.
Wm. Grisenthwaite, Oregon City, Ore.
A. O. Weber, Geneva, Neb.
O. E. Scott, Pocatello, Idaho.

State Union Directory

Locals reporting dues and fees of new members in states having an organized

state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Box 589, Pocatello.

Secretary, O. E. Scott, Pocatello.

Oklahoma

President, T. C. Monson, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, William Grisenthwaite, Oregon City.

Secretary, F. G. Buchanan, Oregon City.

Gulf Coast District

Florida, Georgia, Alabama, Mississippi and Louisiana—C. B. Lozier, district manager, Robertsedale, Ala.

Nebraska

B. F. Walton, Geneva, to whom all prospective organizers should apply.

cal clearing house of the F. S. E. and federated associations will, in time, need a warehouse and coal yard; also a hall to meet in, and rest rooms for the farmers and their families. All of these should be provided for in time and the first steps should be taken with the view of having them as soon as possible. Besides the feed mill in the elevator, that Mr. Kassen mentioned, a flour mill may be added to make flour for the members and others.

Any local, county or district clearing house feeling the need of utilities for receiving, handling, grading, storing and distributing the crops, or warehouses in which to store supplies, should incorporate and sell capital stock amongst its members. Preferably such utilities should be owned by the county or district and have but one corporation for the county or district, such corporation to assign sufficient of its stock to the locals to provide the necessary utilities and facilities, all to be under control of the county or district and all the members thereof.

The first step is to discuss the matter in a regular meeting. Where there is a county or district clearing house it should take the lead and all the locals in the county or district should then conform to the plans adopted by the higher organization.

After it has been decided to incorporate, a committee on incorporation and constitution and by-laws should be appointed. Also a committee on buying, leasing or securing of a site. These committees to report at a subsequent meeting.

On application by any clearing house of the Farmers Society of Equity, or federated association, we will send a draft of a constitution and by-laws as a basis to work from.

This article and many pages in this

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

Mr. John Kassen, secretary of Lone Tree (N. D.) Local Clearing House of the Farmers Society of Equity, wrote that he has had much experience in organizing farmers' co-operative companies and managing co-operative elevators and is willing to assist those who may now be thinking of embarking in such business. We quote the following good things from his letter:

In organizing your corporation, besides having the general plan that all F. S. E. associations should conform to, the state laws must be complied with. Some states have no co-operative association law. In such cases a special form of stock certificate may be devised that will serve the purpose. Do not depend entirely on lawyers to prepare your incorporation papers and by-laws. Few have had experience with co-operative commerce and its needs. If possible, consult successful co-operators in the same lines.

By all means organize on the patronage dividend plan. The people you do business with will respect you for it, and it is the only plan that will hold the farmers together and get new members. You will need at least \$5,000 paid-up capital to start with, if it is a grain elevator. Sometimes it is better to lease an elevator. Few houses are planned to be satisfactory in operation, but are designed to suit the convenience of the contractor. Before accepting any plans they should be very carefully considered, and it will be wise to submit them to an inspector for the insurance companies. Safety and convenience are all-important. Provide an abundance of work floor space and cleaners and graders with sufficient capacity for all demands. A roller feed mill, to grind screenings into feed, should be installed and the power should be sufficient to run all machinery at the same time. Automatic scales should be installed in the cupola to weigh all outgoing grain, and a "man lift" from floor to cupola provided. The office room should be ample and furnished with a desk, fireproof safe and other conveniences.

The system of bookkeeping must be simple, but efficient, and understood by all of the directors, and, most important of all, have a manager who can and will keep the books correctly, who is a good machinist, a good judge of grain, an observer of the markets and not afraid of work. He must, while being courteous, remember that business is business and not favors or charity. Keep the profits in the business and don't divide them among the stockholders.

We have quoted the recommendations thus copiously from Mr. Kassen's letter because they come from a practical man. His recommendations appeal to any person as being safe and sound. For the information of the reader we will say that the state of North Dakota has a law regulating corporations in which the patronage dividend plan is explained. It says: "The profits, or the earnings, of such association shall be distributed to those

entitled thereto by its by-laws and in proportion as they have done business through the corporation." The old form of corporation provides that the dividends belong to the owners of the stock on the day that the dividend is declared.

But in the true F. S. E. co-operative plan that we recommended we go farther, and there are no dividends to declare. All of the proceeds from any sale, and all of the benefits and savings on any purchase, are delivered to the member at once. This is accomplished through the PURE co-operative plan. No price is fixed on the member's produce when it is delivered, unless a track sale was made, but it is forwarded to the final market and sold and the proceeds of sale are then turned over to the member, less the clearing house charges for doing the business. In lieu of a fixed price that is paid under the patronage dividend plan, and which is supposed to be the market price that others pay, and which in a year is expected to leave a profit to divide amongst the members, nearly all the society's representatives on the market permit a draft to be drawn on them for from 50 to 95 per cent of the home market price. This money is drawn at once from the home bank if the member wants it. We consider this the preferable plan in several respects. By this plan no capital to buy the members' crops is needed and all the capital needed, as far as marketing is concerned, is what is invested in the elevator or other utilities. The small commission on business done furnishes the money to meet running expenses.

We always advise buying or leasing an elevator, providing there is a satisfactory one, rather than building a new one. This is in line of getting rid of unnecessary competition and not multiplying utilities. If the owner of the elevator asks too much, in sale or lease, make the farmers' organization solid for control of the crops, and you can get it at your own price. An elevator will not be worth much to the man who owns it if he can not get any crops to put through it. And the same is true with warehouses, canneries, etc.

In addition to the elevator that Mr. Kassen confines his letter to, each lo-

FARMOGERM

HIGH BRED NITROGEN-GATHERING BACTERIA FOR CLOVERS, ALFALFA, BEANS, AND OTHER LEGUMES

A Note of Warning

To the Small Grain Planter—Wheat, oats and barley are wearing out your soils and leaving only the stubble behind in return. We can tell you how to make stubble richer than manure. This will make money for you. Corn is a voracious feeder. Learn how to satisfy this appetite at the least expense of time and money. If you use fertilizer let us tell you how you can use twice as much at the same expense; also we can inform you how you can grow big crops without lime. If you are short of manure we can give you a plan to get organic matter at least expense.

We can tell you if your soil is acid. If acid we may aid you to correct it without lime. All these things we have done for others and can do for you. Write us for free booklet No. 84.

A LOCAL CLEARING HOUSE WANTED
in every farming community, at once. This is necessary to market the crops to get all that the final market pays now and to soon bring about such control as will allow the producers to get their prices at their shipping point. Anybody who stands well in the community can organize. See blank on page 16. Fill it out and send today.

FARMERS SOCIETY OF EQUITY
Indianapolis, Indiana

way TO ORGANIZE AND CO-OPERATE SUCCESSFULLY. The right way, the way that farmers can adopt and at last have an organization as permanent as agriculture itself, is the F. S. E. way. Necessarily the plan as we can print it in this paper is more or less fragmentary, so any person who wants the plan complete should send 10 cents for a copy of Farmers' Industrial Freedom.

The amount of business done by the farmers in almost any agricultural community, the territory surrounding a town, city or station where the marketing is done, runs into hundreds of thousands of dollars. Think of this. Yet there are comparatively few of them that have any business organization. They just do all the hard work and let other people do the business.

And there are thousands of communities that have organizations that yield very scant benefits, because they are not working on the right plan. We have known hundreds of such that existed for a brief space of a few years only to pass away, or to reorganize and try another plan. But locals of the Farmers Society of Equity don't die, because they pay. And always ahead is the knowledge that the organization will soon be completed, when the full and perfect results will be obtained—when agriculture will be the preferred business, because of its certainty of profits, coupled with all the beauties and blessings of country life under such conditions.

We want every agricultural community to organize this year. We want the farmers to feel the thrill of knowing that they are at last in the organization that will be permanent, after so many disappointments. If the movement is not under way in your community send the blank below before you lay this paper aside.

THE BLANK

Farmers Society of Equity,
Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions and compensation for organizing. I will take the lead in my community.

This list was sent by

P. O.

OUR ORGANIZERS

More Organizers Commissioned

More organizers were commissioned in March than in any other month since the F. S. E. was started. Also we are greatly pleased at the number of old organizers who have asked for renewals of their commissions. This condition foreshadows an increase in development, which, in fact, is already being observed.

New Terms

The last national convention provided for better compensation to organizers. It was a wise act. The society has already felt the good results through increased reports from organizers who formerly did not find

that the work appealed to them. If this notice reaches the eye of any old organizer who has not received the new terms he is invited to write for them.

Federation Terms

Any local association of farmers, fully independent, or a part of a national or district organization, can federate with the F. S. E. for unity in marketing. The fee for federating is \$1 per member, with a minimum charge of \$25. Organizers should send for full instructions, blanks for federation, charter, etc. Where no Farmers Society of Equity organizer, an officer of the association seeking to federate can get full particulars on request to this headquarters.

Report Promptly

Organizers reporting their own members are asked to send them in promptly. If the report is held up a few days some of the members will make inquiry and all such correspondence adds to the labor of headquarters, besides is a reflection on the organizer. Write every name and address so plainly that a mistake can not be made. Some organizers, and some secretaries too, write as though this headquarters knew the people and a mere suggestion of the name was sufficient. Don't guess at the members' postoffice, but ask them, if you are in doubt. A strict observance of this request will

reduce the office work all along the line.

Names First

It is recommended that before undertaking to organize a community a list of not less than twenty and not more than fifty names, with correct addresses, of representative farmers of a community should be sent to this headquarters. We will then send a letter and printed matter to each. The value of this to the organizer can not be overestimated.

Publicity

Are the newspapers in your territory printing the F. S. E. news? Are they printing announcements of your meetings and reports of your organizations? If they are not we will wager that you are not supplying them with the facts. What the farmers are doing is interesting news and the editor likes to get hold of it. Send him the facts and he will boost your work.

Membership Cards and Buttons

We do not send them out in advance. But we send as many to the secretary as there are members reported. The secretary must deliver them to the members at the next meeting, or at the first opportunity.

We want every organizer to increase his efforts in April and try to multiply results over any former month. It can be done by the real earnest worker.

Making Farm Kitchens Comfortable

To cook over a stifling, exhausting hot coal range during the summer is misery that no woman need endure. The NEW PERFECTION Wick Blue Flame cook stove does the work of any stove ever made, while keeping your kitchens comfortable and cool.

Burns clean, convenient, economical oil, no dirt, work or trouble. Soon saves its cost in fuel bills. Operated exactly like gas without the expense, none of the dangers of gasoline.

Makes the Heavy Summer Cooking Easy

2, 3 and 4 Burner Sizes

Keeps the Kitchen Cool and Fuel Bills Low

The NEW PERFECTION Wick Blue Flame cook stove has a fine cabinet top with warming shelves, and a portable oven that does the best baking and roasting you ever tasted. Special patented broiler broils on both sides at once, increasing tenderness and flavor.

Let your dealer show you the different sizes—two, three and four burner. Ask especially to see the NEW PERFECTION Range with THERMOS oven, which gives you a splendid range and a fireless cooker combined.

Valuable Cook Book, 5 cents. This sum is simply to cover mailing. 72 pages of the latest recipes and ways of serving. Address (180)

Equity Field Work

Clearing House Problems

From the day of its organization the local clearing house begins to be confronted with problems, and on the manner by which they are solved depends the success of the local. Upon its success depends its permanency. The success of the national organization depends upon the permanency of the locals, and upon the success of the national organization depends the degree of success the locals may be able to attain. A certain degree of success can be won by a local association without affiliation with others in a national organization. But such an association soon comes upon problems vital to its greatest success which can not be solved by itself alone. Witness the examples in Texas and in every state. Hence problems of importance to the local reach out to the district, the section and the nation, and the problems of the national body also become the problems of the local body. There are problems purely local, and these the local must solve for itself; and unless it solves them it can not be a success, regardless of what it may do in connection with the greater organization on problems of wider importance. Therefore this new department is created, and will be maintained to assist locals in the solution of all their problems, local and general. Secretaries, organizers and members are invited to participate in the discussion of their own and others' problems in this department. Bring your problems here for solution. Address all matter for this department to PROBLEM DEPARTMENT, Farmers Society of Equity, Indianapolis, Indiana.

Problem No. 1

How to Make the PROBLEM DEPARTMENT Helpful to the Greatest Degree

Our first problem is to find ways of inducing those who have problems to send them to the editor of this department. By "problems" we mean your difficulties—those things that hinder your success. They involve every part of the existence and operation of your local, in all the work it may or should do, from the securing of new members to the marketing of the crops; from the election of your local officers to the election of the officers of the National Clearing House; the grading, packing and shipping of produce; the co-operative purchasing of supplies; the collection of dues, and the best methods for handling delinquents; the organization and management of county and district clearing houses; the attendance at the local, etc., etc. These and hundreds of other problems should be discussed.

We are told by agricultural educators and other farm papers that co-operation can be made successful by giving the farmers a more complete education on the theory and practice of the principles of co-operation. Let others treat of the theory. They fail to teach anything else. In this department let us treat on the practice of these principles. In no other way can practical, efficient education result. Education is of little use except it teaches what to do and how to do it to best advantage.

Local and district officers and managers should make this department wonderfully helpful, not only to themselves, but to others. Give us your problems. If you have not found a satisfactory solution you will of a surety find it somewhere if you send it in for discussion. If you have overcome some of your difficulties, your means of doing it will be a guide post and an inspiration to others.

In the next issue, May 1, a prominent member of the society, who has been closely associated with the movement from the first promulgation of the Equity idea, and has had much practical experience in local, county and general work, will discuss the subject, "How to Use the Local Papers."

Another County Clearing House for Idaho

Headquarters has received notice from National Organizer A. Y. Satterfield of the organization of a county clearing house at Nampa, Canyon County, on March 23. The locals of Nampa, Lone Tree, Lone Star, Bowmont, Peaceful Valley, Sunny Slope, Fargo, Wilder, Payette, Bramwell and Emmett participated, sending delegates, and a large number of members and other farmers were in attendance. Officers were elected, speeches were made on topics of interest by Organizer Satterfield, State Seed Commissioner R. B. Cogan and County Agent H. A. Ireland. Over \$1,000 was subscribed toward the clearing house and a capable manager is to be employed. County Organizer A. L. Sloat, assisted by William Brothers, will keep the organization work going.

High Taxes in Washington

TO UP-TO-DATE FARMING:
I wish to give your readers some real western news. Your editorial in the March 1 issue, "Recklessness of Those Who Govern," interested me very much, because it read, almost word for word, as I have been talking for the last two years. Western Washington—especially King County and Seattle—has its share of "high tax." We have a system of taxation here that in effect fines those who do improving, such as home building, or any one who tries to clear up the logged-off land. We are taxed on everything we have above \$300. The Puget Sound country has a very fine climate and I guess we must be taxed for that, for I don't know anything else we should be taxed so high for. My tax this year was \$70 on a new twenty-acre tract of land. Every city on the Pacific has thousands of unemployed men.—G. L. Gaudin

A Word About Dues

The National Clearing House, in its effort to build this organization and make it as great and successful as it should be, has a stupendous responsibility, and needs the hearty, loyal support of all its members. The work is a great one. Not that it is difficult, but it is vast. There is need of more workers, for "the harvest is ripe and the laborers few."

In its work of finding organizers, securing markets, employing satisfactory market representatives, obtaining and distributing market reports, and fulfilling its duty to the membership, it must depend wholly upon the funds provided by the payment of fees and dues. Our work and the success of this movement is measured by our income from this source. Every failure on the part of a member to pay the small dues cripples the movement to that extent, working a hardship on others as well as on himself, for whatever delays or hinders the development of this movement hurts every farmer in the country. Therefore we call our members to take this perfectly true and reasonable view of the matter, and act for the best interests of themselves and others.

As dues-paying dates occur at four periods, we call attention now to the following: EXTRACT FROM CONSTITUTION AND BY-LAWS OF THE NATIONAL CLEARING HOUSE

ARTICLE IV ANNUAL DUES

Sec. 7. The annual dues shall be \$1.50. The first payment will be one year from becoming a member, or on the dues-paying date of the local clearing house.

Sec. 8. The annual dues shall be apportioned as follows:

To the National Clearing House.....	\$.50
To the state union.....	.25
To the county clearing house.....	.10
To the local clearing house.....	.40
To the official paper.....	.25

Total \$1.50

ANNUAL DUES-PAYING DATE

Sec. 10. When the national secretary issues a local charter he will place thereon a date which shall be the annual dues-paying date for that local. When a member joins at other than the annual dues-paying time he will pay the full membership fee of \$2.50, which pays all dues for a year, and at the next annual dues-paying date he will be required to pay only a pro rata amount of dues to carry him to the next following dues date.

ARREARAGES

Sec. 20. A member six months in arrears for dues shall stand suspended without action of the clearing house, but the secretary must report the same to the state union, if one, otherwise to the National Clearing House, so the membership rolls may be correct. A member suspended for non-payment of dues may be reinstated by the payment of arrearages.

The dues-paying date of several hundred local clearing houses fell on April 1. Statements have been sent to the secretaries of all such locals and all members should have been notified of the full amount required of them.

Secretaries who have properly kept the membership roll in the record book will have no trouble in checking up their records with the statement sent from headquarters. Any errors should be promptly reported for correction.

The next dues-paying date is July 1. All locals having this date on their charters and in their record books should be in readiness and all members notified in advance.

Co-operation in Ohio

Some of the leading farmers of Gallia County, Ohio, are awakening to the possibilities of organized effort and co-operation. This has led them to form two co-operative organizations, the Gallia County Cow Testing Association and the Gallia County Buying Association. The same officers control both organizations and one man can belong to both or only one. Each of the twenty-five men who are now in the cow testing association pay \$15 toward the expense of keeping a tester and if more than ten cows are being tested by a member the cost is \$1.50 per cow. Since there are twenty-six working days in the month, the tester is busy every day. One man found that one of his cows gave 1.165 pounds of butter milk in the month of November. The milk contained 60.75 pounds of butter fat, which was sold for 33 cents per pound. The value of this and the skim milk amounted to \$23.97. The cost for feed was \$6.80, leaving a profit of \$17.17 for one cow for one month. This same man living on a 160-acre farm in Gallia County sold \$1,500 worth of hogs during the year and as much more was received for cream. This showing was made in a country where the soil is supposed to be poor. The activities of the association are also applied to the buying of fertilizers and feed. When orders are taken for the purchase of any large quantity of feed or fertilizer, each order must be accompanied by \$2 in cash. When the fertilizer arrives the buyer takes it from the car and pays for it at that time. Should he refuse to take it he forfeits the \$2. A saving of several dollars per ton is effected by such co-operative buying. With such practical results as this already realized by several farmers' organizations in Ohio the outlook for this phase of co-operation is bright.

BUSINESS EXCHANGE

CLASSIFIED DEPARTMENT

Real Money-Saving, Money-Making Opportunities—You Can Sell Anything or You Can Buy Almost Anything by Placing Your Offer Before Our Million Readers

CLASSIFIED ADVERTISING—50 Cents a Line, or for eight (8) words. No display, except the first words will be set in capitals, each initial, numeral, abbreviation and key counts as one word. All orders must be received ten days before the date of the paper in which it is to appear. Remittance or reference should accompany all orders. Circulation guaranteed, 200,000 copies or more. When writing to these advertisers say "I saw it in UP-TO-DATE FARMING."

AGENTS

WANTED—Responsible party to take charge of our business in each county handling sale of Automatic Combination Tool, a combined wire fence stretcher, post puller, lifting jack, etc. Lifts or pulls 3 tons, weighs 24 pounds. Sells readily to farmers, shops, contractors, etc. No experience necessary. Descriptive catalog, prices and terms free upon request. Harrah Mfg. Co., Drawer O, Bloomfield, Ind.

AGENTS—Sell Maple Flower: 25-cent package makes 2 gallons delicious syrup. Sale in every home. Profits over 100 per cent. Sample 10 cents. Our agents coin money. Write at once. Wilmington Co., Y 15, Cincinnati, O.

AGENTS—Make \$5,000 this year; be your own boss; independent, abundant money, your time your own; all or spare time; at home or traveling. Write E. M. Feldman, Sales Manager, 6764 Sycamore st., Cincinnati, O., today for full particulars.

FARM LANDS

2,500,000 ACRES of free government land thrown open this spring. Every one can get 160 or 320 acres. We furnish revised lists, locating the land; maps, guides and full particulars. Write us today. Webb Publishing Company, Dept. 33, Webb Bldg., St. Paul, Minn.

FARMS WANTED—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property free. American Investment Association, 71 Palace Bldg., Minneapolis, Minn.

SUNNY SOUTHERN IDAHO—Choice irrigated 80 acres for sale; one-third mile from town. If interested write C. E. Coplin, Burley, Idaho.

SELL YOUR PROPERTY quickly for cash, no matter where located; particulars free. Real Estate Salesman Co., Dept. 6, Lincoln, Neb.

HOMESTEADS LOCATED—Also best soil in state \$5 to \$20 an acre. Wm. Rulien, locator, Baudette, Minn. Best of references.

CHOICE 160 acres timber land, black loam soil, near Marshfield; terms suitable. Harold Waldner, Poyette, Wis.

FOR SALE—TOBACCO

FOR SALE—40,000 pounds best leaf tobacco, from 2 to 6 years old. Mail stamps for sample to Anton Wavrin, Franklin, Ky., R. No. 5.

HELP WANTED

\$100 IN GOLD for the best hatch in a Petaluma Incubator in the next four months; write now for full particulars. Petaluma Incubator Co., 208 UTD, Indianapolis, Ind.

"HEAVEN AND HELL." Swedenborg's 400-page work, 15 cents postpaid. Pastor Landenberger, Windsor Place, St. Louis, Mo.

WHEN your watch needs repairs mail it to us. W. G. Landit, jeweler, 7531 Normal ave., Chicago, Ill.

GIVEN

Moving Picture Machine

Moving Pictures in Your Own Home

This is a real, fine moving picture machine; just like the illustration; generates its own gas for light; don't need electric light, gas or lamp with this machine. Takes regular standard films; same as the real "Movie Show;" gives a big sharp picture nearly six feet square. We furnish films free with machine. It is made of black Japan sheet metal, beautifully finished. The latest mechanical 8-wheel mechanism for operating. Imported triple polished and ground lens; reflector to make strong light, much stronger than electric light. Gives clean, sharp and life-like moving pictures. A child can learn in a few minutes how to operate. Machine perfectly safe for any one to handle.

SEND YOUR NAME TODAY

and just say you want a moving picture machine FREE. We will tell you how any bright boy or girl, or any other person, can earn this wonderful moving picture machine in one day's time. The plan is very simple, any boy or girl can do the little work we ask. Don't hesitate, but act quickly. Be the first in your neighborhood to get one of these real moving picture machines without costing you a penny. Address
H. DAY, Manager, Department 30, Springfield, Ohio

OUR MARKET REVIEW

SUMMARY of trade generally is given by Bradstreet's as follows:

Spotted. Immediate wants govern. Poor country roads affect interior trade and collections. Railway retrenchment. Industrial operations uneven. Disappointing iron and steel demand. Collections slow. Money easy. New enterprises limited. Banks conserve funds, awaiting workings of regional banks. Winter wheat on large acreage, never in better shape. Crop preparations making. Stock market shows undertone of strength. Weekly failures show a big drop.

The most important event, related to agriculture, since our preceding issue, was the second refusal by Canada to join this country in breaking the price of American grain down for the benefit of millers. The first was the rejection by the Canadian people, in a general election, to accept Taft's reciprocity treaty. The second one came on April 6, when the Canadian Parliament refused the terms of the new Underwood tariff law. This law provides free admission to the grain and flour of any country that admits free of duty the same from this country. The report from Ottawa, Canada, says, in announcing the decision, that the government believed in protection for the farmer.

While we have not seen much attention given this action, by the newspapers, we consider it of tremendous significance to the agriculture of both the United States and Canada. As far as grain is concerned it leaves the grain farmers of our country in practically the same position that they were before the new tariff law, because we need not fear, very much, the imports from Argentina, Australia and Russia. The first does not have a large surplus and the other countries will find more logical markets in Europe. With the great wheat and oats fields of northwest Canada out of the proposition, our farmers can again control their crops early and get higher prices. Then, when the world must have the surplus, it will pay the American price for it. This is what wheat growers did from 1904 down to 1911, when fear of the reciprocity pact upset farmers' calculations.

We are curious to know now what will be the next move of the big millers, having twice been defeated in their game by Canada. And Canada was wise. Free trade between this country and that one could not possibly benefit the farmers of either country, since both of them raise surpluses for export to the common European market. But free trade with Canada would have prevented our farmers from getting more than the world price, any time, by controlling the surplus early, or would have made it extremely more difficult. All that wheat growers have to do now to raise the price of wheat is to organize and set their minds on a price and market only when the price is paid. This will mean holding about one-sixth of the average crop off of the market early, but the world must have all of the wheat raised each year and it will take our surplus later at our (the farmers') prices.

We thank our northern neighbors and congratulate the farmers of the United States.

Heavy rains and cold weather have retarded spring work over much of the country. Unless good weather is more general soon the oats acreage will be reduced, with the probability of a corresponding increase in ground planted to corn. Wheat and grass prospects continue better than for ten years.

Wheat declined about 2c since our last report. Corn is a little weaker and oats some weaker than corn. Wheat is 10c below the price a year ago, corn about 12c higher and oats about 4c higher. Wheat at Winnipeg, Canada, is practically the same as Chicago price, for May, but for July is 6c higher.

Old potatoes are higher in Chicago, but there have been some markets that were pretty badly glutted and prices demoralized. The future of potatoes is uncertain, but usually the market is higher the latter part of April, when the farmers are busy in the fields.

Advice

WHEAT—We do not look for material advance in price for the old crop and, unless farmers will get in position to control the new crop better, we will probably see the lowest prices in many years. **CORN**—Market gradually and stop marketing if price goes below 65c at Chicago. **OATS**—Future price depends much on the spring weather for sowing. **COTTON**—Market gradually. **POTATOES**—Market liberally this month.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on March 28, 1914, with comparisons, are shown in the following table:

	March 28, 1914	Change from two weeks before
	Bushels	Bushels
WHEAT	59,317,000	-2,769,000
CORN	22,722,000	-520,000
OATS	23,875,000	-1,007,000
BARLEY	6,372,000	X 37,000

The visible supply of wheat in Canada on the same date was 42,953,000 bushels. This is 1,778,000 bushels less than two weeks before and 909,000 bushels less

than a year before. The visible supply of oats was 15,150,000 bushels on the same date, which is 677,000 bushels more than two weeks before and is 5,268,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on April 6, 1914, two weeks before and a year before as follows:

	WHEAT, No. 2 RED	Two weeks before	A year before
Chicago	83 @ 84	85 @ 85½	1.03 @ 1.06
St. Louis	92½ @ 93	94 @ 95½	1.07
Kansas City	88½ @ 89½	90½ @ 91	1.01 @ 1.06
Cincinnati	96 @ 97	98½ @ 99½	1.08 @ 1.11
New York	1.04	1.05½	1.11½ @ 1.13

Minneapolis—Spring wheat: No. 1 hard, 91½ @ 92¼c; No. 1 northern, 89½ @ 91¼c. Two weeks before, 94½c @ 95¼c and 92½ @ 94¼c respectively. A year before, 88½c and 86½ @ 88c respectively.

	CORN, No. 2 WHITE	Two weeks before	A year before
Chicago	68 @ 68½	68½ @ 69	56 @ 56½
St. Louis	72 @ 72½	71 @ 71½	56
Kansas City	70 @ 71	71½ @ 72	55
Cincinnati	71 @ 72	71 @ 72	57½ @ 58
New York	76½	75½	59

	OATS, No. 2 WHITE	Two weeks before	A year before
Chicago	41½ @ 42	42	37½ @ 37½
St. Louis	41	41½	36½
Kansas City	40	41 @ 42	35½ @ 36
Cincinnati	42½ @ 43	41½ @ 42	37½ @ 38
New York	44½ @ 45	46 @ 46½	

Future Grain Prices

Chicago grain futures closed on April 6, 1914, and two weeks before as follows:

Wheat—May, 90½c; July, 86½c. Two weeks before, 93½c and 89c respectively.
Corn—May, 68½c; July, 68½c. Two weeks before, 67½c and 69c respectively.
Oats—May, 39½c; July, 39½c. Two weeks before, 40½c and 40½c respectively.
Winnipeg, Canada—Future wheat prices closed April 6, 1914, and two weeks before as follows: May, 90½c; July, 92½c. Two weeks before, 93c and 94c respectively.

Cotton

New York, April 8, 1914.—Cash cotton closed as follows: Middling upland, 13.40c; middling gulf, 13.65c. Two weeks before, 13.50c and 13.75c respectively. A year before the price was 12.60c and 12.85c respectively.

MOVEMENT OF COTTON—BALES

	Ending Apr. 3, '14	Ending Mar. 27, '14	Ending Apr. 4, '13
For the week	126,686	155,006	139,241
For the season	13,244,834	13,108,848	12,544,238

VISIBLE SUPPLY—BALES

	World's	U.S.	Foreign
World's	5,411,140	5,564,812	4,849,502
American	3,777,140	3,917,812	3,585,502

The American visible decreased 279,231 bales and the world's visible decreased 289,231 bales in two weeks.

Chicago Produce Market

April 6, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations and advice about other markets, and instructions for marketing, address: Marketing Department, Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	57	72	112

Market had a firm tone today and some of the receivers were holding out for higher prices. Receipts were moderate, reported at 57 cars, and soft, wet weather is expected to make country roads bad for traffic and restrict the movement. Demand was fairly active, although not particularly urgent.

Sales reported were: Per bushel, Wisconsin bulk, long white—1 car at 60c; round white, 2 cars at 65c, 2 cars at 66c. Rurals—2 cars at 68c, 2 cars fancy Dusties at 70c. Sacked Rurals—2 cars at 66c, 1 car Dusties at 69c.

Per bushel, bulk or sacked, Wisconsin, Triumps, Burbanks and Kings, poor to good, 58 @ 63c. Round white, 60 @ 65c. Dusty Rurals, 56 @ 70c. Michigan, round white, 67 @ 65c. Red River Ohio, 85 @ 90c.

NEW POTATOES—Are meeting with very good sale and ruling steady. They are moving a little more freely. So far they have met with good sale. Large hampers, Florida, white and red, No. 1, 1.10 @ 1.15. No. 2, 1.00 @ 1.10. Small hampers, Florida, white and red, No. 1, 1.10 @ 1.15. No. 2, 1.00 @ 1.10. The price of old potatoes is about 3 cents a bushel for higher than two weeks before. The price of new potatoes is from 50c to 75c a hamper higher than two weeks before.

SWEET POTATOES—Are held steady when choice. If not a kind attractive to the good trade they rule easy. Supply is equal to the demand; more than that in the case of goods below choice in grade.

Barrels, Illinois, fresh, well packed, sound	\$2.25 @ 2.50
and uniform	1.50 @ 2.00
If uneven, showing some undersize	1.00
No. 2	1.00 @ 1.10
Hampers, Jersey	1.00 @ 1.10
Illinois, good	75

Few extra good packing trifle over. Culls down to 50. The price of sweet potatoes is about the same as two weeks before.

BEANS—Demand reported as showing some improvement. The feeling in the market is firmer. Tins per bushel to pea beans mainly. Other kinds are quiet. Pea Beans—Hand-picked, choice, \$2.00. Common, 1.75 @ 1.85. Red Kidney choice, 2.80. Brown Swedish, long, 2.00. Round, 2.35. All prices of beans are the same as quoted two weeks before.

	Change same period last yr.	Change from a year before	Change from 2 years before
	Bushels	Bushels	Bushels
—2,246,000	—5,275,000	X 3,421,000	
—113,000	—2,230,000	X 3,811,000	
X 314,000	X 6,817,000	X 7,969,000	
—246,000	X 441,000	X 3,692,000	

No. 2 Timothy	13.00 @ 14.00
Iowa and Nebraska Prairie	10.00 @ 15.50
Illinois and Wisconsin Prairie	6.00 @ 7.00

Read Wheat Prices at Right, Corn and Oats at Left

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago, for the period, 1909 to March, 1914, inclusive. The lowest figures in March, 1914, were: Wheat, 93c, on March 31; Corn, 62½c, on March 6, and Oats, 39½c, on March 11.

Timothy hay is \$1 to \$1.50 a ton higher than two weeks before. Prairie hay is unchanged from two weeks before.

STRAW—Eye straw quotable at \$7.50 @ 8. Oat straw at \$6.50 @ 7.50. Wheat straw, \$6.50 @ 7. The price of straw is the same as two weeks before.

BROOM CORN—Nothing important is to be said. Good quality remains moderate sale and steady. Common rules easy. Per ton, Illinois corn, \$120 @ 160. Oklahoma, 190 @ 150. Damp and damaged less. The price of broom corn is unchanged from two weeks before. In fact, there has been no change for a long time.

EGGS—The receipts at Chicago for the periods mentioned were as follows:

	This week	Last week	Last year
	Cases	Cases	Cases
Monday	20,840	20,770	21,563

A steady feeling exists at the current quotations. There is a good all-around trade. There is a good consumptive demand locally as well as on outside account, and handlers for storage purposes are also absorbing a good part of the offerings. Buyers are discriminating against southern eggs to some extent and show preference for northern. The receipts are liberal and some parties claim they would be still larger but for the bad roads in some sections. Fresh, Firsts, 18 @ 18½c. Ordinary, Firsts, 17 @ 17½c. Seconds, 15½ @ 16c. Dirts, 16 @ 16½c. Miscellaneous, cases included, 17 @ 18½c. Cases returned, 16½ @ 17½c. Storage packed, Firsts, quotable at 18½ @ 19c for Firsts and 19 @ 19½c paid for Extras. The price of eggs is from 1c to 1½c a dozen lower than two weeks before.

you ever did in your younger days; or if you are a sportsman and like to go out hunting occasionally, they will help you to sight your gun as true as you ever did before in your life.

Now Don't Take My Word For It

but send for a pair at once and try them out yourself for reading, sewing or hunting and driving; indoors, outdoors, anywhere and everywhere, anyway and every way; then, after a thorough tryout, if you find that every word I have said about them is true, and if they really have helped you to read and sew or shoot and look off at a distance as well as it ever is possible for glasses to help you, you can remove and keep the lenses forever without one cent of pay, and

Just Help Me Introduce Them

by showing them around to your friends and neighbors, and speak a good word for them whenever you have the chance. If you want to do me this favor just fill out the below coupon at once and this will entitle you to a pair of my "Perfect Vision" lenses absolutely free of charge as an advertisement.

ST. LOUIS SPECTACLE HOUSE, Dept. 44 ST. LOUIS, MO.

Please send me, on seven days' free trial, a pair of your 10-karat, gold-filled spectacles, complete with perfect-vision, accurately-ground, and perfectly-focused lenses all ready for use, also a fine leatherette, plush-lined, silver-tipped, gold-lettered pocketbook spectacle case, and if I find that they really and truly are fully worth more than you are asking for them, and that it will be impossible for me to buy them anywhere else at that price, I will then pay you \$1.50, but if for any reason whatsoever I don't wish to keep them, and I myself am to be the sole judge, I will return you the frames and pocketbook case and keep the lenses without paying you a single cent for them, as you agreed to let me, and I am going to make you stick to your word. Be sure to answer the following questions:

How old are you?.....

How many years have you used reading spectacles (if any)?.....

Name

Post Office.....

Rural Route.....Box No.....State.....

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

K. N. I. Gun Co., 233 South 5th St., Phila., Pa.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE EDITOR of this department loves to talk with our young writers, and he would comment much more than he does but for his desire to save space and print as many letters as possible. He is sure these young people are aspiring and ambitious, and that active life will find them leaders in their localities, and that the world will be nobler and better because of them.

We give first place in this issue to the following remarkable letter from Spain, though the writer's name is not given:

DEAR CADETS—I am a Spanish girl and my home is in Madrid. I have a friend in your country who has told me about your enchanting paper. I have read the Cadet letters and determined to try to become a Cadet myself. I am sending this letter to you through my friend. I have been reading some of the Cadets' wonderful descriptions of your beautiful country. Perhaps they will be interested to hear something about my own darling Spain. My mother is dead and my father owns one of the most beautiful villas in this city. The house is large and almost completely hidden by beautiful red roses. It is surrounded by a vast garden of almost heavenly beauty. My father is first aid-camp to the King of Spain and he is almost always at the palace. Their majesties are very kind to me and I sincerely return their affection. I am 13 years old and attend the St. Armandia English school here in Madrid. There are some American girls here and they are very nice, but they are very different from us native Spanish girls. I love your country and sometimes I dream about your beautiful, flower-covered meadows. But it is beautiful here, too, and I am sure my unknown American friends would agree with me. Excuse the absence of my name.—, Madrid, Spain.

Next we'll welcome this busy Alabama girl:

DEAR CADETS—I have been reading UP-TO-DATE only three months, but I like to read it very much. I am 20 years old and would be glad to exchange a few letters or cards with the Cadet boys and girls. I live in the country, and I like country life. I like to bake cakes and cook good things to eat. I clerk in the store for my father, and I also attend the telephone switch board, but I cook for my mother while she is not able to do anything. My father owns a whole lot of land and a saw mill, a water mill and a gin. I like to work in the garden and feed the chickens and milk the cows. I also like to go fishing, but father has an alligator in the pond now and I am afraid it will get me if I fish there. I live within half a mile of where I was born, and I don't know much about moving, for I never moved but once. I want to hear from all the Cadet boys and girls and I will answer all the letters and cards I receive.—Hattie Brown, Banks, Ala.

DEAR CADETS—I am a country girl, 19 years old, and I live in California. A friend takes UP-TO-DATE FARMING and I am never late in reading all its good things. We are going to move on a farm in the near future and when we are settled I shall subscribe for the paper I like best, and that is UP-TO-DATE. I would like to hear from all the boys and girls, and I will answer all.—Ethel E. F. Jones, East Wilmington, Cal.

DEAR CADETS—This is from northeastern Idaho, Where fields of oats and barley grow; We also raise nice hay and wheat. In summer we've no burning heat, But 3d of March we've lots of snow And have nice sleigh rides, don't you know. We hunt out here for elk and moose, And from the boys they can't get loose. I am a girl of just eighteen And may sometime be a true home queen. My father takes dear UP-TO-DATE; I like it fine; folks think it's great. I'd like to hear from each Cadet—Will try to answer all I get.

DEAR CADETS—My father takes UP-TO-DATE, and though it is about six years since I lived on a farm, I am very much interested in the paper and wish to become a Cadet of Equity. I am 18 years of age and am a stenographer. I am fond of reading and reciting and am now taking lessons in elocution. I also play on the piano. I would like to receive any number of letters from the Cadet boys and girls and will be glad to answer them.—Sarah M. Gerhart, Telford, Pa.

DEAR CADETS—I live out here in Idaho, where the air is pure and life is free. I can sit in my little log house and look out upon the beautiful mountains,

which are about 14,000 feet above sea level. After all, my log house is not so very little. It is 16 feet by 32 feet and has four rooms. I enjoy going to church and Sunday school. I think this is as good a place as God ever blessed, and I am sure any one would enjoy the scenery here. The Yellowstone Park is not far from here and I have been through it three times, and certainly enjoyed the beautiful scenery. I am 21 years old and would enjoy exchanging letters with any of the Cadets.—Burton F. Shultz, Marysville, Idaho.

DEAR CADETS—I am a country girl and I like country life. I live on the same farm where I was born, and I will be 16 years old in September. My father takes UP-TO-DATE FARMING and thinks it is a fine paper. I like to read it and would be glad to exchange letters and cards with the Cadets and readers. I will try to answer all I receive.—Anna Cook, Brooks-ville, O.

DEAR CADETS—I have just been reading the page dedicated to you in that delightful farm paper, UP-TO-DATE FARMING. We have only taken it about a year, but we have learned to look to its coming with joy. Papa is a farmer and a member of the Equity union. I was 18 years old the next day after Washington's birthday and have lived on a farm all my life. I enjoy country life much more than I did the hustle and bustle of a few weeks' visit in the city. We live on a ranch of 640 acres four miles from a small town, where there is an M. E. church and about a dozen other buildings. We attend meetings every Sunday, and as I am a Christian I am among the few young people here who do not dance. I have two sisters, but one of them is married and lives in North Dakota and the other one is visiting her this winter. As no one lives on the ranch but me and my parents, I am sometimes quite lonesome. There is some very beautiful scenery here, and in the spring and summer there are many pretty flowers. Our state flower is the bitter root. I would like to exchange pressed wild flowers with the Cadets this summer and will be pleased to answer letters and post cards if you will write me.—Alma Looney, Comanche, Mont.

DEAR CADETS—I think your letters are grand. We take UP-TO-DATE and all think it a good farm paper. I live on a small farm of 100 acres and we raise cotton, corn and other small grain. I am a Georgia boy of 16 and I like to write letters and cards. I would like to hear from the Cadet boys and girls and will answer all letters and cards I receive.—Henry McCollum, Lavonia, Ga.

DEAR CADETS—I have not had UP-TO-DATE FARMING a very great while, but I would like to become a Cadet. I live on a farm and always have. We raise beans, corn and potatoes. This is not a very large farm, but it is healthy here. I would like to hear from all the Cadet boys and girls and will answer all I receive.—Wallace Emmerson, Dighton, Mass.

DEAR CADETS—Here comes a girl from the good old "Tar Heel" state. My papa takes UP-TO-DATE FARMING and we think it is a grand paper. I enjoy reading the Cadet letters very much. I am 14 years old and live with my parents on a farm of 150 acres. I like to live in the country. I think it is so much more pleasant and healthy than city life. I enjoy riding and driving and all other country sports. I would be glad to correspond with any of the Cadet boys and girls, and will answer all I receive.—Sadie Leach, Denton, N. C.

DEAR CADETS—I am a reader of good old UP-TO-DATE and think it is the finest paper printed. I am a farmer's daughter, 17 years old, and we live on a farm of 100 acres. I would like to correspond with all the Cadet boys and girls and will answer all I receive.—Ethel Bradbury, Blue Mountain, Ark.

DEAR CADETS—I am a farmer. Mother owns a 123-acre farm and I work on a farm of 900 acres. We have 20 cows to milk night and morning. Besides, we have 25 head of beef cattle, 13 calves, a few hogs and 150 chickens. We have two silos and we feed silage to all the stock, including 11 horses. Silage is good feed for farm stock. UP-TO-DATE is a dandy farm paper. We have had it for eighteen months and I enjoy feeding and raising stock. Our crops are corn, wheat, oats, cow peas, potatoes, clover and grass. I would be glad to hear from all the girls and boys and will answer all as long as I can get paper and pencils.—L. J. Burgess, Golconda, Ill.

Secret of Pitching "Fade-Away" Curve

Mathewson, World-Famous Pitcher of New York Giants, Explains It All—Boys Get Next to It Quick

Do you want to make all the ball players in your town look sick when they come to bat against you? Do you want to have the secret of pitching Christy Mathewson's famous "Fade-Away" curve—the curve that has puzzled the heaviest hitters in the National League for years—the curve that can't be hit safely? Then here's your chance. Christy Mathewson, the master of the "Fade-Away" has explained it all. His instruction is free. Write quickly and get it. Send no money—it comes by return mail free.

With the "Fade-Away" curve you can be the champion pitcher of your community. The best batters will be powerless to get runs when you pitch. You can just make monkeys of all the other boys. Get Mathewson's personal explanation of how to pitch, boys, and you can be the hero in your town just as good old "Matty" is in the National League. He's the idol of baseball fans, because of his famous "Fade-Away" curve, and now you can master the same curve. Matty explains every detail so any boy can learn it. He shows how to stand, how to grip the ball and how to let it go. He gives photographs of each move so you can see every point plain as A-B-C.

This wonderful secret is now free to any boy for just delivering a few papers for us. Don't wait a day but send for it now. Send no money—simply write and say "send on the 12 papers to deliver and give me free, Mathewson's lesson on how to pitch his 'Fade-Away' curve." Address W. D. Boyce Co., Dept. 326 Chicago.

Woman's Work and Welfare

Helpful Hints for Homefolks

Fireside Social Chats

By Aunt Sophia and Others

TRAINING OUR GIRLS

NEARLY every mother expects her daughter to become the head of a household some day.

Managing a household is a task worthy of any woman's best effort. Her brightest talents and greatest capabilities will find opportunity for expression in the building of a home. In fact, I often feel like turning around the saying I often hear, that a "talented woman should not lose her talents in the narrow confines of her home" and make it this: "A talented woman should not give her talents to the world and deny them to her own family. Husbands and children are entitled to what wife and mother can do for them, and she should give to them first. She should not, of course, make herself a slave for them. They should not permit her to do so. But I have seen some women who act as though to do for their families what they do for visitors, or their club, is a waste of their time and talent. This attitude does not make homes happy, and it does not give the children the right idea of what a home should be.

So don't bake your best cakes only for the church festival.

Train your daughter, to the best of your ability, for the career of a home builder and a builder of character in her own children. A mother's life, her daily life I mean, has a wonderful influence. See that it is used in a way that will be a credit to you even unto the tenth generation. Teach the girl to do things with her own hands, and don't neglect that bright mind of hers. They are saying now that the future welfare of this country depends upon the boys on the farms. That places a great responsibility upon the mothers of those boys.

AUNT SOPHIA.

LAUNDRY HELPS

The Art of Removing Stains

Every Housekeeper is justly proud of a good supply of snowy linen and, as we know, stains will happen through accident in the best regulated families, and often if we had the "how" of removing these stains right at hand, our linen would remain snowy. Ordinary grease or gravy stains on table linen may be removed by rubbing well in hot water with soap. These stains, unless well washed out, will appear again when the linen is ironed. To remove ink stains from white linen before the ink is quite dry sprinkle it with salt and rub with half a lemon or even a squeezed rind. Rinse off the acid and wash at once. While the ink spots are wet a good plan is to sprinkle some starch on the spot and moisten with milk. Fresh ink stains may be removed by dipping the stained part into buttermilk, or milk that has been boiled; change the milk frequently and then wash the article well. If the soiled part is soaked at once in vinegar, ink spots will quickly disappear from white table cloths. To remove indelible ink soak in a solution of common salt, then wash with diluted ammonia.

To remove iron mold sprinkle the stain with lemon juice and salt, and expose to the air and sun. Repeat this until the stain is gone. If this remedy fails, dip the stain into boiling

water and rub it with salts of lemon, using a rag for the purpose. Then hold the stain over a cup and pour a stream of boiling water through. For iron rust stain mix together soft soap, laundry starch, half as much salt and the juice of one lemon. Have everything in readiness before beginning to remove stains.

Tea and coffee stains can be taken out of the finest damask with ease if they are well rubbed with glycerine and then washed in warm water and soap. Butter will remove tea and coffee stains. It should be rubbed on the linen or cotton and the material be soaked in hot water and washed with a mild soap. Fruit stains may nearly always be removed by pouring boiling water through the cloth until the stain disappears. It may also be eradicated by holding the stain in milk that is boiling for five or six minutes.

Mildew spots that withstand the sun may be removed by boiling the articles. The one remedy for paint stains is turpentine. Soak the part well before beginning to rub, because friction applied before the stain is dissolved will only spread it farther. Another method is to rub the spots with kerosene oil. Boil quickly until the stain disappears, and rinse in several waters. To remove tar, rub the stains with a few drops of salad oil. They can then be completely removed by an application of benzine.

Scorch stains may be removed by soaking the part in cold water and exposing it to the sun, moistening it as it dries. Grass stains can be removed by the use of molasses. Then wash well in cold water and finish with soap and water.

A HOME-MADE CABINET

Almost every housewife has in her attic an old bureau or chest of drawers which can be made into a useful kitchen cabinet. Take off the top and fasten on some thin boards. Sandpaper them smooth and you have a good bread board. Put hinges on the old top of bureau and fasten it to back to cover bread board when not in use. Divide top drawer into compartments for spices, etc. The second drawer is for rolling pin, cake cutters and such small articles. Towels are kept in third drawer. Brass hooks on left side for cooking forks and egg beater. When not in use cover with cloth and you have an extra kitchen table.—Lucy Lee, Cambridge, Mass.

A Slight Omission

"Mother, are your prayers answered?"
"Yes, my child, but why do you ask such a question?"
"Then why don't you pray for me to be a good girl instead of spanking me? It would be a heap more comfy."

TERRIFF'S LAST and most perfect INVENTION

The New Gravity Washer

The master effort of a lifetime devoted to the study and manufacture of Washing Machines. It is an undisputed fact that Wm. W. Terriff invented and put on the market more and better washing machines than any other man. The New Gravity Washer was his masterpiece. It will wash anything from a pocket handkerchief to underclothes and the heaviest bedding perfectly clean, and the gravity principle makes it run so easily that a child can operate it even with a heavy load. The last year of Mr. Terriff's life was largely devoted to writing his biography, which he published under the name of "Twenty-Four Years Hustling in the Washing Machine Business Under Two Flags." We will send you this interesting and instructive FREE first washer without costing you a single penny. Don't delay—write today to **WOLVERINE WASHER COMPANY, 300 Canal St., PORTLAND, MICH.**

Crooked Spines Made Straight

You need not venture the loss of a penny. No matter how serious your case, no matter what else you have tried, the Sheldon Method will help you and probably wholly overcome your affliction. We are so sure of this that we will make a Sheldon Appliance to suit your special condition and let you decide, after 30 days, whether you are satisfied. We make this unusual offer simply because the 18,000 cases treated absolutely prove the wonderful benefit the Sheldon Method brings spinal sufferers, young and old.

Use the Sheldon Method 30 Days at Our Risk

There is no need to suffer longer or bear the torture of old-fashioned plaster, leather or steel jackets. The Sheldon Appliance gives an even, perfect and adjustable support to the weakened or deformed spine and brings almost immediate relief even in the most serious cases. It is as easy to put on or take off as a coat, does not chafe or irritate, is light and cool.

The price is within reach of all who suffer. Send for our free book today and describe your case as fully as possible so we can advise you intelligently.

PHILO BURT MFG. CO., 315 Sixteenth St., Jamestown, N. Y.

GENUINE JAPANESE CHINA TEA SET GIVEN

This is a genuine imported Japanese China Tea Set. It is of the regular eggshell, thin, snow-white transparent body. Full set comprising one Tea Pot and cover, one Sugar Bowl and cover, one Cream Pitcher, Six Cups and Six Saucers, in all 17 full size elegant pieces. Tokio hand decorations, each piece beautifully illuminated in natural colored foliage and Japanese Girl design, perfect reproduction of Pagoda and Landscape scene in delicately tinted harmonious colors producing an effect of rich and singular beauty. We will send you this set ALL CHARGES PREPAID BY US and safe delivery guaranteed, if you will dispose of only 14 sets of our natural colored foliage and Japanese Girl design, perfect reproduction of Pagoda and Landscape scene in delicately tinted harmonious colors producing an effect of rich and singular beauty. What is Now the Fashion

The Fashions of Spring

Although it is really not too early to begin thinking of the summer wardrobe, there is still need of garments for that most trying of all times, the in-between-seasons. For this period we have many beautiful light weight materials, which are all or largely made of wool and which show the most attractive patterns. These are to be fashioned into frocks that can be worn under separate coats and into these same coats as well.

The one-piece frock is still retained and it is built on simple lines. Sometimes it shows a jacket effect and sometimes it is merely a waist and skirt with some little vest or other decorative feature.

6221—LADIES' GOWN—This has the jacket effect. The blouse is really a waist and the fronts are loose only from the underarm seam, but the ends hang loosely over the girdle and there is a soft chemise in sight at the upper part. The collar is small, the sleeves are full length, attached with a low shoulder seam. The two-piece skirt may be attached to the guimpe or not and the flounces which trim it may be omitted or they may be made of contrasting material, an idea which is much in favor just now. Sizes 34 to 44 inches bust measure. Medium size requires 4½ yards of 44-inch material, with one-half yard of 27-inch contrasting fabric for collar and cuffs and 1½ yards of 36-inch goods for the guimpe.

6373—LADIES' FROCK—This also has a vest in front and a wide collar and full length or three-quarter sleeves. Joined to this blouse is a four-gore skirt. Sizes 34 to 42 inches bust measure. Medium size requires 5½ yards of 36-inch material, with ½ yard of 18-inch goods for vest and 1½ yards of 24-inch satin.

6518—LADIES' SKIRT—This model has three gores and is made with either high or regulation waist line. The trimming bands may be used or omitted. This design will be handsome in a solid color with trimming bands of plaid. Sizes 22 to 32 inches bust measure. Medium size requires 2¾ yards of 44-inch material, made without bands, and one-half yard additional if bands are made of the same material.

6594—LADIES' WAIST—This shows a plain model with a full length tuck at each shoulder in front and back, the usual box pleat closing shirt sleeves and a band finish at the neck. Sizes 34 to 44 inches bust

measure. Medium size requires 3½ yards of 27-inch material.

6472—LADIES' WAIST—This is plain, decorated only by the side front closing, with bias edge to the overlapping side. At the neck is an ornamental collar and the plain sleeves end in a band cuff. Sizes 34 to 44 inches bust measure. Medium size requires 3½ yards of 27-inch material.

6550—LADIES' APRON—This covers the entire dress and will save it from spots, no matter what the work in hand. Sizes small, medium and large. Medium size requires 5½ yards of 27-inch material.

6629—CHILD'S DRESS—This is a plain blouse and two-piece skirt given an up-to-date touch by the pleated peplum which is added to the skirt. This can be omitted if preferred, but it is the latest thing and we advise retaining it. Sizes, 6, 8, 10, 12 and 14 years. Medium size requires 3½ yards of 36-inch material for the dress and ¾ yard of 36-inch for the hat.

6627—CHILD'S MIDDY BLOUSE—This shows a new form of the favorite midgy blouse. The drop shoulder is used and there is a flat peplum below the belt. The collar is the usual wide semi-sailor one and the sleeves are short. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 2½ yards of 36-inch material.

Latest Fashion Book 2 Cents—We publish four times a year a Quarterly Fashion Book, illustrating 200 styles for ladies, misses and children, and containing many valuable dressmaking lessons. The regular price is 10 cents a copy, but if you will order the book at the same time you order a pattern we will send the spring number, now ready, for only 2 cents to cover mailing.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Ten-to-One White Dent

A New Corn, Introduced this Year, 1914

Ten-to-One White Dent. Note Depth and Width of Grain and Small Cob.

ounces. The grain weighed 12 3/4 ounces, while the cob weighed only 1 1/4 ounces, or, practically, ten to one. The illustration above shows the depth of grain compared with cob. This illustration is much reduced, but the ear to the right is exact size.

In introducing Ten-to-One White Dent corn we claim for it:

The largest eared, extra early white dent field corn.
The heaviest yielding early field corn.

A variety that will yield IN CORN equal to any variety and out-yields in actual grain many larger varieties that are extensively grown.

A variety that will make a good crop on thinner soil than will produce satisfactory results of many other varieties.

THE variety, above all others, to plant late, when delayed because of unfavorable season conditions or any other cause, although, since it is hardly excelled by any variety for yield of grain, we recommend it unreservedly as a main crop variety.

When planted early it makes very early feed. On account of its small cob and large proportion of grain it is an unsurpassed feeding variety in the ear.

The grain is solid, very sound, not much dented. It is never chaffy. The shape and size of grain can be gotten from the illustrations. It has a large, strong germ.

It is a beautiful corn—pure white.

It is adapted to the corn belt from central Michigan south. Its season is 100 days.

These are the qualities that recommend the Ten-to-One corn to growers. This is the first year of its sale and we make it a condition that each purchaser will report to us next fall.

Postpaid—One ear, 50c. Shelled—1 qt., 50c; 4 qts., \$1.50. By Freight or Express, Purchaser Paying Charges—1/4 bu., \$1.50; 1/2 bu., \$2.75; 1 bu., \$5. No deviation from these prices this year. None to sell wholesale.

Ten-to-One White Dent

We have given this new corn this name because, on an average ear, there are ten ounces of corn to one ounce of cob. The ear of corn shown on this page weighed 14

Ear of Ten-to-One White Dent, Exact Size, Twelve Rows. Notice Breadth and Depth of Grain.

Best Ten Ears Yellow Corn. Variety, Reid's Yellow Dent. Awarded First Prize, Open to World, Indiana State Fair, 1911.

Imp. Reid's Early Yellow Dent

This splendid corn is so well known that an extended description is not necessary. It is more largely grown than any other variety of yellow corn. The ears are very large for a yellow corn. A representative ear is 9 to 11 inches long, having about 18 to 20 rows. Grains are light yellow color and very deep. This corn, when well bred as our corn is, covers the tip of the ear and rounds down over the butt. Stalks grow medium height and stocky, making fine fodder. Also is prized by many for ensilage.

Best Ten Ears Yellow Corn. Variety, Reid's Early Yellow Dent. Won Grand Sweepstakes Prize at National Corn Exposition, Columbia, S. C., 1913. Also at Indiana State Fair, 1913.

We call particular attention to our strain of Reid's Yellow Dent. It is the greatest prize-winning yellow corn in the country. Our stocks are all raised by prize winners, or by growers who planted prize-winning strains of seed. The Reid's Yellow Dent is the heaviest yielding yellow corn, and our strain is the finest and greatest yielder of the variety. While breeding for size of ear and quality of grain we have not fallen into the common error of breeding to a long season, but have retained the earliness. Our Reid's Yellow Dent seed corn can safely be planted up to latitude fifty miles north of Indianapolis.

By Mail, Postpaid—1 ear, 30c. Shelled—1 quart, 30c; 4 quarts, \$1.00. By Freight or Express, Purchaser Paying Charges—1/4 bu., \$1; 1/2 bu., \$1.75; 1 bu., \$3; 2 bu., \$5. Five bushels or more at \$2.50 a bushel.

Terms We will ship to any station, not more than 500 miles of Indianapolis, by freight or express, subject to examination before paying for it, if you will send a letter from your banker, merchant, freight or express agent, or have written on the order, that you have the reputation of fair dealing. We do this to show that we have entire confidence in our seed. It will please from the time you see it until it is stored in the crib.

O. K. SEED STORE

227 W. Washington St.
Established 1880
Indianapolis Indiana

ORDER YOUR SEEDS FROM THIS PAGE AT BARGAIN PRICES AND SAVE MONEY

Buy Your Seeds by Mail—
It is all right to buy sugar, soap, coffee, etc., at your local store, but it is all wrong to buy seeds that way. Seeds can't live under the conditions found in the average store. For fresh, vital living seeds, send to a Seed Store. The United States Mail brings our Seed Store to every planter's door. Therefore you need take no risk. Besides, no other seeds are so reasonably priced. Our trade mark is O. K. Seeds, and everybody knows that this means "All Right Seeds."

O. K. Seeds are Not Cheap Seeds
but they are the best seeds at low prices. You can save 25 to 50 per cent on your seed bill by selecting from this page. Send the right amount of cash with all orders. **Terms** Remit by postoffice or express money order, bank draft or registered letter. We deliver all seeds at prices quoted. Write very plain. References—Continental National Bank or any business house in Indianapolis, and our tens of thousands of customers.
In the following list half pounds will be sold at one-half the pound prices.

O. K. SEED STORE Indianapolis, Ind.

ARTICHOKES

Green Globe—Standard variety. Tips cooked like asparagus. Pkt. 5c; oz. 20c; 1/2 lb. 60c; lb. \$2.

ASPARAGUS

Columbian Mammoth—Large white stalks. Best known and most desirable variety. Palmetto—Large, green shoots; tender. Each variety: Pkt. 3c; oz. 6c; 1/2 lb. 15c; lb. 50c.

BEANS

DWARF OR BUSH, GREEN POD
Burpee's Green Pod Stringless—Extra early, round pod; remains tender and crisp a long time after maturing.
Giant Stringless Green Pod, Improved Early Red Valentine, Early Bountiful. Each variety: Pkt. 6c; pt. 20c; qt. 35c.

DWARF OR BUSH, WAX POD
German Black Wax—Very early; round, yellow pod; popular everywhere.
Wardwell's Kidney Wax—Long, flat pod; remarkably free from rust.
Curries' Rust-Proof Golden Wax.
Davis White Kidney Wax. Each variety: Pkt. 7c; pt. 25c; qt. 40c.

POLE OR RUNNING

White Seeded Kentucky Wonder—Extra early; pods from 6 to 8 inches long; oval-round, dark green color; brittle; stringless, tender and of sweet mild flavor.
Kentucky Wonder, King Horticultural, Lazy Wife.
Cut Short—Old, well-known variety. Ideal for planting with corn. Medium early. Each variety: Pkt. 7c; pt. 25c; qt. 40c.

DWARF, LIMA OR BUTTER
Burpees—Very productive; medium late variety; pods large; excellent quality.
Quarter Century—The earliest and largest bush lima bean in cultivation.
Each variety: Pkt. 7c; pt. 25c; qt. 40c.

POLE, LIMA OR BUTTER
King of the Garden—A vigorous grower 8 to 10 inches in length.
Challenger—Vines grow strong and are very productive; pods produced in large clusters; one of the best late sorts.
Price, same as Dwarf Limas.

DWARF FIELD BEANS
Pea Beans—Well-known variety; always in great demand; famous soup bean.
White Marrowfat, Red Kidney. Each variety: Pkt. 6c; pt. 20c; qt. 35c.

BEETS

Extra Early Blood Turnip—Extremely early; fine grain and flavor.
Crosby's Egyptian—Early; dark red; one of the best for growing out of doors.
Detroit Dark Red, Long Smooth Blood Red.
Swiss Chard—Leaves are used as greens, cooked same as spinach; the large ribs prepared like asparagus; very delicious. Each variety: Pkt. 4c; oz. 10c; 1/2 lb. 25c; lb. 85c.

MANGEL WURZEL OR STOCK BEET
Golden Tankard—Deep yellow flesh and skin. Especially relished by sheep.
Improved Mammoth Long Red—A favorite variety with farmers and dairymen.
Either variety: Pkt. 3c; oz. 5c; 1/2 lb. 15c; lb. 50c. Prices in larger quantities quoted on application.

SUGAR BEETS
Klein Wanzleben—This variety without question the best in cultivation; not largest size, but richest in saccharine.
Vilmorin's Improved—Very large size; best sugar.
Prices same as Mangel Wurzel.

BROCCOLI

White Cape—Large, compact heads of a creamy white color and good flavor.
Purple Cape—Very similar to white cape excepting in color; heads brownish purple. Either variety: Pkt. 10c; oz. 25c; 1/2 lb. 85c.

BRUSSELS SPROUTS

Long Island Improved—Finest strain grown; large and very prolific.
Paris Market—Half-dwarf variety; a sure cropper.
Price: Pkt. 5c; oz. 10c; 1/2 lb. 35c.

CABBAGE

Late Flat Dutch—The most popular late variety. Heads large, flat and solid.
Early Jersey Wakefield—The most widely known and most popular early variety; heads cone shaped; very solid.
Early Winnigstad—Heads cone shaped.
Charleston Wakefield—About week later than Jersey Wakefield; heads one-third larger and less pointed.
Early Summer—Heads large, round and very compact; ten days later than Jersey Wakefield.
Early Flat Dutch—A justly popular and esteemed variety; heads remarkably large, very solid and of fine texture.
Surehead—A strain of Late Flat Dutch; great reliability for heading.
Red Dutch—The best known of the red cabbages; much used for pickling.
Perfection Drumhead—This is the best of the Savoy; heads large with crisp, wrinkled leaves.
Each variety: Pkt. 3c; oz. 15c; 1/2 lb. 40; lb. \$1.25.

CARROTS

Oxheart—Roots short and very thick; color deep orange; fine grained and sweet.
Danvers' Half Long—One of the heaviest croppers; roots dark orange color.
Early Scarlet Horn—A very popular sort; quick growing; deep orange color.
Improved Long Orange—The best known and most largely cultivated of any carrot.
Either variety: Pkt. 4c; oz. 10c; 1/2 lb. 25c; lb. 85c.

CAULIFLOWER

Early Snowball—Undoubtedly the finest variety ever introduced; is earliest and produces beautiful snow white heads of the most delicious flavor. Pkt. 20c; oz. \$1.25.
Dwarf Erfurt—An excellent sort, producing good sized creamy heads. Early. Pkt. 15c; oz. \$1.

CELERY

Golden Self-Blanching—An early sort requiring but little labor to blanch. Heart rich golden yellow, with light yellowish green outer leaves.
Golden Rose—Similar to Golden Self-Blanching, except in color; rosy tinge, shading to pale pink.
Dwarf Golden Heart—Very solid and the heart is of a golden yellow when blanched.
Giant Pascal—A superior keeping sort; stalks very large, thick, solid, crisp and of a rich nutty flavor.
Each variety: Pkt. 5c; oz. 20c.

COLLARDS

True Georgia—Used as greens mainly in the south and west; as the leaves are pulled others grow in their place.
North Carolina Blue Stem—Best main crop variety. Plants grow about two feet in height, thickly set with spreading leaves.
Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 30c; lb. \$1.00.

CORN SALAD

Large Seeded—A substitute for lettuce; if sown in the spring will mature in six to eight weeks; if sown in September, may be wintered over like spinach. Pkt. 3c; oz. 10c; 1/2 lb. 25c; lb. 85c.

CHICORY

Large Rooted—The dried roots are roasted and mixed with coffee or used as a substitute. Pkt. 3c; oz. 10c; 1/2 lb. 25c; 1/2 lb. 40c.

CORN

SWEET OR SUGAR

Golden Bantam—Extremely early yellow variety; produces ears measuring about five or six inches in length, but the smallness of the ear is fully made up by the deliciously sweet flavor and tender quality of the corn when cooked.
Premo, Mammoth White Cory, Early Minnesota, Stowell's Evergreen, Egyptian, Country Gentleman.
Extra Early Adams—The hardest and earliest variety for table use.
Adam's Early—Same as above, but not quite as early.
Each variety: Pkt. 5c; pt. 20c; qt. 35c.

CUCUMBER

Boston Pickling—Very prolific; largely grown for pickles. The fruits are of medium size, bright green; very smooth.
Early Cluster—A very early sort, well adapted for forcing or open ground.
Improved Long Green—Fruits long, firm and crisp. The vines make a strong growth and are very productive; a very popular and well-known variety.
Chicago Pickling, Arlington Improved White Spine, Cumberland Pickling, Early Frame.
Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 20c; lb. 75c.
Giant Pera—Often attain a length of 12 to 15 inches.
West India Gherkin—Used for pickles. Either variety: Pkt. 6c; oz. 15c; 1/2 lb. 40c.

POPCORN

White Rice—Sometimes called Squirrel or Cat Tooth. Pkt. 5c; pt. 25c; qt. 40c.

EGG PLANT

Early Long Purple—Earliest and hardest; very productive; fruit from 8 to 10 inches long. Pkt. 5c; oz. 25c.
New York Purple—Fruit large, nearly round; dark purple; excellent quality. Pkt. 15c; oz. 25c.

ENDIVE

White Curled—Leaves pale green; grows to large size; always crisp and tender.
Green Curled, Broad-Leaved Batavia. Either variety: Pkt. 3c; oz. 10c.

GOURDS

Nest Egg, Dipper, Dish Cloth and Sugar Trough. Pkt. 5c; oz. 15c.

KALE

Dwarf Green Curled Scotch—Rarely exceeding eighteen inches in height, but spreading out under good cultivation to 3 feet in diameter; leaves beautifully curled and bright green.
Tall Green Curled Scotch, Dwarf Siberian. Each variety: Pkt. 3c; oz. 7c; 1/2 lb. 20c; lb. 65c.

KOHL-RABI

Early White Vienna—Best for general table use; flesh tender and white.
Purple Vienna—A little later than White Vienna; color bluish purple.
Either variety: Pkt. 5c; oz. 10c; 1/2 lb. 25c; lb. 85c.

LETTUCE

Black Seeded Simpson—The most popular sort; leaves delicate golden yellow; fine for forcing or outdoor culture; not a head lettuce or outdoor culture; not a head lettuce.
Perpetual—Leaves yellowing green; especially adapted for private use, as but one sowing is necessary for the whole season; very tender; not a head variety.
Grand Rapids, Improved Hansen, Iceberg, All-the-Year-Round, May King, Brown Dutch. Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 20c; lb. 75c.

LEEK

London Flag—Oldest, best known and most largely grown variety.
American Flag—Large, thick stem of sweet flavor.
Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 25c.

MUSKMELON

Extra Early Hackensack—Ripens usually in about 70 days; large size; heavily ribbed and netted; green flesh, very sweet.
Rocky Ford—Very popular, well known sort; flesh light green, smooth grained, sweet and delicious.
Tip Top, Early Nutmeg, Montreal Market, Banana, Orange, Christiansa. Each variety: Pkt. 4c; oz. 10c; 1/2 lb. 20c; lb. 75c.

WATERMELONS

Florida Favorite—Highly prized for its delicious flavor; oblong in shape and grows to a very large size; rind dark green with stripes of lighter green.
Monte Christo or Kleckley's Sweet—Sweetest of all melons; oval shape, skin dark green and somewhat mottled.
Pinney's Early, Sweet-Heart, Improved Kohls Gem, Pasadena, Rattlesnake. Each variety: Pkt. 4c; oz. 8c; 1/2 lb. 20c; lb. 65c.

ONIONS

Yellow Globe Danvers—Undoubtedly the best known and most popular of all onions. Prize Taker, Red Weathersfield, Australia.

Iran Brown, Mammoth Silver King. Each variety: Pkt. 4c; oz. 10c; 1/2 lb. 40c; lb. \$1.50.
White Portugal or Silverskin—Large, flat white onion; mild and pleasant flavor; hard, fine grain and a good keeper. Pkt. 5c; oz. 20c; 1/2 lb. 50c; 1/2 lb. 75c.

OKRA

Lady Finger—Very prolific; pods extremely long and slender.
White Velvet—Pods long, white, very smooth and an abundant bearer.
Each variety: Pkt. 3c; oz. 6c; 1/2 lb. 15c; lb. 50c.

PARSLEY

Moss Curled—A standard variety, very pretty and desirable.
Fern Leaved—A very ornamental variety much used for table decoration.
Plain—Leaves plain and dark colored. Each variety: Pkt. 5c; oz. 10c; 1/2 lb. 20c.

PARSNIP

Hollow Crown—Considered the best for general culture; roots long, smooth, tender and sugary.
Long Smooth White—A standard variety with long, smooth, white roots.
Each variety: Pkt. 3c; oz. 6c; 1/2 lb. 15c; lb. 50c.

PEPPERS OR MANGOES

Large Sweet Mountain—Large and mild flavor; color glossy red; rind thick and fleshy.
Large Bell or Bull Nose—A favorite pickling sort; is very large, red; mild and thick.
Ruby King—The best and most profitable for market or family use; large size; mild and sweet.
Golden Dawn, Chinese Giant, Long Red Cayenne. Each variety: Pkt. 5c; oz. 15c; 1/2 lb. 50c.
Red Cluster—A single plant will bear hundreds of handsome small slender peppers which are very hot; color coral red. Pkt. 5c; oz. 20c.

PEAS

EXTRA EARLY—DWARF
Notte Excelsior—Very early; pods always well filled; finest quality; height 1 1/2 feet.
Extra Early Premium Gem, McLeans Little Gem. Each variety: Pkt. 5c; pt. 25c; qt. 40c.
EXTRA EARLY—NOT DWARF
Alaska—A standard variety and the earliest of all blue peas; preferred by canners. Height 2 1/2 feet. Pkt. 5c; pt. 25c; qt. 40c.
Gradus—This variety combines the finest quality with extreme earliness, and is very productive; grows vigorous and healthy, bearing pods fully as large as Telephone. Height 8 feet. Pkt. 3c; pt. 25c; qt. 50c.
GENERAL CROP LATE VARIETIES
Yorkshire Hero—A splendid large marrow pea; always favorite. Height 2 1/2 feet.
Melting Sugar—Large, broad, edible pods, very brittle. Height 4 feet.
Telephones, Champion of England, Large White Marrowfat. Each variety: Pkt. 5c; pt. 25c; qt. 40c.

PUMPKINS

Kentucky Field—Skin deep orange, flesh somewhat lighter; one of the best for pies. Pkt. 5c; oz. 5c; 1/2 lb. 15c; lb. 50c.
Cushaw or Crookneck—Ripens in 70 days; weight from 60 to 100 lbs.; lemon color; very choice.
Mammoth Tours—Has weighed as high as 200 pounds. Used mainly for feeding stock.
Winter Luxury—Round, golden yellow; closely netted like a netted muskmelon; excellent for pies; flesh thick and fine flavor; very productive and an excellent keeper.
Each variety: Pkt. 3c; oz. 8c; 1/2 lb. 25c; lb. 80c.

RADISH

Early Scarlet Turnip—A well-known variety; very quick grower.
Early White Turnip, Early French Breakfast, Early Long Scarlet, Icicle, Chartier or Shepherd. Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 20c; lb. 60c.

WINTER RADISH

California Mammoth—Grows 10 to 12 inches long; solid, tender and crisp; keeps well through the winter.
Long Black Spanish, Round Black Spanish, Rose China, White Chinese. Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 20c; lb. 60c.

RHUBARB

Victoria—Very large; the finest cooking variety. Pkt. 5c; oz. 10c; 1/2 lb. 20c.

SALSIFY

Mammoth Sandwich Island—Roots three times the size of ordinary Salsify, and of more agreeable flavor. Most popular variety.
Wisconsin Golden—Deep golden color; large size; fine flavor.
Each variety: Pkt. 5c; oz. 10c; 1/2 lb. 25c; 1/2 lb. 40c.

SPINACH

Bloodsail—Leaves curled and crinkled like a Savoy cabbage; hardest and most productive sort.
Long Standing, Thick Leaved. Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 20c; lb. 50c.

SQUASH

Wanted Hubbard—A superior strain of mammoth size; rich dark green rind; an excellent keeper.
Early White Bush, Early Yellow Bush, Giant Crookneck, Mammoth White, Boston Marrow, Fordhook, Mammoth Chilli, Gregory's Delicous. Each variety: Pkt. 3c; oz. 10c; 1/2 lb. 20c.

TOMATO

Tenderloin—Deep rich red; flesh very solid, with few seeds. Pkt. 5c; oz. 20c; 1/2 lb. 60c; lb. \$1.75.
New Coreless—Bright red; immensely productive; round, smooth, extremely solid; grand for slicing; absolutely has no hard green core. Pkt. 5c; oz. 25c; 1/2 lb. 60c; lb. \$1.75.

Livingstone's Beauty, Earliana, New Stone, Dwarf Champion, Logan's Giant Seeding.

Price except where noted: Pkt. 5c, oz. 15c, 1/2 lb. 60c, lb. \$1.50.
Red Cherry—Fruit small, about 1/2 of an inch in diameter, perfectly round and smooth. Fine for preserving. Each variety: Pkt. 5c; oz. 20c.

TURNIPS

Extra Early Purple Top Milan—Earliest in cultivation and a splendid variety. Bulb white, flat, medium size, with bright purple top; one of the sweetest and finest flavored of summer sort.
Purple Top White Globe, Purple Top Strap Leaf. Each variety: Pkt. 3c; oz. 8c; 1/2 lb. 20c; lb. 60c.

RUTA-BAGA

Carter's Imperial—A very hardy sort, excellent for table or stock feeding; does not run to long necks.
Lain's Improved, Large White.
New Neckless—Fine grained, globe shaped, yellow flesh; a very desirable sort for either stock or table use. Each variety: Pkt. 3c; oz. 8c; 1/2 lb. 20c; lb. 60c.

"A Pony For Every Boy And Girl"

ONCE more The Farmer's Wife is offering a beautiful Shetland Pony with complete outfit to some lucky boy or girl. If you haven't a Shetland Pony this is certainly the finest chance you ever had to get one. Our Pony Club motto is, "A Pony for Every Boy and Girl" and the fact that we have already given away 173 ponies to 173 different Pony Club Members shows that we are living up to our motto. Not many children have a chance to get a dandy pony like "Winkle" (the next pony we will give away) but you have as good a chance as any other boy or girl if you send us your name and address right away so we can tell you all about our wonderful Pony Club and how to get "Winkle" for your own.

WE HAVE ALREADY GIVEN AWAY 173 PONIES

HERE ARE THE NAMES OF A FEW OF OUR 173 LUCKY PONY WINNERS

"Lucky," Mildred Struthers, Cochise Co., Arizona
 "Beauty," Evelyn Russell, Greene Co., Arkansas
 "Marmalade," Crystal Andrews, San Bernardino Co., California
 "Pansy," Evelyn Culter, Windham Co., Connecticut
 "Toby," Geo. Lynch, Lake Co., Illinois
 "Roina," Clarence F. Busick, Adams Co., Indiana
 "Empress," Avery and Orle Knight, Chickasaw Co., Iowa
 "Jim," Joey Edwards, Barton Co., Kansas
 "Stubby," Harold Quick, Jefferson Co., Kentucky
 "Merry," Isabelle Whitcraft, Baltimore Co., Maryland

"Rollo," Lillian Davis, Dukes Co., Massachusetts
 "Peter," Charlie Mahoney, Chippewa Co., Michigan
 "Bunny," John M. Borswald, Polk Co., Minnesota
 "Evangeline," Gladys Houx, Saine Co., Missouri
 "Kris Kringle," Mallena Vashus, Dawson Co., Montana
 "Tom," Helen Herrman, Cumming Co., Nebraska
 "Benny," Harold Kiley, Warren Co., New Jersey
 "Joe," Harold R. Palmer, Oswego Co., New York
 "Cub," Eugene Mumpower, Buncombe Co., N. Carolina
 "Paul," Evelyn Sears, Grand Forks Co., N. Dakota

"Jolly," Hazel Cox, Darke Co., Ohio
 "Port," Georgia Spencer, Warren Co., Pennsylvania
 "Irene," Colgate M. Searle, Kent Co., Rhode Island
 "Sunshine," Eva Huddleston, Beadle Co., South Dakota
 "Jean," John H. Elrod, Putnam Co., Tennessee
 "Zip," Ella Fullam, Randolph Co., Vermont
 "Lulu," Louise Damron, Benford Co., Virginia
 "Scotty," Catherine Rohrbeck, Pacific Co., Washington
 "Chum," Bozzie F. Thornton, Mercer Co., W. Virginia
 "Pet," Sheldon Adams, Dane Co., Wisconsin

Notice we print the names of 30 of our 173 Lucky Pony Winners. We would gladly print the whole 173 names if we had room for them here, but we will send them to you just as soon as we hear from you. Possibly some of these happy children live in your county or a county near you and, if so, you probably know them because our Lucky Pony Winners are the best known children in their neighborhoods. However, it doesn't make any difference where you live; if you send us your name and are the lucky child to get "Winkle," he and his whole outfit will be shipped without one cent of cost to you. If you send us your name today, we will send you 1000 votes for "Winkle" and a big surprise that will double your chances of getting a Pony.

THIS PONY FREE

"Winkle"

"WINKLE" is a beautiful little brown and white spotted Shetland. He stands about 42 inches high and weigh around 300 pounds. We have already given away 173 ponies to children all over the United States and "Winkle" is just as pretty a pony as any of these others. We selected "Winkle" from a big herd of Shetland Ponies because we thought he was the prettiest and cutest pony of them all—just the kind of pet that any little boy or girl would love to own. "Winkle" is as gentle as a kitten and likes to play and romp with children all day long. He is a sturdy little fellow, too, and can haul along his little pony cart filled with happy children at a merry clip. If you send us your name and get "Winkle" he will carry you anywhere just about as fast as you want to go. Send us your name today and we will tell you just how to get him. Don't delay but do just as our other 173 Lucky Pony Winners did and send us your name at once.

Do You Want an Outfit Like This?

The Outfit

NOT only will we send "Winkle" to some lucky boy or girl, but we also send the finest kind of pony outfit along with him. The outfit includes a stylish four-wheeled pony buggy, a handsome nickel trimmed harness, a hand-made riding saddle and a wonderful Indian horsehair bridle. This bridle cannot be bought in stores, but is made especially for us by an old cowboy at Deer Lodge, Montana, out of beautifully colored horsehair which he weaves into remarkable Indian designs. No child has a prettier or more complete outfit than the one we send with "Winkle" and we know you will be the happiest boy or girl in your state if you send us your name and get this beautiful pony and outfit for your own. We had just as soon send "Winkle" and the Outfit to you as to any other boy or girl but first you must send us your name and address so we can tell you all about our easy plan. You may fill out the coupon below, or send us your name on a postal card but remember, do it now before it is too late.

Send Us Your Name Today If You Want To Own "Winkle"

THE FARMER'S WIFE PONY CLUB,
 549 Webb Bldg., St. Paul, Minn.

Please send me pictures of "Winkle" and tell me about your Pony Club and also tell me how to take care of Shetland Ponies. I have no pony and want to belong to the Pony Club and get "Winkle" for my own.

JUST AS SOON as we hear from you we will tell you exactly how to go ahead and get "Winkle." Our Pony Club is known all over the country because it gives Shetland Ponies to good boys and girls. Don't let anybody persuade you that you cannot get this beautiful little pony and outfit because our plan of giving away ponies is different from others. The fact that we have already given 173 ponies and outfits to 173 boys and girls all over the United States, from the state of Vermont to the state of California, many going over 1,800 miles from St. Paul, is proof that we really give ponies away. The banker or postmaster in your town knows that the Webb Publishing Company of St. Paul, Minnesota, publishers of The Farmer's Wife and established over 30 years, is one of the largest publishing firms in the United States and can afford to give away ponies to advertise its papers. We never heard of a single one of the 173 children to whom we have already given ponies until they wrote and told us they wanted one and that is why you must send us your name and address at once, if you want us to send you "Winkle" and his elegant outfit.

EVERY CLUB MEMBER GETS A PRIZE

EVERY single child who sends us his name and joins the Pony Club will receive a handsome prize of his own choosing. Besides the Pony Outfit (and the Big Surprise we have for you) we will give Bicycles, Diamond Rings, Sewing Machines, Rifles, Cameras, Gold Watches, Flashlights and many other wonderful rewards that you never could get until now. Of course, "Winkle" and his dandy Outfit is the best prize of all and you have the same opportunity to get him as any other boy or girl if you send us your name now.

BE SURE TO ADDRESS YOUR POST CARD OR ENVELOPE TO

THE FARMER'S WIFE PONY CLUB
 549 WEBB BLDG. :: ST. PAUL, MINNESOTA

[What One Happy Club Member Says]

Dear Pony Club:—I certainly am proud of my pony "Babe." He had such long hair during the winter, but now he has shed off so pretty and is the prettiest pony we ever saw. He is so fat, too. I have had lots of chances to sell "Babe," but no siree, nothing would buy him. I love him more every day and I don't know what I would do without him—I'd be so lonesome.
 Roy Brown, McCook Co., South Dakota.

What We Want You to Know and Why

Being a Few Words on Particular Matters From the Editors to the Readers

China as a Cotton Country

Not only is the Chinese hen competing with our own Plymouth Rocks in the American markets, but now comes the unwelcome news that China can grow cotton in any quantity, and since opium growing has been abolished the Chinese opium grower is planting cotton in its stead. Cotton has been grown in China for thousands of years, but only in a small way, and not nearly enough to supply her own demand. Last year over 5,000,000 bales was grown, and the Chinese Department of Agriculture is making every effort to increase the production to many times its present figure. Some day in the future the south may lose her proud position as the cotton field of the world, and the sooner she learns to grow more grain and grass, more hogs and cattle, the better off she will be.

The Coming of the China Egg

China eggs are coming by the million. Not the porcelain affair used to defraud old biddy by obtaining her natural product on false pretenses, but eggs of the right kind to compete with her. During the year of 1912 only \$1,150 worth of eggs came here from China. In 1913 over \$31,450 worth came in (nearly all in December), and in January and February of this year 37,440 cases of Chinese eggs came into this country, valued at \$167,760. Of course, this is a very small quantity compared with the immense number of eggs consumed in the United States, but nevertheless they replace to a certain extent our home product, and, more than that, there is no telling what volume the shipments may reach. It is said that China can produce almost an unlimited number, at a very low price, and will do so with a market provided.

Ridding the Country of Hog Cholera

This disastrous disease can be abolished, or at least held in check, by the power of science. After much study and investigation there is no question but that hog cholera can be checked, and in many cases cured, by the proper use of the serum now being made for that purpose. It has been proven, beyond all doubt, that when properly made and used success is certain, and where failure has followed its use either the serum was not properly made or it was not properly administered. The story of the manufacture and use of the serum, and its use as a preventative and remedy, is a most interesting one. In an early issue we shall tell this story from our personal observation, having visited one of the largest and best serum manufacturing plants in the United States, and investigated quite thoroughly the results of the use of the product. It will pay the farmer to know the exact truth about hog cholera serum. We will give the fact to our readers so they may know and not take chances on hearsay or the theories of those who do not know.

Answering the Question Why

We have been asked many times, by both farmers and business men, why we devote so much time, space and effort to the matter of rural organization and co-operative marketing. You, reader, may also wonder why we persist in teaching these things. It is because of the undeniable fact that the most important problems of agriculture today are those of organizing and co-operating for purposes of marketing. This has been the great necessity for years, but not until recently has it been generally recognized. Even today there may be farmers who may not believe anything is to be accomplished along these lines. But mark these words: Co-operative marketing must and will soon replace the present method, and when the new system is firmly established on the proper basis it will put more extra dollars into the farmers' pockets and cut more dollars off the consumers' bills than all the farm extension, rural credit and county agent forces put together. The most profitable thing in the world for agriculture is organized co-operation in marketing done along the right line, and that is why we are everlastingly teaching the doctrine and promoting the practice.

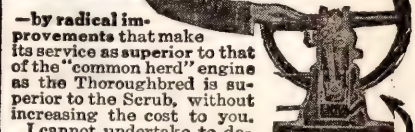

An Example of Old Style Marketing

A story has been told, from an authoritative source, that an Oklahoma farmer shipped a car load of 1,000 melons to a dealer in St. Paul, Minn., and received \$50 for the car, or 5 cents each for his melons. Yet melon-hungry citizens of St. Paul were made to pay from 50 cents to 75 cents each for them, or an average of about 62 cents per melon. The farmer was told that freight rates were so high that the dealer could not pay more than 5 cents per melon, and the consumers were told that the cost was so great that the melons could not be sold for less than the prices asked. As a matter of fact, the cost to the dealer was just 12 1/2 cents per melon, 5 cents to the farmer and 7 1/2 cents per melon freight. This gave the dealers a margin of 50 cents per melon for handling, and is a fair sample of the injustice of the old marketing system. The Equity System, which is an equitable making of prices, would have handled the melons like this: Give 10 cents per melon more to the farmer, making his price 15 cents instead of 5 cents; the railroad would take its 7 1/2 cents per melon, and then allow the handler a margin of 15 cents per melon instead of 50 cents, thus giving the consumers melons at an average cost of 37 1/2 cents, or 25 cents cheaper than the old system compels them to pay. This would give the farmer \$150 for his car of melons instead of \$50, and, as it is safe to assume that many more melons would be consumed, he could sell two cars where he sold one, and instead of only \$50 would get \$300. The railroads would get \$150 instead of \$75 and the dealers would get \$300 out of the two cars, and this would save the consumers 25 cents on each melon, and more could have them. There can be no doubt as to the possibility of doing all this by the Equity System, and as the same rule applies to nearly all crops, every farmer should take an active part in the establishment of the new system.

Let Me Tell You How the TEMPLE ENGINE

Revolutionized
Engine Building

—by radical improvements that make its service as superior to that of the "common herd" engine as the Thoroughbred is superior to the Scrub, without increasing the cost to you. I cannot undertake to describe this engine—HERE. But drop me a postal and I will tell you how it does away—almost altogether—with ruinous VIBRATION and FRICTION—without excessive WEIGHT and BULK—with many other features that render ordinary engines so costly, so short-lived, so inefficient and so cumbersome. In the meantime—note in sectional view, of the "TEMPLE," above, three of its radically "different" features, and what these mean to ENGINE USERS: INVERTED CYLINDER—with HEAD on BASE—close to the ground—eliminating vibration, causing engine to run quietly and smoothly, delivering maximum power with minimum consumption of fuel (gasoline, kerosene, alcohol or distillate). BELL-SHAPED WATER JACKET—(see letter A, flaring toward the base, giving three times the usual volume of coolest water where it's needed—around the explosion chamber, the hottest part of the cylinder. SMALL, LIGHT, BASE—cutting out two-thirds of floor-space and BULK—and one-half the WEIGHT of other engines—making it much lighter and easier to move from one job to another. PROFITABLE ALL-AROUND SERVICE—The extraordinary lightness, compactness and quiet running of this slow speed, heavy duty engine, make it IDEAL for running Threshers, Grind Mills, Sawing Outfits, Shredders, Huskers, Sprayers, Pumps, and all other INDOOR and OUTDOOR machinery, requiring 2 H. P. to 50 H. P. Just a penny—spent for the postal you send me—brings you ENGINE INFORMATION that will be worth hundreds of dollars to you in your season's work. Now "take a CENT for the postal—and LEARN SOMETHING YOU DIDN'T KNOW BEFORE."

35 BUSHELS PER ACRE was the yield of WHEAT

160 Acres
FARMERS
WESTERN
CANADA
FREE

on many farms in Western Canada in 1913, some yields being reported as high as 50 bushels per acre. As high as 100 bushels were recorded in some districts for oats, 50 bushels for barley and from 10 to 20 bushels for flax. J. Keys arrived in the country 6 years ago from Denmark, with very little means. He homesteaded, worked hard, is now the owner of 320 acres of land. In 1913 had a crop of 200 acres, which will realize him about \$4,000. His wheat weighed 68 lbs. to the bushel and averaged over 55 bushels to the acre. Thousands of similar instances might be related of the homesteaders in Manitoba, Saskatchewan and Alberta. The crop of 1913 was an abundant one everywhere in Western Canada. Ask for descriptive literature and reduced railway rates. Apply to Superintendent of Immigration, Ottawa, Canada, or Canadian Government Agent.

Balanced Rations

The small farm constitutes one of our big problems.

A swat in time saves nine million. Kill every "first fly."

Many a man has made money by keeping his own counsel.

If an "agricultural expert" is needed anywhere it is in Congress.

Plan to take the whole family for a fishing trip as soon as the corn is in.

The height of wisdom is to know enough to take advice and not to give it.

The man who never gives up when he knows he is right usually comes out all right.

When you borrow trouble don't overlook the fact that you don't have to pay it back.

The farmer who never learns anything new about farming doesn't make much progress.

Where there is wide difference in opinion there's chance for both sides to be mistaken.

Farm folks need fun as well as anybody else. Get together and make it every little while.

It will soon be time to fix up the grain binder. Better look it over the first rainy day that comes.

Raising good draft colts is profitable. There's no overproduction of horses of big bone and sinew.

Experience is costly when you get it first-hand, but UP-TO-DATE FARMING is full of it at 50 cents a year.

Farmers are making a much better use of the parcel post in buying than in selling. It will always be so.

The railroads keep begging for higher freight rates in order to enable them to borrow more money at lower rates.

The oldest farmers' club in America is located in Pennsylvania and its membership consists of eighteen families of Quakers.

Plan your farm work to keep your teams busy earning something all the time. When they are idle they are an expense.

Have your boy taught good business methods and the principles of true co-operation. He will need this training, wherever he goes or whatever he does.

Another big conference on marketing farm crops has passed into history, but the same job of organizing a practical marketing system is constantly before us.

Keep your stock pure. Don't have your cows, hogs and poultry of all colors, shapes and sizes. If you want to run a menagerie, sell the farm and buy a circus.

The wise farmer is constantly trying to get more wisdom, instead of spending all his time distributing that which he has. Measure a man's wisdom by his work.

Neither potato growers nor labor unions look kindly upon the scab. The farmer treats the scab potato to a chemical bath, while the union treats the scab laborer to a brick shower.

After the Conference is Over

The Shortcomings of the Conference

DOUTBLESS all our readers know that the Second National Conference on Marketing and Farm Credits was held in Chicago April 14 to 17. This conference brought together many of the leading agricultural authorities, theoretical and practical, from all parts of the country, to discuss the present and proposed methods of getting the products of the soil from the farmer to the ultimate consumer to the greater advantage of both classes. It was inevitable that organization and co-operation should hold an important place upon the program, for it is now a clear and undisputed fact that only by these means can any substantial improvement be made in the present method of marketing.

The conference, of course, was ostensibly in the interest of farmers. Some actual farmers were present, taking part. And the entire proceedings demonstrated once more, as we have demonstrated time and time again, that farmers are not receiving as much as they would be justly entitled to, and could obtain if they were in position to take advantage of their opportunities. Not only that, but once more it has been emphatically proven that only by co-operation can the farmers take advantage of their opportunities, and everybody knows that co-operation without organization is impossible.

Naturally, these pertinent questions come up in the minds of farmers: "What good are these conferences to me?" "How will I obtain benefit from them?" "If they are for my welfare, to change certain things to my betterment, must I do differently in my own affairs, and, if so, what must I do and how shall I do it?"

Where is there a community that can show practical results from the conference of 1913?

In our opinion these conferences are of no immediate benefit to farmers, and will be of little benefit in the future, until they bring together a group of practical men, experienced in farmer organization work, who will set in motion machinery of organization. To hold consultations over a disease, and to discuss remedies, may give a better understanding of each, but the disease can not be cured until the remedy is actually applied, and some one, somewhere, sometime must apply that remedy.

The work of application is perfectly clear. Community organizations must be formed at all shipping stations. Men must do this work, and to wait for the farmers to voluntarily come together and organize would be to delay the work unnecessarily, to the continued loss of millions of dollars. Did agricultural colleges wait for farmers

(Continued on Page 4)

What Others Say and What We Think of It

"How can we get the most good out of the corn planter," asks the Southern Farm Journal. By putting only good seed corn in it.

"The result of proper co-operation will be to reduce the number of middlemen considerably."—Hoard's Dairyman. "Nuff ced."

"Every dog has his day."—Old Proverb. And now every farmer has his 'week.' Farmers' weeks are becoming more and more popular.

"Much patience should be exercised in training a heifer to be milked."—Wallace's Farmer. And now and then we need to exercise much agility also.

"Othie Marvel, an Indiana boy, a corn contest boy, raised a fine crop despite the bad season."—Exchange. Quite a Marvel-ous crop, so to speak.

"The country church is logically the heart of rural life."—Kansas Free Press. At last we've found what's wrong with the country. Heart disease!

"Half the value of the farm is as a place to develop the boy."—Breeders' Gazette. Measured by the development of some boys, the farm wasn't worth much.

"If more farmers, business men, men of standing generally, were to enter politics, the road to reform would shorten wonderfully."—Farm, Stock and Home. That is one good roads movement we will support without qualification.

"Teach the farmer to economize," says the Hattiesburg (Miss.) News. It is generally agreed that experience is the best teacher, and the farmer has been going to her school of economy all his life. What new teacher can do better?

"Wheat for the market should not have any 'cheat' in it."—Wallace's Farmer. But even if the farmer keeps it out on the farm the wheat speculator will put it in when the wheat reaches him. Cheat in wheat is a pretty sure thing somewhere between producer and consumer.

"The usual dull period is at hand when financial and business people go slow and wait on the outcome of the farmers' toil."—The Price Current Grain Reporter. Yes, because the outcome means their income. Reminds us of a lot of crows sitting on a fence waiting for the corn to come up.

"It is indeed an interesting spectacle, that of a great nation gravely voting whether or not it shall be known before the world as a deliberate liar."—Farm, Stock and Home. This refers to the canal tolls affair, but isn't stated quite right. We have already faced two ways on the matter and now we are trying to decide which view hurts our eyes the least.

EDITORIAL

The Need for Farm Organization

EVERY DAY emphasizes the need for farm organization. The world effort, no matter in what line, is an effort of combination. Scarcely anything is attempted single-handed and alone, and those who seek to accomplish things by themselves have practically the whole world to overcome. The shipping interests are combined not only to prevent harmful competition with each other, but to secure laws that give them special privileges and add to their profits. As proof of this we may refer to the law giving American ships the free use of the Panama Canal and the desperate fight to prevent its repeal. The great manufacturing interests are combined so as to prevent the different firms and companies from taking advantage of each other, and also to secure public laws in their interest. The recent tariff bill is proof of that. The tariff on manufactured goods was reduced in many cases, but a degree of protection remained, and properly we think, but not so with the unorganized farmers. From them practically all protection was removed, and now the world may glut American markets with the very commodities farmers have most depended upon for their family and far incomes.

We need not multiply these examples. Organization for mutual defense and protection is the rule. It may not be for the restraint of trade or in violation of the anti-trust laws, but it is for mutual benefit, and in that regard it can not be condemned. People, companies and corporations must regard their interests or they must fail.

Here is where our appeal comes to the farmers. The greatest business of all is unprotected. Much is done apparently for agriculture, but it is done in a way that is dictated by somebody else, and that is expected to result to the benefit of somebody else. The farmer himself is not consulted, because individually there is no power behind him. He has neither the strength of organization nor of mutual co-operation. Hence the politician, the ultimate lawmaker, does not re-

gard him as a force to yield to or to win.

This condition has induced some to conclude it would be wise for the farmers to unite politically and form a party of their own. Our experience makes us believe that is impractical. The present political parties are solid structures. They are built upon foundations whose pillars are selfish powers and personal benefits of those who are partisan for the revenue there is in it, and, although bitter antagonists before the people, they come to each other's rescue in times of peril. How can they? Their interests are on different sides, and thus neither infringes on the other. They compete with each other only in the effort to get votes. The farmers en masse could not cultivate a field like that. Others that are so successful, both in securing and preventing laws and in marketing their stuff, do not do that. But they combine so that the voice of one is the voice of many, and to that kind of a voice the politicians and even those already in office listen. That is the position in which the farmers need to place themselves, and they can do it by the very simplest form of organization. But what form? That is not so material. We know of no better than the Farmers Society of Equity, which is founded on those great principles and needs of agriculture that are so apparent in the pricing and marketing of farm products. But the form is not the essential factor. The action is the element that counts—acting together, determined to accomplish a purpose. Hence we would not wait until the farmers of the country have been gathered into a single society. We would stimulate the growth of all the societies, and we would bring them all into co-operation. It is as practical and as easy for all the farm organizations to federate and work together as it is for the counties to constitute a state or the states a nation. What we want is that the farmers place themselves in a position to speak with a voice that must be heard, as the voice of other classes is heard. This is the broad view, the practical view, the reasonable view, and it is the plan this paper teaches. The special work of the different societies is an entirely different matter.

Convict-Made Binder Twine

EIGHT of the forty-eight states in this Union are employing their convict population in the manufacture of binder twine. In Indiana we use on an average 9,000,000 pounds of binder twine each year. Before this state and her sister state began making twine farmers everywhere were paying all the way from 12 cents to 18 cents for twine. Last year they paid the retailer but 10 cents and 11 cents and could have bought it from the prison for 9 cents. This year they can buy it here for 8½ cents. If we estimate the price as having been lowered but 3 cents per pound, which is a very liberal estimate, the saving to Indiana farmers yearly has been \$270,000, to say nothing of other states, whether they have a state factory or not. Forty states of the Union have no state twine factories and the other eight are selling twine to a number of them.

A bill has been introduced in Congress to make it possible for any state to forbid the sale of convict-made goods within its borders. At present it seems that one state can not prohibit the importation and sale of convict-made goods when made in another state, as such goods become amenable to the regulations of our interstate commerce laws. The new bill pro-

poses that all goods made wholly or in part by convict labor shall, upon delivery in any state, be subject to the laws of such state the same as though manufactured therein.

It is believed the passage of this bill would enable any state to prohibit the sale of convict-made goods within its territory.

There are, in the United States, about 50,000 convicts. If all of them were employed in the manufacture of goods it would be a very small output they would produce. Half a dozen ordinary factories employ as many people. There is no reason why the convicts should not be employed in the manufacture of useful articles. Besides, our prisons are for a better purpose than to punish offenders against society. They should do all that can be done to reform the unfortunate human beings who have sinned against society and if possible make them useful citizens. Enforced idleness is the worst thing that can happen to any one. The state that employs its convicts in useful labor can at least guarantee that to that extent, at least, convicts can be made useful citizens. Moreover, the families of many convicted men become also a burden upon society. It is well that the convict should do some productive work to

contribute to their support. All of these things should be considered by Congress before it makes it possible for state legislation, through political machinations, to deprive both the public and the prisoners of what is clearly for the benefit of each.

There is yet another phase of this matter well worth careful consideration. With the competition of prison-made goods there is not so much chance for monopoly to force extortionate prices upon the consumer. It is true, perhaps, that convict labor is not so efficient as free labor, and the cost of making goods in prison factories is higher than in other factories. This effectually safeguards the profits of private manufacturers, but at the same time the fact that the prison-made goods sell at cost shows the public how cheaply goods can be made with ordinary labor, and this places an effectual check on the manufacturers who would take advantage of the consumer.

There is one product we should like to see manufactured by convict labor, and that is vitrified brick for road making. The most unskilled labor could be used in its production, and a road made of this material costs but little more than a high-grade macadam even when made by commercial manufacturers and laid by well-paid laborers, and the expense of upkeep is almost nothing, the brick road being practically indestructible.

Official Aid in Marketing

WHEN it was announced that an Office of Marketing had been established in the national Department of Agriculture, farmers everywhere took courage, and some of those who had so assiduously labored for a better marketing system felt that their labors had at last borne fruit and that their hopes were in a fair way to be realized. But American official life is (and must be) as nearly neutral as possible. When action is so imperatively demanded that something must necessarily be done, action of some kind is taken, but whatever is done is accomplished in such a way as to offend nobody.

In regard to the marketing of farm products, Secretary Houston himself said:

The farmers must be induced in particular communities to develop staple products, to standardize them, to prepare them properly for market, to study what market to reach at a given time, and the best and most economical method of shipping the product. Nothing less than concerted action will suffice. The individual farmer can not solve the problem. He can not sufficiently control the problem of production or of machinery for marketing or the transportation facilities.

Apparently alarmed at what he had said, he seems to have caught his breath and hastily added:

Of course, I am not speaking of concerted action which shall have for its object the establishment of a closed market or the fixing of prices. I imagine we shall not accept such a principle in agriculture any more than we would in manufacturing.

Does not Secretary Houston know that every manufactured article is originally priced by the manufacturer, and that price is paid for it or it remains in the factory? And when it is found that more have been made than will bring the price the manufacturer of that article is curtailed until there is a demand for it at the price? And a world of teachers—of press, departments and colleges—is not urging on manufacturers the continued making of more in defiance of the fact that there is already a surplus, like it is in the matter of farm products. This is only another evidence that the farmers must solve their own problems. In the matter of marketing they must learn what the demand is and produce enough to supply the demand. They must also learn where the demand is and get the supplies to it in the most direct and cheapest way, so that the producer may receive steady and equitable prices and at only fair and reasonable cost to the consumers. Con-

cert of action on the part of the farmers' organization, a nation-wide co-operation, the same to apply to all crops, is the only way to do it, and a movement like that is well under way. Take courage. Farming is soon to become a real business that will abundantly serve the world and yet be assured of fair remuneration.

The Shortcomings of the Conference

(Continued From Page 3)

to voluntarily demand assistance in production? Have the colleges and boards of trade waited for the farmers to voluntarily demand and employ a county farm adviser? Not at all. The farmers have been coaxed, urged, preached to and cajoled to accept them. Why, then, place all the burden of organization on the busy farmer, who has not the time nor inclination to do the technical work of organization, but is ready to join a practical, working organization if one is formed?

Our criticism of the conference just closed is, that like the first one, it will go into the archives of history, whereas its influence should go out in the fields in the form of personal workers and build organization. So far as we have been able to learn, not one thing along this line was accomplished as a result of the conference of 1913, and we know of no provision to do anything of the kind having been made by the conference of 1914.

Why not now accept the facts as they have been shown (and as we have shown them to our readers for years), without holding further conferences to prove them all over again? Nothing worth while can be done in any event without effective organization of farmers. The thing to be discussed is: What constitutes an efficient organization of farmers in order to obtain the best results, and how can such organization be accomplished without any more delay.

This paper supports and does all in its power to promote the Farmers Society of Equity, an organization actually doing work of organization, because its plans are by far the best for the early and complete solution of this great marketing problem. It forms successful community or local organizations, and combines them into larger district or sectional associations for practical purposes, with a national body, giving opportunity for the greatest possible co-operative control. Upon this plan all efforts that are really resultful must eventually stand, and not far in the future this will result in a great federation of farm organizations which will make quick and successful work of the farmers' marketing problems and all other economic and social problems which concern agriculture.

The failure of the Chicago conference to take some definite action along this line is no credit to its promoters or those in attendance.

Too Friendly

"Are you acquainted with your high-toned neighbor, Mrs. Highhead?"
"Only slightly, but her chickens are very sociable."

A Reason for It

"Harold, I dreamed about you last night."
"You dear girl, did you?"
"Yes, I ate something that didn't agree with me, I guess."

The Boodle of It

"I suppose those campaign subscriptions were collected with enthusiasm."
"No, they were collected with a threat and a promise."

Mistook the Person

"Hello, miss, haven't you lost something?" asked the would-be flirt.
"No," was the reply, "but yonder is a woman with a dog chain in her hand. Perhaps she is the one you got away from."

Work of an Expert

Doctor—I find you entirely worn out. The best thing you can do is to close up your business and take a vacation.
Patient—Why, confound it, doctor, I just got back from a vacation last evening!

Concrete Stock Tank

Engine Room and Storage

Concrete on the Farm

AS THE SUPPLY of timber disappears and the price of lumber gets higher the farmer is looking for a suitable material to take the place of wood. Concrete seems to be the favorite in all sections where it has been thoroughly tested. It is not uncommon nowadays to see houses and barns constructed of the material. It is also used for building silos and bridges, but the most common use is in the making of smaller structures, such as tanks, retaining walls, manure pits, floors for buildings and feed lots, foundations, and fences in various forms. As a post material it is by far the cheapest and best to be had. A well-set line of concrete posts, hung with a good quality of woven wire, makes an almost everlasting fence. There is no giving away of the corner posts or braces. When made of concrete there is no danger of fire. When posts are reinforced with wire there is no danger of them being broken. Posts of this kind cost but little more than best quality wood or steel and give much better service.

Tanks of concrete are very strong and serviceable and easy to construct. For a plain finish most any kind of lumber can be used to make the forms, but first of all you must have a firm foundation if you wish the job to be a success. As the walls and bottom of a stock tank should be from four to eight inches thick, there is considerable weight in the finished structure, and if not on a suitable foundation it will settle and crack. Through the lack of a good foundation many otherwise fine tanks are ruined. If the foundation is good and the job thoroughly set before the forms are removed the tank will prove satisfactory.

In building concrete floors the mixture should be somewhat richer in cement than that used on other jobs. A heavy coating of cement and pure sand should be used on top, giving a hard, firm surface that will not crack or show sand holes. Keeping a perfectly smooth surface is the life of a concrete floor. No broken rock should

Where blocks are used in laying up a wall cement mortar is used, thus making joints that will not crack. For the common farm uses concrete in solid form is preferable to blocks or brick, as it can be cast in all manner of shapes and requires no expensive tools in its handling.

A cheap, serviceable farm water

panying picture of a feeding trough for hogs. Nothing could be easier than to make troughs of this character for swine or poultry. To procure an everlasting receptacle of this character simply means the nailing together of two boards in the shape of an inverted V. These are placed on a board platform or other even surface and surrounded with a board frame or form, which is then filled with concrete. The concrete is struck off while fresh to insure an even bottom. No special finish is required and very rude work will answer the purpose. The dimensions of the trough will, of course, depend upon the length and size of the board forms. Small troughs for chickens or large troughs for hogs may be made with equal facility.

To prevent hogs from crowding or getting into the trough, cross pieces should be used as shown. To provide for bolting the cross pieces, holes should be bored in the platform at required intervals and the bolts set in with the thread end down. The bolts should go into the platform to a depth that will insure sufficient projection for the strap iron cross pieces and nut. The concrete should be a "sloppy wet" mix and thoroughly puddled in the form. It should be kept in the form several days and protected from hot sun and wind. When sufficiently hard on the exposed surface to resist indentation with the thumb-nail, the forms may be removed. The concrete should then be sprinkled twice a day for a period of a week.

The strength of a trough of this character will increase with age. It may be easily cleaned and will resist the hardest usage. The longer it is exposed to the weather the more durable it will become.

A Trough the Pig Can't Turn Over

be used, but cement, sand and clean, hard river gravel for the first layer, with a two-inch covering of cement and sand mixture for the surface. Such a floor is suitable for driveways and stall floors in barns. Other buildings will not require so strong a floor and can be made cheaper.

When gasoline is kept on the farm for use in engines or automobiles there should be some safe place for keeping it. It should never be kept around the house or barn. Shown in a photograph with this article is a small building of solid concrete used by an Illinois farmer for keeping his supply of gasoline. It also serves as engine room for a small gasoline engine. This structure is all concrete but the door—walls, floor and roof solidly cemented together.

A concrete bulkhead for protecting the end of a tile drain is of much value in protecting the drain from stock and to prevent water from undermining the outer points of the drain.

Any farmer can use concrete in the building of any of the above-named jobs. It requires no expert to handle this material. Rough-finished jobs are just as lasting as the smoother ones. If you are carpenter enough to make well-finished forms you can turn out work like the stock tank shown in one of the photographs.

plant is shown. It is a combined water tower, engine room and cooking room for fruits and other foods. The size of the body is 12x12x14 feet. The room is divided into two parts. One is used as an engine room for a small gasoline engine and the other is filled with shelves and serves as a cooking room in summer and as a frost-proof storage room in winter. The overhead tank furnishes pressure for piping water to all parts of the house and feed lots. The engine operates a force pump that draws the water from a deep well and forces it into the overhead tank. All water lines are put underground, thus preventing freezing in winter. In passing to the tank above the pipes go through the cooling room, thus keeping the air cool.

This water plant can be duplicated on any farm at a reasonable cost. It is both cheap and serviceable, requiring but little skill to construct. The water lines could be extended to any distant part of the farm where gravity would cause the water to flow.

Every farmer knows the annoyance of having his troughs in the hog lot rooted around, upset, and out of place. Also that troughs of wood rot and warp and leak when exposed to sun.

A simple, sanitary and economical use of concrete is shown in the accom-

Everlasting Fence Posts

Care of the Farm Auto

By a Practical Farmer

I AM very well satisfied that a great many readers of UP-TO-DATE FARMING are owners of automobiles. I have owned and used one for three years, the machine complete costing me \$1,200, and as a labor and time saver, as well as a pleasure maker, I consider it one of the best investments I ever made. I have given the workings of the car a good deal of study and will tell how I care for the machine while in use. First, I am careful to keep the carburetor properly adjusted. When I bought the car the carburetor was a great mystery to me, but one day the machine stopped on me when twelve miles from a garage and the trouble was traced to the carburetor. I "dug into the thing," located the trouble and remedied it and since then the carburetor has not been such a mystery. I mention this to illustrate that the best way to get the needed knowledge is to "tackle it" when anything goes wrong, being sure to "save all the pieces," so if you can not get them back together properly they will be there for some one else to assemble. During changeable weather—that is, when one day is somewhat cold and the next warm—it is not easy to keep the carburetor perfectly adjusted and it is best not to do too much changing unless one knows his carburetor so well that he knows almost without testing how much of a change to make. When making a change I keep in mind the number of half turns given the thumb adjustment. Then I know the kind of a change needed for cold and warm weather. I watch the oiling system carefully, always using the best grade of oil obtainable. I use only one make of oil, never changing to another. I once changed to a different make, thinking it would make no difference, but soon found the oiling system not working right. The cooling system comes in for a good deal of attention. When the weather is warm the engine must be kept cool enough so that everything works well. The water in a water-cooled engine is supposed to be always at the boiling point around the cylinder to be certain of best results. It is not supposed to boil in the radiator, of course, but no damage is done if it does, providing the radiator is kept reasonably full and enough lubricating oil is being used to prevent the pistons from sticking. I use nothing but soft water in the radiator, as scale will not form from soft water, changing the water quite often and thoroughly flushing out the water system when changing water. I exercise care to see that the circulation is not obstructed. Of course, all gear cases are kept as full as they should be with transmission grease. Besides keeping the oiling and cooling systems working right and the engine up in trim, there is always the tires to look after. Tires should be kept fully inflated at all times, but the fact that heat produces a greater pressure must not be lost sight of. I find that a tire that registers a pressure of seventy pounds when starting out will easily register a pressure of eighty after an eight-mile run over a hot road on a hot day. When the weather is hot and the road is hot I cut down from five to eight pounds on air carried in the tires, as the heat will soon put that much in a tube. If a tube is patched there is almost certain to be trouble, for the simple reason that the heat will burn the patches off. For use during warm weather a thorough job of vulcanizing makes the only permanent repair on a tube. Small vulcanizers will do this at very little expense and their operation can be quickly learned, but those who do not care to do this should by all means let a cement patch on a tube be only a temporary repair, having the rent vulcanized as soon as possible, as that is the only way to be free from tires going flat in hot weather,

causing delay and disgust with the whole tire proposition. Dust and dirt should be kept off an auto as much as possible, as the more cleanly it is kept the better it looks, the easier it will run and the longer it will last. My car receives a good brushing and rubbing with a woolen cloth after coming home from a drive, all worn grease and oil being removed. I have a full equipment of tools and an especially built house or garage in which the

machine is kept when not in use. My auto is yet in excellent condition, and the expense of upkeep during the three years I have owned it has not been more than half what I expected it to be when I purchased the machine.—John Underwood, R. R. 2, Tunnel Hill, Illinois.

THE MAY BEETLE EXPECTED TO BE UNUSUALLY ABUNDANT

Damage to corn, timothy and potatoes in Iowa, Wisconsin and Illinois done by the common white grubs in 1912 was not less than \$7,000,000. The damage to the same crops in other infested areas can not be figured at

less than \$5,000,000, which brings the total loss, exclusive of strawberries, nursery stock, lawns and miscellaneous crops, to not less than \$12,000,000 for one year. Injury was sustained in almost every section of the country north of the Ohio river, from the Atlantic ocean to South Dakota.

In the northern states injury from this source occurs every third year. May beetles were unusually abundant in 1908, again in 1911, and the grubs caused the greatest damage in 1909 and 1912. The beetle is due again this year and the damage to crops will occur next year.

An infested field may be thoroughly freed from grubs by pasturing it with hogs, and this method should be followed wherever possible. Hogs will root to a depth of a foot or more in search of grubs. Domestic fowls—turkeys in particular—if given the run of infested fields when the land is being plowed, will destroy large numbers of grubs. Pasturing of hogs to root out these grubs should not be practiced earlier than April or May, nor delayed later than the middle of October, since in winter the grubs are probably too deep in the ground to be reached.

The May beetles usually deposit their eggs in fields of grass, timothy and small grains, especially in the vicinity of timber where they feed. The crops planted in these fields the year following a season of beetles should be those least susceptible to grub injury. Such crops are small grains, buckwheat, clover, alfalfa and peas. There is no authentic record of the grub attacking these crops. Such crops as corn and potatoes should be planted on infested fields this year, as this is a season for beetles rather than grubs. These should be kept thoroughly cultivated during the flight of the beetles (May and June).

Liberal applications of commercial fertilizer will assist grass in overcoming grubs if there are not too many of them.

PROTECTING THE CROP

Many a crop that would have yielded the farmer a good profit has netted a loss because of the ravages of disease or insects. It is as much the part of good farming to be prepared with the materials necessary to prevent and combat such damage to a growing crop as to have machinery for planting and harvesting.

Plant diseases are mostly of fungus character, which can be prevented by the use of a good fungicide, such as Bordeaux mixture or sulphur or lime.

Insects which eat the foliage or fruit can be destroyed with poisonous insecticides. These materials should be on hand and used in the right manner at the right time. A farmer can make no better investment than to purchase a supply of these materials and machinery for applying them.

The spray pump is good for orchard use and for tall growing plants and is the only effective means of destroying those insects that are killed by contact with such solutions as kerosene emulsion, nicotine extract, etc. But for applying arsenite of lead, Paris green, Bordeaux mixture, slug shot, lime, sulphur, tobacco dust and other remedies to potato, tomato and other low plants an easier and more economical method is the dusting machine, that covers the plants with a fine dust of the remedial material. The use of the duster is highly recommended, for it is effective, easy and economical, besides being a great time and labor saver.

The well-equipped farm is not complete without a good spray pump, a dusting machine and material to use therein.

Learned It in Congress

"What are you crying about, my little man?"
"My papa is a congressman."
"That's nothing to cry about, is it?"
"I should say it is. He promised to give me a dollar for the Fourth of July if I would raise the same amount."

HERE'S THE FINEST
BOOK ON BUGGIES
EVER ISSUED

I want
To send
it to YOU **FREE**

It will cost you just 1c for a postal card to give me your name and address. That's all I need and the first possible mail will bring you this great big handsome book—which I honestly believe is the finest buggy book ever issued. It describes and illustrates more buggies and harness, more carts, runabouts, surreys, etc., than you can find in 20 dealers' stores.

It's printed in colors, got lots of pictures, tells all about how "Blue Grass" Buggies are made—shows tests no cheap "store buggy" could stand—tells how I can make for you just what you want, style, color, upholstery, etc. Best of all it explains in detail my plan for selling buggies

From the Factory to You

This book is the only salesman I have. By sending it at a cost of only a few cents postage and dealing with you direct I cut out all profits, wages and expenses of jobbers, salesmen, dealers, clerks, etc. I sell my Buggies to you at the same price the dealer would have to pay, and all this big saving goes to you—that's why I can sell you a better Buggy for less money than any dealer on earth. That's the reason why, when you deal with me,

YOU SAVE \$25 to \$50

And then my book explains my free 30-day road trial plan, my "satisfaction or money back" offer and my \$30,000 Guarantee Bond placed in bank here for your protection. Now send for the book—don't put it off—drop me a postal card NOW.

Running Water Systems

By Prof. R. P. Clarkson

RUNNING WATER is not a luxury. It is a necessity on every farm. The saving of time in the performance of all household duties will more than compensate for the small cost and labor involved in installing the system. But greater than that is the comfort it brings, the lightening of the daily tasks, the sense of ownership, and, too, the selling value it adds to the farm.

If the money can be spared it is entirely possible to provide the farm house with all the comforts of the city home. It is to be remembered that running water is but the first step. There should be added afterwards such other comforts as hot running water, a bath room, set tubs, and so on. Therefore in planning any system, no matter how small, it is best to bear in mind that the system will be added to and improved in a little while, and so plan ahead for the additions to be made. Then, as a little more money becomes available, a little more of the supply system can be completed. In this way, little by little, the house may be furnished with a complete water supply system which is first-class in every respect.

If rain water is used as a supply, an arrangement can be made easily. The first few minutes' fall of rain can be allowed to go to waste, while that falling afterwards may be directed into pipes leading to a reservoir in the attic, in the second story, high on the side of the house or even in the pantry or kitchen on a shelf. From this the water may flow by gravity to a faucet at the sink. Every home should have a supply of rain water. Nothing is nicer for washing purposes. Its cleanliness can be assured by passing it through a sand filter and the directing of the first fall to waste.

While a storage above ground for rain water is not desirable in the summer months, there is no reason for not having this arrangement for winter use, if found convenient. Otherwise wells and cisterns must be used.

If the water is obtained from a well or cistern it must be raised to a level above that of the sink and bath if it is to flow by gravity to the sink faucet. The idea is to do all the pumping at one time, say in the morning, and then have running water all day. Raising the water may be done by means of a pump operated by hand, by a wind mill or engine. An indirect use of these may be made by pumping up an air pressure, if desired, in place of pumping the water and then allowing the air pressure to force the water to the level where it is to be used. This method is becoming quite general. Sometimes water from a well is allowed to flow through a valve into an air-tight cistern where air pressure is supplied so that the water is raised to the sink. After all the water has been pumped out the pressure is released and more water flows into the tank, the pressure is again pumped up and the water used as before. A modification of this is used where the water is pumped into a tank buried underground or kept in the basement and the air already in the tank is thus compressed. Sometimes more air is

pumped in to give a higher pressure. A much better scheme than either of these is to have separate tanks for air and water and to pump the air tank to a very high pressure, having an equalizing valve or a reducing pressure valve between the two tanks so that the water is always under a constant pressure of just the amount wished for.

However, it is assumed in this article that the system used must be low in cost and hand operated. Undoubtedly, then, the best device is one which will take the water from the well or other storage basin and by means of a few minutes' pumping each morning will raise a sufficient amount of water for the day's work into a storage tank of any kind—say one or more barrels or casks—from which it

will run out through the sink faucet on demand. Frequently the storage tank is erected in the haymow of the barn and the supply pipe running from this tank will give water at the barn for the stock or at the house for the family. The tank is in no danger of freezing in the winter when the mow is full. The pipes are laid below the frost line and where they are exposed they are packed in sawdust or wrapped with a thick felt covering or even a few layers of bagging.

In this arrangement the well is assumed to be somewhere on the general line between the house and the barn. In the pipe leading from the well to the main line there is a check valve which allows the water to be sucked up, but which does not allow it to run back into the well. The main pipe runs from the house to the barn, joined by the side branch to the well at any convenient point. At the barn the pipe leads to a hand pump, then through another check valve to the storage tank. Thus the water can only flow from the pump to the tank, but can not flow back through the pump. Anywhere on the tank pipe is a faucet, giving a source of running water for the barn. At the house the main pipe goes directly to the kitchen sink, where there is a faucet, and additional pipes may branch from the main pipes anywhere, to lead water to another building or to any other part of the house which is lower than the barn tank.

The pump used should be an easy double action, low down, powerful force pump. It will cost about \$6. The tank can be a molasses hogshead, an oil barrel, or even several of them connected together by short pieces of

pipe at the bottom. The cost should not exceed \$1. If a new tank is purchased, a wooden one of 500 gallons capacity will cost \$12. Each faucet will cost 50 cents. The pipe from well to pump should be 1 1/4 inches in diameter and will cost about 7 cents a foot new, but good second-hand pipe may be very easily obtained at very low prices. From the well to the house 3/4-inch pipe is large enough and will cost about 4 cents a foot new. Each check valve will cost about 40 cents and the shut-off valves about 85 cents. Therefore, exclusive of the pipe, the whole arrangement as outlined, if barrel tanks are used, will cost about \$10.

If hot water is desired a water front costing three or four dollars is put in the stove and connected to a galvanized iron thirty-gallon tank costing, with couplings, \$6. The water front is merely a coil of pipe or a piece of cast iron with twisted windings so that water passes through, remaining for a considerable time under the influence of the heat of the fire. The cold water pipe from the pump has an extension running to the bottom of the tank. Care must be taken to keep all parts of the pipe below the level of the bottom of the tank. A second pipe carries the hot water from the top of the tank. The extra cost of the hot water equipment will not exceed ten or eleven dollars in addition to the extra pipe used. This is 3/4-inch pipe and in most kitchens the amount will not exceed twenty-five or thirty feet, making the total cost for the hot water equipment not over \$15 at the most.

The total cost of the cold water equipment has been stated, but it is well to point out that if the barn and well are so situated that the distance from barn to well to house is only 200 feet, which is true on most farms, the total cost of running cold water in the barn and running hot and cold water in the house will not exceed \$50. It will probably be less, depending upon how much of the pipe used is of the smaller size. If the barn is too far away to pipe, but the well is only 100 feet from the house, the total cost of running hot and cold water in the house need not exceed \$30, and may be less.

In conclusion, each farmer is urged to work out a scheme for his own house, using these suggestions as far as possible. It does not mean great expense, as these estimates have shown you. It does mean an addition to the value of the home, both for living and selling purposes, much greater than any one thing that can be done, and far greater than the cost of installation.

WIND—THE CHEAPEST POWER

During recent years many farmers have gone back on their old friend, the wind mill, and have been using gasoline engines for the purpose of pumping water.

While the gasoline engine is a most satisfactory adjunct to a farm, and can not be replaced at this time as a handy power especially adapted for operating churns, cream separators, feed mills, wood saws and many other machines, it is nevertheless a fact that a good, reliable wind mill will pump water day and night, year in and year out, and by storing it in a tank of sufficient size will supply water as needed. Wind mills have been used for years and years and there are no good reasons for discounting their use now. After the cost of first installation they call for very little expense and require hardly any attention.

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

CHANCES FOR THE FARM BOY

The opportunities for the farm boy were never better than at the present time. The hustler will find—as he always has—a multitude of ways to self-betterment, and the sloth is indeed slothful who can not find at least one path to prosperity.

Agricultural schools are reaching out in the effort to help the rural workers and the correspondence school and the rural routes have made home study convenient. With the general broadening of the scope of farm work new positions are opening. Nearly every county in the many states will soon have a demonstrator or a county agent as they are sometimes called. There is room and to spare for first-rate stock and poultry judges, for good seed growers, for orchard experts and, most of all, for the efficient general farmer. Hundreds of boys, and girls too, are making a success of poultry raising, bee culture or some other branch that is usually regarded as a side line on our farms. Then if taste runs to letters and your desire is to see your name in print, why not tell your story of success to others through the farm papers? It is a good and worthy work and editors of the farm press are glad to receive pithy, interesting articles along the things that make for better conditions on the farm. The camera may be taken up with both pleasure and profit. Surely there are opportunities for the live wire in the country as well as in the city.

The greatest results come to him who has the utmost faith in the work he is doing. However, big things are not accomplished in the city alone. Right on the farm, in daily contact with the soil, with the open air, with the pleasure and hard knocks that are a part of the life, lie the greatest opportunities of all time. To the boy born and raised on the farm the city often lies like a paradise of ease, but it is not. A city is a land of broken promise, of wretchedness to the poor and a maelstrom of greed and struggle for every one. Only the fittest of the fittest survive, and many a farm boy and farm girl have ruined the best instincts of life in answering its call. The country boy, as a rule, by every talent, every instinct, training and association, belongs on the farm, and there he should stay. Like a retired farmer, the boy belongs to the soil. He seldom entirely releases its hold upon him. Newer opportunities are opening for the exercise of talent of every variety right beside us. We should take advantage of them.—W. C. Smith, Fowlerton, Ind.

AN INTERESTING EXPERIMENT WITH MELONS

Having a two-acre field of sandy loam, with a slope to the southwest, I planted it to watermelons in the manner here described: The ground was plowed eight inches deep and put in perfect tilth by repeated harrowings. Rows were laid off seven and one-half feet each way, and with a hoe made hills at the intersections. When the soil was thoroughly warm, which was about April 20, I planted the seed of these three varieties, Halbert Honey, Kleckley Sweet and Tom Watson, one row to each variety alternately.

Now all these melons are of the long green variety. And I planted them

closer than watermelons are ordinarily planted, because it is my experience that the vines do not bear well until the vines are interlapping, and this method covers the ground earlier and produces good yields at an earlier date. I kept the field clean, but disturbed the vines as little as possible, as to disturb them also tends to make production later.

The result of this method gave me an especially productive field of melons about one-third larger than where single varieties are planted in the ordinary manner, and being all the same shape and color, made an attractive appearance and sold well. (Customers buying melons go on appearances, and when a melon of a certain shape and color is found highly satisfactory, they look for others of the same shape and color. Uniformity helps the sales quite wonderfully.)

I marketed 5,456 melons from this field at an average of better than 10 cents each. Some sold for 35 cents and some (not many) netted me less than 10 cents. I am very well pleased with the results of my experience in

crossing varieties, and recommend it to others. I would caution readers not to try a cross with varieties differing much in size, shape or color.—Lon Wilson, Lahoma, Okla.

EXPERIENCE WITH HOGS

Early in November we marketed our fall crop of hogs. There were about fifty-five of them and they brought us \$1,030.25. They were mostly farrowed in the spring and they were kept in good, healthy condition. We did not treat our hogs with serum to prevent disease. We simply kept them in good, healthy condition. We gave them a ration that would maintain them in that condition. We fed and housed them in a way that made exercise every day an absolute necessity. The pigs had a good pasture on which to run all summer. They made a splendid growth, as is shown by the fact that they averaged 230 pounds at the time they were sold. They had a liberal supply of skim milk, and, by the way, we consider hogs one of the best means we have of marketing the by-products from our dairy herd. It has cost us very little aside from the skim milk to get these pigs ready for market. They have paid a good price for the milk. I believe that I can raise hogs successfully and protect them from cholera by giving them clean quarters and by feeding them in such a way that will make it possible for them to resist the disease when it first approaches.—Elbert Stoecher, Oakesdale, Wash., P. O. Box 97.

(Editor's Note—While good care will do much to prevent disease, it is not an absolute insurance against cholera. On our farms, before serum inoculation was provided, our swine

FROM FACTORY

On account of our economical method of shipping goods direct, to fill the actual orders of purchasers we have a proposition extraordinary to offer to a good reputable man in each vicinity to act as our agent, to take orders for car loads of buggies, wagons, implements, binder twine, etc., from their customers and co-operative purchasing societies.

The quality of our goods and our low price is such that you will have no trouble in securing the business. Write today and get our proposition extraordinary, for enough people should read this ad to order at least \$200,000 worth of goods within the next thirty days.

O'Neil Implement Co.

Marseilles, Illinois

head had clean quarters, balanced, nutritious rations, pure water and exercise. Yet cholera came and carried off many hundred dollars' worth on two or three occasions. Good care is absolutely essential to profitable swine production, but cholera is a dangerous disease and should be combated with all the means at our command.)

HOW I MAKE MY GARDEN PAY

I find the following method of garden making in east Tennessee a success, having vegetables fresh and tender from June to November:

In February I have my garden spot plowed. Then I make a large bed and plant my onions, also Cuban beans and early garden peas, which cold does not hurt. Later I plant stringless green pod beans, a bed of lettuce, beets, radishes, parsnips and a few rows of Early Rose Irish potatoes, and by the time these begin to come up I set out some cabbage and tomato plants.

I make rows for beans four feet apart for the first planting and in about two weeks I furrow between the rows and plant the same kind of beans, which are the earliest varieties. I also plant a few rows of early corn and some long green cucumbers, and the first thing you know your vegetables are ready for market as well as table use.

As soon as my onions will do, I gather them, pull up my bean vines, also the pea vines, cultivate the soil, which is very mellow, and plant in beans, and again when these beans are through bearing. Also the cucumber vines. I clear the ground and sow in turnips. In this way, instead of one crop I get three off of the same piece of ground.—Mrs. W. B. Johnson, Jonesboro, Tenn.

PEANUTS—A NEGLECTED PROFIT PAYER

The peanut can be made a profitable crop on a great many farms where it has never been grown. Peanuts are used by both people and animals for food, and in proper proportions are most excellent for either. The large-podded varieties, used for roasting, can be profitably grown only in certain sections where soil and climate are suitable. The Spanish peanut, however, which is the favorite for stock food, and for the manufacture of peanut oils, butter and confections, is adapted to a wider range.

We have found the Spanish peanut a very profitable crop with us, used as a stock food. All kinds of stock, from our bantam chickens to horses, eat them with great relish. Even the dog is fond of them.

In our farming operations a peanut crop can be grown with less labor than a crop of corn, and the yield is greater. Better still, the crop, pound for pound, contains greater and more valuable nutritive qualities. It contains nearly 50 per cent more fat. The vines, if gathered and properly cured, make a rich rough feed for cows or horses and are really superior to clover for dairy cows. On the market peanuts sell for from \$1 to \$1.25 per bushel.

Still another highly desirable feature of the peanut is its excellence as a hog fattener, and the best way to feed them to the porkers is to turn them in the field and compel them to do the harvesting, which they will do with even less waste than when "hogging down" a corn field.

Farmers whose soil is loamy or sandy should get acquainted with the peanut, study its habits and good qualities and make it a profitable part of their crop rotation.—L. Couch Jr., Bryant, Ark.

SUCCESS WITH THE GARDEN

I begin my gardening early in March by planting the seed of cabbage and tomatoes in boxes and tin cans, in the house. When the plants are two inches high I transplant to rich soil in larger boxes, taking care to disturb the roots as little as possible, and giving them room to become strong and stocky. On warm days in April I put them outdoors in the sun to harden them, and later, as the nights grow warmer, leave them out at night. After frost danger is past I plant them in the garden.

As early as possible I plant lettuce, radishes and peas. Two weeks later, onions, beets and carrots. Early sweet corn is put in during the last days of April. May 10th I plant pumpkins, squash, melons, cucumbers, more sweet corn and string beans. I save space by planting radishes, lettuce, green onions, etc., in the same space where later I plant melons, cucumbers and squashes.

Late cabbage is planted in the garden where it is to grow, as in my experience they grow better than when transplanted.

The essential things in success with the vegetable garden are good seed, a fertile, finely prepared soil and thorough, clean cultivation.—T. Y., South Dakota.

CARE OF THE BEE COLONY

With the approach of the warm spring days comes the most critical time of the year for the weak colony that has survived the winter.

The activity of the bees during these warm days requires a greater amount of food than during the colder weather.

If there is not a good surplus remaining in the hive great care should be taken in providing for them a wholesome food in sufficient quantity at regular intervals to keep the colony strong and active.

The best method of providing this food is to dissolve pure white sugar in water so as to make a thick syrup, place it in a shallow vessel and cover with a clean white cloth. This prevents the bees from drowning in the syrup and at the same time gives them ready access to it. The vessel should be placed in the upper part of the hive and completely closed in so as not to attract bees from other colonies.

As the days become warmer and the bees more active they require more food and more care to prevent robbing. After the first few warm days the hive should be raised from its base and all the dead bees removed. This should be repeated frequently. It not only relieves the bees of a vast amount of work, but guards against diseases arising from these decaying dead bees.

Another item that adds much to the health of the colony is proper ventilation of the hive. There should be several openings at the top of the hive so that air may circulate freely through the hive and moisture coming from the bees readily pass off. Bees can stand a very low temperature if they are kept dry, but nothing is more fatal than a chilly night to a colony saturated with a vapor of moisture.

Put your ear to one of the openings in the hive. If the bees can be heard humming in a clear, even tone, and if, by a slight tap on the hive, the hum is suddenly momentarily increased, your hive is in a healthy condition. But, on the other hand, if no sound is heard, and a slight tap on the hive brings but a very dull and feeble response, it is high time you give them some attention.

If the weather is warm throw open the hive, thoroughly air and renovate it, removing all dead bees and filth of every kind. Sprinkle a little salt water over the combs and among the bees. This will put them to work and the chances are that when you listen the day after you will be delighted with the musical hum you will hear coming from them.—Quincy Leckrone.

No-Rim-Cut Tires

Dropped 28%

During 1913 No-Rim-Cut tire prices dropped 28 per cent. As a result, 16 makes of tires now cost more than Goodyears—some almost one-half more.

Yet the facts are these:

No-Rim-Cut tires have become—by sheer merit—the most popular tires in the world.

They were once the high-priced tires. They used to cost one-fifth more than other standard tires.

They embody four costly, important features found in no other tire:

First, the "On-Air" cure, which adds to our tire cost \$1,500 daily, but saves tire users millions of dollars in blow-outs.

Third, the rubber rivets

which we form in the tire to combat tread separation.

Fourth, the double-thick All-Weather tread—the smooth-face anti-skid.

No other tires at any price offer you these features.

Up to 10,000 a Day

Goodyear prices are due to the fact that we make as high as 10,000 motor tires a day.

We make them in a new factory, perfectly equipped. And we sold them last year at an average profit of 6½ per cent.

They offer you all that a tire can give, so far as men know today. They offer four great features found in no other tire. And they offer all this

at a price below 16 other makes. That is why so many men go to Goodyear dealers.

Live Stock Notes

If a second litter of pigs is desired, breed the sow within three to five days after farrowing. Otherwise you will have to delay the breeding for seven or more weeks. It is usually best to have the sows farrow early enough to allow them to go seven weeks after farrowing before breeding again.

At the same price per pound, shorts are preferable to ground oats for feeding young pigs. Oats are nearly as good as shorts in point of nutrition, but they are objectionable for feeding young pigs on account of the coarse hulls, which irritate the digestive tracts of swine. Feed oats to horses.

Next to hog cholera, bovine tuberculosis is about the most devastating live stock disease extant. Every stockman should thoroughly post himself on this disease and utilize every means in his power to combat and eradicate it. Farmers Bulletin 473, U. S. Department of Agriculture, should be read and studied by all farmers.

With tankage at \$53 per ton, and oil meal at \$29 per ton, the oil meal is by far the cheaper feed for pigs. Tankage is about 50 per cent protein, as a rule, and contains 11 per cent fat (though different supplies of tankage vary widely in composition). Pigs will grow more rapidly when fed tankage than if fed on oil meal, and they relish it far better, but at above prices the cost per pound of gain will be considerably more.

There is many a vicinity which should have a co-operative creamery. Under proper management no other institution would be better for the community. It builds soil fertility and bank accounts and keeps plenty of cash in local circulation. "We never had any cash before our creamery was built, but now we have it coming in every month," said a bunch of farmers who were hunting a thoroughbred sire for their dairy herds. There is a certain creamery in a timbered section of northern Minnesota which paid to farmers, during 1912, the sum of \$150,000.

Keep shifting the sheep and you will not only prevent worms to a great extent, but you will build up the fertility of the entire farm. Sheep on the farm may require some changes in the management of the crop rotation, but it will be a change for the better if the sheep are rotated with the crops.

The most expensive period in the life of a calf is the first four weeks, the cost being nearly double that for any other four-week period. This high cost is occasioned by its being almost wholly dependent upon whole milk.

CHEAP PORK ON FORAGE CROPS

Winter rye furnishes the earliest possible forage for pigs, and as the land can later go in other crops, rye is a very cheap feed.

Crop for summer forage should be planted not later than May 5. A mixture of one bushel of oats, one of Canada field peas, four pounds of rape and two of millet makes an excellent summer forage, and on good soil will carry sixteen pigs to the acre, if exceptionally good. On ordinary soils ten pigs per acre is probably all that should be carried, for a pig that does not live in plenty is not making cheap pork.

Pigs on forage should have a grain feed always. Give about four to five pounds of mixed grain feed per hundred pounds of live weight, daily.

Rape alone makes an excellent summer forage, but should be sown on a fertile soil. An excellent grain ration to go with rape is as follows: Seven parts corn, one part bran, one part oil meal, or tankage, mixed into a thick slop at feeding time.

To have a field of early flint corn to turn the pigs into about September

1st is a most excellent plan. Peas in connection with the corn makes it all the better.

In September the oil meal or tankage can be reduced in quantity if peas are being fed.

INFLUENCE OF FEED ON FLAVOR OF MILK

Recently experiments have been made to test the effect of oats on the flavor of milk. These experiments showed that oats do not have the beneficial effect on the flavor of milk which many dairymen believe. Of fifty opinions expressed regarding the flavor of the samples taken from cows fed with oats, and other cows fed corn and bran, twenty-five preferred the milk from cows fed corn and bran, sixteen preferred the milk from cows fed oats and nine expressed no choice. It does not appear that either ration has any decided advantage over the other. There can be no great superiority in the bran-and-corn ration when one-half of the opinions were either indifferent or were in favor of the other milk. In view of these experiments oats, corn, alfalfa hay, cottonseed meal, linseed meal, bran, gluten and other good feeds for dairy cows, when properly fed in reasonable amounts, produce a fine-flavored milk, but there is no substantial evidence that any one of them is superior to any of the others in this respect.

The relative prices of the different feeds will determine in most cases which are to be preferred in making up a ration for dairy cows.

Of course, strongly flavored vegetables and weeds taint the flavor of milk, cream and butter. It requires no test experiments to demonstrate that fact.

GETTING THE FLAVOR IN BUTTER

Butter is known by its flavor, and flavor is made almost entirely before the cream is churned, or during the "souring" or "ripening" of the cream. At this time the butter is given its taste and smell and this can be controlled absolutely by the management of the milk and cream, but let it be plainly understood that no management, however skilful, can take impure milk and at this stage get fine-flavored butter from it. It is easily possible, however, to take perfectly good milk or cream and make a very bad butter by failure to manage the cream properly during the ripening process.

To obtain that fine flavor that brings the highest price the cream at churning time should have a pure, sour taste, and there should be no suggestion of any other taste present. In order to secure this condition the cream should be soured rapidly and not too long. As soon as the cream is taken from the milk cool it immediately to from 45 to 50 degrees, and never mix warm cream with cold. Twenty-four hours before churning start the ripening process by mixing the cream thoroughly, put it in a can, add a little "starter," which may be a small quantity of sour cream or milk, set the can in warm water and stir frequently to get it all of even temperature. This is very important. Bring the temperature up to 140 degrees, then cool down to 60 degrees, and two hours before churning bring it down farther to 55 degrees, at which temperature it should be churned. Do not try to make perfect, fine-flavored butter where the flavor will be lasting without a dairy thermometer to keep the temperature right during the ripening and churning processes. Then work it properly and you will have a product that will stand the severest test of the most discriminating palate.

You need a new DE LAVAL SEPARATOR NOW

1st If you are still using some gravity or setting process of creaming—

BECAUSE YOUR COWS HAVE likely freshened now and your supply of milk is greater.

BECAUSE YOUR YOUNG CALVES will thrive best with warm, sweet separator skim-milk.

BECAUSE YOUR SPRING WORK requires every minute of your time and a good cream separator will be a great time and labor saver.

BECAUSE WITH YOUR INCREASED milk flow your greater waste of cream, without a good cream separator, must run into more money than you can afford to lose.

2nd If you have a very old De Laval or an inferior separator wether new or old—

BECAUSE THE LOSSES OF THE poor separator from incomplete skimming, and the tainted product of the hard-to-clean and unsanitary separator, mean most when your volume of milk is the greatest.

BECAUSE AN IMPROVED DE Laval Cream Separator is so much simpler and more easily handled and cared for than any other, and you can't afford to waste time these busy days fussing with an inferior or half worn-out machine.

BECAUSE OF THE AMPLE AND "more than advertised" capacity of the De Laval, you can separate more quickly and save time, when time means most to you.

BECAUSE THE DE LAVAL SEPARATOR of today is just as superior to other separators as other separators are to gravity setting.

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency simply write the nearest main office, as below.

"I used Fly-Fuma on 50 cows in dairy with perfect results. Man with sprayer will go over the herd in ten minutes. I use on horses with fine results. It is fine for sore shoulders and harness galls. I used Fly-Fuma on dogs, for fleas and on chickens for lice with perfect results." F. McGYACK, Nashville, Tenn.

FARM POULTRY AND ITS CARE

Poultry ranks second in importance to stock raising. Statistics of 1911 show that the American hen laid 1,666,660,600 dozen eggs that year. If these were placed in refrigerator cars holding 400 cases each they would form a solid train over 1,000 miles long. James Wilson, ex-secretary of agriculture, has said that one year's interest on our national debt could be paid with money derived from one month's sale of eggs during the busy season. Now the hen's busy season would be ten months instead of five or six if the hens were housed in comfortable quarters and given the same good care that the rest of the farm stock receive.

It is my object in writing this article to tell how to keep hens on the egg producing job at least ten months of the year.

The three principal grains are oats, corn and barley. If you want fall and winter eggs commence by feeding your hens a large handful of oats to each fowl in the morning, scattered in at least six inches of hay or straw (hay is best). They will have to work hard for their breakfast. Feed corn or barley at night in the same manner early enough so they can find it all before dark. Keep good fresh water before them at all times. Remember an egg is composed of three-quarters water and without water hens can not lay eggs. This is one reason why hens lay better in spring. They get water. Keep oyster shell before them. Shells are very cheap, costing only about one cent per pound and 50 pounds will last 35 hens a year. These help to make and harden the shell of the egg and also serves as grit. If you care to feed your hens at noontime, corn meal, wheat bran and white middlings fed either dry in hopper or wet with milk or warm water, (if wet add one teaspoonful of salt to each 25 fowls) will work wonders in egg production.

Hens should be supplied with some kind of green food during the winter and I find that carrots, beets, turnips and raw potatoes are all good.

Now comes the most important part, the kind of fowls you keep and the marketing of the eggs. If you keep mongrels and they lay eggs of all colors and sizes you will have to sell at the lowest market price, but if you have thoroughbreds and eggs are of one color and size you can get from 7 to 10 cents per dozen more for them by shipping to some city market. If you don't know of a reliable house to ship to, your express agent will tell you of one or more in any city. (A better way is to become a member of the Farmers' Society of Equity and ship to its market representatives, located in all cities—Editor.) Boston market wants brown and New York wants white eggs of uniform size, weighing about 26 ounces to the dozen. They should be shipped as often as every ten days, so if you haven't enough, better get a neighbor to send with you. Eggs such as I have described, strictly fresh, will bring top prices and pay you well for your trouble.—A. L. Bellows, New York.

VENTILATION AND MOISTURE IN INCUBATING

By Archie E. Vandervort, Sidney Centre, N. Y.

From long experience with incubators I have learned the following in regard to ventilation and moisture: It is not safe to take the air cell as a guide in determining the amount of ventilation and it does not always indicate when moisture should or should not be applied. Chicks get out of them with all sizes of air cells. The charts showing the size that the air cells should be are totally unreliable, as the air cell grows larger until near the end of the hatch, when it becomes smaller again. Incubators having the outlet for ventilation at or near the bottom require less ventilation than those having it near the top, as little oxygen is required by the growing em-

bryos, while it is of vital importance that the carbon dioxide thrown off by the eggs be gotten out of the machine, or there will be many chicks dead in the shell.

Incubators that carry a current of air through them usually require applied moisture. Those that heat by radiation only, and have but one opening for both the outgoing and incoming air, retain the moisture which is evaporated from the eggs. When moisture is applied it is better to put in a small pan of water at the beginning of the hatch than to rapidly dry down the eggs and then supply moisture to bring them back to their normal condition. Evaporation is slow at first and it is better to keep it uniform throughout the hatch by checking it at the start. There is the moisture in the egg that is required if we do not waste it by excessive evaporation. Hygrometers for the determining of the humidity of the air are of little use to the average operator. The egg contains about 74 per cent of water and the chick, when hatched, about 60 per cent.

The best place to locate an incubator is in a room or cellar, where the temperature does not vary greatly, but which has plenty of pure air. It does not matter whether it is damp or dry so long as the air is pure. Sixty degrees is the best temperature for an incubating room. If the temperature of the incubating room does not vary greatly and the machine runs evenly, moisture need not usually be applied. More chicks are killed by overheating during the fore part of the hatch than by any other cause. They usually die about the seventeenth day.

Burned Easily

Preacher—Yes, we saved most of our things from the fire. But the sermons I preached for the last ten years were all burned.

Deacon—I see. They were dry, of course, and burned very quickly.

They All Want to Help the Farmer. But when the Crops are Raised---What Then?

lished our county clearing house and I was made chairman of the executive committee. I at once laid the situation, regarding potatoes in our valley, before our national headquarters. In a few days we were connected up with representatives of the F. S. E. who could handle all the potatoes in our county and in less than thirty-five days we disposed of and shipped thirty-five car loads of potatoes at prices ranging from 62 cents to 70 cents per hundredweight f. o. b. Hamilton, Mont., and realized more than this at other points with lower freight rates. The prices we received through the Equity System were almost double what we were offered through the speculator system. The producers through this section are unanimous in their verdict that the F. S. E. has the marketing situation saved. Every member in our county is wide awake and boosting for the society and its president.

Yours very truly,

C. M. PARR.

Chairman Executive Committee, Ravalli County Clearing House, F. S. E.

Will the farmers in the Bitter Root Valley of Montana be backward about co-operating through their own business organization while it pays them to co-operate, like this example? Farmers are organizing more today than ever before and more than any other class. These facts disprove that they are too individualistic to co-operate or that they will not work together if they can work together advantageously. The trouble has been that they did not have the right plan and their organizations did not give them sufficient benefits—profits.

We don't like to say it, but we have no confidence that anything good will come out of such conferences. We have often told farmers to not depend on other classes of people to give them a business system. But it would be much more to the point for farmers, exclusively, to meet in a national conference and consider the whole subject,

and we predict that before they were in session four days they would find a plan or formulate one that they could agree upon. Then, with representatives at such a conference from all parts of the country to carry the plan back to their homes, who would attempt to predict the good that would come to agriculture in the first year of such a movement? We deny that more data must be gotten or more investigation be made to diagnose the trouble and prescribe a remedy. Enough is known now and plans are working out now that, when fully applied, will accomplish all the farmers desire or that their friends on the other side pretend to desire.

But we don't need to wait for such a conference. With a local clearing house of the Farmers Society of Equity at each place where no organization now, and federating the present associations, lies the farmers' hope for a speedy and complete solution of their marketing problems. And when farmers have their successful system of marketing all other good things that they need will quickly follow.

A LOCAL CLEARING HOUSE WANTED

in every farming community, at once. This is necessary to market the crops to get all that the final market pays now and to soon bring about such control as will allow the producers to get their prices at their shipping point. Anybody who stands well in the community can organize. See blank on page 13. Fill it out and send today.

FARMERS SOCIETY OF EQUITY
Indianapolis, Indiana

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

In April, 1913, the first National Conference on Marketing and Farm Credits was held in Chicago.

At that conference there were 415 delegates in attendance, of which twenty-one gave their occupation as farmers. The others represented boards of trade, chambers of commerce, chain stores, consumers' co-operative unions, commission men, retail dealers, grain dealers, lawyers, manufacturers, publishers, railroad men, storage men and representatives from the Department of Agriculture and agricultural colleges.

The second conference met at the same place last month for four days. The number of delegates was not as great, only 160 answering to the roll call. Twelve of these admitted that they were farmers.

The purposes for which these conferences were ostensibly held are of the most vital interest to people engaged in agriculture. We may then ask why were farmers so conspicuous by their absence? Was a sincere attempt made to get the farmers to attend? Or did the farmers conclude in advance that the conference would be dominated by other interests, as the charge was made on the floor of the conference? Or was it the idea of the promoters and those who prepared the program and those who had charge of the conference that they would meet and decide what should be done for farmers and then expect the farmers to carry out the program that they would lay down?

The question can not help but come up: Are these conferences held with the sincere idea of doing something that would mean a real help and benefit to the farmers of our country? Or have they been held for the purpose of throwing more dust in farmers' eyes to keep them from seeing things clearly and from doing anything definite and practical along the line of establishing an improved marketing system? As two conferences have already been held, and as the last one resolved itself into a permanent society, we may well ask whether its purpose is to promote sound organization of agriculture and practical co-operation to solve farmers' marketing problems, or to retard their solution.

The delegates were from among the same class of people who have been helping farmers for years, in their own way. Notwithstanding this, we find people in the cities still complaining about their inability to buy the fruits and vegetables of the farm at prices they can pay, while great quantities are spoiling in the fields and orchards. Is it reasonable to believe that the two conferences could not find a starting point to attempt a solution, if they wanted to? Inasmuch as the interest of the farmers, as regards improving their marketing system, and the interest of most of the other people in handling the produce of the farm, are not common, then why should the other people interest themselves so much in the solution of the problem? Why should they not prefer to perpetuate the present system, when looked at from their own financial viewpoint?

At the conference Professor Carver of the Rural Organization Service of the Department of Agriculture said that co-operation is backward with farmers because of their extreme individualism. He said they are so accustomed to bossing their own affairs that they do not easily work with one another along co-operative lines.

But is this true in the main? In some cases it is unquestionably true, but in such cases it is not the result of unsatisfactory experience in organization and co-operation, and will not examples of successful, profitable co-operation quickly change the condition? We believe that farmers will trust their business affairs to an expert business agent if by doing so it pays them.

Here is an example:

Hamilton, Mont., April 17, 1914.

Farmers Society of Equity,
Indianapolis, Ind.

I want to say a few words commending the national clearing house for helping the Bitter Root Valley out of a critical dilemma.

Last fall the prospects were very flattering for a dollar per hundred for potatoes f. o. b. Hamilton. Consequently a great many of our members, also outsiders, pitted their surplus stock for spring marketing. About forty days ago our local buyers declared there was no market for potatoes, as the cold storage stock was more than sufficient to supply the demand, and offered 35 cents per hundred, sacked, for potatoes. New sacks were selling for 11 cents and 12 cents each. The farmer was up against the same old thing—the speculator had control of the situation and the producer was the goat. About this time we had estab-

Then the great problem is to organize and federate at every market town, city or station. Then use the organization as the farmers' local business organization. Make it a power in the community. This can be done by the F. S. E. plan. It is being done now in spots all over the country and this is the only way to the success of the national organization.

If your community is not organized or federated, send the blank and get full instructions. If you and your neighbors are dissatisfied with the old marketing system you can end it this year, if you want to.

THE BLANK
Farmers Society of Equity,
Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions and compensation for organizing. I will take the lead in my community.

LIVE STOCK
Conditioner

is a wonderful medicated salt which rids farm animals of their greatest enemies—the deadly stomach and intestinal worms. It kills and expels these blood-sucking, life-sapping parasites and greatly lessens the danger from hog cholera and many other diseases.

I'll Feed Your Stock 60 Days Before You Pay

Send no money—just tear off the coupon below, mark down the number of hogs, sheep, horses and cattle and mules you own, give your name and address and shipping station and I'll send you enough Sal-Vet to last all your stock 60 days. You simply pay the moderate freight charge when it arrives and at the end of 60 days report results. If it don't do what I claim—if it fails to rid your stock of the dangerous stomach and intestinal worms I'll cancel the charge—you won't owe me a penny.

SIDNEY R. FEIL, Pres.

We Cannot Send Samples to All, So These Photographs

We get a great many requests from farmers for samples of seed corn that we have advertised so extensively in this paper. They want to see it before they buy it. As the season is advancing and as there are a good many thousands of farmers who have not sent for samples and probably don't want to take the trouble, we took some grains right out of the bulk corn like we fill orders with and had them photographed. See them here.

These are not select grains, understand, but from the bulk. They are correct samples. If you can get such corn to plant would you not like it? Then if the corn has been bred for years and years for quality and productiveness, would you not prefer such seed to your own, which has probably been grown for years without the expert knowledge of how to select and grow for the highest type and quality? Our Farmers Interest corn has been bred for

FARMERS INTEREST WHITE DENT—Six grains laid end to end measure more than four inches. Order some of this corn and match the grains to this photograph and if it is not a true sample we will take it back.

IMPROVED REID'S EARLY YELLOW DENT—Five grains 3 3/4 inches. Order some of this corn and match the grains to this photograph and if it is not a true sample we will take it back.

twenty years. It is so perfect that it has invariably been awarded the first and sweepstakes prizes at all the great corn expositions and shows for a dozen years back. The other variety is the best strain of the famous Reid's corn in the country. We're proud of both of these varieties, because we know every farmer who plants them will at once realize what patient, intelligent work for years will accomplish in improving grain. The selecting, breeding and improving of these varieties of corn have conferred on farmers, and all the people, greater benefits that they can reap, than all the works of Luther Burbank, the plant wizard of California.

And our last word is: THE PRICE IS LOW. Send your name for catalog, prices and photo reproductions of world's and other prize-winning exhibits, FREE.

O. K. Seed Store

Indianapolis, Ind.

Dear Reader - Listen to Me!

YOU may believe every word I say. If you will, the time you spend in reading this advertisement will be the most profitable period of your life. I can put you in the soap business where you can easily make \$150.00 per month. Any bright man or woman can make more money working for me than in any other way. I have hundreds of agents making \$2,000.00 a year. I have always been in the agency business, myself, and I know it from A to Z. I will teach you how to make sales and make you successful. I have made money in the agency business, and many of the agents I have taught have made their pile and retired.

I now have a much better proposition than ever before—one that makes my agents more money, and I like it better myself. The reason my agents have been so successful is that I do not handle junk, tinware or cheap John goods of any kind that never lead to repeat orders. I do not pay my agents with premiums, but they get hard cash and soon have money in the bank. It is repeat orders that make money in any business. Go into any home on Monday morning and you will find them washing; go to the neighbors and you will find they are washing too. It is the same thing all over the country. The demand for soap is unlimited, and repeat orders never cease. Now, what does this all mean? It means that someone is getting the enormous profit from your territory which should be yours.

There is big money in the soap business and I give my agents the big end of the profit—a profit so large that I hesitate to state in this public manner what it is, but will be glad to advise you confidentially when you write me. Suffice it to say for the present that you will be satisfied. I can give you a chance to make such a big profit that you will be more than satisfied with your income and willing to stay with me year after year and be one of my loyal representatives. I personally teach every agent how to make money and make it fast. My plan has been a great success, and I will give it to you FREE. Now, I want to say to every man or woman who is anxious to make money and better their condition, write me. Don't lose a moment's time, but write me at once, and address your letter to **JOHN B. HECOX, General Manager of the Wolverine Soap Company, 180 Water Street, Portland, Michigan.**

Clearing House Problems

From the day of its organization the local clearing house begins to be confronted with problems, and on the manner by which they are solved depends the success of the local. Upon its success depends its permanency. The success of the national organization depends upon the permanency of the locals, and upon the success of the national organization depends the degree of success the locals may be able to attain. A certain degree of success can be won by a local association without affiliation with others in a national organization. But such an association soon comes upon problems vital to its greatest success which can not be solved by itself alone. Witness the examples in Texas and in every state. Hence problems of importance to the local reach out to the district, the section and the nation, and the problems of the national body also become the problems of the local body. There are problems purely local, and these the local must solve for itself; and unless it solves them it can not be a success, regardless of what it may do in connection with the greater organization on problems of wider importance. Therefore this new department is created, and will be maintained to assist locals in the solution of all their problems, local and general. Secretaries, organizers and members are invited to participate in the discussion of their own and others' problems in this department. Bring your problems here for solution. Address all matter for this department to **PROBLEM DEPARTMENT, Farmers Society of Equity, Indianapolis, Indiana.**

Problem No. 2

HOW TO USE THE LOCAL PAPERS

It is wholly impossible, in the limited space allowed in this issue, to cover more than one phase of this problem, which has several phases. For instance, the organizer should use the local paper to acquaint the farmer reader with the general objects of the society and show the practical way in which it would work with the local affairs. The notices of meetings should be announced therein. Discussions by well-informed members on subjects of handling the business through the society would be both interesting and helpful. Local exchange of products can be done to great advantage through the columns of the local paper. There are many and various ways by which the paper can be made of useful service to the membership and in time we hope to treat on all of the more important ones.

The particular phase of the problem to be taken up this time is the organizers' problem: How to use the paper to promote the growth of the society. First, he should post himself as thoroughly as possible on the work the local clearing houses will be called upon to undertake when organized and ready for business. This depends wholly upon the local conditions of farming and marketing—of what is marketed, where it is marketed and how it is marketed. The organizer must be able to show clearly how this marketing can be done to greater advantage through co-operation. He must not depend upon "glittering generalities," but must dig right into the actual work, getting right "down to brass tacks," and show just what methods will be used to get the produce from the farm to the market and the saving that will be effected thereby. Then he should go and talk the whole matter over with the editor of the paper and make him a convert to the new system. He should then prepare a few brief, pointed, clear-cut articles, dealing not with generalities or long-winded arguments on general principles of co-operation, but deal practically with some phase of the local marketing problem, giving a few facts and figures, and challenging a discussion. Nothing arouses interest in a community more than a discussion in the local paper.

Do not try to cover the entire subject in an article. You will make it too long if you do. Give just the essentials, and announce that you will go into the matter fully in your meetings in various neighborhoods.

In the next issue, May 15, unless some one sends in a problem, we shall discuss the following subject: Can renters, not being permanently located, profit by becoming members?

A County Clearing House Problem

UP-TO-DATE FARMING:

Delegates representing the Clarion County (Pa.) Clearing House held their regular quarterly meeting Saturday, April 4, at the meeting place and as guests of the Churchville local. The meeting was well attended. Important action was taken regarding co-operative buying on the county unit basis. Closer federation along all lines of both buying and selling was agreed upon as the keynote of progress. One thing done, however, I consider ill advised. A resolution was passed to the effect that the total compensation to be allowed a local organizer in this county shall be 50 cents on the first ten members and after that nothing at all, the balance of the organization portion of the membership fee being forfeited to the local clearing house treasury. In my judgment nothing could be devised to more effectively rope, throw and hog-tie an organizer. And without active organizers this work simply will not make progress. May I ask where the county clearing house obtains legal or moral authority to regulate the membership fee or the organizer's commission?

(County clearing houses have no such authority, unless given a special dispensation by the National Clearing House. The membership fee is a fixed quantity, made so by the constitution and by-laws, and is also apportioned by it. Neither local, county, district or state divisions have the right to make any changes.—Ed.)

I consider the organized farmers of this county have saved, at a conservative estimate, from \$2,000 to \$2,500 on fertilizer alone. By fall this saving will be easily increased to \$5,000.

Therefore, in view of the savings made by the society, it ill becomes the members to either compel the local organizer to work for practically nothing, or else to abandon the field, and I for one have no confidence in the permanency of any organization that insists upon coming into existence, growing and living upon the free donations of time, labor and money of others.—R. M. Forringer, New Bethlehem, Pa.

One Equity Man Writes to a Brother

Tobias, Neb., April 14, 1914.

W. F. Sudduth, Broadview, Mont.

My Dear Sir:

Note yours of the 10th and am glad to do anything I can to further the interests of the Farmers Society of Equity.

I can't begin to tell you all about what we are doing in a short letter. There are so many things we have done. Then I

would not know just what of these might interest you. Ours is a grain country primarily, although the corn crop the past year was a total failure. Our local has sixty-seven members now and I hear that we will get more soon. We were organized the last of November with thirty-two.

In the short time we have been working we have marketed about thirty cars of grain. We are buying our corn and hay. Today I am selling a car of wheat. I just bought a car of corn. I estimate that we are saving at least 2 1/4 cents per bushel on all our grain. I shall send a report in detail to our official paper, where you can read it in a few days, not only of our local, but of our district. We organized the district clearing house in February. We have bought since then a car load of sugar and are working on our binder twine order now. I hope we will be able to make up three cars of twine. Then as secretary of the county clearing house I have gotten much other information for the locals about matters that they were interested in. Another year I think the bulk of all the members' business will be done through the society.

If there is any particular subject you would like to know about just let me know and I will tell you all I know. Hoping your local will be as successful as our own, I am

Truly yours,
R. M. TYSON,
District Secretary.

America's Telephones Lead the World

Service Best—Cost Lowest

from London Daily Mail

Why is it that Government ownership and management of the telephones is practically always a failure?

Why is it that throughout the length and breadth of Great Britain and the Continent hardly a single efficient long-distance service is to be found? Why is it that—

from "Electrical Industries" (London)

THERE is a certain amount of satisfaction in the fact that Mr. Winston Churchill got so angry over the freaks of the telephone the other day that he flung his receiver on the floor. As a member of the Government which purchased the telephone system, he deserves all the torture that Post Office working can inflict. But his rage, and his

From "Le Petit Phare de Nantes," Paris

"But today I found I had to talk with Saint-Malo, and, wishing to be put through quickly, I had my name inscribed on the waiting list first thing in the morning; the operator told me—though very amiably, I must confess—that I would have to wait thirteen hours and ten minutes (you are reading it right) in order to be put through."

Herr Haberland, Deputy, in the Reichstag

"The average time required to get a connection with Berlin is now 1 1/4 hours. Our business life and trade suffer considerably on account of this lack of telephone facilities, which exists not only between Düsseldorf and Berlin and between Berlin and the West, but also between other towns, such as Strassburg, Antwerp, etc."

Herr Wendel, in the German Diet.

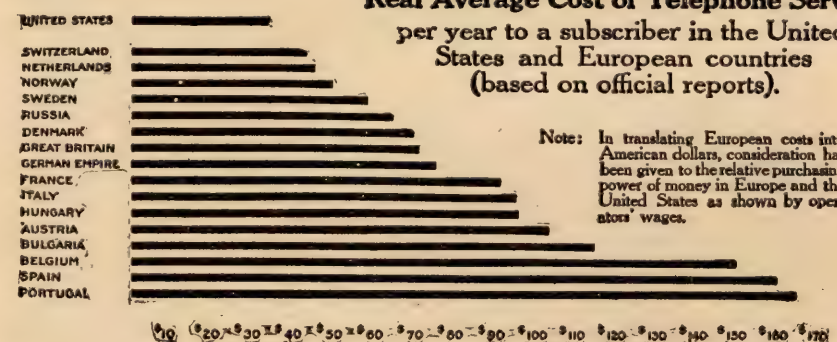

"I refer here to Freiberg. There the entire telephone service is interrupted at 9 o'clock p. m. Five minutes after 9 o'clock it is impossible to obtain a telephone connection."

Dr. R. Luther, in the Dresdner Anzeiger

"In the year 1913, 36 years after the discovery of the electro-magnetic telephone, in the age of the beginning of wireless telegraphy, one of the largest cities of Germany, Dresden, with half a million inhabitants, is without adequate telephone facilities."

Real Average Cost of Telephone Service

per year to a subscriber in the United States and European countries (based on official reports).

Note: In translating European costs into American dollars, consideration has been given to the relative purchasing power of money in Europe and the United States as shown by operators' wages.

These are the reasons why there are twelve times as many telephones for each hundred persons in the United States as in Europe.

HIGHLY SATISFACTORY REPORTS FROM THE NEBRASKA DISTRICT UNION

Officers and Members Send in Flattering Reports of Splendid Success in Co-operative Buying and Selling Through the Equity System

From State Organizer B. F. Walton, From Geneva Local No. 7103

Geneva local No. 7103, F. S. E., is a real business organization with ninety members. We have done about \$15,000 worth of business since January 1, 1914. Every Tuesday is market or shipping day and we are shipping wheat, poultry, eggs, alfalfa seed, etc. Wheat is being shipped this week. We also shipped in coal, lumber, potatoes, flour, one car of sugar, one of salt, chicken grit, groceries, etc. We are making up an order for a car of twine, also another car of flour. Mr. A. E. Weber, our business agent, has been getting prices on farm implements. We find we can buy direct from the factory in most cases. We find co-operating is very easy when there is something to co-operate for. Our business agent can get anything from a pin to a threshing machine and he can sell anything from an egg to a train load of grain or stock. The F. S. E. is the only farm organization that has a successful marketing system established. We have saved thousands of dollars through this society.—B. F. Walton, State Organizer, Geneva, Neb.

THE GENEVA LOCAL BUYS SUGAR
A. E. Weber unloaded a car of 417 sacks of sugar today (April 11) at a saving of over \$1 per sack.

GETS MORE FOR POULTRY AND EGGS
"I have been shipping my poultry by the Equity System and received 5 cents per pound over local dealers' prices. Also am shipping my eggs at a gain of 3 cents per dozen over home prices."—L. W. Myers, President of the Geneva Local, Geneva, Neb.

WHEAT BROUGHT \$35 MORE PER CAR
"I shipped a car of wheat by the Equity System and received \$35 more than local prices."—Cecil Wilson, Member of Geneva Local No. 7103.

SAVED OVER \$100 ON TWO CARS OF WHEAT
"On two cars of wheat sold by the Equity System I received over \$100 more money than local market quotation."—W. W. Fuller, Member of Geneva Local.

EARNING SAVINGS ON EVERY HAND
"Members are saving from 30 cents to 40 cents per sack on flour. Saved from \$2 to \$3 per ton on coal and about one-half on coffee."—B. F. Walton.

ONLY A START, BUT A GOOD ONE
Tobias local No. 7338 has handled a total of 25 cars, in and out, since January 1, 1914, as follows: Corn, 10; wheat, 4; oats, 2; hay, 6. The savings were: On corn, \$261.50; wheat, \$120.53; oats, \$59.60; hay, \$23.57; total, \$461.20. On poultry shipments our savings were: \$75; cream, \$150; eggs, \$40; flour and feed, \$136.55; miscellaneous, \$25; total, \$451.55. Market days, Tuesday a. m., Thursday a. m. and all day Saturday. We are only beginning, but watch us. We are now in absolute control of the local grain market and some day will have an elevator and creamery.—R. M. Tyson, Secretary, Tobias, Neb.

Fixing the Marketing Machinery

UP-TO-DATE FARMING:

I am sending check to keep my subscription ahead, for I do not want to miss a copy of UP-TO-DATE. You are certainly trying to repair the part of farming that really needs fixing. When any part of a machine is not working right, the sensible thing to do is to stop the whole machinery right then and there and fix it before the whole business goes all to smash. For instance, when the threshing machine has a loose bolt, or a broken belt, or the straw stacker sticks, the threshman doesn't keep crowding the cylinder full—he stops and fixes what needs fixing. The same rule should apply to agriculture. No matter how well the production part is working, if the marketing belt is slipping, or the price gear is jumping cogs, shut down long enough to fix it, before something tears loose and smashes up the whole business. UP-TO-DATE is working right where the fixing is needed. Right-minded farmers must certainly appreciate your work.—Walter R. Cibart, Keldron, S. D.

Better Late Than Never

UP-TO-DATE FARMING:

While we are but just getting started in the Equity work in this county, we are progressing very well. We organized our county clearing house in December, 1913. Since then we have marketed several cars of grain and four cars of potatoes from this point, and have several more to ship. We have ordered and received a car of farming implements and wagons which were very satisfactory both in quality and price. We were a little late in ordering, being new in the business, but hope to profit by our experience and line things up still better another season. Success to Equity.—O. M. Hess, Secretary County Clearing House, F. S. E., St. Anthony, Idaho.

Ships His Own Eggs

O. M. Stone of Cottageville, W. Va., a very successful poultryman, whose story was published in the special poultry number, January 15, has been shipping eggs through the Equity System since December and to date (April 15) has shipped 1,440 dozen to New York city and Pittsburgh. His eggs are strictly prime, absolutely fresh, graded as to size and color, and our representatives have no difficulty in securing for him the very top of the market. Mr. Stone writes us that it pays big to ship to the Equity System, even in single case (30 dozen) lots. His eggs have sold from 41 cents a dozen in December to 23 cents for the last shipments reported.

BUSINESS EXCHANGE
CLASSIFIED DEPARTMENT

Real Money-Saving, Money-Making Opportunities—You Can Sell Anything on You Can Buy Almost Anything by Placing Your Offer Before Our Million Readers

CLASSIFIED ADVERTISING—50 Cents a Line, or for eight (8) words. No display, except the first words will be set in capitals, each initial, numeral, abbreviation and key counts as one word. All orders must be received ten days before the date of the paper in which it is to appear. Remittance or reference should accompany all orders. Circulation guaranteed, 200,000 copies or more. When writing to these advertisers say "I saw it in UP-TO-DATE FARMING."

FARM LANDS

PRIVATE CAR EXCURSIONS—My next two private car excursions leave Chicago Tuesdays, May 5 and 19; round trip to Wellston, my Michigan headquarters, \$8.30; return Friday morning, 7:20 a. m.; 50,000 acres to select from in the fruit and clover belt of Michigan; Mason, Manistee, Lake and Wexford counties; admirably adapted for fruit raising, stock and general farming, grains, grasses and all vegetables; prices \$10 to \$35 per acre, and much good land at \$18; payments of \$10 to \$50 down and \$5 to \$10 per month on 40 acres, or annual terms; exempt from taxes for five years if you improve it; write for 72-page booklet and large map free; lake and rail transportation. George W. Swigart, owner, Z-1250 First National Bank Bldg., Chicago.

FARMS WANTED—We have direct buyers; don't pay commissions; write describing property, naming lowest price; we help buyers locate desirable property free. American Investment Association, 71 Palace Building, Minneapolis, Minn.

OUR MARKET REVIEW

UNDER date of April 18th Bradstreet's summarizes the business of the country as follows:

Quiet. Brighter weather helps western and southern trade. Wholesale trade and industry move forward haltingly. Better weather for crops. Last week's freeze did little damage. Winter wheat excellent. Increased areas in leading crops. Season late. Commodities lower, despite war alarms. Argentine corn penetrates the west. Coal dull. Bituminous mines idle. Textiles irregular. Wool higher than year ago. Cotton consumption larger than in 1913. Stock market variable. Bond market active on easy money.

The most important event tending to affect markets and prices, since our former report, was the war-like acts of this country against Mexico and the defense put up by that country. The war excitement is held at least partly responsible for grain advancing on April 22. Wheat closed $1\frac{1}{2}$ c higher than the day before, corn $1\frac{1}{2}$ c higher and oats $1\frac{1}{2}$ c higher. Just why the prospect of war with Mexico, or actual war, if it comes, should cause prices to advance can not be accounted for except that it brings into the matter a new element of uncertainty. Speculators are quick to take advantage of every such occasion to reap all the profits possible on a fictitious rise.

The prospects for the 1914 wheat crop still continue to be about the best ever. The government report for April gives it at 95.6 per cent of a normal. April 1, 1913, it was 91.6 and the yield was the greatest ever grown. The average April condition for the past ten years was 85.7. Following are the countries that raise a surplus of wheat to export with their crops of recent years:

	1913
United States.....	763,000,000
Canada	209,000,000
Argentina	110,000,000
Roumania	82,000,000
Russia	836,000,000

The largest world's wheat crops were in 1912, 3,300,000,000 bushels, and in 1913, 3,000,000,000 bushels. These greatest crops have been consumed, as the world's supply now is below normal. This country seems to be in a fair way, with the splendid condition and increased acreage, to excel last year, but will the world keep up its performance of a 3,800,000,000-bushel crop or better? Canada can not throw its crop into this country because of the tariff that the Canadian government would not permit us to take off. Argentina could not afford to send its surplus here unless our market was about 10 cents above a world's basis, and if we took all her surplus it would leave a void in Europe that we could fill later. The point is, that if the United States wheat growers will hold their wheat for \$1 a bushel and refuse to sell it for less the first six months of the year, the demand in this country would be required to pay the price, and after six months or thereabout the world's price would go to ours and the surplus would be taken for export at \$1 or higher. Think about this matter. We would like to get this paper into the homes of all the big wheat growers in the country and have their co-operation to make them some nice profits out of the wheat crop.

September future wheat is quoted at 88 cents. This is no indication of the price that the next crop will sell for. To illustrate: In May, 1905, September speculative wheat sold as low as 78 $\frac{1}{2}$ c, but the crop subsequently sold up to 91 $\frac{1}{2}$ c. April, 1906, low 76 $\frac{1}{2}$ c; subsequent high, 84 $\frac{1}{2}$ c. April, 1907, low, 78 $\frac{1}{2}$ c; high, \$1.04 $\frac{1}{2}$. April, 1908, low, 82 $\frac{1}{2}$ c; high, \$1.02 $\frac{1}{2}$. April, 1909, low, 99 $\frac{1}{2}$ c; high, \$1.20. May, 1910, low, 90c; high, \$1.03. April, 1911, low, 85c; high, 95 $\frac{1}{2}$ c. April, 1912, low, 93 $\frac{1}{2}$ c; high, \$1.10 $\frac{1}{2}$. April, 1913, low, 87 $\frac{1}{2}$ c; high, 93 $\frac{1}{2}$ c.

These prices would seem to give confidence that the first price that may be offered for the new crop could be rejected with good chance of gain. Cash wheat is 2 cents higher than two weeks before, but 10c lower than a year before.

Indications are for a record-breaking acreage of corn to be put out. Cash corn is about 3 cents lower than two weeks before. This decline is probably because of offers of Argentine corn in the southwest via Galveston at considerably less than domestic corn prices. With a normal corn crop and normal prices in this country it is not likely that any Argentine corn will reach us, but will go direct to Europe. The following table gives some interesting comparisons:

Year	Argentine Corn		United States Corn	
	Production	Exports*	Production	Exports,*
	Bushels	Bushels	Bushels	Bushels
1909	177,155,000	89,499,359	2,772,376,000	38,128,498
1910	175,187,000	104,727,358	2,886,260,000	65,614,522
1911	127,675,000	4,928,362	2,531,488,000	41,797,291
1912	295,849,000	190,459,100	3,124,746,000	50,780,143
1913	119,642,000	110,000,000	2,446,988,000

*Includes corn meal reduced to terms of crop failure due to drought.
†Preliminary estimate.

Oats seeding has been delayed over some large districts and the acreage will probably be below normal. The price shows a further decline.

On this date potatoes are urgently wanted in several markets and higher prices pre-

vail. This is a treacherous season though, and we advise caution. Any considerable advance in price will tempt large shipments and break the price. Also about May 1 the marketing is usually heavy because of a desire to reduce stock rather than to list for taxation. The southern crops of vegetables and potatoes are late, which lengthens out the season for northern supplies and helps the price. A larger acreage of cotton is indicated by reports.

Advice

WHEAT—If we could get one-half million wheat growers to adopt the slogan, "Dollar Wheat and Ask It," we'd advise to hold for a dollar and we know it would be paid. **CORN**—Market gradually at 65 cents or better, basis Chicago market. Stop the moment it goes below. **OATS**—The May government report on the acreage sown and condition will be about the first indication whether prices will be higher or remain as they have been for a long time. **POTATOES**—Market gradually. **COTTON**—If war actually results with Mexico prices will very likely be higher.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on April 11, 1914, with comparisons, are shown in the following table:

	April 11, 1914	Change from two weeks before
	Bushels	Bushels
WHEAT	55,317,000	-4,000,000
CORN	20,551,000	-2,171,000
OATS	22,146,000	-1,128,000
BARLEY	5,677,000	-695,000

	1912	1911	1910
WHEAT	730,000,000	621,000,000	635,000,000
CORN	200,000,000	216,000,000	150,000,000
OATS	198,000,000	170,000,000	131,000,000
BARLEY	89,000,000	95,000,000	110,000,000
	630,000,000	514,000,000	699,000,000

The visible supply of wheat in Canada on the same date was 40,700,000 bushels. This is 2,253,000 bushels less than two weeks before and 1,655,000 bushels less than a year before. The visible supply of oats was 13,910,000 bushels on the same date, which is 1,270,000 bushels less than two weeks before and is 3,330,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on April 22, 1914, two weeks before and a year before as follows:

WHEAT, No. 2 RED			
	Two weeks before	A year before	
Chicago	93 @ 94	1.05 @ 1.09 $\frac{1}{2}$	
St. Louis	92 $\frac{1}{2}$ @ 93 $\frac{1}{2}$	1.10 @ 1.11	
Kans. City	88 $\frac{1}{2}$ @ 89 $\frac{1}{2}$	88 $\frac{1}{2}$ @ 89 $\frac{1}{2}$	1.00 @ 1.04
Cincinnati	96 @ 97	96 @ 97	1.10 @ 1.12
New York	1.05	1.04	1.14 @ 1.16

Minneapolis—Spring wheat: No. 1 hard, 95 $\frac{1}{2}$ c; No. 1 northern, 93 $\frac{1}{2}$ @ 94 $\frac{1}{2}$ c. Two weeks before, 91 $\frac{1}{2}$ @ 92 $\frac{1}{2}$ c and 89 $\frac{1}{2}$ @ 91 $\frac{1}{2}$ c respectively. A year before, 91c and 89 $\frac{1}{2}$ @ 91 $\frac{1}{2}$ c respectively.

CORN, No. 2 WHITE			
	Two weeks before	A year before	
Chicago	65 $\frac{1}{2}$	68 @ 68 $\frac{1}{2}$	59 $\frac{1}{2}$
St. Louis	71	72 @ 72 $\frac{1}{2}$	59 $\frac{1}{2}$ @ 60 $\frac{1}{2}$
Kansas City	69 @ 70	70 @ 71	58
Cincinnati	74 @ 74 $\frac{1}{2}$	71 @ 72	62 @ 63
New York	74 $\frac{1}{2}$	76 $\frac{1}{2}$	63 $\frac{1}{2}$

OATS, No. 2 WHITE			
	Two weeks before	A year before	
Chicago	39 $\frac{1}{2}$	41 $\frac{1}{2}$ @ 42	36 $\frac{1}{2}$ @ 37 $\frac{1}{2}$
St. Louis	40 $\frac{1}{2}$	41	36 $\frac{1}{2}$ @ 37
Kansas City	38 $\frac{1}{2}$ @ 39	40	36 @ 36 $\frac{1}{2}$
Cincinnati	42 $\frac{1}{2}$ @ 43	42 $\frac{1}{2}$ @ 43	37 @ 37 $\frac{1}{2}$
New York	41 @ 41 $\frac{1}{2}$	44 $\frac{1}{2}$ @ 45	40 @ 40 $\frac{1}{2}$

Future Grain Prices

Chicago grain futures closed on April 22, 1914, and two weeks before as follows:

Wheat—May, 93 $\frac{1}{2}$ c; July, 88c. Two weeks before, 90 $\frac{1}{2}$ c and 86 $\frac{1}{2}$ c respectively.

Corn—May, 64 $\frac{1}{2}$ c; July, 64 $\frac{1}{2}$ c. Two weeks before, 68 $\frac{1}{2}$ c and 68 $\frac{1}{2}$ c respectively.

Oats—May, 37 $\frac{1}{2}$ c; July, 37 $\frac{1}{2}$ c. Two weeks before, 39 $\frac{1}{2}$ c and 38 $\frac{1}{2}$ c respectively.

Winning Canada, April 21—Wheat, May, 90 $\frac{1}{2}$ c; July, 92 $\frac{1}{2}$ c. Two weeks before, 90 $\frac{1}{2}$ c and 92 $\frac{1}{2}$ c respectively.

Cotton

New York, April 22, 1914. Cash cotton closed as follows: Middling-upland, 23.15c; middling, 23.40c. Two weeks before, 23.40c and 23.50c respectively. A year before the price was 12.15c and 12.40c respectively.

Chicago Produce Market

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations and advice about other markets, and instructions for marketing, address Marketing Department, Farmers Society of Equity, Indianapolis, Ind.

Argentine Corn		United States Corn	
Year	Production	Exports*	Exports,*
	Bushels	Bushels	Bushels
1909	177,155,000	89,499,359	2,772,376,000
1910	175,187,000	104,727,358	2,886,260,000
1911	127,675,000	4,928,362	2,531,488,000
1912	295,849,000	190,459,100	3,124,746,000
1913	119,642,000	110,000,000	2,446,988,000

*Includes corn meal reduced to terms of crop failure due to drought.
†Preliminary estimate.

Oats seeding has been delayed over some large districts and the acreage will probably be below normal. The price shows a further decline.

On this date potatoes are urgently wanted in several markets and higher prices pre-

Market was firm. The demand was a little more active, while receipts were not large, reported at 47 cars. Desirable goods moved readily and the market was in good condition, although values could not be bettered. Dealers believe field work will occupy farmers' time now that the weather is favorable, and they look for moderate receipts to come.

Sales reported were: Per bushel—Wisconsin, bulk, round white, 2 cars at 67c, 3 cars at 68c, 3 cars at 69c. Sacked, round white—3 cars at 70c; Rurals—1 car at 72c.

Per bushel, bulk or sacked, Wisconsin, Triumphs, Burbanks and Kings, poor to good..... 82 @ 85c
Round white..... 85 @ 90c
Dusty Rurals..... 70 @ 72c
Michigan, round white..... 65 @ 70c

NEW POTATOES—Were easier. A couple of cars of barrels in. Demand was said to be only moderate. Barrels, white, Florida No. 1..... 86.50 @ 87.75
No. 2..... 85.25 @ 86.50
Hampers, Florida, none at present quoted.

The price of old potatoes is 4c to 5c a bushel higher than two weeks before and about 30c a bushel higher than a year before.

SWEET POTATOES—Are quiet, usually quoted as 5c. It has got to the season where consumption is small. Supply continues fair. They are held at former prices when good. Anything common or only fair hard to sell and quotably weak.

Barrels, Illinois, fresh, well packed, sound and uniform..... \$2.25 @ 2.50
If uneven, showing some under size..... 1.50 @ 2.00
Hampers, Jersey..... 1.00
Delaware, when sound..... 75
Illinois, good..... 70 @ 75
Culls, or showing rot down to..... 40 @ 50
The price of sweet potatoes is about unchanged from two weeks before.

BEANS—Rule quiet. There are a few consignment lots around. Quantity so offered is small. They are shabby and yet there is no one in particular looking for them.

Pea Beans—			
	Change same period last yr.	Change from a year before	Change from 2 years before
	Bushels	Bushels	Bushels
—5,218,000	—4,657,000	X 3,578,000	
—5,245,000	X 744,000	X 5,722,000	
—2,473,000	X 7,561,000	X 7,035,000	
—795,000	X 541,000	X 3,707,000	

Red Kidneys, common to fair..... 2.65 @ 2.85
Fancy..... 3.00
Brown Swedish, long..... 1.65 @ 1.75
Round..... 2.00

The price of beans is about unchanged from two weeks before, except Brown Swedish are 25c to 35c a bushel lower than two weeks before. Hand-picked choice pea beans a year ago were quoted at \$2.20 to \$2.25 a bushel.

HAY—Receipts, 2,756 tons. Arrivals larger and feeling steady. Demand good.
Choice Timothy Hay..... 18.00 @ 19.00
No. 1 Timothy..... 16.00 @ 17.00
No. 2 Timothy..... 13.00 @ 14.00
Iowa and Nebraska Prairie..... 10.00 @ 15.50
Illinois and Wisconsin Prairie..... 6.00 @ 7.00
The price of hay is practically unchanged from two weeks before. Also a year before the price ranged practically the same as this quotation.

STRAW—Rye straw quotable at \$7.50 @ 8. Oat straw at \$6.50 @ 7.50. Wheat straw at \$6.50 @ 7. Rye and oat straw are 50c to \$1 a ton lower than two weeks before. Wheat straw is unchanged.

BROOM CORN—Nothing to speak of coming in. Steady and moderate sale for good quality. Slow and easy for common.
Per ton, Illinois corn..... \$120 @ 160
Oklahoma..... 100 @ 150
Damp and damaged less.
Still there is no change to report in the market price of broom corn.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week.	Last week.	Last year.
	Cases.	Cases.	Cases.
Monday	29,152	29,058	26,374
Tuesday	26,295	36,102	43,593

Totals

There is a firm feeling at the current quotations, which are again $\frac{1}{2}$ c higher than yesterday. Trade is very good and there is a demand for the eggs that is absorbing the offerings and keeping the market free of any surplus stock. The demand is to supply local wants, to fill outside orders and more or less of the stock is taken for storage purposes. The receipts are liberal, but, of course, include a good deal of storage packed, which are going into storage direct. Even the cheaper grades of eggs, checks and dirties, are meeting with little better sale.

Miscellaneous lots, cases included, 17 @ 18 $\frac{1}{2}$ c, according to quality. Top prices only realized where shipments are new-laid eggs. Cases returned, $\frac{1}{2}$ c less. Fresh, Firsts..... 18 @ 18 $\frac{1}{2}$ c
Ordinary Firsts..... 17 @ 17 $\frac{1}{2}$ c
Checks..... 15c
Dirties..... 15 $\frac{1}{2}$ c
Miscellaneous, cases included..... 17 @ 18 $\frac{1}{2}$ c
Cases returned..... 16 $\frac{1}{2}$ @ 18c
Storage packed Firsts quotable at 19 $\frac{1}{2}$ c for Firsts and 18 $\frac{1}{2}$ @ 19 $\frac{1}{2}$ c for Extras.
The price of eggs is practically the same as two weeks before.

Fruit

APPLES—There is only a quiet trade. Business is slow. There is enough stock in coolers so that dealers can rapidly bring on the market all that are needed. Occasional lots come in. Light business causes an easy feeling, especially on goods not fine—that is, turning color or becoming ripe. No material change noted.

ORANGES—A very fair volume of business in California is being done. The market is well supplied. Prices rule about steady. They do not change materially in value. Grapefruit remains rather slow, at least quiet; also rather easy.

Vegetables

ASPARAGUS—Demand is good for fancy, green, thick stock. As yet the trade still centers in California. The Southern sells fairly, but does not clean up readily. **BRETS**—Good sale when fresh, young, with nice tops. Supply continues moderate and market is firm for the right kind.

CABBAGE—Supply is heavy. Demand is fair, not brisk, and offerings do not clear readily. Market is easy. Receipts today reported at 8 cars.

CELERY—Not moving so freely. Market is a trifle easier. Receipts today, 2 cars.

CARROTS—A trifle easier today. Demand rather tame and receipts of 1 car moved slowly. Lower prices were quoted.

EGG PLANT—Slow and easy. Buyers want only nice, large, sound stock.

GREEN ONIONS—Fair sale and steady. Supply is small, but demand is tame.

GREEN PEAS—Demand is limited. Only nice fresh, green peas wanted. Mississippi June are slow. They are too small.

FALE—Very slow. Holders refuse no bids and prices depend on the buyer.

LETTUCE—Fair sale, but supply is ample. Market steady for nice, clean, solid stock. Poor, leafy, shot and decayed lettuce has no regular value. Holders accept best bids. Endive is in moderate supply; it has a good sale when fine. Romaine is quiet and steady. Most of the escarola coming is common and faced; it drags. Leaf lettuce is plentiful and easy.

ONIONS—New are in lighter supply and doing a trifle better for nice, sound stock. Old are well held. Not many remain. Imported are quiet and steady.

PEPPERS—There is a good supply and not much demand. Must be sound, good size and good color to sell.

PIE PLANT—Easier. There is a good deal of California on hand and holders want to clean up. No Illinois in today, but there was plenty left from yesterday.

RADISHES—Moderate sale. Quality is not good enough. Buyers take the best. Ordinary and poor stock drags.

Tip radishes in drums have been received from Oregon. They are not a desirable kind; besides, the tops are not fresh and fine. No quotations could be obtained. They failed to attract buyers. Their shipment is not encouraged.

STRING BEANS—Arrivals reported as 3 $\frac{1}{2}$ cars by freight. There did not appear to be so many ocered. Supply at the same time was good. There also was reported a later express, run. General market easy. Prices had to be shaded some on the best. Ordinary and common slow and easy. Demand was only moderate. For poor stock, buyers—which means peddlers mainly—had the making of the price.

TOMATOES—Only one car reported in. There are a good many from former receipts on hand. It will take some days to materially reduce the supply. Fine Florida are quiet as firm and selling fairly well. Common stock is slow and easy. The Cubans come mainly in the latter class.

GIVEN

Moving Picture Machine

Moving Pictures in Your Own Home

This is a real, fine moving picture machine; just like the illustration; generates its own gas for light; don't need electric light, gas or lamp with this machine. Takes regular standard films; same as the real "Movie Show." Gives big, clear pictures nearly 10 feet square. We furnish films free with machine. It is made of black Japan sheet metal, beautifully finished. The latest mechanical 8-wheel mechanism for operating. Imported triple polished and ground lens; reflector to make strong light, much stronger than electric light. Gives clean, sharp and life-like moving pictures. A child can learn in a few minutes how to operate. Machine perfectly safe for any one to handle.

SEND YOUR NAME TODAY

and just say you want a moving picture machine FREE. We will tell you how any bright boy or girl, or any other person, can earn this wonderful moving picture machine in one day's time. The plan is very simple, any boy or girl can do the little work we ask. Send us your name at once. Be the first in your neighborhood to get one of these real moving picture machines without costing you a penny. Address

H. DAY, Manager, Department 30, Springfield, Ohio

SHETLAND PONIES

We have a few genuine Shetland ponies, and rigs, that we are going to give to boys and girls very soon for just a little work during spare moments. You can easily get one of these dandy ponies if you try. We will send you full particulars, so

SEND YOUR NAME QUICK

These are the prettiest little ponies ever saw and just the very thing you have been wanting for so long, and here is a chance to get \$250.00 pony outfit without costing you a cent. Write today and address

DAN ROGERS, Pony Man, Dept. 31, Springfield, Ohio

BASEBALL OUTFIT GIVEN

BOYS! Here is your chance to get a fine baseball outfit, consisting of complete suit, including shirt, pants, cap and belt, good quality, extra well sewed, or combination of big catcher's mitt, fielder's glove, catcher's mask (extra strong and durable) and rubber chest ball, big league style, or fine chest protector. Will Not Cost you Cent. Send your name and we will send you 8 of our fine pictures to dispose of at 25 cents each

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

CADETS OF EQUITY, how much have you helped the great business reforms that we are working so hard to accomplish—reforms that will enable the farmers to benefit by what they produce as well as other people do, and that will help their customers to get their supplies cheaper than they do now? How much have you helped in this great work? You have written nice and interesting letters, and more than we have been able to print, but have you tried to get your friends and neighbors to read and study these great questions? Every new reader is almost sure to be a convert to the important truths that mean so much to the agriculture of the country. Can you not help in so great a work by thus increasing the number of our readers? That will help us and the people too.

For the benefit of others we are going to let this little boy tell how he makes money:

We next give an interesting letter from an Iowa girl. After that we shall have to let the letters come in rotation to save space.

DEAR CADETS—I am a farmer boy, 10 years of age, and I live on a farm of 148 acres. My sister and I had a garden last summer, and we made about \$40 out of it. We had cabbage, tomatoes, pickles and egg plant. The tomatoes rotted quite badly and we did not make much out of them. We made the most out of cabbage. We will have another garden this summer and expect to plant cabbage, peppers, pickles and tomatoes. I would like to know what the other Cadets plant in their gardens. I will also be glad to receive letters and cards from the boys and girls, and will try to answer all I receive.—John L. Burkholder, Calla, O.

DEAR CADETS—I think it is grand to read letters from the boys and girls of dis-

tant states, telling of their lives and country. Iowa is a great farming state, the products being mostly corn, oats and wheat, with some rye and buckwheat. My father's crops are only corn, oats and potatoes. I live four and one-half miles from Mt. Pleasant, which is quite a large town. Our farm is of 140 acres and my father has lost a foot and now wears an artificial one. So it is a pleasure for me and my sister to go home to help put in the crops and then go back to our work away from home. I have spent four years in the city. The city is all right for winter, but the country for me in the summer. I am now three miles from the small town of Salem, where I am a member of the Congregational Church and in a class of twenty girls, called C. L. I. O. I am also an associate member of the Christian Endeavor. I greatly enjoy our contests, entertainments and church work. I don't go home very often, as it is twelve miles distant. I have a piano there and I often long to get to it, as I am accomplished in music and also in fancy work. I would like to get a card or letter from every state in the Union, and I will answer all I receive from boys or girls.—Cora L. Calhoun, Salem, Ia.

DEAR CADETS—I am a country girl and will be 15 years old July 13. I think UP-TO-DATE is a fine paper, and I enjoy reading the Cadet page. I live down by the ocean and like it fine, especially in the summer when the campers are here. I like to go bathing in the surf and think it is great fun. But in winter time the ocean is very rough and sometimes I couldn't get to school at all on account of the high tides. Neskowin is not a very big town. We do not raise many crops here. The people are mostly engaged in dairying. We take our milk to the cheese factory. I would like to exchange letters or cards with the Cadet boys and girls. I will tell those who write all about the ocean, and I will promptly answer all I receive.—Margaret Crater, Neskowin, Ore.

DEAR CADETS—I am very much interested in reading the Cadets' letters, and would like to add mine to the number. I am 21 years old and have taught school one year, but I am now at home on a farm of 150 acres. I think farming is grand. Of course there are ups and downs to all forms of work, but the country is so free and healthful. I would like to become a Cadet and correspond with the Cadet boys and girls, and will answer all letters and cards

I receive.—Hazel C. MacGowan, Elbridge, N. Y.

DEAR CADETS—I hail from the old Volunteer State, that section of the sunny south so noted for its ideal climate, wonderful agricultural resources and hospitable people. My home is near Gallatin, in the famous blue grass region of Tennessee. I am a rural teacher and am especially interested in agriculture and native study. I like the ring of UP-TO-DATE and think it is doing a great work for the betterment of farm conditions. Would be glad to hear from teachers and any of the Cadets. Will respond to all.—W. L. Sprouse, Gallatin, Tenn.

DEAR CADETS—I am a Texas girl, a constant reader of the Cadet page. I live on a farm and we raise corn, cotton, peanuts, grain and vegetables. I love farm life—I think I like it better than the city. I am 19 years of age and would be pleased to hear from the Cadet boys and girls. Will answer all letters received.—Eva Bloxom, May, Tex.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and like it very much. It has much good advice to farmers, and to every one who reads it. It is also interesting to read about other parts of the country. I think it can not be beat. I am a farmer's son and live on an 80-acre farm in Orange county, Indiana. I am 22 years old and am a musician—play the violin, guitar, mandolin and bass viol. I can do any kind of work on the farm and also operate a postal card machine, which is a success as well as a pleasure. I have also had some years' experience in railroad shops and can do different kinds of work. Our crops are corn, wheat, clover and oats. We have one of the best summer resorts in the state and it is known all over the country. It is French Lick and West Baden Springs. One big, fine hotel has 780 rooms. People come from everywhere for their health. Some of the strangest things are great caves that were once inhabited by the cave dwellers. I am fond of writing letters and will promptly answer all I receive.—Ivan Critchfield, Fargo, Ind.

DEAR CADETS—We have taken UP-TO-DATE FARMING for two years and like it fine. I am a little girl, only 9 years old, but I like to live on the farm and help mama take care of the poultry. I have a pet hen myself. I would like to exchange letters and cards with the boys and girls.—Bertha Pulliam, Broughton, Ill.

DEAR CADETS—I am a Colorado farmer of 20 and also a reader of UP-TO-DATE. I live on a farm of 80 acres with my parents and brothers and sisters. We have taken the paper for over a year and think it fine. I live in the sugar beet district and also near the zone of the great coal strike. I also live in view of the picturesque Rocky mountains and a short distance from the county seat. We have two alfalfa mills here, with a capacity of about 60 tons each. We have two churches, one of which I attend regularly, and am secretary of the Sunday school. I enjoy reading the Cadet page and wish to hear from girls and boys near my own age.—C. W. Hornbaker, Niwot, Colo.

DEAR CADETS—Having read some of the letters in UP-TO-DATE FARMING, I wish to join the Cadets. I am 17 years of age and I live on a large farm. Two brothers operate this farm, and I take care of the house. My father and mother and a little brother take care of another farm six miles away. We live in the southeast corner of Iowa, not far from the Des Moines river, and in a pretty nook. I have two other brothers in Nebraska. One is a professor in an agricultural school and the other is a student in one. My two brothers living with me are high school graduates. And now, dear Cadets, I desire an education too, and don't you think I should have it? I am the only girl except a married sister, and I get lonesome by myself in this big house. So I would be glad to hear from any who wish to write.—June Rail, Birmingham, Ia.

DEAR CADETS—May a girl of the Golden State join you? We take UP-TO-DATE and I like it, especially the letters of the Cadets. I think it is a good paper for any one to read, farmers in particular. We lived on a farm until about three years ago. I prefer farm life to city life, but I realize that there are advantages in both. The population of Chico is about 15,000. It is a very pretty place in both summer and winter. A great deal of fruit is grown here, also grain. We have an orchard of olive and peach trees. I am in school and am taking a commercial course. I am very fond of music, but I am not a musician. I like to read and can generally be found with a book. I like to ride horseback, but I do not ride as much as I did when we lived in the country. I would like to hear from the Cadets and will answer all who write.—Loretta Tucker, Chico, Cal.

DEAR CADETS—I am a farmer girl, 16 years old, and have four brothers and two sisters. We have two farms, one of 175 acres, at Chillicothe, and the other at Williamsport, comprising 300 acres. I am staying with my brother at Williamsport, where I can read UP-TO-DATE. My other two brothers are in the nursery business and grow fruit. The highest colored fruit is raised on the alum cliffs. I would be glad to correspond with any of the Cadets.—Marie Rueb, Williamsport, O.

DEAR CADETS—My home is in northern Michigan, 200 miles north of Grand Rapids, on Lake Michigan. I like it here quite well and will do all I can for UP-TO-DATE.—Ord Wilson, Charlevoix, Mich.

Ad now we close again. I thank all the writers.

The Easiest Way to Win and I Prove It

THIS BEAUTIFUL PONY "MISS GINGER" IS YOURS
Runabout, Silver Mounted Harness and Saddle

You can win this pony, cart and harness without it costing you or your parents one cent. You can win it all through your own effort. This entire outfit is the prettiest and finest that money can buy. The runabout is a dainty little affair and it is as easy riding a pony cart as the most expensive made. The beautiful set of harness with nickel trimming completes the outfit.

When you win this pony, you can drive down the road or street of your own town, the happiest and proudest boy or girl in the world. I am going to publish a picture of the winner in our paper so that it can be seen by our more than 100,000 subscribers. Don't you want to be in the buggy when this picture is made?

The Easiest Way of Any

To win this pretty pony. Do you want him? If you do, I can tell you how. My way is the easiest and if you write me and ask me why, I will prove it in my answer. You will agree, your parents will agree, that you can win easier in my contest than any now being conducted by any other paper. You can win the entire outfit—pony, runabout and silver trimmed harness. Besides having the opportunity to win this outfit, I will give to all the boys and girls who work many other prizes that will delight them. If any one tells you it is impossible to win this pony outfit, you just say you are going to write me anyway, because I have promised you "it is the easiest way of any."

Send Your Name to Me Today

You simply can't realize what I can do for you. Write me and just let me show you the interest I take in boys and girls. My suggestions help boys and girls to help themselves, it makes them thrifty, it will help them start a bank account. Remember it does not cost a penny. When I tell you it is the easiest way in the world to win this pony, I mean it.

Helpful Hints for Homefolks

Fireside Social Chats

By Aunt Sophia and Others

FEEDING THE FAMILY

FOR MANY practical reasons the housekeeper, whether living in country or town, should give great attention to the various food values of vegetables. Vegetables are not only noted for their elements of nutrition, but aside from that they have a marked influence upon bodily health and vigor. The use of fresh vegetables at all times will prove a wonderful aid to good health and fresh vegetables are so much better than those canned or dried. For this reason every farmer's garden should have a plentiful supply from early spring to the days when snow is expected, and then there should be plentiful stores of carrots, salsify, turnips, cabbage, celery and other vegetables for the winter. Pickles and preserves are very tasty and appetizing, but they should be used sparingly, if you value your future health.

The most important feature of feeding the family is the problem of feeding the children. A child's second summer particularly is a critical period and a time of much concern to careful mothers. Then it is that bowel troubles occur which so often weaken the vitality and constitution of the child for life and frequently terminate fatally. These troubles are always and absolutely caused by improper food in hot weather. Feed children simple foods all their growing period. Don't let them have pickles, preserves, pastries and such things. They are absolutely unnecessary. A child can grow healthy, rugged and strong on plain food. Starchy foods must be well cooked. Very little meat, if any, should be allowed. Vegetables and fruits (fruit juices for little toddlers) should be plentifully used. And, for goodness sake, have the child's meals regular and don't feed between meals, but remember a child needs meals oftener than a grown person.

Raising a healthy family is a praiseworthy thing and should be given deep study and careful consideration.

AUNT SOPHIA.

THE REST BENCH

Also Good for Other Things

When I say I am a believer in rest it is often accepted as an admission of

laziness or an apology for not working more. I take it to be as much a part of my job to rest in rest time as to work in work time—and as I want facilities to work I also am entitled to facilities to rest.

This bench, six feet long and seating four, was contrived for my front yard by my husband some years ago. It proved so useful, strong, convenient and restful that I now have eighteen of them at various points about the house and no doubt will find other places to use them in the future.

In the front yard they can be so placed that a family circle of any size all face each other. They are easily moved from shade to shade. In the back yard their uses and convenience are without end and in the orchard, when a tired woman is watching a chicken hawk or observing the bees swarm, a bench is the very thing. I have seen the children make a quadrangle with four benches to pen a calf, and it does it. At a picnic my benches go on a wagon as surely as the family goes in the surrey. There the young men contrive tables of them, the old folks find comfort and rest in them

and children can not pull them over on themselves.

The drawing shows how they are made of ten pieces of wood (five duplicates), thirty nails and a pint of paint—cost of materials about 60 cents and weight about forty pounds each bench. Their strength and durability against the weather and rough usage is surprising.—Mrs. Lizzie Thoern, Handley, Texas.

HOW TO MAKE TOMATO CATSUP

When planning your garden consider the following:

Where tomatoes can be produced cheaply and vinegar made at home, etc. there is a neat profit in tomato catsup. Get bottles of uniform size, plenty of good corks, and if you have a sufficient number of bottles to justify, get some neat labels printed.

This recipe was given me by a woman who sent her daughter through college with the proceeds from the sales of her catsup.

The recipe follows: Grind through the finest cutter of your food chopper or meat grinder, one gallon of peeled ripe tomatoes. Catch the drippings and add to the pulp. Add one cup of ground onion, one cup of sugar, one pint good vinegar, salt, pepper, mustard, spice, etc., to taste. One round tablespoonful of salt for each quart of material is my rule, but less may be used.

The secret of this is in grinding the tomatoes, which reduces the labor and time of cooking. Fifteen or twenty minutes boiling is plenty. Stir while boiling to prevent sticking. Have bottles clean and warm. Soak corks in hot water for ten minutes before filling bottles. Press corks in firmly. No wax is required if corks are a good fit. This quick cooking gives the catsup a pretty, bright color.—Mrs. C. C. Moser, Vinton, Va.

\$25 for a Name for this Pony

Special Edition in attractive paper covers, 10c each—3 for 25c postpaid. **COONER & FORTUNE** Indianapolis, Ind.

What is Now the Fashion

For the First Warm Days

The first warm days of the summer season usually come upon us with a rush quite early in springtime. It is well to bear this in mind and to be prepared for them. Everything that is loose and flowing is to be the rule and the plainer the garment the better it will be liked. This is because so many of the newest materials, cottons as well as silks and woolsens, are made beautiful by woven figures which show best in plain models.

6613—WOMAN'S WAIST—This model is simplicity itself. It has the sleeve in one with the body and is gathered around the neck, which is slightly open and finished with a collar in the back only, standing in Medici style. Sizes 34 to 44 inches bust measure. Medium size requires 2 yards of 40-inch material.

6512—SHIRTWAIST—This has a box pleat closing in front, high neck, standing collar, small tucks at each shoulder in front only. Sleeves of regulation shirt style, with tucks above the cuff. Sizes 34 to 44 inches bust measure. Medium size requires 2 1/2 yards of 36-inch material.

6596—MISSES' DRESS—Made with a seamless one-piece yoke, with drop shoulder and having very full front and back. The skirt is a three-gore design and may have the ruffles as shown or not, as preferred. The fullness is arranged in gathers around the waist and the closing is in front. Much liked in voile, in cotton crepe and in other soft wash fabrics, of which there are many among the novelties. Sizes 14, 16, 18 and 20 years. Medium size requires 5 1/2 yards of 36-inch material, with ruffles of the same goods, or 4 1/4 yards of 36-inch if made with ruffles of some other fabric.

6576—LADIES' DRESS—This has a plain blouse with a very low drop shoulder, the sleeve beginning only just above the elbow. There is a dainty vest in the front of the waist and to this is attached the collar. The two-piece skirt is joined to a small panel in the center of the front and this may be of the vest material or of something else in contrast with the main portion of the material if desired. Such a dress as this demands soft fabrics—voile, cotton crepe, crepe de chine and the like are very fashionable at present. Sizes 34 to 44 inches bust measure. Medium size requires 5 1/2 yards of 36-inch material, if cut with seam in front of skirt and back of waist, or 3 1/4 yards of 50-inch material cut on a fold.

6182—HOUSE DRESS—This is thoroughly practical, with a plain blouse and a small sleeve. At the neck is a pretty collar and cuffs to correspond trim the sleeves. The three-gore skirt may be made with high or regulation waist line and the dust cap that completes the outfit is also part of the pattern. Sizes 34 to 42 inches bust measure. Medium size requires 6 yards of 36-inch material.

6601—BOYS' SUIT—This simple Russian suit shows the drop shoulder used on the plain coat and a fancy strap at the closing. There is also a wide collar. Bloomers complete the suit. Sizes 2, 4 and 6 years. Medium size requires 2 1/2 yards of 36-inch material.

6566—GIRLS' DRESS—This has a plain outer blouse and a two-piece skirt joined to an underwaist. This is one of the dresses that will look very attractive in the dainty plaid and check gingham and also in white duck or linen. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 3 1/4 yards of 36-inch material.

6597—CHILD'S DRESS—This has a plain sacque outer blouse, with skirt cut in one with it, and is completed by little bloomers, which may be of the same material. Sizes 2, 4, 6 and 8 years. Medium size requires 2 1/2 yards of 36-inch material for dress and bloomers.

Latest Fashion Book 2 Cents—We publish four times a year a Quarterly Fashion Book, illustrating 200 styles for ladies, misses and children, and containing many valuable dressmaking lessons. The regular price is 10 cents a copy, but if you will order the book at the same time you order a pattern we will send the spring number, now ready, for only 2 cents to cover mailing.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Lots of Fun for a Dime

Ventriloquist Double Throat or Swiss Bird Call.—Fits roof of mouth, always invisible; greatest thing yet. Astonish and mystify your friends. Neigh like a horse, whine like a puppy, sing like a canary, and imitate birds and beasts. Loads of fun. Wonderful invention. Postpaid 10 cents. S. E. FERRY, Irvington, Ind.

This 3 1/2 Foot Telescope Nearly Given Away

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for \$5 to \$8. It is brass bound; protected with brass caps on ends; 5 sections; opens out over 3 1/2 feet long; closed, 12 inches long. Entertain your friends day and night with the "Wonder." We have thousands of testimonials.

FINEST THING I EVER HAD

I received the telescope and will say it is the finest thing I ever had. I would not take \$5 for it. I think every boy and man on a farm needs one of these telescopes.—Chester Housen, Minden, Ga., R. 3.

BEST FOR THE MONEY I EVER SAW

I have a word to say in regard to the "Wonder" telescope which I received some time ago. It is the best for the money I ever saw. Would like to know if the price is still good, as my neighbors are worrying me to death about it. I want to order more.—James W. Raines, Sedalia, O.

A SOURCE OF NEVER-ENDING INTEREST

I have great pleasure in informing you that I have received the "Wonder" telescope. The children, who are forever asking to be allowed to see through it, seem to find it a source of never-ending interest. Please accept my thanks.—Claston C. Swift, New York City.

COUNT WINDOWS IN HOUSE SEVENTEEN MILES AWAY

I wish all to know how satisfactory the "Wonder" telescope is. Our farm is on the highest point in the surrounding country. From our place we can see with the aid of the telescope over into the Kansas Indian reservation, nearly twenty miles, count the cattle and tell a horse from a cow; can see a large ranch seventeen miles east that can not be seen with the naked eye; can see the color and count the windows with the telescope.—F. G. Patton, Arkansas City, Kas.

CAN SEE 10 MILES WITH IT

Received telescope last Friday. It is a dandy. Am well pleased with it. I can see ten miles away.—W. E. Dickerman Jr., Chatham, Mass.

BETTER THAN A \$5 ONE

I received my telescope in good condition. I think it is better than a \$5 one. I am sending for another one for one of my friends and I know of more that want them.—Thomas Mosman, Huffard, Ia., R. 4.

WOULD NOT TAKE \$10 FOR IT

I received the "Wonder" telescope and it is just dandy. I wouldn't take \$10 for it. If I couldn't get another one like it, I can see ten miles with it and can read 2 1/2-inch printing easily a mile away. I can count cattle at five miles.

No farmer should be without one. It would save him many a long walk to see about his stock.—W. A. Eskridge, Ammon, Ky.

CAN SEE 13 MILES ACROSS LAKE WINNEBAGO

We received the telescope in fine shape. It certainly is a wonder. We live on the north shore of Lake Winnebago, and can see across the lake on the other shore, which is thirteen miles. We can see cows grazing real plain. Also all the churches and houses. I don't know of anything we have ever had that we enjoyed as much as we do the telescope.—Charles Hinterthner, Neenah, Wis.

Our Offer To advertise the scope we will send one for only \$1. Send 10 cents extra for ordinary postage, or 20 cents for insured delivery, and we guarantee safe arrival. If not a bargain and you are not well pleased, money will be refunded. All we ask is that you show it to your friends. Full instructions free with each telescope.

Smile Awhile

Safer to Ask

Lady (to beggar)—Aren't you ashamed to be asking for money?
Beggar—I used to be, ma'am, but I got pulled for taking it without asking.

A Mixture

"How does your little boy take the emulsion I recommended?"
"All right, but I have to mix it with compulsion."

On the Move

Mandy (clinging to the buggy seat as the horse was running away)—Bill, do you reckon the good Lord is with us?
Bill—I don't know, but if he is he is sure going some.

That Convinced Him

An Irishman, but recently arrived in this country, was admiring a large office building when a lawyer called from a window: "Hello, Pat! Do you think this is a church?" "Faith, an' I did," was the reply, "till I saw the devil lookin' out at a windy."

Akin to Both

Pat—That's a foine dog ye have. What breed is he?
Dog Owner—He's part Irish and part fool.
Pat—Beggorra, an' he's a cross betwene us both, ain't he?

Must Be There

"There's some pretty good stuff in Billy after all."
"I should say there is. He just now stole my Christmas candy and ate it."

Might Be Larger

Bragger—Do you call them prize cattle? My father once raised a calf twice as big.
Attendant—I see he did, sir, but these calves attend to their own business.

Had Plenty

Mistress (to hired girl)—Jane, have you given the fish any fresh water lately?
Jane—No, mum. They haven't drunked what I gave 'em last week.

Were Just the Thing

Customer—Are you sure these eggs are fresh?
Merchant—Yes indeed. There has not been a particle of salt about them.

Didn't Want Imported Ones

Customer—Do you know where these potatoes were raised?
Retailer—Oh, yes, they were raised in the ground. Here is some of the dirt on them yet.

Not Entirely Responsible

A darkey thought his meat bill was too high, and complained to the butcher. "Here are the figures, Sam," replied the butcher, "and figures can't lie." "No," said Sam, "figgers can't lie, but them as makes 'em can."

No Excuse for Not Knowing

Sue—No, really, I didn't notice how many times he kissed me.
Flo—And the whole think taking place right under your nose!

Like Lightning

"My wife can drive nails like lightning."
"You surely don't mean it!"
"Yes, lightning never strikes twice in the same place."

A Bad Case

Patient—Doctor, I realize that I am pretty sick, and I want you to tell me the worst.
Doctor—Well, I don't think it will be more than \$55.

A Lucky Fall

Pat—I tell ye, Molke, I'm a lucky man. I fell off of a fifty-foot ladder yesterday and it didn't hurt me a bit.
Mike—How was that?
Pat—I fell off of the bottom round.

5,918,098
gallons Polarine sold last year

1,536,232
gallons more than in 1912

The constantly increasing use of POLARINE by thousands of motorists is indisputable evidence of its lubricating efficiency.

It affords perfect lubrication to all makes and types of motor cars, motor trucks, motorcycles and motor boats.

POLARINE maintains the correct lubricating body at any motor speed or temperature.

Polarine

FRICTION REDUCING MOTOR OIL

POLARINE remains liquid at zero. POLARINE differs from all other makes of motor oils, in that it furnishes perfect lubrication to friction surfaces at extremes of temperature.

These essential characteristics obviate the necessity of changing oil for summer and winter lubrication—also the necessity of mixing kerosene, graphite and other injurious products with unsuitable and poor cold-test oil for the purpose of making it feed in winter weather.

STANDARD OIL COMPANY

Economy Gasoline Engines

Shipped From a Warehouse Near You

Now you can have an Economy Gasoline Engine *quick*. We have arranged to ship from eleven warehouses, one of which is within a very short distance of you.

We have made it possible for you to purchase any size Economy Engine not only at the lowest price on record, but you will also receive it in the quickest time and at the smallest cost for freight.

PRICES

From Any Warehouse		
Horse Power	With Battery	With Magneto
1½	\$ 29.95	\$ 37.95
2½	39.95	49.90
4	72.95	82.90
6	102.95	112.90
8-Horse Power (from Evansville Only) \$149.65		
10-Horse Power (from Evansville Only) \$219.50		

Guaranteed by Sears, Roebuck and Co.

Every Economy Gasoline Engine is guaranteed to give satisfactory service, to be made of the best quality materials, to develop its full rated horse power, to be simple, economical, substantial and durable. We do not offer it on 30 or 60 days' trial, but let you have it for as long as you please, for

Any Kind of a Trial You Want to Make

Try our Economy Gasoline Engine on your own work for a month or two months, or a year or more. If you are not perfectly satisfied with it, we will take it back and return your money and freight charges. For complete description of Economy Engines, turn to the engine pages of our large General Catalog or write for our "Special Gasoline Engine Catalog No. 6531U." Address

Sears, Roebuck and Co. - Chicago, Illinois

If you own a Grafonola or Victrola

here is a chance for you to get for twenty-five cents a "sample" advertising Columbia record that will play on your machine.

The only reason why the price is set at 25 cents is because we want you to know at first hand something about the superior and guaranteed quality of Columbia double-disc records.

One side of this record is a tenor solo by Henry Burr, "Good Night, Little Girl, Good Night"—a record which is typical in quality of all the regular standard ten-inch Columbia records.

The other side of this sample record has a short message and a little music which you will find entertaining and instructive.

We can give you the name of a dealer who will supply you with this sample record at 25 cents—if you have any difficulty in locating one. Or for the same 25 cents sent to us direct with this coupon we will deliver the record to you prepaid. Don't forget that this message is to owners of all disc "talking machines," whether Columbia or Victor.

Columbia Graphophone Co.

17th Year

May Fifteenth, 1914

Number 10

Does This Remind You---

Grain Wasted Is Money Lost—

You would not throw your money away. Then don't permit a threshman with an incompetent machine to do it.

Hire a Red River Special

And Save Your Thresh Bill

It is different. It beats out the grain instead of depending upon its dropping out. D. C. Kimball and six other farmers of Cando, North Dakota, say: "We honestly believe it has saved us enough to pay our thresh bills. It cleans so there is less dockage at the elevators." Hire a Red River Special this year yourself and save enough more to pay your thresh bill. Write for "Thresher Facts."

(In continuous business since 1843)
Builders of Threshers, Wind Stackers,
Feeders, Steam Engines and
Oil-Gas Tractors
Battle Creek, Michigan

400,000 Settlers a Year

Immigration figures show that the population of Canada increased during 1913, by the addition of 400,000 new settlers from the United States and Europe. Most of these have gone on farms in Manitoba, Saskatchewan and Alberta.

Lord William Percy, an English Nobleman says:
"The possibilities and opportunities offered by the Canadian West are so infinitely greater than those which exist in England, that it seems absurd to think that people should be impeded from coming to the country where they can most easily and certainly improve their position."

New districts are being opened up, which will make accessible a great number of homesteads in districts especially adapted to mixed farming and grain raising.
For illustrated literature and reduced railway rates, apply to Superintendent of Immigration, Ottawa, Canada, or to the Canadian Government Agent.

215 Traction Terminal Bldg.,
Indianapolis, Ind.

CALIFORNIA CUP ELEVATOR

Always ready for use. Placed inside the crib in the dry. Easy running, durable and strong. Elevates oats, wheat, or ear-corn, 50 bushels in three minutes.

SET IN YOUR CRIB BEFORE YOU PAY
The first successful Upright Ear Corn Elevator made—**SOLD DIRECT to the Farmer**. Free Catalog showing 6 styles with crib plans which save you money. Write for it today.
INTERLOCKING FENCE CO. BOX 54 MORTON, ILL.

Bale Hay

the Whitman Way. Don't experiment. Whitman presses have been proved best by 44 years use. 50 styles—horse or engine power. Illustrated catalog sent free.

Whitman Agricultural Company,
6906 Broadway, St. Louis, Mo.

THE CLIPPER

There are three things that destroy your lawn—Dandelion, Buck Plantain and Crab Grass. In one season the Clipper will drive them all out.

Your dealer should have them. If he has not, drop us a line and we will send circulars and prices. Clipper Lawn Mower Co. Box 5, Moline, Ill.

What We Want You to Know and Why

Being a Few Words on Particular Matters From the Editors to the Readers

Wastefulness Should Cease

If there was less waste there, would be more food and the cost of living would be less burdensome. The time is coming, and there are those now living who will see it, when the American people will be forced to give reasonable attention to the prevention of waste. It may not come until famine may appear about to stare in the face of the people, but it will come, it will have to come, else there will be famine.

Those Abandoned Farms in the East

According to the Connecticut Board of Agriculture there is not now an abandoned farm in that state. The demand for potatoes, vegetables, small fruits, tobacco, poultry and other products of the farm is bringing back into use land that was long neglected, and farm values are steadily rising. This is by no means remarkable. Connecticut is simply dotted with good-sized cities and towns, and not far from its boundaries are such great markets as New York and Providence. There ought to be no abandoned farms in any eastern state, and there will not be when the American people give greater attention to intensive and scientific methods of cultivation.

Keeping Accounts on the Farm

In a recent issue we invited readers to contribute articles on their farming operations for the year 1913, giving a business-like statement of the work of the year, costs of production, sales, prices, profits, etc. The response was wholly disappointing. Only two or three made reports. Are we to understand from this that farmers do not keep accounts? We do not, of course, expect that a very large number of them do, yet we feel quite sure that every community has one or more bookkeeping farmers. Such records are valuable and a farmer who has carefully kept account of his business for two or three years begins to realize the worth of it. We hope a large number of our readers are keeping accounts this year and that at the end of 1914 we shall be able to obtain a number of very interesting statements.

Power Farming on a Small Scale

An article appears in this issue calling attention to the big problem of power on the farm, a problem which is going to be of the utmost importance to the farmer, whether owner or tenant, within a very few years. The article could not cover the subject at all extensively, but in directing thought to the underlying principles and conditions which make this a real problem even now we hope to get every farmer who is or may be concerned to study the proposition from the beginning. Doubtless a number of our readers have gone into this matter in a practical way and have bought modern power plants, engines, automobiles, tractors, electric dynamos, etc., and have been employing them in their farming operations. We very much desire to hear from all who have any of this modern equipment, with an account of the initial expense, running costs and as complete details as possible. We will pay for this information.

Comparisons Now With Forty Years Ago

When talking about the high cost of living very few if any of those who are seemingly so deeply concerned over the problem give any figures showing the difference in the costs of the same articles now and ten, fifteen or twenty years or more ago.

The editor of a village newspaper in Otsego County, the Morris Chronicle, reports that he recently saw a day book kept by a storekeeper of that place in 1866, in which it appeared that yellow sugar then cost 17 cents a pound, crushed sugar 32 cents, raisins 35 cents, cinnamon 80 cents, baking soda 10 cents, green tea \$1, black tea \$1.50, coffee 35 cents; flour, per barrel, \$14; matches, per bunch, 9 cents, and sheeting, per yard, 25 cents.

This list was submitted by the editor to a village storekeeper of today in order to obtain present prices, the result being that while the above articles, in a single pound, yard or bunch each, would have cost in 1866 a total of \$18.84, they can now be obtained in the same village for \$3.50—that is, for considerably less than half—and "of far better quality today than then."

We should like to have some of our readers who have old account books containing records of sales of stock or grain, or of buying groceries, clothing and machinery, to send us the prices they paid and received during the years gone by. We venture the assertion that supplies cost more and produce sold for less than the same articles are bought and sold for today, with, of course, a few exceptions.

In the earlier days, when cities were not so large, when fancy grocery stores were unknown, when farmers peddled fruits and vegetables along the streets, when there was little delivery service and the housewife went to market and carried her purchases home in a basket, they possibly bought eatables cheaper than they now have to pay when they place their order with a fancy grocery over a telephone that costs them \$2 a month and the purchase is delivered at the kitchen door. And the peddlers and market gardeners, quick to learn of the higher prices demanded by the fancy groceries, naturally take every possible advantage of the increased prices to raise their own prices accordingly. This applies only to the cities, where most of the noise is being made about the cost of living.

We believe it to be a fact that the same things bought even ten or twenty years ago would cost the average consumer as much as now; that staple groceries are no higher; that clothing is cheaper and there is no real reason for so much noise about the high cost of living. We should be glad to have our readers submit figures to either prove or disprove this view.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

Let Me Tell You How the TEMPLE ENGINE Revolutionized Engine Building

—by radical improvements that make its service as superior to that of the "common herd" engine as the Thoroughbred is superior to the Scrub, without increasing the cost to you.

I cannot undertake to describe this engine—HERE. But drop me a postal and I will tell you how it does away—almost altogether—with ruinous VIBRATION and FRICTION—with excessive WEIGHT and BULK—with many other features that render ordinary engines so costly, so short-lived, so inefficient and so cumbersome. In the meantime—note in sectional view of the "TEMPLE," above, three of its radically "different" features, and what these mean to ENGINE USERS: INVERTED CYLINDER—with HEAD on BASE—close to the ground—eliminating vibration, causing engine to run quietly and smoothly, delivering maximum power with minimum consumption of fuel (gasoline, kerosene, alcohol or distillate); BELL-SHAPED WATER JACKET—(see letter A) flaring toward the base, giving three times the usual volume of coolest water where it's needed—around the explosion chamber, the hottest part of the cylinder; SMALL, LIGHT, FASE—cutting out two-thirds of floor-space and BULK and one-half the WEIGHT of other engines—making it much lighter and easier to move from one job to another.

PROFITABLE ALL-AROUND SERVICE—The extraordinary lightness, compactness and quiet running of this slow speed, heavy duty engine, make it IDEAL for running Threshers, Grist Mills, Sawing Outfits, Shredders, Huskers, Sprayers, Pumps, and all other INDOOR and OUTDOOR machinery, requiring 2 H. P. to 50 H. P.

Just a penny—spent for the postal you send me—brings you ENGINE INFORMATION that will be worth hundreds of dollars to you in your season's work. Now "take a chance" and ask a CENT for the postal and LEARN SOMETHING YOU DIDN'T KNOW BEFORE.

Balanced Rations

Don't let the good that is in you stay there.

It is all right to try out experiments on a small scale.

If you can't pronounce "Huerta" call him anything.

The best way to fight flies is to prevent there being any.

Half of making a good crop lies in the preparation of the soil.

De-tail the lambs if you want to retail them to best advantage.

The best education gives us the ability to do more and do it better.

Right farming always increases the fertility of the soil year after year.

Some farmers are evidently hostile to paint, judging from appearances.

The dog on the farm is all right, provided he is the all right kind of a dog.

Be always ready to lay aside something good for something better, but be sure about it.

The road to failure is a pretty smooth thoroughfare, worn smooth, no doubt, by heavy travel.

Now is the time to make a thorough study of the silo question. Build one this summer, if possible.

A business farmer needs more than the mere ability to keep a set of books and operate a typewriter.

Pigs like persimmons. There are plenty of opportunities for persimmon pig pastures in the south.

The man at the bottom of the ladder should remember that there's always opportunity to get higher up.

The big red apple needs something besides size and color to commend it. "Handsome is as handsome does."

To prosper a farmer must have a progressive mind, which means he must pry into new things, but with judgment.

The cowpea is the poor man's friend. Like a famous liniment, they're "good for man and beast," and they feed the soil as well.

Colorado grass is now gaining favor throughout the southwest. It has something of the nature and disposition of crab grass.

Virginia has a college-bred Holstein cow by name of Buckeye, DeKol Pauline II, that produced 1,150 pounds of butter in one year.

Authorities, self-constituted, are still declaring there is "no such animal" as a dual-purpose cow, but the farmers of Iowa, Missouri and Illinois go right on raising them by the thousands.

J. Pierpont Morgan has been beyond the pale for sometime, yet the world wags on just the same. Think of this when you're inclined to think the world couldn't get along without you very well.

A Pennsylvania law requires every owner, operator or manager of a creamery, cheese factory or skimming station to thoroughly pasteurize all the skim milk to be used for feeding purposes before returning it, the idea being to prevent the spread of bovine tuberculosis.

Salute the Flag

Mexico, the United States and the World

A PAPER issued twice a month, and with so large a circulation that its columns must be closed some days in advance of the date of issue, must leave to the dailies the publication of the rapidly transpiring current news. This applies particularly to the situation in Mexico. All we can do is to deal with that question in a general way, but even in that way we may interest and benefit our readers, for we may give them information that will enable them to form opinions and come to conclusions that the daily press does not.

Conditions in Mexico are peculiar to that country. Among the natives little attention has been paid to schools and educational opportunities are few. Consequently there is very little education among the masses of the native Mexicans and none of that conscientious observance of law and patriotic devotion to government that is held so sacred in this country and that is characteristic of civilized nations everywhere.

But Mexico is a land of resources. It is rich in opportunities for acquiring wealth. Its tropical and semi-tropical agricultural opportunities, almost entirely undeveloped, are attractive, but its timber and mineral resources have attracted most outside attention. These have brought to it the wealth seekers of the world. Powerful companies from almost all the nations have established themselves in Mexico and have built up great enterprises. The spirit of wealth grabbing, so prevalent almost everywhere, is

dominant in these great foreign establishments in Mexico. They have not to any great extent identified themselves with the Mexican government. They prefer to maintain their allegiance to their home countries, so that, while seizing almost everything in sight, they can claim protection from their own nations.

The working of these great enterprises has naturally brought to Mexico many of the common people of the countries whose citizens own them. Thus it is that there are people in Mexico from all the great nations, and when trouble and turbulence arises these people naturally look to their own countries for protection and the great wealth-accumulating bodies, with their millions at stake, demand it. Our Monroe Doctrine, that no foreign nation must interfere with governments in America, places the United States in a peculiar position as to these conditions in Mexico. It being our doctrine that foreign countries must not interpose in Mexico, those countries look to us to protect their people. This responsibility, added to the responsibility of protecting our own people there, and the semi-obligation we have assumed of helping the minor American countries to have lawful governments, puts us in a place we have seldom been in before. About all we can do is to trust our rulers and hope for the best possible way out of the difficulty. At the time we write this article indications seem favorable to that result, but by the time this paper gets to our readers things may be altogether different.

What Others Say and What We Think of It

"There's money in good roads."—The Banker-Farmer. There surely ought to be, for it takes it to build them.

"Farmers owe much to the progressive farm papers."—Agricultural Epitomist. Our subscribers keep paid up in advance.

"Keep the cholera serum out of politics."—Orange Judd Farmer. But we know of nothing that needs vaccination, purification and renovation more than politics.

"Small flour mills are able to hold their own with the big mills."—The Nebraska Farmer. Very true, but sometimes both of them hold more than their own.

"Dairying is rapidly becoming a science."—Twentieth Century Farmer. Dairying has always been a science, but dairymen are just now beginning to learn that fact.

"When books were rare it was safe to recommend almost any of them."—National Stockman and Farmer. But now there are books so absolutely raw that no one can recommend them.

"I believe that the country which God made is better than the city which man made."—County Boy's Creed. However, a lot of the country boys seem to like the handiwork of man the best, notwithstanding.

In Kentucky all labels on poison bottles must carry a prescription for the antidote, if there is one. Such a law should be adopted everywhere.—Farm and Fireside. Now we suppose all whisky bottles will carry a copy of a temperance pledge!

"It would seem that certain people outside the farm are more dissatisfied with the farmer than he is with himself."—Hoard's Dairymen. That's so, but they are no more dissatisfied with him than he is with them. And without doubt there is justice on both sides.

"Any farmer who raises but one-third of a bale of cotton per acre is selling his labor and that of his children for less than the daily wage of the most miserable factory employe in the cities."—The Progressive Farmer. And that is exactly why those children leave the farm for the city.

"We believe that wholesale shipments by co-operative groups of producers to co-operative groups of consumers offers a much better solution of the distribution of farm products than shipments in small quantities by parcel post. Nevertheless, we are glad the postoffice department is making an experiment. It will show just what may be expected of the plan.—Nebraska Farmer. Yes, and it will show those who may expect the plan to work wonders that it never can be a wonder-working plan. You are right in pinning your faith to co-operation.

EDITORIAL

Actual and Imaginary Competition

FARMERS have many things to contend against. The seasons are sometimes cruelly disappointing. Rains often interfere with the breaking and preparation of the land for the crops, and it may happen that, when all is ready for planting, rains come and cause delay—possibly compel much of the work to be done over again. Then in the growing season a lack of rain may defy the farmer's efforts and force a light crop. But these are the works of nature, and farmers have learned to be patient with them, and in various ways as nearly as possible counteract them.

But there are artificial interferences that are even more serious. American farmers have learned to expect and make due allowance for natural or home competition, but that from foreign countries and that which is purely imaginary—the creation of the American official mind—take them unawares and find them totally unprepared.

Take eggs, for instance. This is not regarded as a staple crop of the American farmer, but it is one of the main elements of the family support and a few cents on the price per dozen means a great deal. One of our local city papers recently expressed the idea that buyers for storage were fearful of making prices at which to buy eggs for storage, because they could not even conjecture what a slump there might be in future prices. It was said

that Russia, even then, was offering to engage eggs for October delivery at 15 cents a dozen laid down in New York, and that China was offering them at 14 cents a dozen for the same date of delivery in our Pacific coast cities. These prices, of course, would have to be met by the storage people, and they dared not buy American eggs except at prices that would meet these and provide for the cost of storage besides. It is easy to see what this means to the home egg producer. If the price of eggs offered the farmers remains at all reasonable, it is because the eggs just now go at once into the retail city trade and are consumed in advance of the imported article. This is a real competition, though it is artificial and is created by laws of the American Congress.

But farmers must contend with a competition that is purely imaginary. The press throughout the country is now ornamented with display headlines of Department of Agriculture predictions of bumper crops for next season. Nobody knows whether that will be so or not. The crops are not yet fully planted, and they must still meet all the exigencies of the season. Spring conditions may be favorable, and if so it should be pleasing to everybody and encouraging to the farmers, but this official heralding of bumper crops is actually injurious to them. These reports, though admittedly predictions, bring down prices and cost the farmers just that much on what they yet have to sell. And whom do they benefit?

Congress and Sincerity

THE MEMBERS of Congress, both of the Senate and the House, are understood to be representatives of the people, and as such their whole aim should be to honestly and sincerely guard the public welfare. The first thing to consider concerning every measure proposed should be: Is it needed? Will it benefit as nearly as possible the whole people? Will its final result be for the general good?

But unfortunately office seekers want jobs. Most political leaders are office seekers, and most congressmen are politicians. Hence their first consideration is: Will it win votes in my district or state? We have a personal letter from a prominent—we may say distinguished—member of the United States Senate. We would gladly mention his name, but, as we have said, the letter is a personal one, but none the less sincere and true. Referring to certain recent legislation in Congress, the Senator says:

The truth about it is that bills of this kind are passed to curry favor with the farmers and secure their votes. It is a species of bribery. I do not believe in that sort of thing and therefore opposed the bill on general principles. I should think it would be a humiliating thing to the farmers of this country, one of the most intelligent

and best-informed classes of men, that legislation of this kind should be passed for the reason that it may be helpful to some political party or some candidate for office. I do not understand why the farmers do not rise up against this sort of legislation, by which, in my judgment, they will be injured much more than they are benefited.

The expenses of the government are becoming enormous. The farmers will, directly or indirectly, pay a large part of the taxes that are necessary to meet these exorbitant expenses. I should think they would in self-respect let the country know they are not mendicants or beggars expecting to live off their government at the expense of the tax payers, and that they do not want this sort of legislation, but resist it.

We do not make the remarks we have made above, nor do we make the above quotation, to prejudice the people against Congress, nor do we expect it to affect the legislation referred to, but we wish the congressmen themselves to know that the people understand their motives and that at least one of their number sees these things as we do and is brave enough to make them known. We wish the farmers to know also that their power is understood in Congress and that they are responsible for how that power is exercised—that it is their duty to place themselves by organization in a position to make themselves heard not only in the channels of trade, but in all political parties.

Are Farmers Well Posted?

FARMERS, like other inhabitants, are citizens of the United States, and upon them, as well as on any other class, lies the duty of taking an active, intelligent part in the affairs of government, local, state and national. Like other classes, also, farmers know most about the work which engages them, and not working much at the government business they know little of what is going on in official circles.

There is such knowledge, however, that would greatly profit the farmers as a class, if they possessed it. Ignorance of many things has led to care-

lessness and neglect, and this has permitted a condition in government affairs that is not good for the people in general, and farmers in particular. We have mentioned some of them, editorially, in recent issues, and also in this one. Extravagance bears heavily upon the taxpayer, and lack of information permits this extravagance to rush headlong, unbridled and unchecked. Farmers should become posted on these things. They need to read more, and read thoughtfully.

As an example of what we mean by this, we relate an incident which happened in Congress recently. The House of Representatives had under

consideration the Agricultural Appropriation bill. The item of appropriating \$274,180 for the Bureau of Crop Estimates was under discussion. Congressman Baltz, of Illinois, an actual farmer, one of the few of them in Congress, asked the following question:

How does the Department of Agriculture get the estimates throughout the United States upon the crops of this country?

Wouldn't that astound you? A congressman who is a farmer, and ought to be well posted, yet was in ignorance of the operation of one of the most important (?) bureaus of the Department of Agriculture! Astounding, perhaps, but not at all uncommon. Very few people, congressmen, farmers, or what not, no matter how intelligent, know about these things, and there lies the trouble. They should know.

For the information of our readers we give the reply of Congressman Lever, chairman of the committee on Agriculture, and in charge of the bill, as follows:

The present method of reporting involves about five or six different sources of information, upon which the Department relies for its final judgment. As I recall it, they have township correspondents and county correspondents and state correspondents. Then they have correspondents such as, in the case of cotton, the cotton-compress men and the fertilizer men and such other men as are intimately acquainted with the cotton situation. Then each state has a state statistical agent, who has under him a number of people reporting to him directly from time to time, and he in turn makes his report to Washington.

Then, in addition to that, the Department has a number of special agents who travel over a given territory. Of course they are experts, well acquainted with the situation. They in turn report to the Department. Now, then, when all this information is gathered, and when the final estimate is to be made, some of these special agents are called here to Washington, and they constitute the crop-reporting board. This information that has been gathered is kept in the safe of the Secretary of Agriculture. It comes here in a specially prepared envelope. It is not touched by any one, not even the Secretary of Agriculture, until the day when the crop-reporting board looks over all the figures. Then the Secretary turns this testimony, as you might call it, or these facts, over to the crop-reporting board. The window blinds are drawn, the telephone is disconnected and the door is locked and then the estimate is made.

Now, then, it is the purpose of the Department of Agriculture to increase very greatly its state force. In other words, they want to build up a strong state system of reporting. In my state, I happen to know, they are paying a man \$300 or \$400 as a state agent. He is a railroad engineer and, of course, can give no special attention to his duties and must be dependent entirely upon a few of his friends scattered here and there about the country, who write to him and tell him the condition of the growing crop and what their judgment is as to the final results. Now, instead of having a system that is carried on in that way and depending almost entirely on a dozen or more Federal special agents, it is the plan of the Department by this increase and by this line of segregation to put into each state a good, strong, capable, live man, who will be in charge of the work and who will devote all of his time to it, and this increase will enable the Department to pay a salary that will provide such a man.

Farmers and the Freight Rate Question

NO FARMER will feel happy if freight rates are to be raised. It means that much less money for his crops that must reach the market by rail. Notwithstanding this, if it can be shown that not to raise the rates will so impair the transportation service that farmers can not get their crops to market in good condition, or in quick time, and delays and wastes cause greater losses than the increase in cost of transportation through the raise in rates, the farmer would choose the least of these two hardships and would prefer to pay a little more freight and secure satisfactory service. There can be no question about this. If it is necessary to raise the rate, or else the service will be crippled, farmers will not object to a raise in the rate. But farmers are objecting to a rate increase, because they do not believe it is necessary. They believe that without any increase the railroads can maintain and improve their service, and a higher rate only means a larger dividend

to stockholders, whose dividends are large enough. In this belief they have been upheld by the findings of the Interstate Commerce Commission and other public officials who have investigated the matter. It is this belief that impels them to appeal to the Commerce Commission to refuse the request for higher rates. Moreover, they know they can ill afford to have any more taken off their own incomes.

If the railroads can make it clear that unless a raise in rates is granted they will be unable to run as many trains, or run them as rapidly or safely, or build new track and rolling stock, which would seriously cripple the shipping service, the farmers will accept the inevitable without protest. But the burden of proof is upon the railroad companies.

Lecture Course Keeps Young Folks on the Farms

BUENA VISTA, Wisconsin, has discovered a way to keep the boys and girls on the farm.

Buena Vista is a country community four and one-half miles from Arnott and, like most farming communities, its means of community entertainment are difficult to secure. But Buena Vista is composed of an energetic farming population. Recently the people got together and decided that they wanted a lecture course. They got in touch with the University of Wisconsin extension division and bought a five-number course at a cost of \$135.

In the middle of the season the treasurer's books showed that all expenses had been paid, with \$50 left over in the treasury. Buena Vista has decided to take on a course next year that will cost nearly \$200.

The lectures were given in a discarded church that had a seating capacity of 180. But the average size of the audience was 185. One hundred and seventy-one season tickets were sold in advance. And people drove six miles to attend the entertainments.

One of the members of the committee writes: "The courses are backed by reliable farmers who are interested in furnishing a class of good, clean and instructive entertainment for their boys and girls in order that they may make farm life more attractive. These farmers are willing to open their homes for the entertainment of lecture course people."

Smile Awhile

Different Driving

"Papa, I was a success in the ball game today. I could drive the ball beyond the reach of everybody."

"But you would have been a greater success if you had helped me drive the pigs to the pasture."

How to Succeed

Lecturer—The two keys to success are luck and pluck.

Hearer—Do you mean luck in finding somebody to pluck?

The One That Lies

Home Hunter—How does the land lie out here?

Native—It's not the land that lies, stranger, it is the land agents.

Worked Like a Charm

"To make us both better, Jim and I agreed to tell each other our faults."

"How did it work?"

"All right, I reckon. We have not spoken to each other for ten years."

His Kind of Thinking

Pearl—Jim told me last night he couldn't talk much because he had a train of thought.

Alf—It must have been made up of flat cars or sleepers.

Knew Better Now

Mrs. Dingit—I remember how we used to talk when we were courting, especially when you proposed and I said "Yes."

Mr. Dingit—So do I. We often said things it would have been better if we had never said.

Power Economy on the Farm

Fig. 1—The Motor Truck Is Useful Where Hauling Is of Importance

EACH new step in the development of farming makes a new alliance between the producers in industry and the producers in agriculture.

Improved methods of farming demand improved implements, which in their turn call for new factories, more skilled labor and a greater use of the products of mines and timber lands.

Easily the most striking advance along these lines is the rapid development of mechanical power on the farm and on the road. "Power farming," as it is called, is growing with a rapidity that taxes the ability of the commercial world to supply it with the tools it demands. A few years ago none but the largest farmers thought of using mechanical power to pull their plows, drills, cultivators and harvesters or loaded wagons freighted with farm produce on the highway to market. The needs and requirements of the average farmer, however, has led inventive minds and far-sighted capital to take up the problem of supplying economical power to the small farmer.

A few years ago a young man who lived in a small city in the interior of Virginia, with only inventive genius, ambition and vision, began experimenting with a small powered gas engine for the one-man farm, or the "one-horse" farmer, as they often term the owner of a farm of small acreage. The writer of this article was living in that town at the time and became a most interested observer of the experiments. A plow was built of assorted pieces taken from other machinery and a small but powerful marine gas engine yoked up. The plow was made to work. A still smaller tool, a hand plow, was also constructed and a motorcycle engine attached. It also worked. Both were, of course, clumsy and ill proportioned, yet were marvels of mechanical skill when the source of supplies for construction were considered.

This young man was not the only one engaged in this work. All over the country are minds of mechanical bent turned toward this problem of economical mechanical power for the small farmer, and the results are highly satisfactory, both for what has been accomplished and what the present accomplishments promise for the future. Already tractors and other power

plants have been made that are quite satisfactory, and adapted to general use. But what is more to be considered is the fact that these first efforts are but first steps, and with the benefit of experience power farming will soon become a stupendous proposition.

Today there are small outfits of different makes which cost not more than the price of six or eight good horses, yet which will easily do the work of

Fig. 2—The Automobile Is Earning a Valued Position on the Average Farm

twelve to sixteen and do it at less expense to the farm, whether the work consists of plowing, drilling, harvesting, hauling, logging, making roads or baling hay. They can turn over an acre six to seven inches deep for from 40 cents to 50 cents and they can drill it for even less. They can haul the harvest in from the wheat field or the corn field with a speed which is rapidly solving the harvest hand problem. They can handle the disks and drills in such a way as to turn out a seed bed that even the intensive European farmers would envy. They can, as a well-known agricultural college professor said, "perform every operation in wheat growing, from plowing and threshing to conveying it to the market, and every operation in corn growing but cultivating."

The difference between motor power and horse power is that when a tractor quits work its expense ends and when a horse quits work its expense begins. A hay famine has no terrors for the power farmer.

There is, of course, nothing to indicate that horses are a back number or that they could be eliminated en-

tirely from the farm. That fate has overtaken them quickly enough in the cities. It is certain, however, that in all the branches of farm work where power and speed are essential, if we are to get our crops with less work and less time, there is a marked saving in using engines. This is seen not only in labor and time, but in the saving of expense for fuel. In other words, if the time and labor-saving elements are not considered at all it takes a greater cash value of oats to get a definite amount of work out of horse flesh than it does to get a similar amount of work out of an engine burning kerosene.

The greatest degree of efficiency in farming depends to a very large extent on the mechanical condition of the soil. To obtain and maintain the right condition it is necessary to plow and cultivate at a time when the soil is in a certain condition, neither too wet nor too dry. It often, if not usually, happens that the ground is in this peculiar condition during only a short period of time after rains, but on account of the slow method of plowing the farmer must begin plowing before the ground is really dry enough

pense than other means, appeals at once to the intelligent, progressive farmer who sees the greater opportunities for profit in the scientific handling of his soil.

The oil engine works in any kind of weather and will work twenty-four hours a day if desired, with just as great speed and strength at the end as at the beginning. It can be housed cheaper than horses to do the same amount of work. It can be maintained much cheaper and it does the work at less cost. The farmer who has ambitions for the future must give heed in his plans to the utilization of mechanical power or soon his horse power must compete with the more progressive farmer's engine power and it can not do so successfully.

As a time saver the motorcycle is great. It has been used quite extensively also as a small power engine. It is a pleasure vehicle of no mean importance. And paradoxical though it may seem, one way to keep the young man on the farm is to give him this means to get away from it whenever he wants to.

The power tractor shown in Figure 3 is of a type that is adapted to the farm of moderate size. Low, compact and powerful, it can be used under a wide range of activities. It can be used for stationary purposes, as it has a drive shaft with a belt pulley. The broad wheels distribute its weight so that it does not pack the soil unduly. The pressure per square inch of ground surface of an engine of this type is greatly less than the pressure of a horse's hoof per square inch. Such a tractor will pull a gang of four plows and a harrow, and plow and harrow from ten to fourteen acres a day. It will also run a small grain separator, a corn sheller, shredder, ensilage cutter, saw mill, etc. And it will pull a heavy King road drag and put earth roads in excellent condition when the ground is too wet for plowing. Besides, the farm tractor can be hitched to an ordinary heavy wagon and will haul a load as large as the capacity of the wagon will permit at a fair rate of speed.

The motor truck is most useful and profitable on farms where hauling is an item of considerable importance. The average farm of ordinary size, however, would not be likely to make profitable use of this vehicle.

Power farming not only effects a striking economy, but it increases the efficiency of every implement used on a farm. It will partly solve the scarcity of labor problem and it changes the vocation of farming from humdrum drudgery to an absorbingly interesting, up-to-date business.

Fig. 3—A Power Tractor With Many Excellent Qualities

Was It Advertised in Up-to-Date Farming

If you see anything advertised in another paper that is not in UP-TO-DATE, will you write the advertiser and ask him to use your paper? In that way a lot of advertisers will come to know the value of this paper. And increased advertising will benefit you by allowing the paper to be larger and better.

Also, buy from those who advertise in UP-TO-DATE. They are guaranteed.

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Farmers are Shrewd Buyers

and excellent judges of tobacco quality—being naturally expert at valuing any product of the soil. They are big users of PIPER Heidsieck because they appreciate the high quality of the leaf and the wholesome satisfaction in this rich, pleasant, tasty tobacco.

PIPER Heidsieck

CHEWING TOBACCO (CHAMPAGNE FLAVOR)

"PIPER" is the highest type of chewing tobacco in the world—made from ripe, mellow, choice leaves of Kentucky White Burley. "PIPER" is distinguished from all other chewing tobaccos by its famous "Champagne Flavor"—a luscious, winey tang that gives an added delight to this splendid tobacco. Get the healthful "PIPER" habit today, and you'll discover supreme tobacco enjoyment.

Buy "PIPER" by the Box and you'll always have a supply handy. For your convenience we pack "PIPER" in 2-lb. boxes of 36 separate foil-wrapped 5c Pocket Plugs; also in 2-lb. boxes of 18 ten-cent cuts.

FREE Send 10c and your tobacco dealer's name, and we'll mail you prepaid, anywhere in U. S., a full-size 10c cut of "PIPER" in a handsome leather pouch FREE. The tobacco, pouch and mailing expenses cost us 20c, and we gladly spend the money to get you to try "PIPER."

Sold by dealers everywhere, in all size cuts from 5c up.

THE AMERICAN TOBACCO CO., 111 Fifth Ave., N. Y. City, Room 1137

Acetylene as a Home Light

CONFESS I am an enthusiast over acetylene gas as a home light. But why shouldn't I be? I have a plant installed in my home and would not have it taken out at any price. The mystery is to me why I have got along with the old-fashioned kerosene lights, with their smoky chimneys and poor lights, when acetylene, with its cleanliness and brilliancy, could be gotten at such a reasonable figure. Reading under the old lights was uncomfortable and certainly bad for the eyes; they were dirty and made a lot of work for the women folks. But how different now with acetylene. Its cheapness, its cleanliness, its safeness and its adaptability for use on the farm all unite in giving it first place as a most desirable farm convenience.

Modern acetylene, generated in high-grade apparatus, affords many advantages over other illuminants and lighting systems. It is much safer than city gas. The gas is nonpoisonous, an item of considerable importance. It produces a beautiful, clean, soft, incandescence at the jet, and gives a

time. The carbide used in the machine costs \$3 per one hundred pounds by the ton and six hundred pounds will last us a year, and we use the lights much more than the average farmer.

Acetylene is certainly a great convenience and I am more than pleased with the investment, and can heartily recommend it to every farmer, or anyone using the old-fashioned kerosene lights, as an up-to-date, cheap and satisfactory light.—Archie E. Vanderbilt, Sidney Centre, N. Y.

AN EXCELLENT RUNNING WATER SYSTEM

A cheap and permanent outfit for supplying running water to over 100 head of cattle, ten horses and a number of hogs is described below by W. A. Dickinson, superintendent of the Meadowlands farm, Minnesota. The concrete shelter over the three hydraulic rams, which supply the power for this simple and economical system, was pictured in a former issue and is reproduced here.

"The building is 6 feet square on the inside. The walls are about 9 inches thick, plastered with cement on both sides, and set about 6 feet high above ground on a foundation 2 1/2 feet deep. It contains about six yards of concrete altogether. The roof is framed, shingled, four-sided and comes to a peak at the center.

"This building houses three rams, two of which have 1 1/4-inch feed pipes and the other a 1 1/2-inch feed pipe. The latter has about the capacity of the other two together. They each have a drain plug for draining the air chambers. The 1 1/4-inch delivery pipe into which they each discharge the water is fitted with a cut-off valve which, when turned, prevents the water from flowing back when the rams are drained.

"These rams get their supply from a spring-fed reservoir about fifty feet away from them, and in which the water level is 6 1/2 feet above the bottom of the rams. With this full of water these rams pump the water to a reservoir located underground above the basement of the barn, about 35 rods distant and 30 feet higher than the rams themselves. At this point they deliver (all working together) about a half-inch stream. This continuous flow of water is sufficient to supply over 100 head of cattle, besides ten horses and a few hogs.

"The only attention these rams require is the draining of the air chambers once a week, which requires about twenty minutes of one man's time from the time he leaves the barn. They give no bother if they are drained regularly. These particular rams have been doing service on this one farm for over fifty years and are still in good condition. With the exception of a new brass plunger valve about once in five years, these rams require no other repairs."

He Won Something

"Did you get a premium in the spelling contest, Billy?"
"No, I didn't get no premium, but I got horrible mention."

light of natural quality—almost daylight. At the same time it is odorless, cool, comfortable and safe. Acetylene costs less than kerosene and by it absolutely reliable service is obtained. All these advantages make it particularly available for use on the farm.

Its cost is not so heavy as some would be made to believe. The entire cost of my plant, including the generator, pipe and fixtures, chandeliers, including every detail of the plant and equipment for twenty-five lights, was about \$200. We have a hot plate, so that in hot weather the women can use it for cooking purposes, which is so much quicker and cleaner than starting up the range. This is one of the great features. The burners in the barns are protected with a covered globe, and are lighted with an electric battery and spark coil by just pulling a small chain, so that there are no matches and danger of fire around the barns.

It takes about fifteen minutes, usually, to charge the plant, and this only has to be done every three or four weeks. The actual filling does not take two minutes, but the filling it with water after emptying takes some

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

SUCCESS AND FAILURE IN 1913

(Awarded First Prize of \$3)

Farming in this section was much work and little profit last year on account of the severe drought which visited this vicinity, yet the year could not be counted a failure, for much valuable experience was gained and preparation made to provide for such emergencies in the future. Field crops, fruits and vegetables failed from heat and dry weather. The wheat harvest came earlier than usual. We had 70 acres of fine-looking wheat, from which a fairly good yield was expected. Special pains had been taken to prepare the ground, select and sow wheat and fertilizer, but the entire crop only averaged seven bushels of wheat per acre. Over twenty-three acres of corn yielded in the neighborhood of fifteen bushels to the acre. Different varieties of corn and methods of cultivation were tried. Several acres where rye had been turned under and others where stable refuse was scattered with a spreader, an increased yield and better grade of corn resulted, but nothing like an average yield. Hay also was a short crop on uplands, but a fairly good crop on bottom land. Fruit was almost an entire failure. Pear trees, usually well loaded, were without a pear. Repeated plantings of vegetables dried and scorched without yielding enough to supply the home table. Finally, realizing there was nothing to be gained by wasting time and seed, we turned our attention to fencing and other improvements. Wells, cisterns and ponds were cleaned out and new ones finished. As the weather was so favorable, concrete work followed—walks, steps and gate posts and fence posts set in concrete.

Some time was devoted to road building and the good roads problem is presented in the March 1 issue expresses my views with reference to concrete as the ideal material for road building.

One of the by-products of the farm that should be called the stand-by product is that derived from the industrious biddy. When food was scarce she sang and scratched, devoured insect pests and weed seed and heaped her cash products with unabated zeal. The income increased in value and numbers to offset the other decrease.

One beneficial element of farm life is that we do not feel the losses unless they are serious ones. There are so many different sources of income the loss or decrease in value of one or more is usually balanced by the increase of others. With the cash value maintained through the ill-fated year by improvements and biddy settling for the groceries, I am thankful to call it even and prepare for the coming crop knowing success will exceed failure with as little effort on the farm as elsewhere.—L. A. Barnes, Mt. Washington, Ky.

DIYERSIFIED FARMING

(Awarded Second Prize of \$2)

Below is my statement of my farming operations for 1913, with receipts and expenditures. I am using the Melrose system of farm bookkeeping, find it very convenient and would not farm without it. I am unable to give comparisons with the year 1912, as I began keeping books only last year.

Receipts

Oats, 2 acres, 75 bushels...	\$ 20.25
Hay, 7 1/2 acres, 12 1/2 tons...	62.50
Radishes, 4 acres, 199 1/2 doz. bunches	27.62

1,017 pounds seed.....	101.70
Peas, 8 1/2 acres, 5,922 pounds seed	148.05
Potatoes, 6 1/2 acres—	
170 sacks (70c per cwt.)	148.49
13 sacks (70c per cwt.)	10.25
415 sacks (70c per cwt.)	511.90
Apples, 1 acre, young orchard, first season, 23 bu.	23.00
Butter	20.00
1 veal calf.....	6.00
Eggs and chickens, sold.....	126.09
Eggs and chickens, used.....	9.19
Hogs, 19 head.....	263.15
Hogs, home use.....	37.75
Total receipts.....	\$1,545.20
Expenses	
Family food and clothing..	\$ 247.26
Miscellaneous, including machinery, repairs, taxes, interest, etc.....	491.93
Feed for horses.....	22.61
Expense for hog supplies...	134.40
Expense for poultry supplies	145.27
Expense for oat crop, seed twine and labor.....	9.18
Expense hay crop, labor...	9.05
Expense radish crop, labor and seed.....	27.85
Expense pea crop, labor and seed	67.05
Expense potato crop, labor, seed, sacks, etc.....	126.50
Expense dairy, for hay, separator and miscellaneous items	41.35
Total expenses.....	\$1,324.45
Surplus	\$ 220.75
Value of stock and equipment	\$3,359.75

—John Doe, Idaho.

OUR RECORD FOR 1913

(Awarded Third Prize of \$1)

I am herewith sending you a complete statement of last year's operations upon our farm. Here we raise corn, tobacco, wheat, hay and garden vegetables for home use.

Last year we made: Wheat, 200 bushels; tobacco, 9,000 pounds; hay, 6 tons; corn, 250 bushels. Sold—Cattle, 4 head; butter, 30 pounds; chickens, \$12 worth. Meat raised, 800 pounds.

Cost of producing wheat—seeding, fertilizer, harvesting, threshing, etc.—\$60. Cost of tobacco—plant bed, burning, sowing, canvas, planting, cultivating and marketing—\$200. Cost of hay—seed, mowing and stacking—\$15. Cost of corn—seed, planting, cultivating and housing—\$20. Cost to feed teams for all this, \$250. Cost

LONG before harvest is the time to look over your haying and harvesting machines. Among yours something will need attention. You may need a new binder or mower to get the most from your fields. Place your orders for new machines with the dealer, and get what repairs you may need now, in ample time. When you need a new harvesting or haying machine, buy from a reliable line that has stood the test of many years' service. Let your choice be a machine bearing one of the following names:

Champion Deering McCormick
Milwaukee Osborne Plano

You will find one of these same names, or the name "International," on the best, smoothest, most uniform twine made. Each of these seven brands is made in five grades, sisal, standard, extra manila, manila, or pure manila.

Ask the local dealer for catalogues on any International Harvester binder or mower, or write to the

International Harvester Company of America

of cattle, butter and chickens comparatively nothing.

Besides this we put on the railroad 1,000 crossties, which cost us (we put them there with our teams) \$120.

Value of wheat, \$200; value of tobacco, \$720; value of hay, \$120; value of corn, \$220; value of cattle sold, \$118; value of butter sold, \$25; value of chickens and eggs sold, \$14; value of meat, \$100; value of ties, \$850.

So, by figuring closely, we have as a balance to our credit \$1,822.

I agree with you that the farms are advancing on a better business basis.—W. W. Rowles, Spring Mills, Va.

BROWN FENCE
13 Cents Per Rod Up
Strongest, heaviest wire, Double galvanized. Outlasts others nearly 2 to 1. Low prices direct from factory. Over 150 styles for every purpose—hog, sheep, poultry, rabbit, horse, cattle. Also lawn fence and gates of all styles. Mail postal for catalog and sample to test and compare with others. Address THE BROWN FENCE & WIRE CO., Department 70, Cleveland, Ohio.

ORNAMENTAL FENCE
40 designs—all steel. Handsome, costs less than wood, more durable. We can save you money. Write for free catalog and special prices. KOKOMO FENCE MACH. CO., 440 North Street, Kokomo, Ind.

BINDER TWINE

If you and your neighbors have not bought your binder twine you can hear of something to your advantage by writing The Equity System Indianapolis, Ind.

REARING THE YOUNG CALF

A better grade of cows will result when more attention is given to the rearing of calves. When a calf is born the mother should be in the best physical condition possible. Characteristics of parents are transmitted to their offspring. An undersized cow that gives a small quantity of milk and of low quality is quite likely to transmit these qualities to her offspring. Every heifer calf born of a high-grade mother has the possibility of becoming a better grade cow than the mother. On the other hand, scrubs will produce scrubs.

A calf should be weaned from the mother within three days after birth. If permitted to remain longer, it is difficult to teach the calf to drink from a bucket and the excitement caused the mother lessens the flow of milk. If the udder is caked the calf should remain with the mother a longer time. After the calf is taken away from the cow it should be taught at once to drink from a bucket. For the first three weeks the calf should be fed three times a day. The milk should be as nearly as possible at body temperature. The amount should be increased from five or six quarts a day the first week to eight or nine quarts later. At the end of the second week whole milk may be diluted with a small amount of skim milk. The amount of skim milk may be gradually increased during the third week until it furnishes the entire milk ration. At this time the calf should be taught to eat grain. At first it should consist of a handful of ground oats, corn meal or linseed meal. When the calf is six weeks old it should have about one-half pound of grain a day. This should be increased gradually until at the end of the third month two pounds may be given daily. Cleanliness is as essential to calf raising as it is to the production of milk. Growth during the first few months should be rapid. A clean, well-lighted and ventilated stable with plenty of fresh water and sweet milk are essential to rapid development. The feed for the first winter should consist of a large amount of rough food and a small amount of grain. In feeding for veal production the calf should be taken from the mother and given the same care mentioned above, except that whole milk should be fed and the quantity increased to five or six quarts twice a day.

There are several distinct advantages in rearing calves during the winter months. The summer months are busy ones and the farmer can not give sufficient attention to the growing calf. If given proper care during the late fall and winter the calf will mature quickly and suffer no serious drawback when turned out to pasture in the spring. A fall calf is ready to become a producer when milk and butter are the most valuable.

NATION-WIDE ATTEMPT TO CONTROL HOG CHOLERA

A nation-wide campaign to control hog cholera is to be made in the very near future, if the plans are carried out which were suggested at a recent meeting of the Federal and state officials who have the work in charge.

Every year one hog out of every ten in this country succumbs to this disease. Only by the full and hearty co-operation of stockmen and farmers in carrying on a definite campaign of control can outbreaks of this disease be prevented, says Dr. F. B. Hadley of the College of Agriculture of the University of Wisconsin.

While properly prepared serum is the only agent known which can be used to combat the disease, certain simple measures for preventing it from infecting healthy herds can be successfully adopted.

Keeping the pens, yards and animals clean and free from all chances of infection is the first step toward preventing an outbreak. Very often the disease is carried from one farm to another on the farmer's boots, or by ani-

mals and machinery that pick up bits of soil or dirt near the infected quarters.

All hogs coming into the herd should be quarantined for a period of three weeks before being allowed to mingle with the rest of the herd, and all stock cars used for breeding hogs should be thoroughly disinfected before using in order to keep the infection from spreading to disease-free farms. In order to avoid severe losses, herds that are threatened with cholera should be promptly treated with the serum.

To further assist this work Congress recently appropriated \$500,000, which will be used for field demonstrations and to place federal inspectors in those serum manufacturing plants doing an interstate business.

KEEP THE MILK PURE

Minute organisms called bacteria make the changes in milk that either spoil it for use or make it fit for use in other forms. Bacteria is what sours milk, making clabber, or cottage cheese or other cheese, and the various drinks of fermented milk, such as kumiss, lacto and other forms. These bacteria, taken into the human system, are not at all harmful, but actually beneficial. On the other hand, harmful bacteria which cause disease when taken into the body also get into milk and multiply rapidly, making its use dangerous

DE LAVAL

as superior to other
separators as other
separators are to
gravity creaming

WHY STOP HALF WAY IN BUYING A CREAM SEPARATOR?

THE ABOVE HEADING SUMS UP the cream separator case, as it concerns every prospective buyer of a separator and every user of an inferior separator, in a few words as it could well be put.

OTHER SEPARATORS SKIM cleaner than is possible on the average with gravity creaming, and De Laval Cream Separators skim as much closer still than other separators, particularly under the harder conditions of cool milk, running heavy cream or separating the milk of stripper cows.

OTHER SEPARATORS PRODUCE a cream superior to gravity creaming, and De Laval cream is smoother, less frothy and so much better than the cream of other separators that De Laval made butter always scores highest in every important contest.

OTHER SEPARATORS SAVE TIME and labor over gravity setting or creaming of milk, and De Laval Separators, by reason of their easier turning, greater capacity, easier cleaning and easier handling, save a great deal of time and labor over other separators.

OTHER SEPARATORS SAVE their cost every year, as a rule, over gravity creaming, and De Laval Separators save their cost every year over other separators and last from ten to twenty years,

or on an average of five times as long as other separators.

DE LAVAL SEPARATORS COST A little more than other separators, but very little, and they soon save that small difference and go on saving it every few months, as other separators would go on wasting it, for all the years they last.

WHY THEN BUT HALF SOLVE the problem of best results and greatest economy in dairying by the purchase of an inferior separator or go on dairying with this important problem but half solved if you are already using an inferior separator that you might so easily replace with a De Laval?

THE SEASON OF GREATEST PRODUCTION is now at hand when all these differences count for most with every user who should have a separator and is trying to get along without one. No other dairy question is of anywhere near as great dollars-and-cents importance.

WHY NOT SOLVE IT NOW IN the only sure and safe way possible? If you haven't a separator, buy a De Laval. If you have a poor separator, replace it with a De Laval. If it is not convenient to pay cash you may buy a De Laval on such liberal terms that it will actually save and pay for itself.

Every De Laval local agent is glad of the opportunity to prove every claim here made. It will cost you nothing and may save you much to give him the opportunity. If you don't know the nearest De Laval agent simply address the nearest main office, as below.

OLD FOLKS What 15c Will Do!

You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world, and that tells the truth and only the truth. The Pathfinder is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its 21st year of increasing success. This paper fills the bill without emptying the purse; it costs but \$4 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address: THE PATHFINDER, Box 7 WASHINGTON, D. C.

HOME-MADE CHEESE

By A. C. McPherson

Farmers' wives are often deterred from cheese making simply because they imagine it a task or suppose a considerable outlay for utensils necessary. For home use, to provide one's self with a few cheeses now and then, the simplest implements can be used, such as are to be found in every home. A large tin wash boiler, which should be new or bright as possible; a basket, one or two squares of cheese cloth, and a hoop, which can be fashioned from a discarded measure or can be made of tin. The press can also be improvised.

It is best to begin with only small cheese at first. Strain the night's milk, if enough milk can not be obtained at one milking, into the boiler, stir well and leave uncovered until cool. Next morning add the morning's milk to that already in the boiler, stir well so as to incorporate all cream that formed on the night's milk. A piece of rennet half as large as the hand should have been put to soak the night before in a pint of warm water. (Rennet tablets have almost entirely superceded the rennet itself.) Add the rennet whey to the milk soon after it is placed on the stove and stir well. Heat the milk gradually up to about 90 degrees, then remove from the fire and let stand half an hour, or until coagulation takes place, after which cut into squares with a large knife so as to allow the whey to escape. Whey should be almost transparent when the curd has "set." Should the whey be of a milky color it denotes that either the milk was not sufficiently heated or else a deficiency of rennet. After the curd has set, dip off all whey possible before removing the curd. Have ready a square of cheese cloth, which should be spread over a clean basket and the basket placed over a tub. Dip the curd from the boiler, place in the cheese cloth and let it drain awhile, then with the hand break the curd up fine and salt to taste, using fine dairy salt. Afterward gather the cloth by the corners, shake well until firmly settled in the center of the cloth, then lift and place in the cheese hoop, where it is intended to remain upon the press. A clean board is to be placed under the hoop, which is bottomless. Fold the cheese cloth evenly over the curd so as to not wrinkle and place the cover or "follower" over it. Place a light weight at first on the cheese, changing to a heavy one afterward. Let the cheese remain in press about thirty-six hours, turning once in that time. After taking from the press set away to dry, then rub with melted butter. Turn once a day and rub with butter for a week. Afterward place a bandage of thin muslin around the side and place in a dry, cool room, secure from flies. In five weeks the cheese should be ripened for use, if small. If the farm possesses but three cows the farmer's wife ought to be able to furnish her table with cheese of her own making, supposing all three cows to be in full flow of milk.

Twenty pounds of milk are required to make one pound of butter, while but ten are required for a pound of cheese.

Rennet tablets can be had at drug stores or of dairy supply houses. Rennets can be procured of butchers also. Rennet is to be preferred if it can be obtained.

PURE-BRED VS. SCRUB COWS

A pure-bred dairy cow is one that has been bred for generations for the particular purpose of giving milk. A pure-bred beef cow is one that has been bred in the same way except that beef qualities rather than milk qualities were sought. A scrub or unimproved animal is one whose breeding is mixed with few pure-bred ancestors. Neither milking nor beef qualities have been considered. The advantages of the pure-bred animal are: (1) Pure-

ECONOMY King Cream Separator

Our sanitary loose disc bowl has no slots, crooked tubes or inaccessible corners. The supply tanks are seamless and of our improved no-splash pattern. Every part of the bowl and supply tank and the covers coming into contact with milk are highly polished and tinned and retinned with the best pure block tin.

An ingeniously designed dirt collecting chamber in the bowl cleans and purifies the milk.

These and many other advantages of Economy Cream Separators are fully explained on pages 1225 to 1237 of our new big General Catalog. If you would like additional facts, we have—

THE new Economy King Cream Separator is its own best salesman. Let us send you one on ten weeks' trial. Test it with old milk, cold milk and milk from stripper cows as well as on fresh warm milk. Try the Economy King alongside of any other separator, regardless of name, make or price—compare them for closeness of skimming, ease of running, quick and thorough cleaning and in other essential requirements.

If the Economy King isn't superior to others—if a ten weeks' test don't prove it to be satisfactory in every way, send it back; we will return your money, together with transportation charges you paid.

Prices: 250-lb. capacity, \$28.95; 375-lb. capacity, \$36.75; 600-lb. capacity, \$44.90; 800-lb. capacity, \$49.80.

A New Book for Farmers

It not only illustrates and describes our complete line of Economy King Cream Separators, but combines under one cover, complete descriptions and accurate illustrations of our entire line of Plows, Harrows, Cultivators, Spreaders and other farm implements, as well as Buggies, Harness, Gasoline Engines, Farm Tools and many other farm supplies, all sold at worth while prices.

If you would like to have this Separator Catalog, which also combines all these other lines, just write "Send me your Cream Separator Book 65U72" and address

Sears, Roebuck and Co., Chicago

bred animals have been bred for particular purposes for 400 to 2,000 years and will no doubt conform to desired characteristics more nearly than the scrub; (2) the offspring of a pure-bred animal will be more valuable than the scrubs (inherited characteristics, such as health, vigor and beauty, are quite likely to be transmitted; (3) the cost of keeping the two animals is the same; (4) a herd of pure-bred animals is uniform, more attractive and brings more on the market; (5) even a good milker or beef animal, if not pure-bred, can not be depended upon to reproduce these qualities in the offspring.

CARE OF BROOD SOWS

This season of the year is chosen by many farmers as the most desirable to have their sows farrow, in order that the pigs may have a good start before the weather becomes very hot and in order that they may be weaned in time to have the sows bred to farrow in the fall of the year. During pregnancy, and for some time after farrowing, a sow should receive most careful attention. Not only for the benefit of farmers whose sows are

farrowing now, but for the future benefit of those whose sows have already farrowed for the spring, Prof. R. L. Shields, head of the animal husbandry division of Clemson College, advises certain precautions with brood sows.

The first day after farrowing the sow should be given nothing but water and her feed should be light for a few days, until she recovers her normal condition. When she has done so, however, she will require large quantities of nutritious food to stimulate a large flow of milk. It is advisable to give her at this time just as much food as she will "clean up." At birth pigs weigh from two to two and a half pounds and for a month depend for nourishment solely upon their mother. As the only way of feeding pigs during the first month of their existence is through the sow, it pays to feed the sow liberally. A large litter with a poorly fed sow is likely to become stunted and the pigs will be unprofitable to raise.

As soon as the pigs are three weeks old the sow should be once more turned upon good pasture and fed grain or slops in addition. At the end of two months the pigs should be weaned. A few days after weaning the sow is ready to be bred again.

Department of Organization

Practical Organization, Federation and Co-Operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, \$2.50; Dues, \$1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

Members of the Board

J. A. Everitt, Indianapolis, Ind., president.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

The greatest thing for farmers is right prices.

The greatest problem for every farmers' organization is to make it profitable to the members.

No farmers' organization has ever disbanded that was profitable to the members. Therefore the supreme effort of every officer of a farmers' organization should be directed to making it the most profitable to the members.

Agriculture too often suffers from paralysis of the price. The census report shows that that vast multitude of farmers who are the average, and all below them, have suffered from paralysis of the price their products sold for.

Numerous sections of the country that were once noted for producing certain crops of fine quality and in great abundance do not produce them now, because paralysis of price killed the industry.

In the eastern states there are thousands of farms that have been abandoned and left to grow up in brush and weeds because of the great American farm curse—paralysis of price.

In some of our far western states, that are very remote from the great consuming centers, some organizers of the Farmers Society of Equity report that the chief difficulty they encounter is the lack of money for the farmer to pay the initiation fee. Another effect of the disease—paralysis of price.

And while this condition has been in the country for years—that is, the average farmer has been underremunerated, it was not because of lack of price his product finally brought, because on the other side we find the complaint of extreme stimulus of price that has curtailed the demand.

Thus the business of producing has suffered from paralysis of price and the side of consuming has suffered from extreme stimulus of price. And the troubles are not growing less, but worse. And it will continue to get worse until the two classes of people learn how to protect themselves.

We need hardly say that paralysis of price on one side and extreme stimulus on the other side arises from the fact that the distributing (marketing) system for farm products has become too intricate and too costly. There are far too many people employed in the marketing section and the number is increasing amazingly every year.

Is it any wonder that both the producers of farm products and the consumers of them feel that something is wrong when another set of people get between them and charge 55 cents for handling 45 cents worth of the commodities? This is the reason for the paralysis of price that has killed production of certain crops in thousands of communities and is responsible for practically every abandoned farm. It is also responsible for the high cost of living, with consequent labor and business troubles, demands for higher wages, strikes, industrial wars and the long train of evils that follows.

And as the multitude of people who handle the stuff increases, and the business is more divided and subdivided, with more people to support and pay profits to, the producers must take less and the consumers must pay more. This calls for harder work and more intelligent work and better machines on the part of the producers and more demands for increased wages, more strikes and a continuation of the industrial war between employers and employees.

The number of men, firms and corporations in business on March 1, 1914, by Bradstreet's directory, was 1,887,705. The number a year before was 1,848,756. The increase in the year was 38,949. These figures cover only those people in business on their own account and with their own money. It does not include railroads, traction lines, brokers, agents, etc.

The per cent of increase of people in business, from 1900 to 1910, was 32 per cent, while the per cent of increase in population of the country for the same ten years was only 20 per cent. This bears out our claim that the trouble is chiefly in the over-expansion of the middle system. It is growing in a ratio of more than one and one-half to one compared to increase in population. This can not

continue always. Society and business can endure a number of parasites and not suffer because of them, in fact, a reasonable number, we believe, are necessary for the health of the body, but too many of them, sucking the life blood, means eventual ruin.

So the question arises, how can we get rid of the superfluous parasites?

The people may permit the present condition to continue and to get worse until the middle system will work its own undoing—until the two great classes, on either side, can not longer support the middle class, when all will fall together. When this occurs business concerns topple and fall, farm land values and farm product values go down to panic prices. Then the cost of living will be low enough, but it will still be the same great problem, because, while everything will be very cheap, the would-be consumer will oftentimes not have the little price to pay.

And if a readjustment comes in this way, as it has sometimes in the past come in this way, after rock bottom has been reached, a rebuilding will come about along old lines and the same troubles we have had in the past will be repeated with ultimately the same kind of a collapse, only to begin over again.

But will the people be wiser this time? Will exploitation be pushed to such a conclusion?

Bankers and merchants and manufacturers and others have their organizations in the interest of their respective businesses. Do they realize what must happen if they continue multiplying middlemen in a ratio one

and a half times as fast as population increases? Can not they see the handwriting on the wall that if exploitation is pushed to a limit that the two great common classes of our people can not stand it, that all must fall together?

People buy only as they have money to buy with. The only way a producer of crops can get money is through the sale of those crops. When his crops do not sell at profitable prices he has no money to spend for necessities or luxuries unless he breaks in on his capital. If he has a little profit he can be a meager buyer, but if he has good profits he can be a good buyer. The laboring man can only get money from the sale of his services, so if his wages are small he is a small purchaser. As they increase he can purchase more, except as he finds the prices of the commodities he needs have advanced in price in an equal or greater ratio. And it is a fact that the necessities of life and taxes have increased in a greater ratio than wages and the prices of farm products have increased. And all the tendency of the times is in this direction.

While there are nearly 40,000 more business houses of record this year than a year before and a vast number more not of record, and all of these are employed, and their wages and profits are paid by the producers and consumers; and salaries to public officers and taxes have been boosted generously and in some cases enormously yet the earning powers of the farmers and laborers are hardly any greater.

Now we claim that the associations of merchants, and others that make up the middle class, could remedy this thing if they would. If they would

On account of our economical method of shipping goods direct, to fill the actual orders of purchasers we have a proposition extraordinary to offer to a good reputable man in each vicinity to act as our agent, to take orders for car loads of buggies, wagons, implements, binder twine, etc., from their customers and co-operative purchasing societies.

The quality of our goods and our low price is such that you will have no trouble in securing the business. Write today and get our proposition extraordinary, for enough people should read this ad to order at least \$200,000 worth of goods within the next thirty days.

O'Neil Implement Co.

Marseilles, Illinois

take it up in their meetings and through education and moral suasion and practical equity in business see that no more handlers of produce were established, no more expensive offices were created and no excessive profits were demanded, they could at once give better and cheaper service to producers and consumers and in a short time the great questions of a certain and adequate reward to the farmers and an abundance of supply at reasonable prices to the consumers would be answered to the benefit of all

But they won't do it. So the alternative is for the farmers to complete their organization and do it quickly, before the break that we referred to comes. We appeal to farmers to complete their marketing system for their own good and also for the welfare of the consumers of their products and the necessary handlers of them.

That disease, the paralysis of the price, must be cured. This means that farmers must get together and discuss these things. Then, when they are together, they must make their organization and meetings profitable. And this takes us back to our text—"The greatest thing for farmers is right prices."

We mean the right price when selling and we mean the right price when buying. We have aimed to show

that the prices were cut down on the things that the farmers sell because there are too many toll gates along the way to market. And the price is piled up on the things they buy because there are too many self-appointed people to handle them. In many places there are from three to ten people doing the business of receiving the farmers' produce and selling them their supplies, with all their separate expenses, that one person with one operating expense could do.

These middlemen could combine the separate efforts, if they would, for the good of all. But they won't do it. On the contrary they are permitting the number to increase and multiply enormously. Forty thousand more middle institutions a year will be 400,000 more in ten years. And all were not counted.

Where there is a local or county clearing house of the Farmers Society of Equity, or a federated association, this problem can easily be solved. It has been solved in many places already. Others are now urged to send to this headquarters, Indianapolis, Ind., for the latest instructions.

And any community that is not yet organized or federated is equally urged to send for full particulars for organizing or federating and how to substitute one seller and buyer for many, and one selling and buying expense for the many.

We will say that an average agricultural community does a business of \$1,000,000 a year in selling and buying. Now tell us, is there any good reason why they should not do this business through first hands and systematically, if they can? The agricultural community that produces half a million dollars worth of products a year by hard, intelligent work surely should have a business system, owned and operated by the farmers themselves, or in which the farmers have a say, to put them on the market after all the hard work is done.

Don't you say so? Is there a farmer, who produces crops to sell, in all this broad land who will dispute this?

The unanimous answer must be "Yes, if we have a practical plan, a successful system."

That is precisely what the F. S. E. offers. Its plans have been improved right down to date and they now cover every essential feature—organization, incorporation, an easy way to raise the necessary money to establish credit, to pay cash for supplies and to build or buy the necessary warehouses, elevators, packing houses, etc., and to market the crops to the final demand.

DO YOU WANT HIM?

"Hustler" and Two of His Friends

Buggy and Harness, Saddle and Bridle Too

YOU or some other boy or girl will own Hustler and his buggy and outfit. The Farm and Fireside Pony Club is now open to all boys and girls. "Hustler," the beautiful Shetland Pony shown in the above picture, will soon be sent to some member of the Pony Club. You have just as good a chance to win "Hustler" and his saddle and bridle, nickel-plated harness and handsome pony buggy as any child in America. The Pony Man of Farm and Fireside has no favorites. "Hustler" is a beautiful Shetland, with fluffy mane and tail, just as full of fun as a pony can be. "Hustler" is about forty inches high and weighs almost 350 pounds. He is the best playmate imaginable.

JOIN THE PONY CLUB TODAY

You should join the Farm and Fireside Pony Club right away while the membership is still open. Every single member is guaranteed a fine prize. So you simply can't lose once you join the club. Besides "Hustler," "Ginger" and "Little Joe," two other fine ponies, will be given away—also hundreds of valuable prizes and thousands of dollars in cash. Now is the time to join the club.

A FEW OF OUR MANY PONY WINNERS

Here are the names and addresses of only a few of the many boys and girls who have won ponies from Farm and Fireside. If you would like to know how easy it is to win a pony, just write to any one of these children. Farm and Fireside has been the National Farm Paper for thirty-five years and has given away just dozens of Shetlands to boys and girls

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

B RADSTREET'S summary of the business conditions of the country follows:

Quiet. Weather irregular. Retail trade affected by rain and cold weather. Jobbing and wholesale moderate. Higher prices for woolen goods. Lumber, iron, coal and steel dull. Brilliant early crops promise. A phenomenal wheat yield possible. Clearings large. Stock market rallies on peace talk. Commodities easier.

In striking contrast are the excellent crop prospects with the irregularity and more or less depression in trade and industry. While the weather has generally been of the kind that favored the crops, barring some delays, not very serious, in planting, it has been too cold or too wet for season retail trade. Farmers are reported as buying sparingly. This is partly because they are busy and the uncertainty of the prices for the next crops, notwithstanding the quantity may be satisfactory, may have its effect. The careful farmer does not buy on promises of big yields, as he knows he can only pay in proportion to the price he receives.

Winter wheat prospects still continue the best ever. The Department of Agriculture report as of May 1, issued on May 7, indicates the greatest crop of winter wheat ever grown, one-fifth again as large as the record crop last year and more than half again as large as that harvested in 1912. If the promise of May 1 is fulfilled at harvest time the yield of winter wheat will be 630,000,000 bushels. Some former yields of winter wheat are as follows: 1913, 523,000,000; 1912, 399,000,000; 1911, 430,000,000; 1910, 434,000,000; 1909, 417,000,000; 1908, 437,000,000; 1907, 409,000,000; 1906, 492,000,000; 1905, 428,000,000; 1904, 332,000,000; 1903, 399,000,000; 1902, 411,000,000; 1901, 458,000,000; 1900, 350,000,000 bushels.

The weather since May 1 has been favorable for wheat, therefore the May 1 condition has been fully maintained, if not advanced. Spring wheat seeding is well advanced, but at this writing is delayed by wet and cold weather.

All grains show a liberal decrease in visible supply. Wheat and oats prices remain about the same as two weeks before, while corn is ruling a little higher. Potatoes are rounding out the season nicely with well maintained and a little better prices as the season advances. Rarely has there been a year of such regular prices. While they did not go as high as the size of the crop seemed to suggest, every bushel that was marketed intelligently brought a profit to the grower. Beans have made the best advance in the two weeks period. Southern vegetables and fruit are netting profitable prices to the growers when wisely marketed.

Advice

WHEAT—Market the old crop. **CORN**—Market gradually. **OATS**—The acreage sown is a little short of normal. We believe nothing will be lost by holding awhile. **POTATOES**—Market what you have left gradually. The season has retarded the growth of southern early potatoes and prices will probably remain good. We do not advise holding any large amount for the very last of the season.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's report on April 25, 1914, with comparisons, are shown in the following table:

	April 25, 1914	Change from two weeks before
WHEAT	50,092,000	-5,325,000
CORN	15,104,000	-5,447,000
OATS	17,276,000	-4,870,000
BARLEY	3,612,000	-2,075,000

The visible supply of wheat in Canada on the same date was 31,215,000 bushels. This is 6,485,000 bushels less than two weeks before and 2,104,000 bushels more than a year before. The visible supply of oats was 12,408,000 bushels on the same date, which is 1,502,000 bushels less than two weeks before and is 2,382,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on April 22, 1914, two weeks before and a year before as follows:

	May 6, 1914	Two weeks before	A year before
WHEAT, No. 2 RED

New York	44	44 @ 44 1/2	

Future Grain Prices

Chicago grain futures closed on May 6, 1914, and 20 weeks before as follows:

Wheat—May, 93 1/2c; July, 85 1/2c. Two weeks before, 93 1/2c and 88c respectively.
Corn—May, 66 1/2c; July, 66 1/2c. Two weeks before, 67 1/2c and 64 1/2c respectively.
Oats—July, 37 1/2c; September, 35 1/2c. Two weeks before, 37 1/2c and 37 1/2c respectively.
Winnipeg, Canada, May 6.—Wheat—May, 92c. Two weeks before, 90 1/2c.

Cotton

New York, May 6, 1914.—Cash cotton closed as follows: Middling upland, 13.00c; middling gulf, 13.25c. Two weeks before, 13.15c and 13.40c respectively. A year before the price was 11.85c and 12.10c respectively.

Chicago Produce Market

Chicago quotations are used in these reports for the sake of uniform comparison. Issue after issue, and this year with former years. For quotations and advice about shipping to other markets address Marketing Department, Farmers Society of Equity, Indianapolis, Ind.

	This week	Last week	Last year
Monday	20	72	98
Tuesday	62	20	53
Wednesday	40	40	37

Total, 3 days... 122 132 188
Trade was quiet and market easy, although prices did not show much change. Very fancy Dusty Rurals sold at 73c, but few buyers were willing to bid higher than 70c for the best offered. Receipts were ample, 40 cars. Dealers reported a very quiet outside demand and there was not much doing on local account.

Sales reported were: Per bushel—Wisconsin bulk, round white—1 car at 62c. 1 car mixed Burbanks and Kings at 65c. 3 cars at 68c. 2 cars Rurals at 70c. 1 car fancy Dusty Rurals at 73c. Sacked—2 cars at 68c. Per bushel, bulk or sacked, Wisconsin, Triumphs, Burbanks and Kings, poor to good, 65@68c. Round white 68@70c. Dusty Rurals 70@73c. Michigan, round white, 65@70c.

NEW POTATOES—Feeling easy. Trade seems to be well supplied. Demand is tame. Common, small stock is hard to sell. There is some variation in prices quoted by different dealers even on same classification of goods.
Barrels, white, Florida, No. 1, \$5.00@5.50.
Culls 4.25.
Red, No. 1, 2.00.
No. 2, 1.50.
Hampers, Florida, white, No. 1, 1.25@1.50.
No. 2, .75@1.00.
Red, No. 1, 1.25@1.50.
No. 2, .75@1.00.
The price for old potatoes is unchanged to 3c a bushel higher than two weeks before. The price of new potatoes is from \$1 to \$1.50 a barrel lower than two weeks before. Hampers are proportionately lower.

SWEET POTATOES—None to speak of are offered. There may be a few Illinois to come. Demand very light, still a few are salable if nice goods. Common hard to sell.

Hampers, Illinois, good, .75@85c.
Culls, or showing rot, down to .25@50c.

BEANS—The market is firm. Pea Beans quoted a trifle better. Best Red Kidney also slightly improved. Advices from shipping points are stronger.
Pea Beans, hand-picked, choice, \$2.25@2.30.
Common 2.00@2.15.
Red Kidneys, common to fair, 2.25@2.35.
Fancy 2.25@2.35.
Brown Swedish, long, 2.00@2.20.
Round 2.25@2.40.
The price of Pea Beans is 25c to 30c a bushel higher than two weeks before. Other varieties are correspondingly higher. A year ago hand-picked choice Pea Beans were quoted at \$2.20 to \$2.25 a bushel.

HAY—Receipts, 1,834 tons. Offerings small and demand good. Prices firm.
Choice Timothy Hay, \$18.50@19.00.
No. 1 Timothy Hay, 16.50@17.50.
No. 2 Timothy Hay, 14.50@15.50.
Iowa and Nebraska Prairie, 13.00@16.00.
Illinois and Wisconsin Prairie, 8.00@9.00.
Timothy Hay is unchanged to 50c a ton higher than two weeks before. Iowa and Nebraska Prairie are from 50c to \$3 a ton higher than two weeks before. Illinois and Wisconsin Prairie Hay is \$2 a ton higher than two weeks before.

STRAW—Rye Straw quotable at \$8@8.50. Oat Straw at \$6.50@7.50. Wheat Straw, \$6.50@7.
Rye Straw is 50c a ton higher than two weeks before. Other kinds unchanged.

BROOM CORN—Moderate sale for good quality. Common grade remains slow.

	Change same period last yr.	Change from a year before	Change from 2 years before
Bushels			
...	-4,149,000	X 3,239,000	X 4,881,000
...	X 3,484,000	X 4,881,000	X 3,745,000
...	X 5,001,000	X 3,745,000	X 1,945,000
...	-1,111,000	X 1,945,000	

Per ton, Illinois corn, \$120@160.
Oklahoma, 100@150.
Damp and damaged less.

There is still no change in the price of broom corn.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
Monday	25,379	32,901	30,539
Tuesday	29,832	33,149	44,777
Wednesday	33,747	26,660	26,801

Totals 89,009 92,710 102,117
The feeling is rather easy and prices show further declines of 1/2c.

A fair demand existed. Buyers were not so eager to purchase as a few days ago, and were inclined today to watch developments. The receipts are showing increase and the warehouses' report of the stock in storage was rather a surprise to most dealers, who had calculated on a material shortage as compared with last year instead of an increase. Liberal quantities are going into immediate use, both on local and on outside account, but the speculative demand seems to have halted for the present.

Fresh, Firsts 18 1/2 @ 18 3/4.
Ordinary, Firsts 17 1/2 @ 18c.
Checks 16 1/2 @ 17c.
Dirties 17 @ 17 1/2c.
Miscellaneous, cases included, 17 1/2 @ 18 1/2c.
Cases returned, 17 @ 18 1/2c.
Storage-packed Firsts in fair demand. Firsts are quotable at 18 1/2 @ 19c and Extras at 19 1/2 @ 19 3/4c. Feeling weaker and prices shade lower.

The price of eggs is 1/2c a dozen higher than quoted two weeks before. The price is 2c to 2 1/2c a dozen higher than a year before.

Read Wheat Prices at Right, Corn and Oats at Left
This chart shows the highest monthly cash prices for the three varieties of grain at Chicago, for the period, 1909 to April, 1914, inclusive. The lowest figures in April, 1914, were: Wheat, 92 1/2c, on April 8; Corn, 65c, on April 21, and Oats, 38 1/2c, on April 21.

Fruit

APPLES—A weak feeling prevails. Holders ask former prices. To lower them would not help much, as demand is very small. Very fair stocks remain and a more rapid decrease would be very satisfactory to holders.

Vegetables

ASPARAGUS—Three and a half cars reported in. Besides this a good deal of home-grown and from nearby sections comes in. A good deal had to be carried over from yesterday. Supply was excessive, much larger than the demand. Market weak and prices lower and there is no certainty what it will clean up at.

BEETS—Salable and steady when fine, clean and well packed. Poor, uneven or wilted tops dull.

CAULIFLOWER—California quiet and easy. Some St. Louis expected was not in until late.

CUCUMBERS—Supply is larger and market easier. Demand is tame. The hampers from Louisiana and Florida contain mostly common, uneven, small cucumbers that are not good color.

CELERY—Very little doing. Old stock is not cleaning up and market is weak.

CABBAGE—There was a better feeling in the market. Receipts smaller, reported at 2 cars. The improvement in the market is for nice, solid, green stock. Some comes poor, yellow or uneven in size. This does not show any improvement.

CARROTS—Good, clean, uniform size carrots, with nice green short tops, good sale and firm. Some have poor tops and others are coarse, with tops too long. These are slack packed and have to be discounted.

EGG PLANT—Moderate sale. There is a good supply and demand is limited.

GREEN ONIONS—Slow sale, especially when coarse and yellow. Supply is moderate, but only nice, straight, green stock can be used.

GREEN PEAS—California drums of Telephones were reported as not wanted. Some are being put in hampers. Southern peas were in smaller supply. The choice were fair sale and steady. Some June came in bad order and had to be sold low.

LETTUCE—Slow sale and easy, except for a little that is good.

ONIONS—New have a quiet trade. Supply is not large, but it is ample. Imported are quiet. Not many remain.

RADISHES—Sell only in a small way. Buyers are not taking barrels any more. Poor, yellow, wilted stock has no regular value. They will buy a few hampers if they find nice fresh stock, tips or long.

SPINACH—There was none offered early. Some was reported, but it had not been sighted at noon. There was a fair demand, buyers being around looking for a little stock.

SWEET CORN—A little received from Florida in hampers. Small sales made at \$2.00 a hamper. The corn is not nice, shows worms and not attractive enough to sell well.

STRING BEANS—Floridas were weaker. They were plentiful. Some very poor. None are now really fine. Some are good but too coarse. Not many Louisianas on sale. They bring a premium. Total receipts today, 3 1/2 cars.

TOMATOES—Receipts were larger, said to have been 13 cars in. This gives the market a larger supply. An easy market quoted, but no material change in prices noted.

Millions of Hogs

Die From Worms

The loss to American farmers annually runs into incalculable millions of dollars. Added to those that die, are the millions of "no account" animals—runty, unthrifty, unprofitable boarders. These cause even greater loss, and nine out of ten are worm loaded.

SaltTone Will Stop Your Worm Losses

SaltTone is the great animal saver and profit maker. It will drive out the worms, and fortify your stock against dreaded cholera and other diseases.

The Stock Conditioner and Tonic

SALT TONE

The Great Wormicide for Stock

This well-known medicated salt, is the life work and study of John E. Robbins, president of this Company. After thirty years of testing on his own famous herds, Mr. Robbins knows it will do the work—as will no other preparation. So he guarantees SaltTone—absolutely. You feed it like common salt. One penny's worth lasts a hog 12 days. Order today.

Try It 60 Days

Read Our Offer

Send No Money—Just the Coupon

We'll send 100 pounds of SaltTone on 60 days' trial. Give it as directed and at the end of that time tell us your experience. If it does not do as we claim, it will cost you nothing but the freight charge. If it does, it will make you ten, perhaps a hundred times its cost. Send no money—just sign and mail the coupon TODAY.

The John E. Robbins Company Greensburg, Indiana

Read These Letters:

"Forty sows breed to 'Big Defender' and all conditioned with SaltTone, averaged in my sale \$115 per head. 'Big Defender' E. C. Caverly, famous hog breeder, Toulon, Ill."

"SaltTone is a great worm destroyer. We feed it to our imported horses and Hampshire hogs. J. Crouch & Son, well-known stockmen, Lafayette, Ind."

PRICES:
40 lbs., \$2.25;
100 lbs., \$5.00;
200 lbs., \$9.00;
300 lbs., \$13.00
Nonmail orders filled for less than 40 lbs. SaltTone is sold in "trade-marked" packages. Never in bulk.

SALT TONE

THE JOHN E. ROBBINS COMPANY, Greensburg, Indiana
I will pay your special 100 lb. 60 day trial order of SaltTone. It does as you say and if it does not I owe you nothing. U.S. M. P. O. Box 1000, Greensburg, Ind.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

CATHERINE WEIS, North Adams, Mass., wrote a Cadet letter sometime ago and, like hundreds of others, was disappointed that her letter did not appear in the paper. We regret our inability to print all the letters as much as do the writers, but a paper with the popularity UP-TO-DATE FARMING has, and that is so eagerly read all over this country and also in many other countries, can not possibly make room for all the letters received. But our young friends are benefited even by the writing, for each letter is a step upward and our great aim is the progress and advancement of the young people.

This Texas boy takes a very sensible view of farming and manifests characteristics southern hospitality:

DEAR CADETS—I am a farmer's boy and I enjoy farming very much. Of course farming is no lazy man's job. It takes hard manual labor to grow a crop, and sometimes, after we have worked hard all the year, our crops are cut short by a drought. There are drawbacks in farming and if you want to know what the leading disadvantages are and how to overcome them read UP-TO-DATE FARMING. It tells in every issue how we may make farming

more profitable. I don't think farming the easiest, but I believe it the happiest life a person can live. You Cadets that like town and city life better than country life pay me a visit this summer and I'll show you what pleasure really is. Instead of running uptown to buy watermelons we go to the patch and get all we want. After we have had all the melons we can eat we will start for the creek. The peach orchard is directly on our way to the creek, and as we go we'll get a supply of nice Elbertas. Having a good time fishing, and after catching a nice string of perch, we'll go home and have the fish for supper. In the morning for breakfast we'll have fried chicken, ham and eggs—and the chicken came from the yard that morning, the ham from the smokehouse and the eggs fresh from the nest. You see, we raise all these things—hogs, cows, chickens, etc. We can grow any kind of vegetables, corn and cotton being our chief crops. We grow some ribbon cane. How many can tell without looking at a map what part of Texas I live in?—Dewitt Ham, Lindale, Tex.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and enjoy it very much. I live in the small village of Genoa, in the state of New York. I am 13 years old and go to Genoa high school. My father recently purchased a small farm of 35 acres and I like it very much, for I never lived on a farm before. I would like to correspond with the Cadet boys and girls, because I want to be a Cadet myself. I will gladly answer all cards and letters.—Bernice M. Mulvaney, Genoa, N. Y.

DEAR CADETS—I am a farmer boy who wishes to become a member of the

Cadet family. I take UP-TO-DATE FARMING and also other farm papers, but I like none so well as I do UP-TO-DATE. I am always ready to read it when it comes to our home. I also enjoy reading the Cadet letters. I live half a mile from the little mining town of Sketon, W. Va. I am 21 years old and live on a farm of 152 acres. I would like to exchange letters or cards with the Cadets and will answer all I receive.—Robert W. Tench, Sketon, W. Va.

DEAR CADETS—I am a Florida boy and I would like to join the Cadets. I am a reader of UP-TO-DATE and like it very much. I am 20 years of age and have lived on a farm all my life. I stay at home with my father and mother. We live on a 160-acre farm, on a rural route, ten miles from Hawthorne, which is our nearest point. I think UP-TO-DATE is the finest farm paper a farmer could read. I would like to hear from the Cadet boys and girls. I promise to answer all.—D. M. Johnson, Hawthorne, Florida.

DEAR CADETS—I am an Iowa girl and would like to join the Cadets. I am 16 years old and I live in the country, on a farm of 340 acres, about six miles from the nearest city. My father takes UP-TO-DATE and I enjoy the Cadet page most. Will be pleased to receive cards and letters from the Cadet boys and girls and will try to answer all I receive.—Lydia R. Ter-Louw, Pella, Ia.

DEAR CADETS—I am a girl of 14 years and I live on a farm of 315 acres in the Sunflower state. We have been taking UP-TO-DATE for four or five years and I like the Cadet page just fine. My two brothers and I went nearly three miles to school. There were twenty-one attending the school. We have four horses, seven cattle, two hogs and 100 chickens, with eighty little chicks. I have a pair of bantams with seven little ones. I expect to raise a vegetable and flower garden this year. There are quite a number of white and blue daisies around here now (April 5). We live seven miles from the nearest town, which is Garfield. I would be glad to exchange letters or cards with the Cadet boys and girls.—Lilla V. Mills, Garfield, Kas.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and enjoy it very much. I have been taking it about two years. I am a farmer boy of Illinois and am 21 years old. I am a fair foot racer and can play the organ some. Our chief crops in this vicinity are corn, oats, rye and hay. Some wheat is grown, but not much. Land ranges from \$100 to \$225 per acre and that makes it too high to buy here I think. My folks own a small farm of 75 acres. We are eight miles from the water power dam across the Mississippi river, between Keokuk, Ia., and Hamilton, Ill. It is something like a mile long and is a gigantic structure. While it isn't to be compared to the Panama canal as an engineering feat, it nevertheless required men with brains to build it. I would like to exchange letters with the Cadets, especially from those who live in a new country where land is cheap and can tell me of the opportunities that are there.—Albert Markillie, Warsaw, Ill.

DEAR CADETS—Will you allow an eastern Pennsylvania farmer in your ring? I am 18 and I like farming better than any other occupation. I now live on a farm of 200 acres. We keep about thirty cows and six horses and some hogs. You may say what you please about papers, but good old UP-TO-DATE is the kind for me. I would be delighted to hear from some of the Cadet girls and boys. I am pretty busy, but I can find time to answer all that write to me.—Edgar D. Ruoss, Elverson, Pennsylvania.

DEAR CADETS—I have been reading UP-TO-DATE FARMING for some time and find it very interesting. I live on a farm of 170 acres and I would like to become a Cadet of Equity. I am at school today. I think school is a great place to go. All of you Cadets please write to me. I will try to answer all I receive.—Alma Brown, Voss, Tex.

DEAR CADETS—I am a Michigan boy, 19 years old, and would like to join the Cadets. I take UP-TO-DATE FARMING and enjoy reading the letters. I have always lived on a farm and own several head of stock of my own. I would like to exchange post cards and letters with all the Cadet boys and girl and will answer all I receive. Will exchange photos, too, if you like.—Perry O. Bates, Paw Paw, Mich.

DEAR CADETS—My father has taken UP-TO-DATE FARMING for two years and the letters are very interesting. I have lived the past four years on a 320-acre homestead with my parents and two brothers and two sisters. Recently we moved to town, where my sister and I are attending high school. I will be glad to receive cards or letters from my Cadet friends. Will answer them all. Here is wishing good luck and prosperity to good old UP-TO-DATE.—Leta Wells, Blackfoot, Idaho.

I thought we would have to close the letters here, but we must make room for these Oregon rhymes, mustn't we?

DEAR CADETS—I am a reader of UP-TO-DATE and will join the Cadets before too late. I am a boy of fifteen years. And almost through with shedding tears. I live out here in the golden west. Where crops and climate are the best. Now, all the Cadets who will write I will try to answer and to delight. With country and with city views, Which sure will drive away the blues; And if you want to know the rest, Just pack your grip and come out west. —Herman Zahler, Hillsboro, Ore.

CIRCUS DAY

WILL we go to the circus? Most assuredly. Why should we, and how can we, deny the boys and girls this treat? Every farmer and his wife should bundle the kiddies in the wagon, or the carriage, or the automobile, and make circus day a holiday. What is the need to fill the warm, hopeful little hearts with aching disappointment? Why, a year in glory is nothing to them as compared to a day at the circus. And we enjoy it ourselves, your Uncle John and I, just about as much as when we were children. It does us all a world of good to break away from the duties of the farm and have a playday of such an unusual and interesting character. Yes, and your children will respect you more and love you better if you show your love for them in this way as well as in other ways. Not only that, but if you want to really understand and appreciate your children, watch them learn more about animals and people in one day at a good show than in a whole year at school. Children need just such opportunities. And do not force them to be content with viewing the street parade. That only whets their eager appetites. Take them into the side show and the "big tent."

—And, by the way, offer the hired man the driving horse and single buggy and tell him to go take his sweetheart. If there is any better time to show how human we are than the day the circus comes we never found it.

AUNT SOPHIA.

VEGETABLE RECIPES

Cream of Celery Soup—Cover with cold water three cups of celery leaves with outside stalks; add one-half onion; cook one-half hour, or till tender, then press through a sieve. There should be one pint. Melt two table-
spoons of butter, add four tablespoons of flour and gradually one pint of milk. Then add celery stalk and stir until thickened. Season with salt and pep-
per.

String Bean Salad—Boil string beans whole till tender, turn off the water and rinse with cold water and let drain. Keep in ice chest till ready to serve. Then cut beans in small pieces and mix with salad dressing. Garnish with sliced beet or parsley. Very nice.

Escalloped Cauliflower—Take com-
mon heads of cauliflower, boil till tender, drain well, cut in pieces, put in layer with fine-chopped egg and this dressing: Half a pint of milk thick-
ened over boiling water with two table-
spoons of flour, seasoned with two
tablespoons of salt, one of white pep-
per and two ounces of butter. Put
grated bread over the top, dot with
small pieces of butter and place it in
the oven to heat and brown. Serve
in same dish it was baked in.

Stuffed Tomatoes—Remove the cen-
ters of six prime tomatoes, fix with
bread crumbs, butter, pepper, salt and
grated cheese. Place in a buttered tin
and bake twenty minutes.

Cabbage and Beet Salad—Chop fine
six boiled beets and add to it one pint
of chopped cabbage. Mix well and
stir into a pint or more of boiled salad
dressing. Put in dish and cover with
hard-boiled eggs.

Cucumbers Stewed With Onions—
Take three fresh cucumbers, peel them
and cut into small pieces. Fry them
with an equal number of slices of
onion in butter. Stew these in the
gravy with the cucumbers. If the
sauce would be preferred a little richer
the yolks of two eggs might be added
to it, but must not be allowed to boil
after adding eggs. Serve in about
thirty minutes.

Creamed Peas—Cover one quart of
cooked peas with a little more water
and let simmer. Pour off the water,
add two-thirds cup of milk, one table-
spoon of butter, one tablespoon of
flour, a little salt and pepper. Let
come to a boil and serve hot.

Fried Beets—Cook medium-sized
beets till tender, plunge into cold
water and remove the skins. Cut into
thick slices, dredge in cracker dust
and fry in pork fat.

PASTE FOR PAPERING TIME

Take a sifter of flour, pour in cold
water and work smooth as for starch,
then pour in boiling water, stirring

all the time, until it is thick. Add a
little cayenne pepper to keep the mice
from bothering the paper. Take a
hair brush to put the paste on with
and a clothes brush to smooth the
paper. It will not hurt them at all,
since they can be washed. You can
paper a room quickly this way with-
out having to put your hands in the
paste.

STEAMED SPONGE PUDDING

One cup of bread sponge, spoonful
of butter. Mix thoroughly and set to
rise in a warm place. When very light
roll thin and spread with any fresh
or dried fruit, or raisins. Roll into
a little loaf, put on a buttered tin and
set to rise in a warm place. When
light steam one and a quarter hours.
Keep covered closely. Serve with
cream and sugar or any good sauce.

KITCHEN WISDOM

The kitchen should be the lightest
room in the house. Unless the cup-
boards are carefully watched, also the
refrigerator, mold will quickly form
on the food. There is nothing that
cleans the sink better than soda and
water, and it is also needed about the
refrigerator. Butter will keep sweet
longer if placed in stone jars.

A Boon to the Farm Housewife

The kitchen loses its terrors with the
NEW PERFECTION Wick Blue Flame
cook stove. Does exactly the work of
the coal range without the terrible ex-
hausting heat and the dirt and trouble.
Burns clean, convenient, economical
oil; almost saves its cost during the
season.

Makes the heavy
summer cooking
easy, the kitchen
pleasant. None of
the dangers of gaso-
line; no smoke, no odor.

Note, in the picture, the cabinet top,
the fine, big oven, the shelves and the
towel racks. Roasts, bakes, toasts and
brolls to "perfection."

New Perfection WICK BLUE FLAME Oil Cook-stove

NEW PERFECTIONS come in 2, 3,
and 4 burner sizes, which your dealer
can show you. Ask him to explain the
special burner construction, how the
broiler broils on both sides at once,
and about the patented fuel reservoir,
refilled without turning off your fire.

Be sure and see the
latest model with the
new THERMOS
oven, an invention
that gives you a range
and fireless cooker
combined. Don't forget that fuel sav-
ing soon makes up the price of the
stove. That a cool kitchen makes
cooking easy, especially when striking
a match gives you your fire.

This stove is a necessary piece
of FARM MACHINERY, as im-
portant as the thrasher, seeder,
disc harrow, cream separator.

The Equity System Does Pay

The farmer who wants the most money for his crops may wonder whether it will pay him to join the F. S. E. and sell his stuff through the Equity System. Let him listen to a brother farmer who has tried it:

"I have been a member of the F. S. E. one year, and by way of expressing my appreciation for the benefit of other farmers, I will mention a few of the extra profits I have obtained. I bought some steers at a public sale a few months ago and our cattle dealers told me I could not possibly get my money out of them. I sold them through the Equity System and made a profit of \$10.50 a head. I shipped veal and received \$4 more than I was offered at home. I realized 4 cents per pound on poultry above local market prices. My

neighbor sold clover seed through the Equity System for an advance of 63 cents per hundred over the home market.—Adolph Glasier, Minnesota.

A Representative's View of the Equity System

We certainly feel that your organization is doing a great deal of good to the individual members, by controlling shipments and locating the most profitable markets. This organization can and has done a great deal toward preventing overstocked markets by concentrating on one representative in each market, thus moderating the keen selling competition. The benefit is undoubtedly felt wherever there is an Equity clearing house organized at a local loading or shipping station.

It is an absolute fact that at towns having no organization, other things being equal, the prices paid for farm produce are considerably lower than in towns where the Equity is represented. Many farmers organize a local institution, build warehouses and then contract with some local operator who furnishes the money. An organization operating in this manner can be of little benefit, as the operator controls the price. Such a local organization can do little more than clear the manager's salary out of the deal.

During the past four or five years we have handled approximately 1,600 cars of potatoes for farmers' organizations and we can frankly state we prefer to handle shipments through a central organization. With our offices at Kansas City and at Chicago, and connections on other large markets, we

have always been able to divert cars to the best markets.

The present methods of the Farmers Society of Equity could undoubtedly work wonderful results with federation and close co-operation of the many local independent associations now organized, and thereby develop a marketing system superior to anything now in existence.—Wilber & Innes, Kansas City and Chicago.

Had Done Worse Things

"If you are not more respectful in your language I will commit you," said the judge to the witness.

"I will not be surprised," replied the witness, "for you have committed worse things even than that."

**A Complete Line
\$850 to \$1050****---"Makes Life Worth Living"**

A wonderful record which backs up every Detroit and guarantees a record-breaking season is a tabulation that covers the twelve months from January, 1913, to January, 1914, and embraces every Detroit car in operation (not a picked few). It shows that the **THOUSANDS OF DETROITERS NOW IN USE AVERAGE ONLY \$3.81 PER YEAR APIECE FOR REPAIR PARTS. THIS STAUNCH FOUR-CYLINDER CAR IS CERTAINLY THE GREATEST CAR EVER PRODUCED FOR COUNTRY USE.**

The above is a record made possible only by a method of building which is better and a design which has no equal among cars of this class.

People have come to realize only too well the common weakness of the popular priced cars. Those sagging axles, those stripped pinions, those vibration-racked motors, those frames and transmissions bumped half out of commission by poor spring suspension.

The Detroit full-floating axle is designed to withstand 2,000 pounds of overload. The platform rear spring needs no shock absorbers. The 32 horsepower, long stroke motor, in comparison to the light weight of the car, is more powerful than even the big 60's with their massive loads to carry.

Beauty—Note the exquisite proportions of the new 1914 touring car, or the snappy, jaunty lines of the new roadster.

Power—A new and bigger motor (3½x5) carries this lightweight vehicle without exertion anywhere its wheels can find traction. We do not believe there is an automobile made, four or six, big or little, \$1,000 or \$5,000, that can outpull it.

Convenience—The new Detroit-Remy electric starting and lighting system is the cleanest installation ever devised, and it adds less than 40 pounds to weight of car.

Simplicity—All controls at your fingers' ends, on the dash.

Every sterling feature that made the Detroit great is retained—platform springs, full floating rear axle, ball bearings throughout—such features as only the costliest cars have ever before specified.

The greatest models of their class yet produced are these new Detroiters.

Free handsomely illustrated catalog on request.

419 North Capitol Ave., Indianapolis

\$ 9 2 5

Completely Equipped

Streamline—Bullnose—32 horsepower—the 1914 Detroit challenges comparison in appearance and quality with even the most expensive makes of Fours. There is not an ungainly angle in it; graceful as a bird's wing, the crowned fenders melt away the angularity of guards. With the added horsepower of its expensive ball bearings, the motor is indomitable. For five hundred dollars more one buys not a whit better construction—more honest material, more sterling workmanship.

What We Want You to Know and Why

Being a Few Words on Particular Matters

Some Facts About Flies

The ordinary house fly begins laying eggs when eight days old, and lays 100 or more at a time. Eight hours after being laid, these eggs hatch out maggots, which in twelve days more evolve into an adult fly. Thus in twenty-eight days after a fly egg has been deposited it has hatched, developed into an adult fly, which has laid 100 or more eggs, which in twelve days more become 100 flies. If the offspring of one female should increase without any check from April to September we should have as a season's output 214,577,844,320,000,000,000,000 flies hatched. Moral: Keep houses, yards and barns scrupulously clean in the spring months and begin early with the swatter, the fly trap, poison and tanglefoot. When we rid the earth of its flies and mosquitos we will reduce the human death rate to a remarkable degree. The day is coming when flies about the home will be as disgraceful as mud on the kitchen floor.

Cows and Co-operation in Canada

The average dairy cow in Canada produces, according to statistics, some 3,000 pounds of milk per year. The dairy herd at the Nova Scotia Agricultural College Farm, consisting of pure-bred Ayrshires, Jerseys and Holsteins, averaged nearly 10,000 pounds of milk per cow during 1913. The cost of feeding was approximately \$60 for each cow, leaving a profit of from \$60 to \$100 per head, according to the manner of marketing. Special attention has been given during the past year to co-operative dairying. The Scotsburg creamery (co-operative) had the largest dairy production of any in the Maritime Provinces, manufacturing 228,750 pounds of butter, which sold for \$61,900. This creamery was established some twelve years ago by the Dominion government, the farmers erecting the buildings and the government installing the machinery and managing the creamery for seven years. The farmers then, having become sufficiently educated in dairying, took over the business, which has been maintained on a co-operative basis, some 400 farmers being interested in the institution.

Getting the Right Viewpoint

There is nothing which will bring about a reform where reform is needed so quickly as a common understanding amongst people as to the causes of the conditions that need reforming. Consequently we believe we can do the farmers the most good by giving them the facts which govern the conditions confronting them. In our study of these problems of importance we want accurate, first-hand information from the producer and consumers themselves, not the mere views of some politician or theorist. Let those of our readers who have recently bought a new mower, or binder, wagon or grain drill go back to the day when they bought their old ones, and compare prices. Then let them also compare prices they were paid for products they sold to purchase the machinery with the prices paid them now for similar products. How many hundred-weight of hogs, pounds of butter, bushels of corn and tons of hay did it require to buy those things ten or twelve or more years ago? Then compare with the number is requires to buy them now. How much did the production of those crops cost then as compared to now? We want a large number of our readers to get out their old account books, compare them with their present accounts and send us the figures. We can use them to the benefit of agriculture. For further information turn to the editorial on page 4, entitled "The Right Road to Success."

Efficiency Farming in the Corn Belt

The United States Office of Farm Management is indefatigable in its investigating propensities. If there is a farmer who is doing the same old work in a brand new way to his greater profit he may rest assured that sooner or later one of Uncle Sam's investigators will be camping on his trail, eager to reduce his system of management to a bulletin for the benefit of the "average farmer."

According to some of the investigators, real efficiency farming in the corn belt calls for a plan whereby hogs will harvest much of their own feed, without waste. Efficiency farming, you understand, is that kind of farming where the minimum of effort produces the maximum returns, and as it is possible for a good farmer to raise a larger acreage of grain per man during the growing season than the same number of men can properly take care of during the harvesting period, real efficiency demands that he obtain cheap help in harvesting. The hog has been discovered to be able to supply that cheap labor.

The system is very simple indeed. Three different crops are grown in a four-year rotation. Corn, rye and a mixture of timothy and clover comprise the crops, rotated and harvested as follows: First year, corn (hogged down); second year, corn (crop cut and rye sown); third year, rye (pastured and hogged off); fourth year, clover and timothy (pastured and cut for hay). The hogs graze the rye from early spring to May 10, when they are turned in the clover until July 15, before which time the rye will have matured, and back they go to the rye field and clean up the rye and graze the young clover in it. Six 100-pound hogs to the acre will clean up the rye by September 1, and then as soon as they are brought up to a full feed on corn they are turned into the first-year corn field to "hog it down," when they are ready for market after having harvested three crops. The farmer harvests two and sows the rye. Good management should make a success of this plan, on the one-man farm especially.

BOHON "BLUE GRASS" BUGGIES

ARE SOLD ON
30 DAYS FREE TRIAL
UNDER AN
UNLIMITED GUARANTEE
BACKED BY A \$30,000 BOND

THAT heading outlines in a few words the most liberal selling policy ever adopted by any buggy manufacturer. It means that if there is any risk in dealing with me, I am the one who takes it.

First of all, there is my 30-day trial offer. When I ship you a BOHON "BLUE GRASS" BUGGY I want you to really try it—on your own roads—no matter how rough they are—and if it doesn't stand up satisfactorily—the buggy is mine and the money yours. Ship it back, and I will refund your money and pay the freight both ways besides.

Then there is my unlimited guarantee. If you keep the buggy after the 30 days' trial I will guarantee that it will not break down or give out from any defect of material or workmanship—not for a year, or two or three years—but forever.

Further, I have deposited in the Mercantile National Bank of this city a legally binding guarantee bond for \$30,000. It means that I could not afford—even if I wanted to—to go back on any statement, claim or promise I make in my dealings with you.

Now, honestly, have you ever heard of any fairer, squarer way of doing business? No, and you never will. But there's more to be said, and I want to say it to you by sending you my big

BOOK OF BUGGY BARGAINS FREE

It tells how and why—by selling direct from my factory—cutting out all middlemen's profits and expenses—I save you \$25 to \$50—shows more buggies and harness, carts, surreys, runabouts, etc., than you can find in 20 dealers' stores. Tells how to get your own choice of style, color, upholstery, etc. Let me send it to you—I'll be glad to pay the postage. Just drop me a postal NOW.

Balanced Rations

The farmers' co-operative elevator movement keeps going up.

Many a man who really loves his wife forgets to keep her informed of it.

It takes as much brain work to do successful farming as any other business.

Some fish subsist on others. For instance, the land shark lives on suckers.

The man who really and truly knows a thing to be so is always able and willing to prove it.

The open mind is the open door to better things. Be not only willing, but anxious to learn.

Where it can be grown successfully, vetch makes one of the best cover crops for the orchard.

There is no doubt about it, but the best people on earth are the home folks and the country is full of them.

If there is any country community which needs good roads more than any other it is a dairying community.

The farmer who can supply his soil with barnyard manure in liberal quantities has the soil fertility problem solved.

Before the grass becomes short in the pastures see that the pasture fences are all intact. A few staples may save a cow.

Any one always takes the most interest in what is his own. Make your boy a partner in the crops he helps you grow.

The high cost of living will eventually come around to the high cost of government. Why should not the tax rate be lowered?

The campaign against hog cholera grows apace. In this, as in most all other things, the ounce of prevention outweighs the pound of cure.

Farmers who can co-operate and make a success of the banking business might profit by studying how to co-operate for success in the farming business.

The farmer who learns exactly what each bushel of grain or ton of hay costs him to produce is on his way to learn other things of much profit to him.

In the advertising columns of a farm paper is to be found the latest news of improved farming methods. The progressive farmer studies the advertisements.

Another problem coming to pester us is that of hog cholera serum manufacture—whether or not it should be made by the state or by properly licensed private plants.

No other human occupation opens so wide a field for the profitable and agreeable combination of labor with cultivated thought as agriculture.—Abraham Lincoln, in 1859.

Clifford A. Thorne of the Iowa state board of railroad commissioners is fighting vigorously against a raise in freight rates. He is truly "a thorn in the flesh" to the railroad companies.

"What's Behind the Bigger Production Movement"

Possibilities of the Wheat Crop

GOVERNMENT statistics report conditions are most favorable for the biggest crop of winter wheat ever produced in the United States. The acreage is said to be 3,000,000 acres greater than the former largest acreage, which occurred in 1903. The condition at the time the reports were made was the most promising ever known. Consequently, if some disaster does not happen along, we are told to expect a harvest of over 600,000,000 bushels of winter wheat alone, with a possibility of 650,000,000 bushels.

These forecasts are probably as accurate as it is possible to secure under the present system of crop reporting, which we described in detail in our last issue, and without doubt the buyers of wheat, from the local man at the elevator on down (or up) to the flour mills, are going to put the price on the toboggan if possible and give it a push. Whether or not the price toboggan will start on the downward slope and hurtle toward a low level will depend wholly upon the farmers who now own the wheat fields.

There can be no question but that the consuming world can use every bushel of this crop and will use it just as surely if compelled to pay \$1 per bushel, basis Chicago, as if it sells at

60 cents per bushel. Moreover, foreign wheat is not overabundant, crops in Argentina and prospects in Russia being short, and as the Canadian acreage is reported to be reduced, as is also the spring wheat acreage in the United States, there will be a demand for all the wheat grown in the United States this year, a demand that will justify a reasonable profit to the wheat growers.

We will deeply regret seeing the wheat growers lose millions of dollars in profits which they deserve, should have and would receive if they were properly organized. It is to save just such losses that we have so urgently implored our readers to organize. Even with the extent of organization which now exists, we believe wheat could be held to the dollar mark if the various associations would federate and put forth united effort. And while we have no desire to scold (even though scolding seems justifiable) the agricultural press, we believe their duty to their readers should impel them to make an effort in behalf of dollar wheat, because, if the price remains below a dollar, the farmer will suffer an unjustifiable loss.

When will our contemporaries wake up to the fact that price is as important as production? It begins to look as though they never will. Yet UP-TO-DATE FARMING considers it just as much a duty to help the farmers get what should be theirs in price and profit as it is to help them get larger yields.

What Others Say and What We Think of It

"Shearing time is a great day on the farm."—Breeder's Gazette. Nevertheless, we are always mighty glad when night comes.

"Does any one know any good reason why each state should not publish its own text-books?"—Farm, Stock and Home. Yes. Politics.

"There is too much 'hit-and-miss' farming done on American farms."—Farm Progress. Such farming never makes a hit—misses it every time.

"Strawberry shortcake is no good after it becomes shelfworn."—Toledo Blade. We never knew a strawberry shortcake that was any good to become shelfworn.

"The earth road should have at least six hours of sunshine each day."—Bulletin, United States Department of Agriculture. Well, turn the matter over to the weather man. He is in your department anyhow.

"An association has been formed to make foolishness unfashionable."—Missouri Valley Farmer. What most of the husbands and fathers would prefer to see would be an association to make fashions unfoolishable.

"Do you know that there are mines in New Jersey where sharks' teeth and bones are found?"—Twentieth Century Farmer. Well, we are not surprised to hear it, for New Jersey has long been a great field for the incorporation of sharks—land sharks, money sharks, oil sharks and the like.

"The farmer makes a big mistake by attempting to 'save money' by buying cheap seed and needs to be educated to spend more rather than less money for his seed."—Forest Crissey. This is true so long as he gets real value for his extra expenditure. Poor seed is highly expensive at any price.

"A slight advance (in price) per bushel, dozen, hundredweight or stint will be a proper and wonderful incentive to the farmer to increase quality and production."—The Banker-Farmer. Which is the cream of the milk in the cocoanut. Those who are anxious to increase production can easily demonstrate the soundness of this doctrine by helping to insure that advance in price.

"Hired men are hard to get, hard to keep and expensive. A one-eighth horsepower motor, equivalent to one-man power, costs about \$10, with an operating expense of less than 1 cent an hour. Instead of hired men, why not have a motor to relieve you of some of your chores?"—Twentieth Century Farmer. Because the motor will not curvy the team, slop the hogs, go after the cows or gather the eggs. But the motor is all to the good for what it can be used for.

EDITORIAL

The Right Road to Success

NOTWITHSTANDING the fact that farming is generally more profitable, and farmers as a rule are more prosperous than at any other time in history, there are unmistakable signs of great unrest in the world of agriculture. This unrest has three principal causes. One is the low prices at which abundant crops usually sell. The second is the knowledge that those same crops are sold to the ultimate consumer for practically the same price per unit as the smaller crops. The third is the agitation kept up to induce the farmers to increase the production under conditions which may compel them to sell that increased production at the low price levels.

Contributing causes are found in the agitation for increased production, the high cost of the present standard of living, the fact that production is not keeping pace with the increase of population and the desire of the Department of Agriculture, agricultural colleges and experiment stations to show greater returns from the effort they put forth.

This unrest is not confined to the unsuccessful, indifferent or unfortunate farmer. It is not the product of calamity howlers, though they are making capital of it. Neither is it merely an after thought of drought and crop failure, though they serve to intensify it, but it reaches and concerns the most progressive, prosperous farmers and receives grave consideration at the hands of conservative agricultural publications.

The progressive element among the farmers are learning the necessity of better business methods and it is a fundamental principle of good business to know in detail all the facts which pertain to and govern one's business. This has led farmers to look into matters more closely and they know what is wrong with agriculture. They know that while a lack of knowledge of the principles of greater production retards progress, the one all-important obstacle is the uncertainty of price. They know, also, that consumers are paying prices which should allow the farmers more money than they now receive. They know they dare not take undue risks in increasing production by methods which must cost them money, when there is so much evidence that the increase in production by such methods may sell for so little that they will not have their investments returned. It will cost money to increase production by the adoption of the better farming methods advocated by the authorities on the subject, but only the most daring, the most successful and the financially well-to-do farmers feel

disposed to take the risks, on account of the uncertainty of price.

The average farmer feels that he should have more money for his bumper crops. He knows that the world can use all he and his fellow farmers produce, or will be able to produce under a proper system of farming, which means properly balanced production, diversity of crops, etc. He knows he must have more money in the future than he did receive in the past if he is to follow the teachings of those who are promoting the better farming cause, and he has little assurance that he will obtain it.

Thus the farmers know that something is needed which is now lacking before they will be able to solve the problems the future puts up to them. They know very well, also, what that something is. But they seem at loss to find the way to supply it. They are willing to take the farm demonstration, county agent and rural credit movements for what they are worth. But there is a limit to their effective powers and they can not reach or remove the big obstacle in the way, nor bring about the reform that is needed most. In fact, these new movements are themselves restricted in their usefulness by the big obstacle and will never be able to give full measure of the good they might do if the obstacle was removed. That obstacle, of course, is the condition now existing which leaves the farmers at the mercy of the manipulators of price—in short, the uncertainty of price.

By way of illustration, let us consider a man ill from lack of sufficient food. Fresh air is a good thing and he should have it. Pure water is a necessary thing and he should have it. But neither of these can make a strong, healthy man of him nor do him much good until he is given plenty of good food. Then he can utilize the fresh air and the pure water to advantage.

So it is with agriculture. Greater knowledge, improved methods and better credit are all good for it, but not until there is more certainty of profitable prices can it make the gains a healthful condition demands.

With these things clearly in mind, farmers should have no difficulty in turning to the right road to reform. It is the way of organization and co-operation. Thousands are turning to this way, but other thousands are hesitating. This is no time for hesitation. Right now, TODAY, is the time for progressive farmers to determine to have a local organization to take up this problem, in co-operation with other local organizations.

UP-TO-DATE FARMING would be glad to hear from every person reading this who feels a real interest in this, the greatest of all economic reforms.

How Congressmen Work

THERE are few more important assemblages of people in all the world than the Congress of the United States. It is composed of distinguished and supposedly honorable men, chosen by the free and, at least legally, independent votes of the American people, to represent them in government and to enact necessary laws or laws that will make the government better and result in the general good. The people like to believe in the honesty, faithfulness and wisdom of these men, and foreign countries regard them and their method of doing business as satisfactory to and representative of the people that sent them there. They judge the American people largely by the work of the American Congress. If these congress-

men truly represent the people it is well and good. If not, the people ought to know it.

The editor of the People's Popular Monthly was in Washington not long ago, and while there he visited both Houses of Congress and in an editorial tells what he saw. He first visited the Senate and felt disappointed because he wished to see that distinguished body in session, but as the seats were almost entirely vacant he concluded that the Senate was having a recess. Soon he noticed, however, that some one was making a speech, and on inquiry learned that Senator McCumber of North Dakota was delivering "to the Senate" a lengthy address on the Panama Canal tolls repeal bill. "Just seven of the senators were present!" The remainder he supposed were in

their offices, or out playing golf, or some other way entertaining themselves elsewhere.

Concluding that if the senators were no more interested than their absence indicated, it was not worth while for an ordinary voter to be interested, he passed from the Senate Chamber to the House of Representatives. There he found a group of forty or fifty members engaged in a furious debate. A speaker was gesticulating wildly and addressing the nearly empty house in an excited manner. He was being continually interrupted by the few that were there, and the visiting editor thought some matter of great moment must be under consideration. He soon discovered, however, that the matter under discussion was the addition of \$11,000 to the appropriation for erecting a postoffice building at Mandan, North Dakota, and less than one in ten of the members were present! The House, or rather the fraction of it that was there, was acting upon the public buildings bill, which the editor of the Monthly calls the "pork barrel" measure "through which congressmen strengthen themselves in their districts." Champ Clark, the speaker, was absent and Leader Underwood was at home in his campaign for the senatorship. There was nothing like a quorum present, but the measure was adopted by a viva voce vote, which was in no sense legal, but no one asked for a quorum!

Our own experience in Washington justifies us in saying these sessions witnessed by the editor of the Popular Monthly are typical of the way business is done in Congress. It is inexcusable. No other class of employees would be tolerated that did their work in that way. We say these things not through any disrespect for Congress, but because we realize that these great men have drifted into habits of heedlessness, if nothing worse, and do not attend to business as they are supposed to do and do not guard the public interests with a vigilance that the people have a right to expect them to do. The only way to improve this situation is to give the people the facts and make it a public issue. The party press dare not do it.

A Weight of Responsibility

SCARCELY an event of state or national importance transpires which does not prove that a great responsibility rests upon the farmers of this country. They constitute the greatest class of our citizens and, not only that, their homes are found in all portions of it. They are not restricted to any locality, nor to any crop or crops. They are everywhere, in all climes and conditions, and may produce any crop that grows in our nation-wide soil or climate. Their interests, therefore, can not be measured by any special rules, and being thus located everywhere they ought to be familiar with every national interest and condition as well as with the prevalent methods of doing things.

And their calling is such that they have no special "axes to grind." They can not be consolidated or centered upon any certain scheme or selfish action. A policy that is good for them must necessarily be good for the whole country, for they occupy and represent the whole country and no other calling could exist without them.

This measures their great responsibility. In this period of strangely increasing selfish legislation and special laws are the farmers properly awake to what is being done and to our present remarkable methods of government? Extravagance sits in high places and not only characterizes, but controls public expenditures. Selfish interests concentrate their powers and secure almost any public favors they ask, often to the material injury of the masses of the people.

Of course, all the people could unite and overrule these evils, but there is

one single class that could do it alone and that is the farming class. Unfortunately this class has not yet learned to exercise a combined power. As they have labored in their fields they have indulged in their individual thoughts and taken individual action. This has been taken advantage of by other classes even to the absorption of the profits that came from the soil and to the winning of special laws for special benefits. This is why we have so long engaged in this great work of education. We have had in view no special interests. Our thoughts and our hopes have been for the whole country and we still appeal to the farmers to realize what they themselves mean to the country and prepare themselves to do what they alone can do—not only to secure justice to themselves and their business in better marketing, but to exercise a salutary power in rebuking evil in high places and in making ours in truth a "government of the people, by the people and for the people."

Use of Chemicals in Canning

THE TIME for canning and preserving fruits is rapidly approaching and, in fact, is already here in some places. All know it is a common practice to use more or less salicylic acid and so-called canning powders as a means of more certainly preserving the fruits or canned vegetables. The Department of Agriculture issues a warning against the use of these chemicals. Salicylic acid is a well-known and useful medicine when used as such, but it is also a poison and its effects are bad if improperly used. It is especially harmful to digestion and the wrong use of it is certain to have bad effects. There is no system in its use in canned fruits or vegetables and persons eating fruits and vegetables so treated are very liable to be injured. The Department says most of the canning powders on the market are practically salicylic acid put up in different form and sold at a higher price and greater profit.

The Department of Agriculture recommends that these be not used at all, and says it is entirely practicable to put up both fruits and vegetables in such a manner that they will keep indefinitely by the usual process of sterilizing the products by means of heat, being careful that the cans are so filled as to exclude all air and seal airtight while yet hot.

Smile Awhile

She Was Exact

Judge—What is your age, madam?
Witness—Twenty-seven years and some months.
Judge—But I must have your exact age.
How many months?
Witness—Three hundred and twenty-nine.

Tit for Tat

"I'm afraid I shall not get along well with the folks over the way."
"What's the trouble?"
"My lawn mower screams and they sent me some axle grease and said for me to put it on the lawn mower."
"Didn't you do it?"
"No, I sent it back and told them to put it on their piano and their daughter's throat."

Signs of Grief

"Was there any evidence of mourning when Sue married Jack?"
"Yes, all the belles were told."

He'd Been Fishing

"Did the fish bite much today?"
"No, but the skeeters did."

About the Same as Liberty

"That seems to be an excellent umbrella. What does it cost to have an umbrella like that?"
"It costs eternal vigilance."

He Wasn't There

Teacher—Tell the class what you know about the Mongolian race.
Pupil—I didn't go to the race last Saturday. I went to the ball game.

Hog Cholera—Its Cause and Treatment

By C. Hayes Taylor

EVERY FARMER who has hogs on his farm should know as much as he can learn about hog cholera. Not many do. The facts given in this article (and to be concluded in the next issue of this paper) have been compiled with the utmost care and are not theories, but truths which have been demonstrated until there can be no question as to their correctness. And if I may presume to trespass upon the time and good nature of the reader, I would urge him to read these statements until he has them clearly defined and firmly fixed in his mind.

Hog cholera is caused by an invisible something, believed to be a germ or bacteria, so small that not even the most powerful microscope can find it in the blood or tissues of a hog infected with the disease. Its work can be seen very clearly, however, and its effects are known to every one.

When one hog suffering from cholera is placed in a herd of healthy hogs they all, with seldom a single exception, contract the disease and most of them, if not all, die. Blood obtained from a hog having the cholera can be taken to a distant farm, injected in the veins of a healthy hog, where no cholera is or has been, and the disease is given to the healthy hog. Therefore, notwithstanding the fact that a cholera germ never has been seen, we know there are such things and that they exist in the blood and flesh of hogs, are cast off with excretions and can be carried from place to place, get into the systems of other hogs and cause great destruction. No chemist, scientist or medical man has ever been able to find a chemical which will destroy the cholera germ without at the same time destroying the tissues of the flesh or blood in which the germ exists. The only way to combat hog cholera is to combat the germ in some manner which will keep the hogs vigorous and healthy so nature may fight the disease. Nature alone may be able to do something in cases where the disease is not severe, which would likely mean that the germs are not abundant or virile, but in its malignant form cholera overcomes nature, and no matter how healthy the hog, or how well cared for, if cholera in its worst form is introduced by any means it wipes out the herd. Birds, dogs, men and other animals may carry the disease from one farm or community or county to another. A stream of water may carry it. Any moving thing may serve as a carrier.

Hog cholera exists in two forms, the acute and the chronic. The acute form is malignant and takes the suffering animal away in short order. The early symptoms are tremors (trembling), fever, weakness, staggering gait, either constipation or diarrhea, labored breathing and convulsions. In the chronic form young hogs become stunted and emaciated. Sores form in various places on the body. Fever runs up to 105 or 108 degrees. The hog is usually found off by itself. It walks weakly, drags its hind feet, arches its back and often falls to the ground. The first symptom, however, is loss of appetite.

Inwardly may be found signs which are unmistakable. Every farmer who has the opportunity should carefully examine the stomach, lungs, liver, kidneys and intestines of a cholera hog and become familiar with their appearance. The lungs will show small red spots, as a rule, or large areas of inflammation. The liver may be enlarged and of an unhealthy color. The kidneys are usually light colored with small red spots and the intestines usually show ulcers.

The problem confronting the farmer is this: Can cholera be either prevented or cured and, if so, how? We care little about the theories, except as they may help us to understand the facts, but what are the facts which have been determined

There Is Money in Swine if Cholera Doesn't Get Them Before the Butcher Does

to show what can actually be done to control this dread disease?

Many years ago some very careful scientists noticed that now and then a hog would be left from a herd killed by cholera, never showing any symptoms or signs of sickness. These scientists believed there must be something in the blood of such animals which prevented cholera from working, making them naturally immune. They took some of the blood from the veins of these immune hogs and injected it in the veins of a healthy hog, which was then exposed to the cholera, but the hog sickened and died. Next cholera blood was taken from a hog sick with cholera and injected

supplies extra bone material to heal a broken bone or exercise builds muscle. So they kept injecting more and more cholera blood into the immune hogs, believing that the hog's own blood would make more and more of the anti-bodies it contained to counteract the additional cholera germs. They found by experiment their theories were well founded. The hogs received large quantities of cholera blood, but did not contract cholera. Then they took the blood from the immune hogs, supposedly containing large quantities of anti-bodies, and injected it into healthy young pigs, placed these pigs with other healthy young pigs in a pen together and placed with them a pig suffering from a severe attack of cholera. The healthy pigs which were not treated with the "immunity blood" from the immune hogs sickened and died. Those that were treated, or vaccinated, remained well. Thus the scientists found that immune hogs could be made extra-immune by the injection of cholera blood and their blood would become so strongly antagonistic to cholera that when it was injected into other hogs they became immune also.

Thus we see that the real preventative is a discovery, a purely natural remedy, no one knows just what, but the fact remains that it exists. It is not a manufactured chemical, a patent medicine or nostrum, but is nature's own product. We do not manufacture corn from chemicals, but we produce corn by planting corn. And this great hog cholera remedy is not manufactured, but by planting the "seed" in suitable location (in a healthy hog) and then giving it proper cultivation (injecting cholera blood into its blood stream) it grows and multiplies. All the hog cholera serum that is genuine and potent was manufactured by nature itself in the blood of hogs from nature's own formula and put together in her own mysterious way.

Although it has been agitated widely for about only two or three years, the study and experimentation with the treatment of hog cholera has been conducted by the most competent veterinarians, scientists in animal husbandry and chemists for a much long period of years. It was in 1903 that Drs. Dorset and Niles of the Bureau of Animal Industry, Washington, D. C., made the discoveries and began the experiments heretofore described which resulted in the discovery of the serum method of prevention. The Iowa Agricultural College took the lead in developing the use of the treatment and began the manufacture of serum and virus in the state college laboratory. Since then a number of states have provided plants for the manufacture of the remedy and also a number of private concerns took up the work. It is absolutely necessary that the serum produced be of an absolutely pure and potent quality. Impure, impotent or "fake" serums have been found on the market, and such serums are not only powerless to prevent loss, but often actually produce diseases which destroy the victimized swine. A large portion of the complaints made that the serum treatment is not succeeding has been traced to the poor quality of the serum used or a careless method of using it.

In our next issue we will go still further into this intensely interesting account of the war on cholera, taking up the serum (made from the blood of immune hogs containing large quantities of anti-bodies, the enemy of the cholera germ) and the virus (blood that is taken from hogs suffering from cholera, and containing cholera germs) and dealing plainly with their manufacture and use. The photos on this page are those of the largest serum and virus factory in the entire country, where perfectly pure and highly potent articles are produced. This plant has been visited and thoroughly inspected by the writer, with the sole intent of getting right at the facts and giving the readers just as we found them. The

(Continued on Page 10)

Top—Eight fifty-pound pigs, all inoculated with cholera virus. The six living have been vaccinated with serum.

Bottom—Injecting cholera virus into ear of immune hog, making it hyper-immune.

Top—A pen of hyper-immunes from whose blood serum is made.

Bottom—Putting a hyper-immune in a crate preparatory to drawing blood from the tail for manufacturing serum.

into the veins of several hogs, including those naturally immune. All but the immunes contracted the disease and died, but the immune hogs remained in a perfectly healthy condition. This seemed to prove beyond question that there was something, somewhere, in the naturally immune hog to prevent it from becoming affected by cholera germs.

The scientists then formed the theory that some property or minute organisms existed in the blood of the naturally immune hogs that either destroyed or rendered powerless the cholera germs. They called this property "anti-bodies." They theorized further and assumed that these anti-bodies might multiply and grow in strength if they had extra work to do or enemies to fight, just as nature

Build Your Silo Now

Two Valuable Articles in the Equipment of an Up-to-Date Farm

EVERY progressive farmer of the present day realizes the value of good silage. It is as easily digested as the same plant preserved dry, with the advantage over dry fodder of toning up the digestive system and keeping it in healthy activity. It furnishes a succulent food for cattle in the winter season.

It is the universal experience of farmers, as well as the testimony of agricultural colleges and experiment stations, that a given acreage will support a much larger number of cattle with the use of the silo than without it. This means more beef and more milk at a cheaper cost of production and a more rapid upbuilding of the fertility of the soil.

The silo preserves most or all of the feeding value of fodder which is lost by curing. It has been shown by the Colorado Experiment Station that the loss in feeding value of corn stover from the time it is cut until it is cured is as high as 55 per cent. The Wisconsin station shows that between the time of cutting and curing stover the loss in protein alone is 14 per cent. In case of early frost, hail or anything interfering with the maturity of the crop the silo protects the farmer from loss.

If you have not already begun, now is the time to start getting together the materials for your silo. For the results the silo should be completed one month before time of filling. Experiments have been carried out with dairy cattle produced one-third less cost when the hulls in the ration. This fact, can you afford to ignore a silo?

Excellent feed for both cattle. A corn crop

planted after oats have been cut will mature sufficiently to make good silage.

A silo is one of the first and very important steps in the solution of the feeding problem in any section and any one having as many as ten head of cattle can not afford to be without a silo.

Both stave and concrete silos have given excellent results in all states and either may be erected with farm labor.

Last year several men put off building their silos until such a late date that the corn was too dry for first-class silage before the silo was completed.

THE MAKING AND FEEDING OF SILAGE

Silage has come into general use throughout the United States and is universally recognized as a good and cheap feed for farm stock and particularly so for cattle and sheep.

Silage is the best and cheapest form in which a succulent feed can be pro-

vided for winter use. An acre of grain can be placed in the silo at a cost not exceeding that of shocking, husking, grinding and shredding.

A given amount of corn in the form of silage will produce more milk than the same amount when shocked and dried. There is less waste in feeding silage than in feeding fodder. Good silage properly fed is all consumed, and in addition very palatable. Like other succulent feeds, it has a beneficial effect upon the digestive organs and more stock can be kept on a given area of land when it is the basis of the ration.

On account of the smaller cost for labor, silage can be used for supplementing pastures more economically than can soiling crops, unless only a small amount of supplementary feed is required. Converting the corn crop into silage clears the land sooner than if the corn crop is shocked and husked, and because of these advantages silage, in the general opinion of dairy farmers, has increased milk production per cow and has increased the profits per acre.

Corn Silage

In all parts of the United States where the silo has come into general use the principal silage crop is corn. Ordinarily corn will produce more food material to the acre than any other crop which can be grown. It is more easily harvested and put into the silo than clover, cowpeas or alfalfa.

Furthermore, corn makes an excellent quality of silage. The legumes, such as clover and alfalfa, are liable to rot unless special care is taken to pack the silage thoroughly and force the air out. The only objection which has been raised concerning corn silage is the fact that it contains insufficient protein fully to meet the requirements of animals to which it may be fed. The best variety of corn to plant is that which will mature and yield the largest amount of grain to the acre, since the grain is the most valuable part of the corn plant. The variety commonly raised in any particular locality for grain will also be the most satisfactory to grow for silage.

Cultivation and Yield

In some sections it is a common practice to plant the corn a little thicker when raised for silage than for grain. Weeds should be kept out or they will be cut with the corn and may impair the quality of the silage. The amount of silage that can be obtained from an acre of corn will vary from four to twenty tons or more. A fifty-bushels-per-acre crop of corn will yield about eight to twelve tons of silage per acre, depending upon the amount of foliage and stalk that accompanies the ear. Southern varieties of corn as a rule carry a larger proportion of the plant in the form of stalk and leaves than do the northern-grown varieties. Corn should be harvested for the silo at about the same time that it is harvested for fodder.

Corn for the silo can be cut either by hand or by machine. Hand cutting is practiced on farms where the amount

of corn to be harvested is so small as to make the expense of purchasing a corn harvester too great to justify its use. Hand cutting is slow and laborious and there are probably few localities now where the purchase of a harvester would not be a profitable investment.

In case the corn has become too dry or ripe before it is put into the silo, water should be added to supply the deficiency of moisture necessary to make the silage pack properly. Unless it is well packed the silage will "fire-fang" or deteriorate through the growth of mold. Enough water should be added to restore the moisture content of the corn to what it would be if cut at the proper stage. The water may be added by running directly into the silo by means of a hose or by running through the blower. It is claimed that by running it into the blower the water is more thoroughly mixed with the cut corn.

Sorghum

Sorghums, both saccharine and non-saccharine, are readily made into silage. On account of their superiority to corn as drought-resisting crops they are more commonly grown in those regions of the west where the rainfall is too light or irregular for a good growth of corn. It is important that the sorghums be harvested at the proper stage of maturity if the best results are to be secured. A mixture of corn and sorghum has proved satisfactory in some localities where the rainfall was so variable as to make the corn crop uncertain.

Clover

Clover can be used successfully as a silage crop, yielding a palatable product high in protein, but it is preferable to make it into hay, for the silage made from clover, as from other legumes, has an objectionable odor, necessitating particular care in feeding to avoid tainting the milk. It does not pack so well as corn, so great care should be exercised in the tramping of the silage at the time of filling, and the depth of the silo should also receive particular attention. Clover should be chopped before siloing as a matter of convenience in feeding and also to secure more thorough packing. Clover for the silo should be harvested when in full bloom and some of the first heads are head.

Cowpeas, Alfalfa and Soy Beans

Cowpeas, alfalfa and soy beans can be successfully made into silage by exercising the same precautions as with clover. They should be cut at the same time as for haymaking. However, it is ordinarily preferable, as with clover, to make them into hay rather than silage. The fermentations which take place in silage made of legumes cause a greater loss of nutritive material than with corn silage. Corn husks and pea vines from canning factories, beet pulp and other by-products are also used in certain localities for filling the silo.

There are on the market several makes of silage cutters that will give satisfaction. The capacity of the machine to be purchased is an important consideration which should not be overlooked. Many persons make the mistake of getting a cutter which is too small, thus making the operation of filling the silo very slow and interfering with the continuous employment of the entire force of men. It is better to get a machine large enough so that every one will be able to keep busy all the time. The larger cutters are equipped with self-feeders, a labor-saving device which the smaller sizes lack.

The usual length of cutting varies from one-half to one inch. The latter is considered a little too long, since pieces of this length will neither pack so closely in the silo nor be so completely consumed when fed as will the shorter lengths. On the other hand, the longer the pieces the more rapidly can the corn be run through the cutter.

An Old, Old Story

We are both interested in UP-TO-DATE—you as reader and we as publishers. We want to give you that bigger, better, more valuable farm paper that you have always wanted. We will give it to you!

Because the subscription receipts do not nearly pay our expense, advertising must help. We must have more advertising, and the way to get it is by making the paper pay advertisers better. You can help, Mr. or Mrs. Reader.

Will you help? Whenever you want to buy anything look first to see if it is advertised in UP-TO-DATE. Patronize our advertisers because we guarantee "a square deal."

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

My Experience With Alfalfa

By John Underwood

Alfalfa, the King of the Forage Field

MY EXPERIENCE in growing and feeding alfalfa dates back over a period of seven years. At that time I read a good deal on alfalfa culture. Previous to that time I had been almost always short of hay for the stock I kept. I decided to try six acres in alfalfa. I can assure readers of UP-TO-DATE FARMING that I have had most gratifying returns. But I made some mistakes. When I seeded my first six acres I used only twelve pounds of seed per acre, which was recommended to me as being enough, but this was a mistake. The seed I secured on this occasion was two years old—another mistake. This seeding did very well, considering everything, but I would have obtained better results had I used fresher seed and about twice as many pounds per acre as I did use. For a long time it appeared as if I were going to get nothing but weeds instead of a patch of alfalfa, but after awhile the alfalfa started and, the land being in splendid condition, it did fairly well. About the last of August I clipped the field, which prevented weeds from going to seed. This clipping gave the alfalfa a fresh start, so that when winter came I had a good stand of alfalfa with a good top to protect it during the winter. The next year I expected great returns from my alfalfa. In one way I got them, in another way I did not. From that six acres, if I remember correctly, I cut between twenty-five and thirty tons in three cuttings, but being "green" at the job I again made some mistakes. The first cutting I did not cut soon enough and it got very coarse and woody. The second cutting I harvested at about the right time, but tried to save it without cocking, with the result that I lost a great portion of the leaves. And the third cutting I put in a little too green. It got very musty. In fact, some of it was white with mildew when I started to feed it in the winter. I next seeded ten acres more, which made sixteen acres in all, and in 1910 I secured in two cuttings sixty tons of as good hay as ever was fed to an animal. In 1911 I gave the same field a good coat of manure and prepared it for corn. The fall after keeping the corn field clean I did not plow the field at all, but the following spring worked it with the disk and harrow until there was an extra fine seed bed. I then seeded twenty-four pounds of alfalfa seed an acre. I find that I can not get alfalfa too thick. The thicker it is the finer it is and the finer it is the better I like it. When seeded so thick and on well prepared land one can feel reasonably sure of a good catch of alfalfa. The harvesting of alfalfa seems to be a difficult proposition, especially to those who do not grow it. As I have given my first year's experience it can readily

be seen that it was certainly a difficult proposition then for me. And it really does require a little experience before it can be done right. The last few years I have had splendid results and I will try to give my method as nearly as possible. Having sixteen acres to harvest, I like to start as soon as I can, so that if we get a bad spell of weather the last will not get too far advanced before it is cut. I do not wait for the field to get one-tenth in bloom before I start. I start as soon

as I can see a flower here and there. I always start on the highest part of the field first, as it always flowers first. If I wait till the lower portion of the field is about one-tenth in bloom the plants will be all in bloom and the hay will therefore be too woody when cut. I start to cut as soon as the dew is off in the morning, usually cutting about four acres at a time. As soon as the mower has had a good start I start the tedder going and keep it going almost until the hay is fit to cock. I ted four or five times. I would suggest here, judging from my experience, don't try making alfalfa hay without a tedder, for if it is at all heavy it can not be done. The leaves on the top will drop off before the hay underneath is fit to cock. If it has been a dry, hot day the alfalfa will be fit to cock the same evening as it was cut. If it is not well wilted I leave it until the next morning and ted it again. I believe it will pay any man to cock not only the first cutting, but every cutting. I do not allow my men to roll it in heaps and call that cocking. Each forkful should be picked up separately and put on top of another, making a small stack that will be practically waterproof. Then a few days rain will hardly hurt it at all, excepting the very outside of the cock. If I do happen to be hindered by a spell of rainy weather I consider it advisable to move the cocks on to fresh ground to prevent the smothering of the plants underneath. This can be quickly done if two men work together. First one forkful is taken off the top of the cock and then both men put their forks in the same side of the cock and slide or pull it on to a fresh spot and then replace the top

forkful as before. To tell just when alfalfa hay is fit to store away is a point that needs a little experience. After the cock has finished heating I take a handful out of the center and wring it with my hands. If some juice can be wrung out I do not consider it quite fit. If, however, I can not wring any juice out, it will be all right to haul in. When putting my alfalfa hay in the mow I do not put eight or ten loads in the center and leave it there. I spread it as it is put in and I can assure any one if this method is followed he will be well pleased in the winter when he is feeding it to his stock.—John Underwood, R. R. 2, Tunnel Hill, Ill.

NEEDLES IN NAIL KEGS

I stepped into a farmer's workshop the other day and found him busily engaged in sorting over the contents of an old nail keg.

Drawing closer, I took a squint at the contents of that keg and was surprised at the collection. Honestly, it contained everything from the safety pin off of Mother Hubbard's nightcap to the safety valve on Wright's aeroplane.

"Looking for a needle?" I queried.

"Might as well," growled the farmer. "I want a harness hook to put up in the stable and I know blame well I put one in this keg last week."

He spent over a half hour looking for the blamed thing, and I'll be blown if he found it then.

When he got through I offered him a fool's suggestion, or, in other words, I told him that an ordinary drygoods box six inches high and about two by three feet in size could be partitioned off into about twenty-four boxes or sections, each six inches square, in less than the half hour he wasted looking for the hook, and then he could put hooks in one section, burrs in another, screws in another, etc. Here's the idea:

Well, of course he failed to thank me for the suggestion. In fact, I believe he threatened to kick me out under his breath. But say, the next time I entered that shop the drygoods box was doing its work all right.

Have you such a thing as a variety show of that kind in one of your nail kegs? If so, what do you intend to do about it?—W. Clement Moore.

THE FORGOTTEN PAYMENT

"Here's that \$5 I've been intending to pay you for that last job you did for me, John," said Farmer Harris to the village blacksmith.

John Craft, the smith, took the money, wadded it up, thrust it in his pocket and said: "If you'll wait a minute, Tom, I'll give you a receipt."

"Never mind your receipt," I'm in a hurry," and the farmer good naturedly drove on his way.

He had scarcely turned the corner of the nearest street when an automobile stopped at the shop and the blacksmith became engaged in repairing some trifling breakage in the machine. The payment of Harris's \$5 slipped entirely from his memory—and the following week he was killed in an accident.

In settling the Craft account naturally a bill was handed for \$5, which he was f

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

HOW ONE COMMUNITY CREATED ITS OWN BIG OPPORTUNITY

(Awarded First Prize of \$3)

It is a fine thing to live in a community where the farmers are progressive enough to work together in looking for and utilizing opportunities for making progress and money at the same time.

I will give a brief account of the means whereby our farmers established a very profitable trucking business. During the winter of 1910 three farmers who happened to be together began to talk about the possibilities for profit in truck farming and to discuss the things needed to make such an enterprise as profitable as possible. They decided some sort of an association was very desirable, if not absolutely necessary, and after considerable study and discussion amongst themselves they decided to jointly go to work and see what could be done. Each took certain roads and visited every farmer in the community on that road and explained what the three men had been talking about and had decided to try to do. A large number of the farmers visited became interested, signed an agreement to plant a certain stipulated acreage of truck, such as tomatoes, beans, sweet potatoes, cantaloupes, melons and pumpkins. The association was formed, each member paying in \$1 as a temporary working fund.

The first and earliest crops were sent to market by the business manager of the association and sold at very satisfactory prices. Then a canning plant was put up and the later and cheaper crops were canned, care being taken to can only perfectly fresh and sound material. Some products, because of size, shape or season, which might not sell well in fresh condition, are just as good for canning as strictly fancy goods.

The association manager also shipped products for non-members on a percentage and the canning plant put up their products on shares.

Many farmers made as high as \$240 from a small area of truck, and every one had plenty of canned goods for home use, besides selling the surplus at a fair price. There was plenty of ready money in the community all through the summer, where usually there was little or none until cotton-picking time.

This shows what wide-awake farmers can do when only two or three get their heads together and work together for better things.—Lon Wilson, Oklahoma.

UTILIZING WASTE LAND

(Awarded Second Prize of \$2)

Everywhere I go I see land under fence that is yielding nothing to the owner and I often wonder why so much land should lie idle the year around. I owned a homestead in Arkansas. About 50 per cent of it was rough and stony, part of it so much so that it would be impossible to grow any kind of a cultivated crop. The sides were steep and exceedingly rocky. The land was rich in humus, however, and I often wondered if an orchard could be had from that piece of land. A happy thought struck me and I concluded to turn that waste land into money, and this is what I did. I went in there and cut brush and sprouts until the land was clear. The trees were left. (The rocks) were

all burned over. That patch of stony land was a sight to behold. I mixed red clover seed and orchard grass seed, equal measure, and sowed two gallons of the seed to the acre all over the rocks. I did not plow it; that was out of the question. This was done early in the spring and the spring rains carried the seed to the rich soil underneath and as soon as the weather warmed up my grass was also up, thick as need be. Every nook and gully and bank was literally covered with clover and orchard grass. Now I had a Duroc sow and eight pigs and no suitable place to keep them. Feed was scarce and high that year. So I fell on the plan to fence up my glade and put my hogs there. This was in June. The

hogs needed no further attention. There was running water in the lot. The hogs were soon in a thriving condition. The latter part of October I put the eight shoats in a close pen and fed corn about four weeks, when I butchered. My hogs netted about 200 pounds each, or 1,600 pounds in all, and I did not feed them much corn either. About 80 per cent of my profit on the eight hogs came from the pasture on the glade.—John B. Polk, Hood River, Ore.

CONVENIENCES OF THE FARM HOME

(Awarded Third Prize of \$1)

My husband received UP-TO-DATE FARMING for a Christmas present and I eagerly read "Our Country Contributors" first of all the helpful pages. I am going to tell a few of the conveniences that we enjoy which I believe could and should be in every farm home. The greatest attraction for the farmer's wife in the city is the system of running water, with hot and cold water for dishwashing and the preparing of vegetables, and a generous supply of hot water for the Monday washing of clothes. Then all would appreciate the pleasure of a good bath at the close of a hard day without the dreadful work of carrying in and heat-

ing the water. Now this convenience is within the reach at a most reasonable cost. The plan used in our home at "Sugarland" is this: A tank holding 315 gallons stands in our "up-ground" cellar, three feet from the back kitchen door (a saver of steps). The limestone water from a very deep well is pumped into this tank by a gasoline engine and carried from this tank through small galvanized pipe to the house, where it can be had by simply turning a faucet in the sink. To get hot water we have a thirty-gallon galvanized tank connected up with the range, so when we have a fire in the range every day we have thirty gallons of hot water at hand all the time heated by the same fire used in cooking. This water is piped to the kitchen sink, the wash tub and bathroom. A running water system is so valuable it should be in all up-to-date homes.

The kitchen is where the farm housewife spends a great part of her time and should be as cheerful and convenient as possible. My kitchen is small, with one large window and a door to the south, also a door to the west. The floor is covered with a tan and gray linoleum and the walls and ceiling are painted light gray. A large wooden cook table, painted light gray, with a zinc top; a "Hoosier" kitchen cabinet, range and sink are all I need and have room for. I am not crowded. Everything is handy and I appreciate this size. It is so much easier to keep clean. My cooking utensils are of aluminum.

Every up-to-date farmer's wife should save her energy like her up-to-date farmer husband does, by having all manner of labor-saving machines. There are two I want to mention. One is a bread mixer. As this task of kneading bread is long and tiresome, and baking comes two or three times a week, a bread mixer will do the work in three minutes and the bread will be finer.

The other is a vacuum cleaner. Then the dust problem is for sure settled. These cleaners are reasonable in price and easy to handle. A few moments to a room keeps everything clean.

More home conveniences will go a long way toward making country people better satisfied with farm life.—Mrs. James L. Clark, Indiana.

SOME FARM CONVENIENCES

A sewing awl is one of the greatest money savers for a thing of its size that can be found. They cost about 50 cents and there are innumerable things that can be stitched with one.

Another good thing to have is an extension bit. It takes the place of about ten or possibly more of the old style bits. You can bore any size hole with the one bit and save the trouble of having a dozen or so to search through to find the right one. They cost from 75 cents up.

Soldering outfits can now be had in small, compact form and any farmer can use them. One will save many trips to the hardware store, besides the expense, or worse still, the throwing away of a bucket, pan or milk can. Outfits can be had from \$1 up.

Many a farmer has had the experience of bending over an old-fashioned grindstone for hours at a time to sharpen an axe, scythe or other implement, to the great discomfort of his back. An emery wheel is a pleasure and luxury alongside of an old grindstone. It will do the work better and in one-fourth of the time. A good emery wheel can be had at reasonable cost.

A garden plow will do the work quicker, easier and better than it can be done with a hoe. They cost from \$3 to \$8.

Chickens must have clean, fresh water to drink. If it is placed in pans, old dishes, etc., it is sure to get dirty. If it is put in drinking fountains it will keep pure and clean. Good gal-

You'll Be Proud of Your *Detroit*
Every Mile of The Road

Road performance is the test of any car. You will feel the same pride in your big, smooth-running, hill-climbing *Detroit* that you do in your thoroughbred stock, your well-tilled fields, your trimly kept house and barns.

Select your car for this season on known facts. Don't let big talk count with you. Get the real essentials of *Detroit* construction before you and you will understand why one-half of the thousands of cars we have built during the past two years have been sold to farmers and men who use their cars mostly on country roads.

The *Detroit* is a big, staunchly built car. It may wear out sometime, but it won't break down. A remarkable investigation, recently made, shows that the thousands of *Detroit*s now in use average only \$3.81 a year for repair parts. No other car ever approached such a record.

You don't feel rough roads in the *Detroit*. The big platform rear springs take up the shocks and bumps.

The new *Detroit* motor, bigger and more powerful than ever, carries this lightweight vehicle up any hill where its wheels can find traction. Part of the daily performance of one of our test cars is to shoot up a long 50 per cent grade with a full load of passengers. It never fails to make the grade.

The *Detroit* full-floating axle, the kind you see on cars twice its price, will carry more than 2,000 pounds of overload.

Ball bearings throughout; the new *Detroit*-Remy electric starting and lighting system; simple control on dash, mark a quality of construction you have been led to expect only in cars costing twice as much as the *Detroit*.

And when you come to think of the price you will wonder how we manage to put all that real value into the car for the money. Send in your name and get our free booklet that tells the whole interesting story about this wonderful car.

Briggs-Detroit Co. 621 Holbrook Avenue

M. D. COATE, Cleveland, O.

vanized fountains can be had for 50 cents each.

The man who will let his wife bend over an old washboard and tub should be made to cultivate his corn with a hoe. A washing machine is not a luxury. It is a necessity.

To compare the old dash churn to the new improved churns is like comparing a wheelbarrow to an automobile. Butter making will become a pleasure when you own a good improved churn.

As a last word let me say this: There is a lot of talk nowadays about keeping the boys and girls on the farm. The best way to do this is to install the modern conveniences on the farm and in the home, which will make farming a pleasure.—Buckeye Farmer.

A SUCCESSFUL BOY FARMER

Merle Hyer of Lewiston, Utah, makes potato growing pay at the rate of \$400 per acre. He grew 382 bushels of marketable potatoes on the half acre of land. That would be at the rate of 764 bushels to the acre. On these he cleared \$200, a rate of \$400 to the acre. The potato grown was the Early Eureka. The crop was grown on sandy ground, all weeds were kept out and the land was cultivated enough to keep the soil loose. Just after the blossoming period the potatoes were irrigated by subirrigation.

At such a profit potatoes can surely be a profitable crop for the farmer. If it pays a boy to give a crop the best of care it will pay the farmer.

Merle Hyer's success was largely due to the fact that the boys here in Utah are organized into the Boys' Potato Club. The motto is "To Make the Best Better." The boys not only get the advantage of each other's experience, but they have an expert on potatoes to help them to learn how to grow potatoes. Merle Hyer was state and national champion of the Boys' Potato Club for 1913. The organization of these boys will help them to see the benefits of organization when they become men.—George Gardner, Logan, Utah.

PARCEL POST AND FARMING

I wish to commend the recent regulations of the parcel post. Perhaps some of us will get out of the old rut of dealing with a string of middlemen and in a small way start our dormant minds to thinking. Do not understand me to say not to support home industries, for that is our duty. But if you have something to sell that can not be consumed at home do not sell it at home. You are not under any obligation to do so. If there is some one near you who produces something you need help him if possible by buying from him. Otherwise if you can buy where you can keep the middleman's profit in your own pocket, do so.

We can now sell all our surplus vegetables, such as beans, potatoes, etc., to the nearby city consumers anywhere within a radius of 150 miles at a saving to the consumer and a profit to ourselves over what the overcrowded grocery store of the small town usually pays.

Of course it is better to organize to procure our customers, but if one has enough to justify him he can visit the places to which he thinks he can make profitable shipments, with samples of his produce, and secure his own customers. Always give them a square deal and they will remain your customers.—Mark Burns, Harrison, Ark.

"Since the hay commission men in Kansas City have increased their charges from 50 to 75 cents a ton for selling hay, farmers in the hay producing regions are proposing to organize an association to sell their own hay. Another good way is not to sell hay, but to feed it and market it on the hoof."—Missouri Valley Farmer. That last way would only transfer commissions from hay dealers to live stock dealers.

ONE TENANT WHO IS "MAKING GOOD"

A concrete example of the possibilities of tenant farming where there is proper co-operation between landlord and renter has been observed in Pickens County, South Carolina. W. H. Barton, assistant state agent of demonstration, says:

"S. H. Maddox of Norris, S. C., is a tenant on the farm of E. W. Tate. Mr. Maddox is known in his community as the 'best farmer in the county' (Pickens). He began on dead poor land four years ago, the land being full of gullies from knee to waist deep. With deep plowing, terracing and winter cover crops of rye he has in this short time brought the farm up to a point where, last year, he made an average of forty-five bushels of corn and 1,547 pounds of seed cotton per acre. He now has more than three-fourths of the farm sown to clover, vetch and rye to be turned under this spring.

"This is a concrete example of what a renter can do when the landlord co-operates properly. And this is the secret of the whole affair. The landlord, Mr. Tate, furnishes free of charge all cover crop seed and binds himself not to advance his charges for rent as long as Mr. Maddox remains on his farm. Mr. Maddox pays a certain percentage of all he makes and whatever

is to the interest of one is to the interest of the other. Mr. Tate is delighted with Mr. Maddox and Mr. Maddox is delighted with Mr. Tate. Such a harmonious co-operative arrangement is fine to behold. Why can not this method be extended?"

THE VALUE OF AN OLD HORSE

Sometimes there's a bargain in buying an old horse, providing it isn't too old, where children have to go a long way to school. Sometimes an old horse can take them back and forth just as well as a young one and much more safely.

And if the women folks wish to go to town and a horse can not be spared, the old one may be hitched up to the buggy and fills the place of the needed horse quite well.

I knew of a woman who had one good cow, several hens and a good garden, besides a small orchard. Her husband worked for wages. She had a little surplus of several things—eggs, butter and so on. She knew of an old horse she could buy for \$25. He was about twenty years old. She decided to go in debt for him. She bought an old, rickety buggy for \$5, which she repaired and painted with the help of her husband. She then began hauling all her surplus to market and she became acquainted with several ladies in town who wanted her to sew, and

two wanted her to wash. She sent home the clothes as white as snow and in a short time she had more calls for laundry work than she could accept. Her products also won a good reputation owing to the nice way in which she marketed them. She soon paid for the horse and started a bank account and finally helped to buy a farm of their own. She kept the old horse till he died.—A. C. H.

LOSING HIS "FIGGERS"

My friend Brown runs a small dairy farm, and, like many other small dairymen, his business and bookkeeping are not always the best in the world.

A short time ago a friend of his paid him a visit and, standing beside him while the milk was being measured and collected, he noticed Brown put the number of quarts on a slate—simply the quarts, no date or other record.

"When do you put your record on your books, Brown?" inquired his friend.

"Oh, whenever I get a chance," he answered.

"Don't they ever get rubbed off?"

"Yes, once in awhile, but then we depend on our memory. I suppose we lose a little of it too, occasionally."

"Well, listen," said his friend, "why don't you mark the number of quarts on that large calendar—the morning record at the top and the night record at the bottom of each date? There's plenty of room, as the figures and spaces are large. It wouldn't get rubbed off then and your book could be fixed up once a week."

On the wall hung a large insurance calendar and Brown soon took advantage of the suggestion.

It seems like a sensible plan for the small dairy farmer who takes a certain number of quarts of milk to a creamery every day. Large shippers, of course, should use a regular daily book account.

ALFALFA SAVES THE DAY

Last year we raised cantaloupes, but like so many others who flirt with these specializing products, we lost out severely. We only delivered fifty-two crates to the railroad and lost all of these but a few crates of standards, which returned us 25 cents per crate.

In addition to this misfortune we were compelled to pay a ball debt of \$215.

To counterbalance we raised corn sufficient to supply our needs and from twenty-three acres of alfalfa we sold 100 tons of fine hay, at prices ranging from \$10 to \$15 per ton, baled. The baling expense was \$2 per ton. But we made a net profit of \$764 from our alfalfa field and kept plenty for feeding.—Miss Ellen Tanner, Lake Arthur, N. M.

AMERICAN WOOL NEEDS BETTER HANDLING

From 10 to 20 per cent of the value of the wool crop is lost annually through the neglect of a few simple measures. Under existing conditions, when American and Australian wools lie side by side in the warehouse, the poor handling of American wools is noticeable. This handicap would be removed to a great extent if all growers would agree to do four things:

Put ewe, and buck fleeces in separate sacks.

Shear black sheep separately and keep the fleeces separate.

"Fixing up" the farm a man works well and when he feels well, a tractive farm with every shape makes a farmer and see.

Tire Prices Which No Man Should Pay

This year, 16 makes of tires are selling higher than Good-year prices. They run—most of them—\$5 to \$15 more.

Those extra prices, if you pay them, mean simply wasted dollars.

This Is Why

The test of time has given Goodyears the topmost place in Tiredom. They outsell any other after millions have been used.

No other tire can offer you the Goodyear No-Rim-Cut feature. No other tire gets our "On-Air" cure—the extra cure which saves the countless blow-outs due to wrinkled fabric.

No other tire combats tread separation by the patent Goodyear method. And no other tire has our All-Weather tread. That's a double-thick

tread, as smooth as a plain tread, but with deep, sharp, resistless anti-skid grips.

Those features save tire users millions of dollars. But not one of those extra-price tires contains one of them.

How We Save

Our mammoth output brought Goodyear prices down. Smaller makers cannot possibly compete. And our average profit last year was but 6½ per cent.

Others will say that higher prices buy you better tires. That isn't true. Better tires can't be built. Those higher prices mean smaller output or a larger profit.

There was never a time when it meant so much to get Goodyear tires as now. And your dealer, if you ask him, will supply them.

WHEN WRITING TO ADVERTISERS PLEASE
MENTION UP-TO-DATE FARMING

Keep Your Grain Out Of The Straw Stack

Too much grain is lost in the straw pile by incompetent threshers. There is no need of it. The Red River Special has proved that all the grain can be saved. Just to test the Red River Special, hire one this year and note the difference. Walt Flanagan and three other farmers of Golden City, Missouri, say: "It saved our thresh bill."

Hire A Red River Special And Save Your Thresh Bill!

This machine has an entirely different principle of separation from all other threshers. It beats the grain out of the straw instead of expecting it to drop out while the straw is being rushed through the machine. Insist upon having a Red River Special to thresh all your grains and grass seeds. The saving will pay your cost of threshing. Your thresherman will be glad to operate a Red River Special if he knows you want it for your work. Speak to him about it. It's your privilege to specify the machine that does your threshing. It's your grain. Write today for "Thresher Facts."

ARE CAPONS PROFITABLE?

By Archie E. Vandervort
Sidney Centre, N. Y.

I have been asked a great many times, "Are capons profitable?" In answer to this question I will say that it depends on when and how capons are to be marketed and to some extent upon the kind of stock. I saw the statement not long ago, from a man who ought to know better, that it paid to caponize cockerels to be marketed at five pounds weight—that the capons could make that weight quicker. This in my experience I find is a mistake, a relic of the days when caponizing was supposed to make for a quick and enormous growth. I find that the one great advantage of caponizing is that it keeps the stock caponized soft-meated much longer. That the capons, as a rule, ultimately attain a much greater size than the cocks is doubtful. Most of them are not allowed to live long enough to show what they might do that way. Winter chickens, grown for the summer trade in roasting chickens, are generally caponized because the tendency is for both males and females that are hatched long in advance of the natural season to mature sexually at that season, though perhaps not physically mature. We say they are precocious. By caponizing his cockerels the grower of soft roasting chickens stops or checks their sexual development. When either cockerels or pullets become sexually mature their meat begins to harden—the cockerels more rapidly and noticeably than the pullets. The sexual development of the cockerel is not always checked. Indeed, men of long experience in handling capons say that the tendency always is for nature to replace the organs removed, and it is to this and not to unsuccessful operation in caponizing that "slips," so called, are due.

When a cockerel begins to show signs of sexual development the meat begins to harden and the poultry raiser sells at once. The same way with the pullets. As they begin to lay they have to be disposed of, for if kept longer they will soon be marketed only as old fowls. So the soft roaster grower gets his greatest profit only on that proportion of his product which remains soft-meated until the period of high prices. He does not succeed in keeping all of it in that condition, but by caponizing he does keep a much greater part of his cockerels marketable for the purpose and for the season for which they are produced. But while we hear occasionally of very large capons, the average capons are not much larger than the cockerels of the same breed and age when they are marketed. The difference is not in size, but in quality. These are birds that dress seven to nine pounds on the average. At five pounds weight the cockerels generally in the larger breeds are still soft-meated, and in most instances would make the weight quicker than capons out of the same lot.

Caponizing of cockerels hatched in the spring and early summer is for holding them over until the bulk of the crop has been marketed. As grown on most farms, cockerels are not ready to market for roasters until fall and early winter. Then there is a glut of them and prices go down. If held over uncaponized they would be marketable only as cocks and there would be no gain, and might be a loss, in holding them over. In both circumstances mentioned the profit of caponizing and holding over the stock depends in part upon the fact that the practice is not general. There are some quite extensive districts now where caponizing is practiced, and the result is that where ten or twelve years ago capons were rare and brought high prices, the prices nowadays are not so much above the prices of other classes of poultry.

GETTING INTO POULTRY

Many would like to get into poultry if they only had the money to do it. The disposition to venture into this business is great. We often hear men say, "I wish I was able to go into the

poultry business. I know I could make some money in it." Often these men have no experience with poultry. To them it is a sealed book, but, as is often the case, men have the hardihood to go into places where angels tread very softly. For the benefit of any who may be standing on the borders of the poultry field, and to show them what may be done by determination and patience, I give the particulars of a case which has come under my own observation. A young man married and set out with very little of this world's goods. For some years he rented little places here and there and did some gardening. Then he ventured into poultry carefully. He could afford only fifty hens at first. It may have been well that he had no money to invest more heavily, for he had little experience to back up his ambition. But poultry keeping went well with gardening. When he delivered his vegetables he received many orders for eggs and he was usually able to sell these at about what the people would have to pay at the stores, with the assurance that they were always getting fresh eggs. This young man gradually increased his flock. Today he has the finest little farm I know of, all his own. He sells many day-old chicks, keeps something like 600 laying hens, the eggs from which are shipped to the city. Now this is the right way of getting into poultry.

With a man who has money to buy and equip a big poultry plant, when he has not the experience to care for or to market the products of the place, the chances for failures are promising.

Begin carefully and build it up, steadily, patiently, bravely, and do not be discouraged if everything does not come your way at first and all the time. There is only one road to successful business and I believe I have pointed that road out.—S. F. Green, Milton, Ky.

INDIAN RUNNERS FIND FAVOR

During the last few months we have had one of the most profitable birds in our poultry yard, the Indian Runner duck. They have been the most profitable bird for us. They began laying about the middle of December. It was pretty cold through January, February and the first part of March, but in March they laid 244 eggs. We only have thirteen ducks and two drakes. From those thirteen ducks we received more eggs than from all our chickens.

We feed them about three-fourths of a gallon of bran in the morning and in the evening some corn. Water is kept before them all the time. In the winter time we feed some cabbage or other green substance.—Harold J. Dehnhoff, Bloomdale, O.

Results Compared with Theories

we want its columns to be open to the advertisements of the Society so those farmers can be reached who do not read this paper. UP-TO-DATE FARMING has never charged a cent against the Farmers Society of Equity for advertising or for publicity. But the society is willing to pay other papers their regular advertising rate. So our appeal is to our readers to use their influence to open the columns of all the farm papers to the announcement of the organization that is bringing farmers greater benefits than any other former organization ever did. This is the time for farmers to know their real friends and real helpers and be able to distinguish them from their pretended friends.

We have before us the May number of the "County Agent." This is the official paper of the county demonstration movement as being promoted by agricultural colleges and others in conjunction with the Council of American Grain Exchanges. In the number referred to much space is given to a campaign that is under way in Nebraska to put a county expert in each Nebraska county.

At a meeting held in Omaha recently a campaign committee was selected. There are about fifty names on the committee representing nearly all lines of business except agriculture. Quite strange, it seems to us, there is not one man whose vocation is given as a farmer. Any person who will analyze the farmers' present condition and understand their real needs, and then look over this list of committeemen, it will be easy to understand why the farmers are not represented on the committee. While the purpose of the movement is announced as in the interest of, and for the benefit of farmers, a little thought will lead to the conclusion that it absolutely selfish in securing all the benefits to the classes of people who are the promoters and who are selected to conduct the campaign. Probably a more deliberate holdup of the American farmers with a demand to deliver to others was never attempted. We have exposed the exclusively greater crop movement heretofore and intend to do it in the future, whether the application is to Nebraska or Indiana or any other state. In one-sidedness, selfishness and in-

sincerity of the promoters we believe there has never before been a parallel example in the country.

To explain: On the committee is the head of the Omaha Chamber of Commerce and several other men connected with the chamber. Now, one of the things that farmers need most is to end gambling in farm products and be in a position so that they can ask and get their prices on delivery at shipping point. Can they expect these Chamber of Commerce men on the committee to secure these things for them?

The Omaha Stock Yards is well represented on the committee. Farmers want steady prices on live stock and their own prices at loading stations. Will the representatives of the stock yards work for these things for the farmers?

The president of the Nebraska Millers' Association is a member of the committee. One of the things farmers want help to accomplish is to be organized so that they can get their own price for wheat and other grain on delivery to the buyer. Will the millers' representatives on the committee work for a condition that the farmer can ask his price and they will give it when he hauls the load of grain to the mill?

And so all through the list. There is probably not a single interest represented on the committee but what wants the old marketing system perpetuated. There is probably not an interest represented but which will be benefited by greater crops providing the marketing system is not disturbed.

So we have this demonstration movement for the increase of crops, and ostensible working for the betterment of agriculture, rigidly excluding all farmers from working with them, but selecting their campaign committees from amongst the classes of people whose profit, oftentimes whose very existence in business, depends upon perpetuating the present vicious marketing system, which is the great bane of American agriculture and the source of all farmers' ills.

We are not against the farm expert and his work, seeking for greater pro-

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

Farmers' Society that has solved the marketing problem wants a representative at once in each community to put the new system in operation. Farmers, or their sons, or others, who can give part or all time. Useful and profitable work. THE EQUITY SYSTEM, Desk A 94, Indianapolis, Ind.

The advertisement as printed above, by the Farmers Society of Equity, is running in several farm papers and was offered to some others, but was refused.

When those publishers were pressed for a reason for refusing to run the advertisement one said: "We do not know enough about the Farmers Society of Equity." Another one said: "We will send our representative to see you regarding the advertisement." Another one reported: "We have encouraged the formation of farmers' clubs amongst our subscribers, and to carry this advertisement might be considered as a recommendation by the editor to abandon the clubs and organize into the Farmers Society of Equity." Some others gave no reason at all.

Perhaps the wording of the advertisement is stronger than it should be, in this: "Farmers' society that has solved the marketing problem." We will not contend that the Farmers Society of Equity has solved the marketing problem completely at this time. But it has solved it to a great extent in many places and is solving it wherever it is established and its system is employed. We will change that part to read: "Farmers society that is solving the marketing problem," and we will then send the advertisement to the papers again.

That the Farmers Society of Equity is solving the marketing problem any publisher or any other person can satisfy himself if he will take the trouble to make a little inquiry. For instance, the early truck crops of the extreme southern states have always been the difficult to market. No other section of the country has suffered as that one because of the lack of a systematized marketing. I quote from a letter written in 1914, by the business manager of the Farmers Society of Equity:

the Farmers Society
as director of mar-

keting for two years. The members of our society in my section have made many thousands of extra dollars because of our system of marketing. The problem of marketing our produce is not the serious one now it was before we had this system. But the demand on me has grown to such a point that I can not get enough produce from our members to supply it. Some days I have calls for a hundred car loads of stuff more than I can supply. I often have offers of fancy prices which must be turned down because of not having enough produce to fill them.—C. B. Lozier, Manager, Masonic Temple Building, Mobile, Ala.

We could publish equally conclusive evidence from many other districts if it would be necessary, but we invite all publishers of farm papers to seek full light on the system of marketing being established by the Farmers Society of Equity. We claim that this movement is not a movement for a part of the farmers, but for all of them.

It is not a movement for the readers of this paper, alone, but for the readers of every farm paper in the country. It should not be the exclusive duty of one farm paper to accomplish all of the stupendous work of educating the people and organizing them into a sound and enduring organization for marketing, but all farm papers that have the best interest of agriculture in view should help.

These are our declarations and we invite investigation. If what we are doing is not honest and legitimate and beneficial to the farmers, then it is the duty of the farm press to expose our work. Every one of them say that the farmers must organize. But how? If there is one way better than another way it is the duty of each farm paper to find the best way and help the farmers in that way.

So it appears to be proper for every reader of this paper, who is also a reader of any other farm paper, to write to that other paper and ask the publisher and editor to help as they can, at least to not refuse the advertisement of the Farmers Society of Equity should it be offered to them.

We claim that this movement to organize the farmers is good. We claim that the plan is the best one that was ever offered to the farmers. It is not only good for the farmers, but for all of the people. Speaking for the Farmers Society of Equity and the members of the same, we will say that we want the co-operation of the press; at least

Polarine

FRICION REDUCING MOTOR OIL

5,918,098
Gallons Polarine
Sold Last Year

1,536,232
Gallons More
Than in 1912

The constantly increasing use of POLARINE by thousands of motorists is indisputable evidence of its lubricating efficiency.

It affords perfect lubrication to all makes and types of motor cars, motor trucks, motorcycles and motor boats.

POLARINE maintains the correct lubricating body at any motor speed or temperature.

POLARINE remains liquid at zero. POLARINE differs from all other motor oils, in that it lubricates perfectly at extremes of temperature.

STANDARD OIL COMPANY
(AN INDIANA CORPORATION)

Makers of Lubricating Oils for Leading Engineering and Industrial Works of the World

duction. But our purpose in writing this way is to show farmers that they must not look to that movement for any relief in marketing. And it is successful marketing more than in greater success in producing that money is made on the farm. What we want to see is every effort for greater production coupled with well-directed effort in marketing the crops that are produced. But this latter the county demonstration agent will not do. The people who selected him will not let him do it. So, while we would not start any campaign against the county expert, we do urge the farmers in every county where there is a demonstration agent now, and in counties where there is no agent, to immediately take steps to organize to establish their own selling and buying system.

We call on farmers everywhere to think seriously about this matter.

Some of our old readers may recall what we have said in these columns before to the effect that as soon as a large number of producers in a section of the country are organized and federated in the Farmers Society of Equity, with its crop reporting and marketing plan, the buyers will no longer go out through the country communities, because there will be little produce for sale there. We said that they would prefer to place their orders at a central clearing house where the reports of produce are assembled. The report from the Gulf Coast Section, printed above, seems to confirm this idea. Quantity will always attract the big consumers and also it will always get the highest prices. It stands to reason that a buyer would rather fill all his requirements from one seller than from 100 sellers. The saving over the old way of soliciting produce, if only partially included in the price paid to the producer, is quite an item of extra profit. It at least partly accounts for the "fancy" prices offered.

Any farmers' organization in the five Gulf Coast states—Florida, Georgia, Alabama, Mississippi and Louisiana—comprising this district, and which is not getting the satisfaction in marketing that it ought to have, should write at once to the manager of the district, as above, or to the Farmers Society of Equity, Indianapolis, Ind., for federation terms. Also any community without a marketing association in the same section should send the blank following this article for instructions for organizing.

As more communities organize into the Gulf Coast Section, and as more of the present associations federate with it for centralizing and unifying their marketing operations at the section headquarters in Mobile, the num-

ber of buyers traveling through the country and soliciting produce will grow less. The marketing problem then, of those individuals and associations on the outside, will become even more grave. Eventually, as the revolution in marketing progresses, all of those who for awhile stood aloof will be forced by their own interests to connect with the Farmers Society of Equity, either by organizing or federating.

We claim that the Farmers Society of Equity supplies a system the cheapest to establish and the quickest in giving results that was ever offered to the American farmers. In fact, those who have investigated thoroughly claim that it is the only practical plan for local, county and national co-operation before the farmers today. Send the blank and give a lift for national organization and co-operation.

BINDER TWINE LIMIT OF TIME TO SEPTEMBER FIRST

Local, county, district and section clearing houses and federated associations are hereby notified that the National Clearing House has arranged to clear orders for binder twine to cover oats and spring wheat harvests as well as the winter wheat harvest. Therefore the time when orders may be registered has been extended from June 1 until September 1. In event of damage to the crop, after an order has been placed, the order can be canceled or reduced any time prior to shipment. Approved, negotiable bank notes payable September 1 will be accepted by the manufacturer if credit is necessary. The National Clearing House does not sell twine. It acts only in clearing members' orders to the manufacturers who have quoted low prices in consideration of a national order.

Further particulars on request.

Equity Field Work

One Year's Business in a Minnesota Local

Report from Parkers Prairie Local No. 6975, by L. H. Brochman, Secretary and Manager

Our first cattle shipment was made on March 11, 1913. We have shipped sixty-four cars of stock from March 1, 1913, to March 1, 1914.

We have shipped seventy-seven cars of potatoes, some grain and all kinds of other commodities such as eggs, poultry, hides, beans, etc.

Our total amount of business for the past year from March 1, 1913, to March 1, 1914, was \$145,761.04.

Our business for the month of March was as follows:

Actual business transactions for the month of March.....\$9,989.05
Total running expenses for the month.....\$12.20
Average expenses per day.....12.00

We have shipped five cars of cattle during the month of March, 1914.

We have shipped fourteen cars of potatoes, 8,400 bushels.

During the month we have taken in 1,906 dozen of eggs and other commodities, such as hides, onions, rutabagas, seed corn, timothy, clover seed, etc.

We have had one car of seed wheat and a car of salt shipped in.

Our society saved the farmers from 25 cents to 63 cents per hundred for clover seed and made 2 cents per bushel on wheat shipped in January.

We made the farmers 10 cents per bushel on a car load of barley last May.

We made our members from 2 cents to 7 cents per pound on poultry.

We have been selling our eggs to retail stores and consumers and received 25 cents per case above market quotations.

We made our members from 1 cent to 5 cents per pound on hides.

We saved last spring on wool about 3 cents per pound.

We have shipped a lot of furs this season and the farmers have been more than pleased with the returns therefrom.

This society has been a blessing to this community, especially the farmers. It is an impossibility to find any one that has any grievance to report.

Massachusetts Sees the Light

The adoption of a better system of farm finance, co-operative buying and selling organizations, better selling agencies, for milk particularly, cheaper and more abundant electric power for use on farms, and the extension and development of trolley lines and better roads in rural districts are advocated in the sixty-first annual report of the secretary of the Massachusetts state board of agriculture. "One of the most important points in co-operation among farmers is the establishing of a standard for their products. Each individual farmer can establish his own grade, but this means little when selling goods in a large way. The Danes could not sell the enormous quantity of butter exported each year were there not a standard established by the Co-operative Society, to the rules of which each member must conform; neither could they get the large uniform prices as individuals.

"We should have co-operative societies in our state to handle the principal crops. Butter, eggs, poultry, milk, fruit, etc., should be sold through state co-operative societies, each package or article bearing the stamp of the association and the grade of the products, thus guaranteeing to the consumer the quality of the goods sold.

Here's the Right Spirit

We wish to advise our fellow members and readers of UP-TO-DATE FARMING that we are in Equity for business and to stay. We are incorporated as a part of our county clearing house, through which we are selling our crops and buying our supplies. Our local is now selling several cars of white wheat and will shortly buy a car of salt through the county clearing house. Our crops we sell through the society of wheat, barley, horses, poultry and eggs. We have opposition, of course, but it comes from those who would profit from us. Will send in our complete crop report soon.—R. A. Dowell, Utah.

GO TO

WESTERN CANADA NOW

The opportunity of securing free homesteads of 160 acres each, and the low priced lands of Manitoba, Saskatchewan and Alberta, will soon have passed.

Canada offers a hearty welcome to the Settler, to the man with a family looking for a home; to the farmers son, to the renter, to all who wish to live under better conditions.

Canada's grain yield in 1913 is the talk of the world. Luxuriant Grasses give cheap fodder for large herds; cost of raising and fattening for market is a trifle.

The sum realized for Beef, Butter, Milk and Cheese will pay fifty per cent on the investment.

All lumber cut to fit, shingles, windows, lat or plaster board, hardware, nails, paint, etc. Send today for information and model farm house and big Catalog.

North American Construction Co.
613 Aladdin Ave.

Clearing House Problems

From the day of its organization the local clearing house begins to be confronted with problems, and on the manner by which they are solved depends the success of the local. Upon its success depends its permanency. The success of the national organization depends upon the permanency of the local, and upon the success of the national organization depends the degree of success the local may be able to attain. A certain degree of success can be won by a local association without affiliation with others in a national organization. But such an association soon comes upon problems vital to its greatest success which can not be solved by itself alone. Witness the examples in Texas and in every state. Hence problems of importance to the local reach out to the district, the section and the nation, and the problems of the national body also become the problems of the local body. There are problems purely local, and these the local must solve for itself; and unless it solves them it can not be a success, regardless of what it may do in connection with the greater organization on problems of wider importance. Therefore this new department is created, and will be maintained to assist locals in the solution of all their problems, local and general. Secretaries, organizers and members are invited to participate in the discussion of their own and others' problems in this department. Bring your problems here for solution. Address all matter for this department to **PROBLEM DEPARTMENT, Farmers Society of Equity, Indianapolis, Indiana.**

Problem No. 3 THE TENANT FARMER

Many organizers and farmer members declare that the renter constitutes a big problem in the organization and operation of the Farmers Society of Equity and its system of marketing. But nothing has ever been offered to the renters of this country that will be so beneficial to them as this society. When once thoroughly established, with a local clearing house at every shipping station, the renter can carry his membership with him from one community to another and wherever he may go have the same expert service in the marketing of his crops.

Any marketing scheme or system which fails to meet the requirements of the tenant class of farmers is foredoomed to failure. Tenancy of farms is on the increase in this country, and as land grows still higher in price this increase will continue. Therefore successful co-operation in a marketing system must be based upon a plan that will meet the requirements of the renters and work to their advantage. This is one of the pre-eminent features of the Farmers Society of Equity.

The membership fee is a most moderate one. This enables the poorest tenant farmer to become a member. The dues are so small that no one need stay out because of financial condition. The saving in costs of supplies purchased and the gain in profits by selling the crops through the society will return the small expense to the member many times over during the first year of his membership. If another year finds him removed to some locality where there may be no local clearing house, he has already profited much by having been a member but one year, and he can still maintain his membership in the society as a member at large and receive the co-operation and aid of the national headquarters in both buying and selling.

Naturally, a renter who expects to move to another locality in another year would hesitate to join a purely local organization, as he could get no benefits therefrom after he removes from the locality. But in the Farmers Society of Equity no such objection can be maintained.

(Members, officials and organizers are urged to submit problems to this department for discussion.—Editor.)

As One in the Cornfield Sees It

So far back as history extends it seems to have been the policy of governments to keep the tillers of the soil as near to serfdom as possible. The United States is the only nation that has opposed that condition of farmers and favored agricultural independence and prosperity. But there are those in America who would reduce our farmers to serfs and convert our agriculture into a system of tenantry and landlordism. Hence the pressure that was brought to bear in the House and Senate while the tariff bill was pending. So long as the tariff was working for the stock gambler it was all right, but so soon as any part of it was found to protect the farmers from foreign competition it must be removed. When the reciprocity bill was pending during the Taft administration this same gang was howling about the farmers getting too rich and riding through the cities in their automobiles. The tariff protection had made them rich. But that protection has been removed now, and the crowd that said farmers were too rich, a few months ago, have now learned that the farmers need money, and the currency bill helps the money lenders to get it to them at a percentage that soon draws it back again. But that is not enough. Some say there must be a law that will not only put the value of crops up against the world, but that there be an absorbent lien even upon the crops. Is it possible that the scheme was to raise the prices of farm products by the admission of foreign products so that the farmers to borrow money from the "gang" liens upon their lands and the continued low prices would be possible for them to pay? It looks to the man in the cornfield that we are to do about it? Are we to grow and whine, or are we to grow and fight?

the people and that we must and will be recognized? Let us show our good sense and organize for mutual protection. It is up to us. Let's get to business.—The Man in the Cornfield.

Note—The above was written by a Pennsylvania farmer.

Jefferson County, Idaho, F. S. E.

Following are extracts from resolutions passed by the county organization of the Farmers Society of Equity.

"The success of a farmers' association depends upon complete co-operation between every branch of its organization; therefore, be it resolved we in no wise neglect our duties to locals, county, state and national bodies.

"Our politics shall be founded upon the man, not on the party, and our platform of principles shall always include honesty, economy, and efficiency.

"This county organization is formed to assist the locals in buying supplies, selling their crops and help to make effective the plans of the state and national organizations. Therefore, be it our purpose to induce all farmers to become members, and all members to transact all their business in buying farm supplies and selling farm crops through their regularly organized divisions, rather than deal on the outside.

"Freight rates are even now too high in this northwestern country. We will oppose raising freight rates by the Interstate Commerce Commission.

"The business of the world is done principally on borrowed capital; therefore we petition our members of Congress to hasten the establishment of Agricultural Credit Banks, whereby money may be loaned to farmers on long time, at low rates of interest."

He's Astonished at You Sleepy Fellows UP-TO-DATE FARMING:

After reading my last number of UP-TO-DATE I find myself fairly sizzling with enthusiasm and must express my admiration for the personal message of the president on Page 11. After reading those lines I am filled with wonder at the sound sleep—the exceedingly torpid, comatose condition—of our farmers in respect to their best interests. The farmers have enough to contend with in low prices in good years, and short crops when prices are good, without having to compete with the products of the cheapest of foreign labor, where human beings live like animals and work like slaves. Must we come to their standard?

For ten years I have been farming in this western country. We have had a hard fight with nature and a harder one against the powerful forces that took advantage of our needs in finances and marketing. High rates of interest (18 to 24 per cent), high costs of transportation, highway robbery by market speculators, has added to our burdens, and now comes the competition with foreign-grown products! It is high time we began doing something that amounts to real relief, on our own account. So our local association abandoned its own charter and became a local clearing house of the national Farmers Society of Equity.

Broom corn is our principal crop. The buyers refuse to come out in the country and buy our broom corn, and when we haul it to town they paid an average price of \$65 per ton. I take a Kansas City paper and I read the market reports and I find the broom corn market quoted as follows, word for word:

"With practically no broom corn in first hands, owners of stocks in warehouses are asking higher prices. Choice is selling \$5 to \$10 higher. Wichita sales last week included two cars at \$150 a ton. Some grades as low as \$75. Self-working quoted at Kansas City at \$135 to \$150."

So \$65 is all the producer gets for what it cost him \$10 to produce, a profit of \$25 per ton. On this basis an average crop will yield \$125 profit. Compare this with the profits of the dealers.

I have been a subscriber to your paper for two years and the medicine is beginning to take effect. UP-TO-DATE FARMING is doing a world of good in this part of the country. The Farmers Society of Equity can do all that should be done.—James M. Garretson, Madison, Okla.

Well Pleased With Bean Sales

I received returns today from my beans shipped to the Equity System at Indianapolis and am very well satisfied with the returns. Each bushel netted me 20 cents more than I could have sold for to local buyers.—Carroll Culbertson, Michigan.

Saving Energy

"It seems to me, Uncle Pete, you don't do the work you used to do."
"No, I'm getting feeble. I used to walk clear around this field before breakfast. Now I go just half way around and then turn and come back."

Missed It Before

"We are all sorry to lose you as our pastor, Brother Blint."
"But, sister, you may get a better man next time."
"We didn't the last time."

There's a Difference

"Jackie, what is the difference between weeds and flowers?"
"Weeds is something that wants to grow and flowers is something that has to be coaxed."

MEND YOUR HARNESS WITH THE SPEEDY STITCHER

We want every reader to have a Speedy Stitcher Absolutely Free. The Speedy Stitcher is the best Automatic Sewing Awl ever offered. Its simplicity makes it a thoroughly practical tool for all kinds of repair work, even in the hands of the most unskilled. WANTED—To buy 4,000 foxes and mink, \$2 to \$5 each. Beechhurst Co., Shelbyville, Ky.

Question Box

QUESTION—What rule is there governing the name that shall be adopted for a local clearing house?—Several Inquirers.

A.—The clearing house should invariably take the name of the town or city where located.

Q.—Our members want to buy some registered Durham bulls, also registered horses and dairy cows. Can you help us to find them?—M. E. Scott, Montpelier, Idaho.

A.—The supplying of registered stock has not become one of the society's activities up until this time. However, we hope that this notice will reach parties having such stock for sale and that they will communicate with you.

Q.—Can you tell us where we can get a registered Jersey heifer calf, also about a car load of common grade suckling calves?—George W. Wortham, Secretary, Neiber, Wyo.

A.—Same answer as above.

Q.—As I am about to undertake organizing for the Farmers Society of Equity, there are a few questions I would like to have answered:

(1) Our town is a small one, but there are two elevators, and I believe the owners of the elevators own much of the town and control most of the side track. So, if we would organize here it looks as though we would have to load our grain from the wagons to the car. (2) We farmers are told each year that cars are impossible to get. Also it is generally understood that the dealers have made arrangements with the railroad company to not let cars to track loaders. (3) Should we not have enough

grain at any time to load a car, what then? (4) When we would ship our grain and hay will it be tested and graded before being sold?—F. L. Collins, Van Wert, O.

A.—(1) It would appear that there are enough elevators at your place now. Therefore to build another one would be unnecessary and unwise. You should organize and get all of the farmers into the association, or enough of them to control the situation. When that time comes you can make satisfactory arrangements with owners of the present elevators to handle your grain through their elevators, or you can buy them at reasonable prices. Elevators without grain to put through them are not of much value. (2) You are surely mistaken, and should there be any appearance of withholding cars from the farmers' association, report the matter to the State Commerce Commission and you will find that you will be supplied with cars as promptly as any other people are. (3) You should have a warehouse or an elevator and you can easily have such soon after you organize, by following the plan that this headquarters will give you. Then you can hold your grain and accumulate it until you have a car load to ship to the market. (4) Your hay and grain will be handled on exactly the same plan as regards inspection on the various markets as other grain is.

Q.—In case there is a county clearing house of the Farmers Society of Equity, and then there is a district clearing house organized comprising more than one county, can this county clearing house stand as a subordinate organization in the district clearing house?—M. C. A., Pennsylvania.

A.—No.

Q.—(1) I take three farm papers and not one of them has recommended the Farmers Society of Equity. Still all of them pretend to stand for the interest of the farmers to get together in organization and co-operation. What is the matter? (2) Is a Mr. Fitzgerald, who in the past has established two or three colonies and who used to publish a newspaper in Indianapolis, in any way connected with the Farmers Society of Equity?—J. W. McCurdy, Pitts, Okla.

A.—(1) This is a pretty difficult question to answer correctly. Different publishers and editors probably have different reasons. But it does appear that their sincerity about wanting farmers to get together in a practical and sound organization for successful co-operation might be questioned. (2) No, not in any way whatever.

A LOCAL

CLEARING HOUSE WANTED

In every farming community, at once. This is necessary to market the crops to get all that the final market pays now and to soon bring about such control as will allow the producers to get their prices at their shipping point. Anybody who stands well in the community can organize. See blank on page 12. Fill it out and send today.

FARMERS SOCIETY OF EQUITY
Indianapolis, Indiana

Q.—Part of our state was organized by organizers from Idaho. We have been reporting our members to the Idaho State Union. It appears to me by reading the national clearing house constitution and by-laws that this is wrong.—W. C. O., Utah.

A.—Sections 5 and 6 of Article IV of the constitution and by-laws of the National Clearing House answer your question. It is always well to conform to the laws of an organization. Otherwise its laws will come in contempt, and organizations that do not enforce their laws or whose members do not obey the laws, can not expect to be permanent.

Q.—Our clearing house is in a dispute as to how to get money to pay our hall rent, for stationery and other expenses. Some say assess each and every member alike. Now we have members who have done business through the clearing house and others who have not done business. I claim it is unjust for those that have not received any benefits from the local to help pay the expenses so far. How would it be to charge a small commission on the business done as stated in Article VII in the by-laws?—J. B. Berkenmeier, Secretary, Thayer, Kas.

A.—The preferred way to meet the expenses of a local clearing house is for all of the business done by members to be charged a small per cent or commission to be placed in the treasury. In this way this expense is thrown on those who do business and in proportion to the business done. If this does not meet the expenses, or if there are expenses to meet before any business is done, and an assessment levied, it must be levied on all members equally.

QUESTION—The by-laws of the Farmers Society of Equity provide that when there are three or more local clearing houses in a county that it may organize a county clearing house. Please instruct us whether a county clearing house may be organized without getting special permission from national headquarters.—C. W. O., Pennsylvania.

ANSWER—The national by-laws further provide, in Section 1 of Article V, that permission must be gotten from the next higher clearing house or union. This means that if there is a state union in Pennsylvania that you must apply to such state union

for permission to organize the county clearing house. If there is no state union, then the permission must be asked for and gotten from the National Clearing House. The point is, that in some cases it will be wise to organize the county clearing house as soon as there are three locals, while in some other cases it will be wise to wait until there are more locals organized before organizing the county clearing house.

The same rule applies in the case of section clearing houses. This comes under Section 1 of Article VI. Before a section clearing house is organized permission must be obtained from the National Clearing House.

A Little of Your Spare Time
Spent in Soliciting

new and renewal subscriptions for UP-TO-DATE FARMING would undoubtedly prove remunerative for you, as it has for hundreds of others. Better get our proposition anyway, because it will be more liberal than you now suppose. Write us.

Circulation Department
Up-to-Date Farming Indianapolis

Q.—What is your opinion of the movement to establish a grain exchange in St. Paul and call it a farmers' exchange. Do you believe that it will help the farmers of the northwestern states very much in marketing their crops?—B. O. J., Jamestown, N. D.

A.—It may be of a little advantage in opening up the market more completely to farmers' elevators than it is claimed the grain exchange of Minneapolis does. However, if the St. Paul business men establish a grain exchange it will cater to all of the grain shippers of the northwest, including the line elevators of the speculative interests. The farmers' elevators and farmers' organizations that join in with such interests in a terminal market can hardly expect the freedom and independence in marketing that is assumed farmers' organizations are working for. The farmers' organizations and farmers' elevators that join in with such a movement can not expect anything other than the old conditions that have prevailed in the past, which includes making the price of grain at the final market. The Farmers Society of Equity contends that the price of grain and other farm commodities should be made by the people who produce them on the farms, or at the town or station where marketed, and the farmers' price paid there. This is what we are organizing to do. In our own case—that is, as regards members of the Farmers Society of Equity—we would not advise them to put their money in a grain exchange jointly with the speculative interests in St. Paul. We know the people who are collecting money from farmers to establish the St. Paul grain exchange, and we know some of them were guilty of a conspiracy to deliver the best organization farmers ever had over to the American Federation of Labor. The attempt wrecked the organization, because the rank and file of farmers would not be delivered. This movement in connection with the speculative interests savors very much of the same thing and is a consummation the speculators would very much desire.

Q.—We are about to organize a district clearing house and we would like to know what commission we should charge for doing business.—L. H. Brochman, Secretary, Parkers Prairie, Minn.

A.—The per cent will vary, largely governed by the amount of business done. No clearing house, we feel, should charge in excess of 5 per cent. If a district clearing house, this to provide for its support, also the support of the local clearing house and to contribute to the support of the National Clearing House, and if incorporated and bonds issued, it should be enough to pay the interest and payments on the bonds. This, of course, means that the farmers must do business through their clearing house, as volume of business must be done to afford a low rate of commission. If \$100,000 worth of business is done in a year, of selling and buying, the commission will be \$5,000. But a county or district clearing house should do from a quarter of a million to a million dollars' worth of business, when the commission will be \$12,500 to \$50,000. As the business grows this per cent can be decreased. For instance, we have before us your statement of business done in the month of March, the amount being \$9,989.05, while the running expenses for the month were \$312.20. The percentage in this case would be 3.1 per cent.

You reported for the month of April business done to the amount of \$12,163.12 and the running expenses \$202. In this case the per cent is 1.6 per cent.

No rule can be laid down covering the percentage either as a flat rate or as assessed against different articles. It is a pretty good plan to let the commission vary on different articles. For instance, live stock may be commissioned at a lower rate than wheat. And potatoes, cabbage, etc., pay a higher rate than wheat. When you organize decide on rates that appear equitable, subject to be changed at any regular meeting in the future. Be sure to provide a penalty against any member or local that does selling or buying independent of the district clearing house and enforce it. Only in this way can satisfactory results be obtained. We have sent you a draft of constitution and by-laws for governing a clearing house corporation.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

Our Offer We will send the complete Home Repairing Outfit as described as a premium for 3 yearly (new or renewal) subscriptions at 50c (total \$1.50). Charges prepaid within 500 miles of Indianapolis. Elsewhere in United States send 50c extra for delivery.
Up-to-Date Farming :: Indianapolis

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

BUSINESS conditions of the country are summarized under date of May 23 by Bradstreet's as follows:

Improvement. Better weather and retail trade. Jobbing trade helped. Crop damage talk advances cotton. Staple cotton goods in broader demand. Wool prices higher than a year ago. Basic iron in demand. Industry lags. Wheat exports larger. Clearings expand. Better tone in stock. Crops good. Cereals in good shape. Rain hurts cotton in Texas. Collections slightly better.

The sensational winter wheat crop report of the government, as of May 1, has done its work of cutting down the price of new wheat. The papers have been full of the prediction of a billion-bushel wheat crop. The largest crop the country ever harvested was last year, 763,380,000 bushels (government report). So, if the combined winter and spring crops amount to a billion bushels it will be 236,620,000 bushels, or 31 per cent larger than ever raised before. Of course such a realization is not impossible, but it is quite improbable. But the report of such prospects has about as bad an influence on the price as the actual realization could have. For instance, the cash price of No. 2 red wheat at Chicago is 97¢ @ 99½¢, while the future, September price, is 86½¢, with a tendency still lower. Predictions are being made that new wheat will sell at 70¢. If it does and if the crop amounts to a billion bushels the extra yield will go for nothing, to the growers. That the winter wheat crop will be a bumper one is now practically assured. Also that the price will be enough lower to not give the farmers much more money is almost equally certain. We mention this for the consideration of the exclusively greater crop agitators.

These advance estimates are usually overdrawn. Since May 10 there has been some deterioration in winter wheat because of dry weather in the central producing states and the fly has done some damage in comparatively small areas. Spring wheat has started under particularly favorable conditions. Argentine reports are against a big yield in that country and this is one of the sustaining elements in our market, as the manipulators could use a good crop of that country as a club to beat the price down much more than the size of any exportable surplus of that country could warrant. Canadian wheat does not enter into the price relations of our wheat so much because there is still a duty of 10 cents a bushel (under the former law it was 25¢) against Canadian wheat. This our farmers may thank the good offices of the Canadian Parliament for.

The visible supply of wheat shows a very remarkable decrease since our last report, over 14,000,000 bushels. For comparison we give the visible supplies on the 1st of May and the 1st of June of several years as follows:

1913—May, 47,157,000; June, 37,910,000
1912—May, 41,722,000; June, 30,847,000
1911—May, 27,605,000; June, 26,838,000
1910—May, 26,228,000; June, 20,133,000
1909—May, 29,635,000; June, 19,786,000
1908—May, 30,318,000; June, 22,808,000
1907—May, 51,999,000; June, 47,729,000
1906—May, 38,421,000; June, 30,811,000
1905—May, 28,529,000; June, 20,034,000
1904—May, 30,257,000; June, 20,603,000

The lowest visible supply in recent years occurred in 1909. July 1 of that year it was 7,609,000 bushels; August 1, 9,756,000 bushels, and September 1, 9,166,000 bushels.

Price of cash wheat advanced about 3¢ and is about 9¢ under the price of a year ago.

The corn visible was cut in half in the two-weeks period, but does not yet begin to approach low water mark. In September, 1913, it was 1,823,000 and December of same year, 1,525,000 bushels; November, 1911, 1,703,000 bushels; September, 1910, 1,545,000; September, 1909, 1,868,000; September, 1908, 1,955,000, and November of same year, 1,221,000. Before 1908 the visible supply of corn did not go below 2,000,000 as far as we have the record. The price of corn advanced about 4¢ per bushel and has reached the highest mark of the crop year since our last report.

The oats visible also shows a liberal decrease, the price gaining 2½¢ per bushel. The visible supply of oats has often been much lower. The lowest we have record of was August, 1913, at 991,000 bushels. The preceding crop was 922,298,000 bushels, which sold up to 58½¢ in Chicago the following April. It was followed by the biggest crop the country ever raised in 1912, 1,000,000 bushels, which sold down to the following March.

Wool situation is much mixed. Too little in Texas and not enough in Mississippi and Georgia. These states are credited with additional statistics just made. Consumption of cotton the greatest of any year. Both raw cotton and goods is also said to

Potatoes are in strong demand at advanced prices.

Advice

WHEAT—Market the old wheat. The price will be lower when the new crops move. **CORN**—Market gradually. **OATS**—We believe prices will work higher. **POTATOES**—Market any that are left. **COTTON**—Market gradually.

Visible Supply

The visible supply of grain in the United States by Bradstreet's on May 16, 1914, with comparisons are shown in the following table:

	May 16, 1914	Change from two weeks before
	Bushels	Bushels
WHEAT	35,737,000	-14,255,000
CORN	7,591,000	-7,513,000
OATS	12,008,000	-5,268,000
BARLEY	3,097,000	-515,000

The visible supply of wheat in Canada on the same date was 30,640,000 bushels. This is 3,575,000 bushels less than two weeks before and 2,743,000 bushels more than a year before. The visible supply of oats was 12,166,000 bushels on the same date, which is 342,000 bushels less than two weeks before and is 1,200,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on May 23, 1914, two weeks before and a year before as follows:

WHEAT, No. 2 RED			
	May 23, 1914	Two weeks before	A year before
Chicago	97½¢ @ 99½¢	95½¢ @ 96½¢	1.07 @ 1.08½
St. Louis	95 @ 96½	94 @ 96½	1.02 @ 1.05
Kansas City	91¼ @ 92½	87¼ @ 88½	94 @ 97
Cincinnati	98 @ 99	99 @ 99½	1.05 @ 1.08
New York	1.06½	1.04	
Minneapolis—Spring wheat:			
Northern, 93½¢ @ 95¢		Two weeks before, 91¼¢ and 91¼¢ @ 93¼¢ respectively	A year before, 92½¢ and 90½¢ @ 92¢ respectively
CORN, No. 2 WHITE			
Chicago	71¼ @ 72	67¼ @ 68	62 @ 62½
St. Louis	75	72¼ @ 73	61¼ @ 62
Kansas City	75 @ 75½	73	62
Cincinnati	76 @ 77	74 @ 74½	62 @ 62½
New York	82	76½	65½
OATS, No. 2 WHITE			
Chicago	40¼ @ 41¼	38½ @ 39	39½ @ 40½
St. Louis	41¼ @ 41¼	40½	42½
Kansas City	40½	40 @ 40½	39 @ 39½
Cincinnati	44 @ 44½	41¼ @ 42	42 @ 42½
New York		46 @ 46½	

Future Grain Prices

Chicago grain futures closed on May 23, 1914, and two weeks before as follows:

Wheat—May, 97½¢; July, 87½¢; September, 86½¢. Two weeks before, 93½¢ and 85¢ respectively.

Corn—May, 70¢; July, 68½¢; September, 66½¢. Two weeks before, 66½¢ and 66½¢ respectively.

Oats—May, 41¢; July, 39¼¢; September, 38¼¢. Two weeks before, 37½¢ and 35½¢ respectively.

Winnipeg, Canada—Spring wheat: May, 95¼¢; July, 96½¢; September, 87½¢. Two weeks before, 92¢ for May.

Cotton

New York, May 23, 1914.—Cash cotton closed as follows: Middling upland, 13.70¢; middling gulf, 13.95¢. Two weeks before closed 13.00¢ and 13.25¢ respectively. A year before the price was 12.10¢ and 12.35¢ respectively.

Chicago Produce Market

Chicago quotations are used in these reports for sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	52	45	100
Tuesday	40	35	43
Wednesday	25	32	41
Thursday	20	35	33
Friday	38	38	46

Total, 5 days.... 175 185 263

Market ruled strong and generally 1¢ to 2¢ higher on good demand during early hours. Outsiders were good buyers. Late the demand became less aggressive, but handlers refused to shade prices where good stock was involved.

Sales reported were: Per bushel, bulk—Michigan—2 cars Dusty at 73¢, 2 cars at 72¢, 1 car at 71¢, 2 cars at 70¢; Wisconsin—1 car Dusty at 73¢, 1 car mixed at 70¢. Sacked: Round white—1 car at 70¢. Per bushel, bulk or sacked, Wisconsin, Tri-umphs, Burhanks and Kings, poor to good, 62¢ @ 68¢. Round white..... 66¢ @ 70¢. Dusty Rurals..... 70¢ @ 75¢. Michigan, round white..... 66¢ @ 70¢.

NEW POTATOES—Market shows little change. There is a fair trade doing. Supply equals requirements and market is steady.

Sales reported were: Sacked—Louisiana, Triumphs, 1½ cars at \$1.40 per bushel.

Barrels, white, Florida, No. 1.....	\$5.50
No. 2.....	4.50
Louisiana, white, small, topped up.....	3.00
Red, small, topped up.....	3.50
Hampers, Louisiana, red, common, small to good.....	.90 @ 1.35
Alabama, No. 1.....	1.50
Florida, No. 1.....	1.50 @ 1.65
Per bushel, sacks, Louisiana, red.....	1.40
Alabama, red.....	1.40 @ 1.50

The price of old potatoes is practically the same as quoted two weeks before. The price of new potatoes holds about the same as two weeks before.

BEANS—Market remains quiet, few beans of any kind coming in, and regular dealers have ample stocks to carry them along for the present. The consignment demand is tame.

Pea Beans—Hand picked, choice.....	\$2.20 @ 2.25
Common.....	2.00 @ 2.15
Red Kidneys, common to fair.....	2.65 @ 3.15
Fancy.....	3.25 @ 3.35
Brown Swedish, long.....	2.00 @ 2.10
Round.....	2.25 @ 2.40

Choice hand-picked pea beans are 5¢ a bushel lower than two weeks before. Other grades and kinds are unchanged from two weeks before. A year before

choice hand-picked pea beans were quoted \$2.30 to \$2.35 a bushel.

HAY—Receipts, 1,093 tons. Demand good and market steady. Offerings only moderate.

Choice Timothy Hay.....	\$18.00 @ 19.00
No. 1 Timothy.....	15.00 @ 16.00
No. 2 Timothy.....	13.00 @ 14.00
Iowa and Nebraska Prairie.....	16.00 @ 17.50
Illinois and Wisconsin Prairie.....	8.00 @ 9.00

Timothy hay is from 50¢ to \$1.50 per ton lower than two weeks before. Other varieties practically unchanged from two weeks before. The price of choice Timothy hay is \$18 to \$18.50 a ton.

STRAW—Rye straw quotable at \$8.50 @ 9. Oat straw at \$7 @ 8. Wheat straw, \$6.50 @ 7.

Rye straw and oat straw are 50¢ a ton higher than two weeks before. Wheat straw unchanged.

BROOM CORN—It is in but small request and dealers report business as being on a small scale.

	Change same period last yr.	Change from a year before	Change from 2 years before
	Bushels	Bushels	Bushels
—3,325,000	—10,511,000	—1,986,000	
—5,447,000	X 1,460,000	—497,000	
—4,870,000	X 2,218,000	X 1,774,000	
—2,075,000	—437,000	X 2,016,000	

a long time is a decline of \$10 to \$25 a ton in the price of Illinois corn and from \$10 to \$20 a ton in the price of Oklahoma corn. A year before Illinois corn was quoted \$100 to \$120 a ton and Oklahoma \$50 to \$80 a ton.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
	Cases	Cases	Cases
Monday	21,099	31,055	21,341
Tuesday	26,945	27,931	27,477
Wednesday	30,946	22,647	25,086
Thursday	17,674	21,454	16,952
Friday	19,606	18,385	18,021

Totals..... 116,270 121,372 107,977

A steady feeling exists at the current quotations. Trade is fair and general conditions remain about the same.

Fruit

Chicago, May 23, 1914

APPLES—Continue to sell slowly and holders are shading prices in an endeavor to stimulate the movement. Warm weather is unfavorable for handling fruit out of coolers. Some prices are as follows:

Barrels—Northern Spies, No. 1.....	\$5.00 @ 6.00
Winesaps.....	5.50 @ 6.00
Golden Russets.....	4.00 @ 4.50
Ben Davis.....	3.50 @ 4.00
Redskins.....	4.50 @ 5.00
Greenings.....	5.50 @ 6.00
Starks.....	5.00

The prices named are for choice stock. Inferiors sell for less.

Some prices on boxed apples from the west follow:

Arkansas Black.....	\$2.25
Rome Beauty.....	2.00 @ 2.25
Fancy Large.....	2.50
Missouri Pippins.....	1.75 @ 2.00
Ben Davis.....	1.50

ORANGES—Supply on sale is moderate and prices are held steady. Small navels are preferred to the large and meet with a better demand. Grapefruit is selling slowly, especially when quality is not good.

STRAWBERRIES—Receipts were lighter and quality better today. Still the demand was confined to best selected. Soft, leaky berries were numerous. Shipments from all points included some leakers, but a larger proportion came from Tennessee and Mississippi. Receivers also complained of soft berries from Anna, Ill. Pint cases are no longer wanted.

Vegetables

Chicago, May 23, 1914

ASPARAGUS—A little more demand for nice goods today, as usual on Friday. Prices a trifle better for good stock. Small, thin asparagus slow and easy. There is a good supply and prices are so low that the trade takes only the best.

BEETS—Salable and steady when fresh and nice. Many are coming heated, and some arrive in very bad condition. Buyers want only fancy goods and poor stock is hard to move at any price. Buyers also show preference for hampers and barreled beets are dull.

CABBAGE—There is a fair trade. Recent reductions in prices have induced a little more buying. A

A slightly better feeling is noted. Fancy cabbage is doing a trifle better. Poor stock is dull.

CUCUMBERS—Selling fairly, but cucumbers are in liberal supply, 7½ cars in today, and the market is easy.

CELERY—Very little trade. There is an ample supply for the present limited demand.

CAULIFLOWER—Good supply of St. Louis in today. Market easy. The best, nice-sized stock sells fairly. Very small, or stock with yellow leaves, is dull.

CARROTS—Fair sale when fresh, good-sized carrots with nice green tops. Market is liberally supplied and poor stock does not clean up. Receipts today, 3 cars.

GREEN ONIONS—Home gardeners supply the market. Outside onions not wanted.

GREEN PEAS—Fair sale when fine, green and with pods well filled. Illinois and Tennessee peas are moving readily. Mississippi Telephones are poor, old, dry and discolored. They are not selling and have little value.

LETTUCE—Trade quiet. There is very little desirable lettuce offered and firm prices are obtainable for the little nice stock that is received. Poor, leafy stock is slow and weak.

ONIONS—Texas and Louisiana onions are selling very well. They are in fair supply, but move freely at firm prices. Advances indicated that Texas onions are nearly through coming, not many are due to come from Louisiana, and California will not be ready for some time.

PEPPERS—Salable and steady when fine, good-size and good color. There is no reliable market for home peppers.

PIE PLANT—Market is liberally supplied with home-grown. Demand is moderate.

PARSLEY—Home-grown is supplying the trade. Little call for Southern.

RADISHES—Market is supplied with home-grown tips, which are plentiful, good and cheap. Outside radishes no longer wanted.

SPINACH—There is very little demand. Weather is too warm. Home-grown is in good supply and weak.

SQUASH—Dull and easy. Market does not clean up.

STRING BEANS—Good trade today. Early receipts were only half a car and sales were made at strong prices for fine beans. A later run of five cars changed the aspect of the market, however, and prices did not average better than steady. Demand was very fair and the market had a good tone.

TOMATOES—Supply of fancy, sound, ripe tomatoes was pretty well cleaned up. The market inclined to do a little better for that kind. Receipts today were 2 cars. Many of these were faulty, being green, spotted or mixed.

TURNIPS—Trade slow. Most of the offerings are poor, too small, or yellow and wilted. That is the reason they do not sell better.

Three Years for \$1
OR A CLUB OF 3
One Year Each \$1
Up-to-Date Farming, Indianapolis, Ind

MORE MONEY FROM COWS
Protect your cows from flies and they will give more and richer milk—stand quiet while milking. Returns 400 per cent profit. Use

Fly-Fuma
and all flies and insects leave. It is harmless to man and beast. Cures sores. Good for horses. Kills lice on poultry, fleas on dogs, etc. Easily applied with sprayer or cloth.

Free With first order for a gallon we give free a 50¢ Electric Sprayer—best made. Qt., 35¢; gal., \$1; 5-gal. can, \$4.

O. K. SEED STORE
Dept. A, Indianapolis, Ind.
Dealers write for prices.

"I used Fly-Fuma on 50 cows in dairy with perfect results. Man with sprayer will go over the herd in 10 minutes. Use on horses with fine results. It is fine for sore shins and harness galls. I used Fly-Fuma on dogs, for fleas and on chickens for lice with perfect results." F. McAYOCK, Nashville, Tenn.

\$60 a WEEK and Expenses

That's the money you should get this year. I mean it. I want County Sales Managers quick, men or women who believe in the square deal, who will go into partnership with me. No experience needed. My folding Bath Tub has taken the country by storm. Solves the bathing problem. No plumbing, no water works required. Full length bath in any room. Folds in small roll, handy as an umbrella. I tell you it's great! GREAT! Rivals \$100 bath room. Now listen! I want YOU to handle your county. I'll furnish demonstrating tub on liberal plan. I'm positive—absolutely certain—you can get bigger money in a week with me than you ever made in a month before—I KNOW IT!

Two Sales a Day—\$300 a Month
That's what you should get—every month. Needed in every home, badly wanted, eagerly bought. Modern bathing facilities for all the people. Take the orders right and left. Quick sales, immense profits. Look at these men, Smith, Ohio, got 18 orders first week; Meyers, Wisc., \$250 profit first month; Newton, California, \$60 in three days. You should do as well. TWO SALES A DAY MEANS \$300 A MONTH. The work is very easy, pleasant, permanent, fascinating. It means a business of your own.

DEM-ON-STRATING TUB FURNISHED

Little capital needed. I grant credit—Help you out—Back you up—Don't doubt—Don't hesitate—Don't hold back—You can not lose. My other men are building houses, bank accounts, so can you. Act, then, quick. SEND NO MONEY. Just name on penny post card for free tub offer. Hustle!

Woman's Work and Welfare

Helpful Hints for Homefolks

Fireside Social Chats

By Aunt Sophia and Others

HELPING THE HOME

THIS one thing I do every spring and with such satisfactory results I must encourage others to make an effort along the same line.

Our home consists of three parts—the grounds around the house, the house itself and its contents. We take them all into consideration on our farm, for we have found that the home is not complete until all these three factors are properly developed and harmonized. They must all be so arranged and managed that they will give us the greatest amount possible of pleasure, comfort and utility. We have given the grounds about our home as much thought and care as we give our rooms. We take as much pride in the furnishings of our lawn as of our living room (more people see it), and our back yard is as important, in its way, as the kitchen. We make an earnest effort for cozi-

ness, beauty and pleasure both inside and outside, and we are well repaid. We not only take a world of pleasure in our yard trees, flowering shrubs, lawn grass and flowers, but we get nearly as much pleasure out of planning them and working out new ideas for improvement.

A pleasing appearance is quite a study in itself and to help us out we send early every spring for a number of catalogs and booklets, including bulletins from the Department of Agriculture treating of flowers, shrubs, lawns and planting home grounds. The seed catalogs often contain some very good suggestions, and we study them all. Then we are constantly watching for ideas in photographs we see reproduced in the papers and magazines we take. Some day I may send a photograph of our own little home and its surroundings. It may give the readers of the Woman's Work pages some helpful hints.

The children are all very proud of the appearance of our home and they count it a pleasure to help keep it in perfect order. We have enough flowers so they may take what they want when they want them. Sunday afternoons it gives the mischievous Fred (age 13) and Mary (age 10) a glorious opportunity to tease when Orville (age 18) goes surreptitiously to the flowers and begins culling a more or less gaudy bouquet. But Orville usually bears their merciless banter very serenely, for he knows those flowers will be appreciated and will speak more eloquently for him than his rather bashful tongue will be able to. It all helps to make our lives sweeter, our homes happier and our hearts more full of the joy of life.

AUNT SOPHIA.

SCISSORS IN THE KITCHEN

By Mrs. W. C. Palmer

One of the handiest tools to have in the kitchen is a pair of strong scissors with a good cutting point. It will be hard to find another utensil that can be made to save as much work as scissors, as they can be put to so many uses.

For ordinary use a medium-sized pair of good steel will answer all purposes. There are many processes in the preparation of food that are often rather difficult to perform with a knife which can be done easily and quickly with a pair of good, sharp scissors.

The rind of bacon, ham or pork can be trimmed off quickly with the scissors or the edges of the meat that curl during the frying process can be snipped with the scissors until it will lie flat again in the frying pan. Often a few snips will cut out a bone from the piece of meat or the fins and bones from the fish.

The disjointing of a fowl can be quickly accomplished with the scissors and without splintering any bones in the process, even to the back bone.

In the preparation of vegetables the scissors are indispensable. Celery, parsley, cabbage, lettuce and rhubarb are all the more quickly and easily cut and prepared if scissors are used instead of a knife.

It takes only a snip to trim the brown edges from the lettuce or to cut out any defects or to shred a bit

of parsley, etc., for the soup or salad.

In the spring they will cut the young tender stalks of rhubarb into cubes, without removing the skins. In this way the tender pink skins will lend a pretty color to the sauce and will give it a fine flavor.

They will be found handy to trim the tops and roots from the vegetables as they are gathered from the garden.

Even on baking day the scissors are convenient. Dust the blades with flour and snip out enough of the dough for a loaf of bread or each tiny biscuit. The edges of rolls will be neat and sharp if cut with the scissors instead of a knife. The edges to the pie can be quickly trimmed away or the pie crust that is left over can be cut into fancy shapes for tarts with only a few snips of the scissors.

It is much easier to cut marshmallows for the salad or cake than with the sharpest knife, as well as citron, lemon and orange peel.

When a quantity of paper is to be used the scissors are again indispensable. Another little help is to cut the soft odd bits of paper into small squares to be used in greasing tins on baking day. A box full of these will be found real "time savers" on baking day.

In preparing the child's lunch the waxed paper can be cut into convenient sizes for wrapping, instead of tearing. In this way the waxed paper can be made to go farther, as there will be less waste.

Large bunches of grapes or raisins can be divided in the right portions much easier with scissors than if torn or cut apart with a knife. They are useful in preparing grapefruit and oranges for serving in halves, as the tough parts can be clipped out so easily with the scissors and still the fruit will have a neat appearance when brought to the table.

Scores of other uses will suggest themselves.

The scissors will need to be washed and dried carefully each time after they are used, so they will not rust and will be always in good condition.

Mutually Obligated

"If you will pay the enclosed bill," wrote the creditor, "you will oblige me; if you don't I will have to oblige you."

TERRIFF'S LAST INVENTION

The New Gravity Washer

The master effort of a lifetime devoted to the study and manufacture of Washing Machines. It is an undisputed fact that Wm. W. Terriff invented and put on the market more and better washing machines than any other man. The New Gravity Washer was his masterpiece. It will wash anything from a pocket handkerchief to underclothes and the heaviest bedding perfectly clean, and the gravity principle makes it run so easily that a child can operate it even with a heavy load. The last year of Mr. Terriff's life was largely devoted to writing his biography, which he published under the name of "Twenty-Four Years Hustling in the Washing Machine Business Under Two Flags." We will send you this interesting and instructive booklet absolutely FREE and tell you how you can get your first washer without costing you a single penny. Don't delay—write today to

WOLVERINE WASHER COMPANY, 850 Canal St., PORTLAND, ME.

PARKER'S HAIR BALM

Cleanse and beautify the hair. Promotes a luxuriant growth. Never fails to restore Gray Hair to its Youthful Color. Prevents hair falling. 50c. and \$1.00 at Druggists.

What is Now the Fashion

6655—COMBINATION SHIRTTWAIST AND DRESSING SACQUE. This has the regulation shirtwaist closing and a short tuck at each shoulder in front, while the back is plain. The neck has a band finish for any style collar preferred. The sleeves are long, but may be shortened. There is also a short peplum. Sizes 34 to 44 inches bust measure. Medium size requires 3 1/4 yards of 36-inch material.

6649—LADIES' APRON. This apron, which may be used over the dress or in place of one, has a plain little waist which fastens in the back and is cut out square in the neck. The sleeves are merely ruffles at each shoulder. The skirt sections completely cover the dress and meet in the center of the back. Sizes 34 to 44 inches bust measure. Medium size requires 4 1/2 yards of 36-inch material for apron and cap.

6647—LADIES' SKIRT. An excellent skirt for general wear. This is a modification of the pegtop. It has a crosswise tuck at each side of the front and a side front closing. Sizes 22 to 32 inches waist measure. Medium size requires 2 3/4 yards of 36-inch goods cut lengthwise of the material and requiring piecing back of the darts.

6669—GIRLS' FROCK. This has a tuck at each shoulder in both front and back, but is otherwise plain. There is an applied yoke piecing at the neck and cuffs of corresponding shape trim the short sleeves. The belt may be of the dress fabric or of leather as preferred. Sizes 2, 4, 6 and 8 years. Medium size requires 2 yards of 36-inch material and three-fourths yard of 36-inch contrasting to trim.

6642—GIRLS' FROCK. This has both front and back plain, joined with a long shoulder seam. In front the material is cut away in U form to display a vest, which fastens at the side and permits of slipping on the dress without any regular opening in front or back. The skirt is straight and in one piece. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 2 1/2 yards of 36-inch material, with five-eighths yard of 24-inch silk to trim and 1 1/2 yards of ribbon for belt.

6646—LITTLE BOYS' SUIT. Both stylish and pretty. It has a single tuck at each side of the front and a center front closing in duchess style. At the neck is a wide sailor collar and the sleeves are short or long as preferred. Sizes 2 and 4 years. Four-year size requires 2 yards of 36-inch material.

These patterns are guaranteed; are none better at any price. Sections accompany each. Give name and size. Write your name plainly.

A WASHING TANK AND DRYING TABLE

A washing tank and drying table is easily made and very useful in preparing vegetables for market. Potatoes, carrots, beets, etc., should be freed from soil before placing them on sale and I know of nothing quite so handy as this arrangement. The table B is hinged to tank A. The legs are hinged and when not in use are

folded over on the table and the table folded over so as to form a lid for the tank, the legs folding inside out of the way. The bottom of the tank should be lower at one corner and a hole in lower corner to let out the water after using, by a drain plug or stopper.

NINE HUNDRED BILLION RATS

Under normal conditions a female rat will bear three to five litters of ten, each year. At this rate one pair of rats would in five years increase to over nine hundred billion, provided all survive. The economic losses from rat depredation in the United States are enormous. A government report says: "It costs the American people \$100,000,000 yearly in grain alone to feed the rat. Add to this \$35,000,000 to \$50,000,000 in merchandise, poultry, eggs, other foodstuffs, damage to buildings, furniture, pipes, embankments, foundations, piers, etc., and you have an amount equal to the revenue of an empire. And, so far as any one has been able to make out, the rat serves man no useful purpose. They are a wary, alert and dangerous foe, and it will require intelligent, energetic and unremitting efforts to suppress them. In some localities the suppression of the rat has become almost a necessity for the preservation of the human race. It has followed man into all parts of the globe, and where the rat goes plague and other

diseases invariably go. The rodent, in addition to carrying plague, is also the reservoir of trichinosis and ten other parasites. Furthermore, rats have leprosy. They also have cancer. These tumors occur "spontaneously" among wild rats and may be readily transferred from rat to rat. The rat has grown from a nuisance to a danger and control of this rodent has become a serious health problem as well as a necessity.

Keeping the Family Together

Mama—Now, you told a story and you can't go to heaven.
Little Edie—I don't want to go to heaven. I want to be where you and pa are.

A Different Direction

Native (to famous hunter from the east)—I saw an abundance of bear tracks just north of here last evening and they were big ones, too.

Hunter—All right. I am glad you told me, but I must hunt out south of here today.

The Easiest Way to Win and I Prove It

THIS BEAUTIFUL PONY "MISS GINGER" IS YOURS

Runabout, Silver Mounted Harness and Saddle

You can win this pony, cart and harness without it costing you or your parents one cent. You can win it all through your own effort. This entire outfit is the prettiest and finest that money can buy. The runabout is a dainty little affair and it is as easy riding a pony cart as the most expensive made. The beautiful set of harness with nickel trimming completes the outfit.

When you win this pony, you can drive down the road or street of your own town, the happiest and proudest boy or girl in the world. I am going to publish a picture of the winner in our paper so that it can be seen by our more than 100,000 subscribers. Don't you want to be in the buggy when this picture is made?

The Easiest Way of Any

To win this pretty pony. Do you want him? If you do, I can tell you how. My way is the easiest and if you write me and ask me why, I will prove it in my answer. You will agree, your parents will agree, that you can win easier in my contest than any now being conducted by any other paper. You can win the entire outfit—pony, runabout and silver trimmed harness. Besides having the opportunity to win this outfit, I will give to all the boys and girls who work many other prizes that will delight them. If any one tells you it is impossible to win this pony outfit, you just say you are going to write me anyway, because I have promised you "it is the easiest way of any."

Send Your Name to Me Today

You simply can't realize what I can do for you. Write me and just let me show you the interest I take in boys and girls. My suggestions help boys and girls to help themselves, it makes them thrifty, it will help them start a bank account. Remember it does not cost a penny. When I tell you it is the easiest way in the world to win this pony, I mean it.

HOME SILVER CLUB, 200 Friend Bldg., Kansas City, Mo.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET of EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER of EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

EVENTS follow each other in rapid succession. Congress is still wrestling with important measures and, unfortunately, in many cases personal interests or hope of future preferment seems to have more influence than the public good. The Mexican situation is making history and shows that the human family has not yet reached the highest ideals of civilization. We are sure our young writers are noting all these things and that they are building on higher ground.

Our first letter this time comes from the Old Dominion, the home of our earlier presidents, and it shows a disposition to accomplish things:

DEAR CADETS—I am 16 years old and live on a farm of 200 acres about forty miles from Richmond, the capital of Virginia. The farmers of Virginia raise tobacco and take it to the warehouse in Richmond for sale. Some get fancy prices and others don't make expenses. We raise corn, wheat and oats. I would like for some of the Cadets to tell how they make money on the farm. I grew a small patch of tobacco, my father furnishing the fertilizer. I received \$3.05 for it. If I had paid for the fertilizer and cultivation I would not have cleared expenses. This year I shall try lima beans, that sell for 7 to 8 cents a pound dry, and also some muskmelons, that bring 5 to 8 cents each. I hope many of you will write and give us your ways of making money. I enjoy reading UP-TO-DATE. Father has been taking it for two years. It certainly is a good paper. Cadet boys and girls, write to me and I will answer all.—Retha Owen, Bumpass, Va.

DEAR CADETS—I am an Idaho girl and have lived in the country most of my life. I like to ride horseback. I am 17 years old and would like to hear from all the Cadet boys and girls, as I have long evening and will enjoy answering the cards and letters I receive.—Mary Smith, Lapwai, Idaho.

DEAR CADETS—I read UP-TO-DATE and I would like to become a Cadet of Equity. I am a country girl and live three miles from town. I have lived all my life in California and love the Golden State. I live on a farm of 200 acres. I would like to get a letter or card from Cadet girls and boys in every state in the Union. I promise to answer all and tell more of the Golden State.—Clara Crane, Oakdale, Cal.

DEAR CADETS—I am a San Francisco boy of 22 years, but at present I am staying with my folks, who are great readers of UP-TO-DATE FARMING and live in a little country town known as Cotati, about 45 miles from San Francisco and 9 miles from Petaluma, which is noted for its eggs and poultry. I will be glad to hear from all the Cadet boys and girls and will tell them about the world's fair which will be held in San Francisco in 1915.—John Jensen, Cotati, Cal.

DEAR CADETS—I live with my mama and grandma and grandpa. We have lots of stock and I am very fond of pets. I am 12 years old and wish to join the Cadets of Equity. My grandpa takes UP-TO-DATE and I enjoy reading the letters. I would like to exchange cards with the girls and boys and will answer all I receive.—Ruth T. Wallace, Bridgewater, Ia.

DEAR CADETS—I am a Kansas boy and like farm life fine. I live on a farm of 950 acres and have taken UP-TO-DATE for two years. We have 20 horses, 19 head of cattle and two autos. We raise wheat, corn and barley. I would be glad to exchange letters and cards with the Cadet girls and boys and will answer all I receive.—Johnnie Thomas, Ludell, Kas.

DEAR CADETS—I am a farmer girl, 18 years of age. We began to take UP-TO-DATE FARMING this winter and I think it a fine paper, especially the department for the Cadets of Equity. We have an Equity organization in our little town. I would be glad to join you and would be glad to correspond with any of the boys and girls.—Greta L. Seaver, Egbert, Wyo.

DEAR CADETS—I am a Texas girl and a reader of UP-TO-DATE FARMING and think it a grand paper. I enjoy reading the Cadet letters so much. My father and five brothers are tending 500 acres of land this year. I would greatly appreciate letters or cards from all the Cadet boys and girls and will answer all I receive.—Eula Beard, Quana, Tex.

DEAR CADETS—I am a reader of UP-TO-DATE and like it very much. I live on a farm and like farm work best of all. Some girls think it dishonorable to do farm work, but I think every girl should know how to work. If they don't have to work now

they may sometime. I have five brothers and four sisters and I am the baby, though I am not spoiled. I would like to hear from some of you boys and girls. I am 19 years old.—Emma Ball, Alert, N. C.

DEAR CADETS—I would like to join the Cadets of Equity. My father has been a subscriber to UP-TO-DATE FARMING for several years and I hardly ever miss an issue. I have lived in the country most all my life, but since I started to high school I have been in town and now I like the city better than the country. We lived only a short distance from Lewisport. I would like to correspond with the boys and girls.—Lessie Thrasher, Lewisport, Ky.

DEAR CADETS—A Colorado girl would like to join you. I have read UP-TO-DATE and think it a fine paper, especially for the boys and girls. I am 14 years of age and have lived on a farm all my life. Have lived in Colorado seven years. The chief occupations are mining gold and silver and stock raising. I would like to exchange cards and letters with the Cadet boys and girls and will answer all I receive.—Dixie Jones, Stratton, Col.

DEAR CADETS—Here comes a girl from Alabama and have lived here nearly six years. We came here from Mexico, Mo., 100 miles from St. Louis, and we like it much better here than we did there. Papa owns a 560-acre farm. One hundred and eighty acres belong to me, besides my homestead of 40 acres. The Satsuma orange is the chief crop here. I expect to put out 100 trees in the fall. We depend almost entirely on colored labor. Cucumbers, Irish potatoes, beans and all garden truck, as well as corn, cane, watermelons, etc., are up and growing fine April 15. I have a white French poodle and a three-year-old buck deer for my pets. We are a sociable crowd in this county and have entertainments and many other amusements for the young people. Horseback riding is a great sport. The different churches are also well represented. I live nine miles from town, but it is nice out here. I will be 19 the 12th of next October and would be glad to receive letters or post cards from all. Will answer all.—Violet R. Maddox, Roberts-dale, Ala.

DEAR CADETS—I am a Pennsylvania girl and have been reading UP-TO-DATE for nearly four years. I think it is a splendid paper and I take great pleasure in reading the Cadet letters. Though I do not live on a farm, I would like to become a Cadet. We lived on a farm for three years and I think it much nicer than living in town. I would be glad to hear from the Cadet boys and girls and will answer all letters and cards I receive.—Mary L. Meyers, Hyndman, Pa.

DEAR CADETS—I am a boy of 17 years and live on a farm of 75 acres among the beautiful West Virginia hills. We raise corn, wheat, oats, rye and potatoes and some hay and most all kinds of garden vegetables. I am very fond of stock, especially horses. I live near Greenbrier river, five miles from Alderson, which is a beautiful town of 2,000 inhabitants. I also live in sight of the main line of the Chesapeake & Ohio railway. Our winters are cold and I enjoy the winter sports, but our summers are delightful. A number of people from the large cities come here to spend the summer among our beautiful hills. We are only 21 miles from the noted White Sulphur Springs, a beautiful summer resort with accommodations for 3,000 guests

My father has been taking UP-TO-DATE for more than a year and I am fond of reading it, especially the letters. I would be very glad to hear from all the Cadets, especially those in Virginia. I have relatives in the counties of Hanover, Rock-bridge and Craig and I expect to visit some of them this summer.—Dana M. Thomas, Alderson, W. Va.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING. It has been coming to our home for about three years and I am always in a hurry to get it to read the Cadet page. Here in the western part of Oklahoma we raise corn, wheat, oats, kafir corn, milo maize and broom corn. Some cotton is raised, but it is too dry for that. I live with my parents, four brothers and one sister about a mile and a half from Weatherford, a small town of 2,118 inhabitants. Farmers have planted corn and some other crops (April 22) and our gardens are up nicely, our onions being 12 inches high. We have 8 horses, 33 cattle and 22 hogs. We milk 15 cows twice a day. I myself milk five cows and then turn the separator, but with all my work I would not exchange my country life for the city. I would like to exchange post cards with the Cadets.—Bertha Jones, Weatherford, Okla.

Some have written to ask why their letters were not printed. We have often given the reason. It is because we can not make room for all. But we like to have their letters just the same, and regret we can not print them all. We imagine there is not in all the world another such a band of writers as the Cadets of Equity.

Didn't Know Which

"Fire at will!" shouted the drill master after he had ordered "Take aim."
"But which of them is Will?" hurriedly asked the new recruit.

He Sure Was

Teacher—Who was George Washington's father?
Dull Student—George Washington's father?
He was—he was— Yes, I know. He was the grandfather of his country.

They Failed to Meet

"The donkey club," announced the preacher, "will meet soon after the service closes. They will assemble on each side of the door and stare and snicker as the orderly people pass out." But the club didn't meet that day.

Naturally So

The section foreman reported the killing of a cow by a train. "What was the disposition of the carcass?" wired the superintendent. "Quiet and gentle," was the reply.

No Lack of Material

Little Susan, who had heard them teaching about creation at Sunday school, was helping her mother dust the room. Looking under a sofa, she exclaimed: "Oh, mama, here's dust enough for God to make a man of!"

Wanted Another

"I believe you are the very tramp I gave a whole pie last year."
"Yes, ma'am, I am the very same, and that pie is a matter of history."
"Well, what are you waiting for now?"
"I am waiting for history to repeat itself," ma'am.

Seeing Ourselves

"Yes, this world would be fine if we could see ourselves as others see us."
"But it would be much finer if we could see others as we see ourselves."

\$250 Will pay reliable woman \$250 for distributing 2,000 FREE packages Perfumed Soap Powder in your town. No money required.

Baseball Curver GIVEN

Boys, you can simply make money out of the other boys with this curver. You can be as big a hero in your town as any big league pitcher. The curver which is worn on the hand enables the pitcher to give the ball a rapid whirling motion thus causing a wide curve. It is so small that the batter cannot see it and they all wonder where those AWFUL CURVES come from. You can fan them out as fast as they come to bat. A complete set of directions for throwing curves goes with each curver.

Our Offer: We are giving these baseball curvers away free as a means of introducing our great farm and family magazine, Missouri Valley Farmer. Send us 10c for a three months' trial subscription and immediately upon receipt of same we will send you one of the curvers. \$5.00 curver, mail free and postpaid. If you want one of these wonderful little curvers do not delay but send us your subscription at once to the address below. Our supply is limited. Do not put off sending in your order.

MISSOURI VALLEY FARMER, BC24, Topeka, Kansas

This Real Shetland Pony Outfit

PONY, CARRIAGE, HARNESS, SADDLE AND BRIDLE—ALL GIVEN AWAY

This is the rig
Who Wants Me?

Any Boy or Girl can get all this—
Just send me your name

Emma Williams is the name of the little girl below. I made her a present of this pony and outfit seven years ago. She still has it. It took several prizes at fairs. She writes me a letter every Christmas and sends me a picture of herself and pony. See her smile. She's glad she sent me her name and told me she wanted a pony. I am still giving ponies away to boys and girls. **DO YOU WANT ONE?** Do like little Emma did,—send me your name. My plan is simple and easy. Do as I say—and

Send Your Name Quick!

The next pony I am going to give away is a beauty—jet about as high as the dining-room table, round, plump, trained, as gentle as a lamb. Perfectly safe for any little girl to ride or drive. The carriage is just as pretty, with tires and nickel side-lamps. Fine black leather, harness, russet leather saddle and bridle. Could you finer outfit? Do as I say and you can have all I have. I want your name. I have a story to tell pony all ready to send to the lucky boy or girl as well as not. Send me no money. I don't.

want you to send me your name—today—NOW. Will you do it?—and get this real live Shetland pony and complete outfit. **MATT YOUNG, Pony Man,**

208 South Wittenberg Avenue, S

Only \$2 DOWN ONE YEAR TO PAY

For Any Size You Need Direct From Our Factory

No need to be without a cream separator any longer. The price you get for only 8 pounds of butter now puts one of these big, fine, life-time guaranteed separators on your farm. You buy direct from the manufacturer and save half. You pay no interest—no extras. You have the use of this big labor-saving machine while it is earning its own cost and more. You don't risk a single penny. We pay the freight both ways if the separator fails to please you. If satisfied you pay our low factory-to-farm price in small easy installments of only \$2 a month and up out of the extra cream profits which the machine will save for you. In this way you don't feel the cost at all. If you will fill out the coupon below we will give you the benefit of an extra special offer whereby you will also save one-half of the usual first payment. Send today.

Any ten-year-old boy or girl can run the New Butterfly Separator with perfect ease.

The New Butterfly is the simplest of all cream separators. It runs on a single ad disc to wash. One-piece skimming device is made of aluminum. Quickly and easily washed.

Thirty Days Free Trial on your own farm will convince you that for light running, perfect skimming, easy cleaning and convenience the New Butterfly can't be surpassed.

\$24 Buys the No. 2 Junior NEW Butterfly

The greatest cream separator value ever offered. Light-running, easy-cleaning, close-skimming, durable. Material and workmanship guaranteed a lifetime. A machine that will skim 95 quarts of milk per hour and get all the cream. Free Catalog Folder shows four larger sizes up to the No. 5½ shown here. All sold on easy payment terms of only \$2 down—30 days' free trial and one year to pay. No matter how many cows you keep you can get a machine to suit your needs on these easy terms and let the machine earn its own payments before they are due.

No Interest—No Extras

The price we print is the price you pay. There are no extras—no interest. For example, the price of the No. 2 Junior is \$24. For this you pay only \$2 down then \$2 a month for 11 months. The machine comes to you ready to run and safe delivery guaranteed.

30 Days' Trial—Life-time Guarantee

To prove to your entire satisfaction before you pay that the New Butterfly is the separator you want we give you a whole month's use of the machine on your own farm. If for any reason you are not satisfied you can return it at our expense and we will refund your money together with any freight charges you paid. It you decide to keep the separator we will send you a signed life-time guarantee against breakage caused by defects in either material or workmanship.

Get Our Extra Special Offer SEND The Coupon—SAVE a Dollar

For a limited time we are offering to pay one-half of the first payment down on any New Butterfly Cream Separator you select. By accepting this special offer you obtain any size machine we make for only \$1 down (instead of \$2) and have a whole year to pay the balance of our low factory-to-farm price. Big Free Catalog Folder illustrates all sizes—explains this great offer. If you need a cream separator don't miss this opportunity to get one direct from the factory on terms so easy the machine itself will earn its own cost and more before you pay. Fill out the coupon—send today.

NEW BUTTERFLY Cream Separators

are made in our big Chicago Factory by skilled American workmen. We carry a complete stock of repair parts at all times enabling us to make shipment within 24 hours after order is received. There is no waiting for repairs to come from a distance—no quibbling with local agents at home. Our life-time guarantee insures New Butterfly purchasers the best service any manufacturer can possibly give.

Read What These NEW BUTTERFLY Users Say:

Dear Sirs:—The separator skims to perfection, is easy turning, and the skimming device is the easiest cleaning I ever saw. At home we used the..... and the..... but neither one of these high priced machines gave the satisfaction your machine does. I have had several of my friends look at it and they were all highly pleased. Very truly yours, J. D. WERSINGER, Le Mars, Ia.

Dear Sirs:—Your separator runs easier than any other machine that I have ever handled and think that you can well afford to give anyone thirty days' free trial. We think it is fine. Truly, R. Z. McMURRAY, North Vernon, Ind.

Gentlemen:—My cream separator is giving perfect satisfaction in its work, and as for ease of cleaning, truly I think it can hardly be beat. Yours most kindly, JACOB S. ZIGLER, Gatewood, W. Va.

Dear Sirs:—We have used our machine now 3 years, and could not think of getting along without it. Very truly, J. S. BARTH, Uhrich, Mo.

Sirs:—We have had two other kinds of separators and yours is the best of all. W. H. FULLEN, Marcola, Ore.

What We Want You to Know and Why

Being a Few Words on Particular Matters

The Small Number of Highly Profitable Farms

Recent investigations have apparently shown that from two to five farmers in every hundred are making very handsome incomes. These farms are of three classes. One class is of highly specialized farms, where farming of the most intensive character is done on a very large scale. In nearly every case of this kind the farm has unusual advantages as to location and markets, or else as to soil and climate.

Another class consists of farms producing products of exceptional quality, such as very high-priced live stock, fancy poultry farms, etc., and, while having location in various parts of the country, are not very numerous and there is not room for many such in any one locality.

The third class consists of farms managed on the basis of ordinary field crops and live stock, but being both very large and exceedingly well managed. Neither are there a great many of these farms, nor can there be. In the greater portion of the country the farmer must face ordinary conditions and make the most of his ordinary opportunities. While the favored few can find good markets, as a rule, for their specialized crops and their high-bred stock, or by reason of large production reduce the costs so that the ordinary products yield a good profit at market prices, the average farmer must find other means to make his work very profitable. It is in the interest of this great class we have devoted our energies and demand for them a fair deal in the market place where profits are made or lost.

Secretary Houston on Co-operation

Our work in connection with practical organization for farmers has continued for several years. All over this country are to be found organized communities which were brought together by this paper, and in every case where its teachings have been observed the results to the organized co-operators have been most satisfactory. When this paper began its task of building an efficient business organization for farmers, and declared that the marketing at profitable prices was the great reform needed, and could and would be accomplished with the right kind of organization, it stood alone in its teaching and worked alone in its endeavor to construct an organization of the right kind. In those days the teachers of farmers confined themselves wholly to greater production principles and practices. Even today, when many of them have admitted that the marketing problems are indeed of the utmost importance, practically all of them give the production side of the subject their whole attention.

It is very interesting at this time to note that they have admitted our first teachings, which once they denied or ignored. Secretary Houston of the Department of Agriculture recently said:

Co-operation is the prime need of the country. There is a growing demand for strong men who have their feet in the soil, who know the country, who have sound agricultural training and good judgment, to take the leadership of agricultural communities.

Within the last week I have been visited by the country life commission of two states, asking for men to take such positions; one at \$4,000 a year, one at \$6,000.

One of the big problems of the day is to make country living more satisfactory. To this end farm profits must be increased, the business side of farming must be improved, better roads must be had, schools must be improved through consolidation and rural high schools established.

It is useless to talk about uplifting farmers. They are not going to be uplifted. You must attach your program to a definite problem and help solve it, whether it is agricultural, industrial or educational. It takes co-operation.

Taking the secretary at his word as thus reported, he takes the ground that farmers must co-operate; they must co-operate in a business way; they must co-operate to obtain increased profits; they must follow a definite program, an effective plan, and have an efficient organization with which co-operative effort can be made fruitful. Their leaders must be strong men who can and will take part in all these things. This co-operation the secretary declares to be the prime need of the country. We have been saying so for years, and we have been proving our faith by our works. We have been showing also that only by national co-operation and federation can the desired results be obtained, a fact that should not have to be proven by experience and time.

Warning Against a So-Called Cholera Cure

The articles now appearing in UP-TO-DATE FARMING treat upon a method of cholera prevention that has the indorsement of practically all agricultural colleges, veterinary authorities and of the United States Department of Agriculture. In the beginning of the series of articles it was stated clearly that no cholera specific, no remedy that would destroy hog cholera bacilli and save the hog, has yet come to the knowledge of man. About the time that our first article appeared in print we received an article which we were asked to publish telling of a medicine which was said to be not only a preventative, but a specific cure, and giving what purported to be an indorsement of the claim by both the United States Department of Agriculture and the Minnesota State Agricultural Experiment Station. The article is very misleading. We give herewith the statement made by the United States Department of Agriculture about it:

What appears to be a well-organized campaign to delude farmers throughout the country into buying an alleged cure for hog cholera, Benetol by name, under the impression that this has been investigated and approved by the United States Government, has come to the attention of the Department of Agriculture. The Department has no reason to believe in the efficiency of any proprietary cure for hog cholera and does not recommend any. Under certain conditions it urges farmers to protect their stock with anti-hog cholera serum, but that is all.

In connection with this attempt it may be said that the medicine, which is now put forward as good for hogs, was advertised some time ago as a means of killing tuberculosis, typhoid and cancer germs. At that time it was asserted that the army was interested in it. As a matter of fact the army was no more interested then than the Department of Agriculture is now.

In view of the evidence that the attempt to create this false impression is persistent and widespread, all hog owners are warned to communicate with the United States authorities before accepting as true any statement that the government recommends any treatment other than the serum already mentioned.

Get Your Canadian Home From the Canadian Pacific

The Home Maker

We will make you a long time loan—you can move on the land at once—your Canadian farm will make you independent and

We Give You 20 Years to Pay

Rich Canadian and \$11 to \$30 per acre— one-twentieth down, balance in 19 payments with interest at 6 per cent. Long before final payment comes due your farm will have paid for itself.

We Lend You \$2000

FOR SALE—Town lots in all growing towns. Ask for information on industrial and business openings.

**1913
RECORD**

Magnificent Crops in all Western Canada

All parts of the Provinces of Manitoba, Saskatchewan and Alberta, have produced wonderful yields of Wheat, Oats, Barley and Flax. Wheat graded from Contract to No. 1 Hard, weighed heavy and yielded from 20 to 45 bushels per acre; 25 bushels was about the total average. Mixed Farming may be considered fully as profitable an industry as grain raising. The excellent grasses full of nutrition, are the only food required either for beef or dairy purposes. In 1912, at Chicago, Western Canada carried off the Championship for beef steer. Good schools, markets convenient, climate excellent. For the homesteader, the man who wishes to farm extensively, or the investor, Canada offers the biggest opportunity of any place on the continent.

Vol. 17 INDIANAPOLIS, INDIANA, JUNE 15, 1914 No. 12

Balanced Rations

Catch crops are to be used where others didn't catch.

Getting rich raising chickens looks easy so long as you just look.

Oklahoma is claiming a wheat crop twice the size of any of recent years.

Our country contributors are adding their experiences to help others. Have you given us yours?

And now the farmer gets out his corn cultivator and daily proves that a square peg works well in a round hole!

One extreme usually follows another so closely there is no chance to get balanced between them. Consequently avoid extremes wherever possible.

For our own use we would not trade the little spring of pure, cold, crystal clear water at the foot of the hill for all the soda fountains in Christendom.

The little isles of Great Britain have over 2,000 co-operative societies with a total of over 3,000,000 members, and the annual net profits amount to \$50,000,000.

Alfalfa can be made to grow on nearly all soils, but in many cases it might be cheaper and far more profitable to grow a legume better adapted to conditions.

Too much rain in some spots and not enough in others, as usual. But good management is ever hopeful of keeping ahead and succeeds most of the time. Be of good cheer.

It takes just as much butter fat to make a pound of 15-cent butter as it does to make a pound of 35-cent butter and just as much corn and clover to make the pound of butter fat.

The high cost of loan money in many sections should impel the farmers to promote a "bankers' uplift" movement in order to show those dignitaries how to produce plenty of money at a low rate. Tit for tat.

Before elections the voters seem to take a lot of interest in what the candidates "stand for." After elections they pay little attention to what they do. Political interest of this kind bears but little fruit.

It takes enthusiasm, loyalty and ability, equal parts, to make a co-operative enterprise a success. But there is plenty of material for it amongst farmers, old General Opinion to the contrary notwithstanding.

"Wherever co-operation has been tried and conducted on safe, business-like grounds it has succeeded," admits the Ohio Farmer. By success is meant that co-operative methods give better returns than independent methods.

"Dust thou art and to dust thou shalt return" is a fine text for a farmer to preach himself a sermon from, the dust referred to being in form of grain and hay and the return being made by the live stock route.

By order of Secretary Daniels, officers of the Navy must no longer use alcoholic drink while on duty. Privates have been forbidden its use for some time. Now what incentive will a sailor have to work for promotion?

Grading Wheat—In and Out

We are told of an investigation made in one of the Dakotas to determine how the farmers' wheat was graded in at the elevator by the local buyer, and graded out when sold by him. The figures here given are by Judson Welliver, in Farm and Fireside. As Mr. Welliver says, they are highly interesting. By some mysterious (?) process the grades on thousands of bushels change from low to high over night. Study the table and then think seriously—do you not need a new system of marketing for your own protection?

The Bad Effect of It

NOT LONG AGO we called attention to the extravagant announcements that 1914 was to have the greatest wheat crop ever known in the country. These declarations came in the most emphatic terms not only from the market centers, but from the Department of Agriculture, and the papers with display headings were full of it.

We deprecate such untimely reports on the ground that the wheat crop was not yet made and it was impossible to tell what the harvest would be, and the unequivocal declaration that the crop was to be enormous would tend to lower the price paid for what wheat the farmers still had on hand. It did that and wheat was sold in fear of the effect such enormous production would have on future prices. We now clip from a prominent daily, and other dailies at the time we are writing are full of it, the following:

Instead of a bumper crop of wheat, which was clearly indicated at that time, scarcely one-third of a crop will be harvested in some sections and across great areas of Missouri river bottom land in Saline, Carroll, Howard, Cooper, Boone and other counties the farmers are plowing up their wheat fields and planting corn.

The cause is the so-called Hessian fly, a

pest whose eggs are said to have been brought to this country by the hired soldiers of King George during the revolutionary war. The exceptionally dry weather had aided the quick development of the fly, which lays its eggs in the tender stalks of wheat where the developing maggots sap the vitality of the plant.

The pest is not confined to Missouri, but is reported from the Kansas wheat belt and elsewhere. Its appearance will mean a loss of millions of dollars to Missouri farmers this year on wheat, but as it is not too late to plant corn in affected fields, experts of the College of Agriculture of the University of Missouri advise this course.

In other wheat-producing sections where the Hessian fly has not been mentioned the terrible May drought has reduced the yield prospect more than half. We are not willing to say that this startling change in reports is promulgated as a means of affecting prices, but that is the result. The widely promulgated reports of big crops were made at a time when there was a possibility of driving wheat from the farms to market at low prices. Now the reverse reports come after the wheat has gone into the buyers' hands and high prices are desired by them. We repeat that we are unwilling to say that low prices to the farmers and high prices to the speculators is the purpose of these reports, but that is the unquestionable effect of them. Farmers ought to take notice.

What Others Say and What We Think of It

"The administration's rural credit bill has been shot full of holes."—Successful Farming. It won't hold water, then, for it had holes in it in the first place.

"When a man brags of how quickly he can do his work, watch him and see how well he does it."—Farm Journal. If he does it well also, take a few lessons yourself.

"It is easy to blame the world for your own mistakes."—Business Farmer. But it is a lot harder to make her take the blame for them. Chickens come home to roost.

"Already Oklahoma has begun to howl for harvest hands—fifteen thousand to start with."—Indianapolis News. Evidently the wheat crop in Oklahoma is a howling success.

"It argues a fatal defect in our methods of distribution when a bumper crop is a calamity to the grower."—Farm Journal. And there's no beating that argument, with a phalanx of facts behind it.

"We are confronting an endless chain of good times."—Farmer and Stockman. Fine! But every now and then the cussed chain busts and slaps us in the face and the wheels of progress stand still until we put in a new link.

"It is no longer possible for a farmer, by main strength, to do much more than make a living."—Home and Farm. It never was, so far back as our memory will carry us. It takes a mixture of mind with muscle, and the more mind the better.

"Having the right idea of keeping up the fertility of the soil is one of the prime, fundamental factors in all good farming."—Hoard's Dairyman. There is enough education in that one sentence to keep many a farmer's mind busy for days and days.

"Big Business ought to be free. It ought to be able to get justice without participating in politics."—An ex-railroad president. Did the railroads control politicians and legislatures to merely get justice for themselves, to keep the public from imposing upon them, or to keep from having justice dealt the public? Form your own conclusions.

"Much public money is wasted in the grading of roads. Not only are roads often graded higher than necessary, but they are very generally graded too wide. Last week we traveled over a mile after mile of upland prairie road that had been graded thirty feet or more in width, from ditch to ditch."—Nebraska Farmer. Those who do all that unnecessary grading, and add the money to their own bank accounts, probably would not say the money was wasted, at least after it came into their possession.

EDITORIAL

Self-Determined Life

IN AN ADDRESS delivered in Washington a few days ago at the unveiling of a statue to Commodore John Barry, of revolutionary fame, and spoken of as the "father of the American navy," President Wilson said:

There are just as vital things stirring now that concern the existence of the nation as were stirring in the time of the revolution, and every man who worthily stands in this presence should examine himself and see whether he has the full conception of what it means that America shall live her own self-determined life.

The American government's self is its people and its self-determined life must be the life determined by its people. In other words, its people must rule. But do they? In theory, in name and in general belief, yes, but in fact there is room for doubt, and President Wilson must have had that doubt in his mind when he declared there are as vital things affecting the life of the nation, the independence of the people, now as there were in the days of the revolution, and when he so emphatically affirmed that every one should know whether or not he had the unselfish devotion to popular independence so essential to a self-determined national life.

So many selfish and powerful institutions have built themselves up in gratification of personal greed and have absorbed so much of the common interests of the people and our chosen rules are so much inclined to cower in their presence that the good of the masses is forgotten. Note the corporation control of some of our greatest public utilities. Transportation and even communication afford examples. In many cases the railroads are made to serve capital rather than the public that needs their services. We scarcely need refer to the recent disclosures of the management of the

great systems and the testimony given by Charles S. Mellen of the New York, New Haven & Hartford railroad. The express, the telegraph and telephone systems are not free from like charges, but, perhaps, in a lesser degree. The arbitrary control of the country's money by the great banking institutions that constitute the money power are even a greater menace to public liberty, and the marketing combines that arbitrarily make both buying and selling prices are a still greater menace to general prosperity and national independence.

It is no wonder the President should realize that great questions of self-directed national life should confront us now as did in the days of our fathers. Who come forward and won our national life then? The pioneer farmers that were hewing down the eastern forests to make for themselves independent homes. Who must step to the front and settle these questions now? The masses of the people, mostly the farmers, who from ocean to ocean and from lakes to gulf are each year taking from the soil that without which not only the people, but the nation, would perish. The idea has taken possession of the serving masses that in this country, as in others, there are authoritative rulers to whom they must look for government. But not so. The governors are the people, and those in authority, no matter what names they have won or assumed, are only the servants of the people and are responsible to those people for every official act—in fact, for every hour of their official time. The people have forgotten this fact and the officials ignore it. In truth, then, there are menacing conditions and evils that are eating into the heart of popular independence and the general welfare and it devolves upon the same classes that won our liberty to bring our nation back to a self-determined life.

The Agricultural Extension Act

THE Secretary of Agriculture has written to the governors of all the states asking them to designate the college or colleges to which the funds provided by the Smith-Lever co-operative agricultural extension law are to go. This is a measure whose wisdom and prudence we have seriously doubted because of the fact that public moneys so seldom accomplish the ostensible purpose for which they are appropriated. This measure in particular we feel sure will fall far short of accomplishing its alleged purpose to the value of what it will cost, and we so argued before Congress and the public, but to no avail.

The act provides that each state in which an agricultural college is designated shall receive as a basic fund from the federal government \$10,000 a year, with additional appropriations to be distributed in proportion to the rural population of the states, but to share these additional funds the states must in some way provide equal sums to add to them. The additional appropriations are the following large sums: \$600,000 for the first fiscal year following that in which the basic appropriation first becomes available. This sum is to be increased by \$500,000 a year for seven years until the total additional sum shall be \$4,100,000 a year. This will make the annual appropriation for this purpose from the United States treasury \$4,580,000, and all of this great sum

except \$480,000 must be duplicated by the states. The act provides that all this money shall be expended for the following purposes:

That co-operative agricultural extension work shall consist of the giving of instruction and practical demonstrations in agriculture and home economics to persons not attending or resident in said colleges in the several communities, and imparting to such persons information on said subjects through field demonstrations, publications and otherwise, and this work shall be carried on in such manner as may be mutually agreed upon by the Secretary of Agriculture and the state agricultural college or colleges receiving the benefits of this act.

The inefficiency of that kind of work has been proven time and again. It is but a repetition of the strangely dominant fad of "greater production." Farmers must be impelled to produce more and more in spite of the fact that produce that cost millions of dollars in its production goes to waste on the farms every year for lack of a suitable system of marketing, and that other millions of dollars worth are sent abroad because our own accessible demands are fully supplied. We say accessible demands because many of our own people are unsupplied because the stuff is not brought within their reach or is priced so high by speculating sellers that they can not afford to buy it. This essential feature of successful farming is entirely ignored by the law and, therefore, its effect will be, as is the general cry for greater production, to add that much more to the cruel profits of market gambling. Hence in spite of it all it is up to the farmers themselves to look after their marketing.

American Egg Prices

A REDUCTION of the price of eggs in the United States is more keenly felt in the American farm home than the reduction in the price of almost any other American product. That reduction is now being seriously felt in almost all parts of the country, not in the city retail markets, perhaps, where the consumers buy, but in the country markets where the producers sell. The reason for this reduction in price is not difficult to understand. It is because so many eggs are coming from abroad. The American consul at Shanghai, China, reports that since the first of last January over 62,000 cases of thirty dozen eggs each were shipped from Shanghai to American Pacific coast points. These eggs cost in China about 8 cents a dozen and the shipping cost is about 2 cents a dozen and that puts them on the American market at about 10 cents a dozen. It is said that on that northern route from China eggs reach this country in very good condition even without refrigeration, and that they may be put at once on the market or in cold storage.

It is easy to see that this must weaken the market here, and, whether or not it can break the high price control of the city retail trade, it reduces the price paid the American producers. We think the people in their rural homes deserve protection in their business as much as do the larger establishments elsewhere.

American Farmers and Canada

IT IS well known that during several years past hundreds and even thousands of our northern and northwestern farmers have accepted offers made by the Canadian government and have gone from the United States to make their homes in Canada. This emigration has been mostly to the great wheat growing regions of Saskatchewan and Alberta and Manitoba. But wheat growing in Canada seems to have been somewhat disappointing not only in cheapness and certainty of production and yield, but also in price.

As a consequence the United States Department of Agriculture announces that "a large number of American farmers who have, in recent years, left the United States to engage in farming in Canadian territory, are now asking for certificates to permit the return of their household effects to this country." The Department allows that the long and rigorous winters characteristic of that part of Canada may also contribute to the desire to return. Whatever may be the cause, we are glad for our people to come back home. There is no better place, all things considered, than the United States, and when the American farmers assume the privilege that unquestionably belongs to them of conducting their business as other business is conducted, of seeing to it that their products are marketed properly as well as produced abundantly, this will in truth be an ideal agricultural country.

Still the Rural Credit Scheme

AS WAS to be expected, the so-called rural credit scheme is still a live question before the legislative power of the country. It seems to now take the form of a proposition for the government to aid in the establishment of farm credit banks by lending money of the government to the banks on security of land mortgages to the amount of \$50,000,000. The bill provides for the creation of twelve federal land banks with a minimum capital of \$500,000 each, and there is provision also for the formation of farm loan associations.

It will be noted that the farmer is

not recognized as having any security for loans except his land titles, and we are glad President Wilson does not approve the scheme. The farmers have as good security outside of their real estate possessions as have any other class of people, and they deserve as much consideration as do those of any other business. There is always a demand for their property. There is never a surplus of farm stock and farm crops are always available. The world could not live without them and no class is freer from dishonest schemes to beat their creditors. We see no reason why farmers should not have every faculty for borrowing that other people have, and we demand such facilities for them and on just as favorable terms. But the power behind this much-talked-of scheme, and the ever-present core in it, is for the money power to get a lien on the farms and homes of the people, and that is what we deprecate.

Smile Awhile

How and Where

Judge—You say you saw the prisoner strike the defendant. On what provocation did he strike him?

Witness—He didn't strike him on any provocation. He struck him on the jaw.

Prospect for Eggs

Little Susie (who was visiting from the city)—Auntie, you are going to get lots of eggs today.

Auntie—Why do you think so, dear?

Susie—The hens are all sneezing. Don't you hear 'em?

It Was Frightened

"What's the matter, dear? Your hair is all standing on end."

"I done it up last night in a paper that had a ghost story in it."

Didn't Need to Experiment

"Don't you believe that farmer fellow tried to kiss me last night and said he never tried to kiss a girl before?"

"What did you say to him?"

"I told him I was no agricultural experiment station."

The Cost of It

"Have you seen Mrs. Style's new hat?"

"No, but I saw her husband this morning and he was swearin' awfully. I guess it's a topnotcher."

About as Usual

Hubby—You were talking in your sleep last night, dear.

Wife—Is that so? I didn't say much, did I?

Hubby—Of course not. You know you never say much when you talk!

Not Writable

A little girl was asked to write an essay of not less than 250 words. She handed in the following:

"Papa bought an auto and it busted one day going up a hill out in the country. I suppose this is about fifty words. The other 200 are what papa said as we walked back to town, but mama would whip me if I wrote them."

Not the Best Side

Little Boy—And you are my grandma?

Grandma—Yes, I am your grandma on your papa's side.

Little Boy—Well, you'll not be here long till you find out you are on the wrong side.

Still Keep at It

"My little man, do you know what becomes of liars when they die?"

"Yes, they are buried and lie there."

How to Please the Company

"Nora, how does my new gown look in the back?"

"Beautiful, madam, beautiful! They'll all be delighted when you turn your back to 'em!"

Guess It Will

"Patience and perseverance will accomplish all things," said the old farmer after he had finally got his auto cranked up.

"Not everything they won't," said the road boss, who has been looking on with derision.

"I wish you'd tell me one," requested the farmer.

"Would it enable you to carry water in a sieve?" asked the boss.

"Sure it would. I'd wait patiently till it froze," replied the farmer as his auto, brought to life, took him down the road.

Hog Cholera—Its Cause and Treatment

By C. Hayes Taylor

IN THE preceding issue the cause of hog cholera and a description of the anti-cholera serum vaccine and its discovery was given in order to make clear to the reader the principles upon which the serum method of cholera prevention is based. We told how this serum was discovered, of what it consists and the reasons why cholera can be prevented by its use. The reader was advised to preserve the former article until this one is received, to re-read it in connection with what will be said here, and thus have a fairly complete idea of the manufacture, use and effect of this much-discussed remedy.

The writer had the good fortune to visit probably the largest and best serum manufacturing plant in the country quite recently, that of the Pitman-Moore Company, manufacturing chemists, who for years have held a very high position as makers of drugs and chemicals of absolute purity, and because of the excellence of their products have won a most enviable reputation throughout the medical world. This company has established a large and complete biological farm near Indianapolis, where conditions for the manufacture of high-grade serum were as near perfect as possible to secure, for to be effective and not dangerous serum must have unalloyed purity and potency. Bad serum may be as bad in effect as cholera itself. To be thoroughly safe and reliable, serum must be made by those who fully understand the necessity of keeping everything absolutely free from infection and know what precautions to take and what tests to make to insure its purity and potency.

"We realize," declared Mr. Moore, president of the company, who personally conducted the UP-TO-DATE FARMING party through the buildings, explaining the process, "that impurity is dangerous to life and health and, of course, impotency is worthless. Hence, having an untarnished reputation of long standing to maintain, and foreseeing that only by satisfactory results from its use will the anti-serum method ever be of service to farmers and consequently of profit to us, we make sure that the serum we make is both pure and potent."

Right here we want to put forth a word of caution. The farmer who uses this method for cholera prevention should use only serum which was prepared under perfect conditions and having undergone rigid tests. To do otherwise is inviting danger and trouble. Always learn from the agricultural college, or the state veterinarian, or any reliable, licensed veterinarian, what serum to use, and never, under any circumstances, use or permit to be used a serum which was not manufactured in a serum plant inspected, approved and licensed by the state or national government.

Serum is made from the blood of healthy hogs made immune to cholera by the process described in the first article. These hogs are purchased by a skilled buyer, who chooses well-developed animals weighing about 200 pounds, showing every evidence of strong vitality. The bacon type of hog is generally

Taking Hyper-Immunes to the Bleeding Rooms

preferred, the Berkshire, Duroc-Berkshire cross and the Tamworth breeds being favorites. These hogs are first quarantined, tested and carefully watched for a time to make sure of being in perfect health. Their blood is tested for tuberculosis and other disease germs. Those found perfectly healthy are first made immune by receiving both serum and virus by the simultaneous method. This means these hogs have injected into their blood the tested serum (blood containing anti-bodies, which combat cholera) and tested cholera virus (blood from cholera hogs).

The serum and the virus used to immunize these hogs have been tested in both the laboratory and in the pens before being used. The serum is tested in the laboratory by being given every chance to develop any disease germs that might by any chance be lurking in the blood of the hog from which it was taken, and then by examining it with a high-powered microscope, which would instantly detect the presence of such germs. As a double precaution some of the serum is injected into guinea pigs. These little animals have been found to be highly sensitive to all bacterial influences and if there are any dangerous germs in the serum it will quickly cause the guinea pigs to sicken and die. If it stands these purity tests it is next tested for potency. It must contain many of the powerful little anti-bodies, the cholera's natural enemy. To make this test healthy young pigs, usually eight in number, are inoculated with cholera virus. Six of them receive serum also, but two do not. These two must sicken and die in from eight to twelve days, proving the virus to contain virulent cholera infection. The six inoculated with serum also must remain alive, in the same pen, and be perfectly healthy after the others are dead. If these things so happen, then both the serum and the virus are considered proper for use and are used in immunizing the 200-pound hogs as before stated. The virus must kill the two and the serum must save the six or either or both will be discarded and not used. All serum and virus used in manufacturing or sold to customers should undergo these same rigid tests.

Returning now to the immunizing of the 200-pound hogs from whose blood serum is to be made, let us follow the process. After giving them the simultaneous inoculation of both serum and virus a wait of fourteen days ensues, during which time the hog is closely observed. If at the end of fourteen days the temperature is perfectly normal and the animal is on full feed, gaining in weight, then virus taken from the virulent-blood pigs (pigs

suffering from cholera infection) is injected into the blood of the hog, in its ear veins, to the amount of nearly one quart to a hog weighing 200 pounds, or precisely five cubic centimeters to each pound weight (1,000 cubic centimeters are equal to approximately nine-tenths of a quart). Already having immune blood—i. e., blood containing serum full of the anti-bodies—in its veins, the anti-bodies begin multiplying rapidly to protect themselves from the cholera virus and become very numerous and active, destroying or rendering harmless the cholera germs, as described in the first article. The blood thus filled with active anti-bodies is now serum blood. The hog is now known as a "hyper-immune"—that is, he is not only immune to cholera, but his blood is so strongly impregnated with anti-bodies that it will, when injected into the blood of other hogs, render them also immune.

Our photo at the top of this article shows a bunch of hyper-immunes being taken out of the pens for the purpose of drawing some of their

Upper—Drawing serum blood from the tails of hyper-immunes.

A College Education for the Farm Boy

By One of Them Who Is Earning It

Realizing that there are many farm boys who yearn for a college education, but who hesitate because of lack of funds, I would like to offer them some encouragement by showing how some students are working their way through college either in whole or in part. In these modern times there is intense competition and, every time, the trained man gets the job. This is just as true of agriculture as it is of any other occupation.

Farming, up to the present time, may be classed as pioneer agriculture. True, much money has been made, but it is partly because of the increased value of land and partly because the farmers have sold the fertility of their soil. Now comes the test, and science

Hard at Work for Greater Knowledge

is to play an important part in the real farming that is to be done in the future. The farm boy of today needs practical education as the farmer of the past never needed it.

In my association with the students at the agricultural college in one of the most progressive middle west states I find a variety of reasons for taking the agricultural course. Some come to prepare themselves for taking charge of their home farms, a few come because they are sent. Most of them, however, are here because they regard farming as a wholesome, respectable and fairly profitable profession. Most farm boys enjoy the free outdoor life of the farm and have no desire to engage in any other work.

From my own observation and experience I believe it is possible for the average farm boy to secure a college education, providing that he has reasonable health, has no one depending upon him and has a determination to work hard and to accomplish things. In this college are boys who are earning either all or part of their expenses and are progressing and the fact that they are working their way has no hurtful effect upon their social standing in the university.

One man, now a junior, told me that he had just \$48 when he left home to enter his freshman year and he returned home the next June with \$33. Of course this is an exceptional case and I would not advise all boys to try it on such a narrow margin, because many would fail. I find that the best plan is to stay out one or possibly two years after graduating from high school and the money one can earn in this time will enable him to get acquainted with the ways of earning part of the expenses. Then there are the summer vacations, which can be turned into money. Of course, the student must live with reasonable economy, but for his own benefit he should not confine himself to his work and studies too closely, because there is much to be gained by association with other students and in participation in student affairs.

Boarding clubs around the university offer good chances for men who want to work. The manager gets his board for keeping the tables full, and then there are one or two waiters and in some cases a helper in the kitchen. The university can not be depended

upon to furnish very much regular work, although a few students find employment in the dairy barn or feeding the beef cattle and the sheep.

Laundry routes and clothes pressing clubs provide money for some boys who have plenty of energy and business ability. Selling pictures, writing paper and insurance are quite profitable. Probably one of the most remunerative of all employments open to students is the selling of college pennants and pillows. One man who graduated a few years ago told me that he sold over \$1,200 worth of these articles in one year and his share of this was more than enough to pay his way for that year.

There are many odd jobs around the university which can be obtained through the college Y. M. C. A., which maintains an employment bureau. This department secured work for needy students amounting to several thousand dollars last year and always stands ready to give advice to new students.

Many families are glad to give room and even board to deserving students in return for firing furnace, mowing the lawn, cleaning carpets and other odd jobs around the household.

Upper classmen—that is, students in the third and fourth years—often earn something by writing for agricultural papers and acting as local correspondent for some city newspaper.

These are the most usual methods of earning expenses and the amount to be derived from this depends upon the student's ability. There are boys who are doing it every day in the year, however, and they seem to be none the worse for it.

One who is working his way must put forth a greater effort than if he were doing nothing but attending to his studies. But his capacity for work will increase and the chances are that he will find time to do both his college work and his earning duties properly up to a certain limit.

I have found that a large per cent of the graduates of the agricultural

The Home Back on the Farm

college return to the farm, either to the home farm or as a manager of a farm on a salary. These men probably are the most valuable to agriculture, as they go directly to the farm, pro-

duce results and improve the farming methods of the community. One graduate refused an exceptionally good salary elsewhere in order to go back to the home farm and live his own life. He thought that he could make just as much money and be better satisfied. Several secure positions as teachers in other colleges or in high schools. Others take up experiment station or government work, others become journalists. A man with a college training can go into the commercial world and learn more than the man lacking college training about some one thing, become an expert and earn a large salary. There are so many things that a graduate of an agricultural college can do that a student of fair ability, who has conducted himself properly during his life at the university, need not worry for a position. He has to "produce the goods," however, but his training should enable him to do that.

The question is well summed up in the following extract from the handbook issued by the Y. M. C. A. of one of the great agricultural schools:

Handling the Wheat Crop

By John Underwood

An exceedingly big crop of wheat is ready to be harvested and it is "up to us" who have the crop to so handle it as to obtain the most for it. In my opinion the time to cut wheat is when the straw just below the head and above the last leaf is a golden yellow and the grain in the hard dough stage. If cut before, the grains will shrivel and there will be many light kernels. On the other hand, if allowed to become overripe, loss ensues from the shelling of the grain. The grain should be shocked as fast as cut. I put twelve small bundles in a shock. Large bundles do not dry out as rapidly and are heavier to handle. In making the shock the sheaves are set squarely and solidly meshed together at the top, but at reasonable angle at the base, so that the shock will be solid. Two cap sheaves are placed on. When properly erected the shock will be perfectly round, from all directions, and will fully protect itself from winds and the grain will quickly cure.

I have always considered it better to thresh from the stack than the shock, hence I stack my grain. In threshing from the shock many more teams are necessary. The shocks present a larger area to the rain and do not shed the water and protect the grain so well as properly put up stacks. Besides, there is a good deal of grain lost through waste by way of loose stuff left in the field. Field pitchers will not at threshing time take up the loose grain about the shocks. Taking these things into consideration, I am convinced it pays to stack every season and thresh any time after the grain has been in the stack two weeks. The stacking must be properly done. I have had a good many years of experience in stacking and exercise the utmost care to see that each operation is properly executed. In selecting a site for the stacks any level spot high

"It is not often wise for a student who expects to help himself through college by working to enter until he has in sight three-fourths of the money necessary to pay his first year's expenses. Students already in school will have engaged the good jobs; the new men should not expect to step into a good job at once. Success in working your way through school requires experience and pluck. The man earning his way has a double chance of failure—failure to get work shuts off supplies, failure in your school work puts you out of school. A hard success in getting your education is little better than a failure and the man earning his way sometimes does it at the expense of his education. If, however, you want an education bad enough to make the sacrifice, you can get it even though you have to make your way while doing it. The work is a man's work and he must be a strong man that can do the work in a satisfactory manner and at the same time work for his living while doing it."

enough that water will not lie in case of rain will do very well. Care should be taken to see that the ground is level, otherwise the separator is likely to waste grain. The shorter the haul from the shocks to the stack the better.

It is not an easy matter to make a man a good stacker by just telling him what to do. Showing him is better and yet only actual experience and natural ability will make him proficient. I build my stacks about two-thirds as wide as they are long, endwise to the separator and in fours, just wide enough between the inside ends to let the feeder and belt in. About ten good loads are put in each stack. I begin by making the bottom somewhat smaller than the bulge of the stack, gradually swelling until the "eaves" are reached. The "eaves" are made by shoving the eave sheaves out about six inches. Two-thirds of the grain I put in the body of the stack and one-third in the top above the eaves. The center from the bottom

The Old Hand-Rake Reaper

(Photo from I. H. C.)

to the top is kept well tramped and high. Above the "eaves" I keep the center filled so as to slant the outside layer or round at about 45 degrees. The sheaves are laid like shingles and when the stack settles the shingled sheaves are so steep that the most driving rain is baffled. Many stacks are made imperfect by drawing in above the eaves too abruptly. Draw in slowly at first, increasing until the top is reached, giving the top an egg shape from eaves to peak. Carry the ends of long stacks perpendicularly up to the peak. Lay two or three layers of sheaves crosswise of the ridge so as to make sure of no rain getting into the center of the top of the stack. To keep the cap sheaves from blowing off, a double strand of binder twine, to the ends of which are attached weights of wood or stone and laid on top of the caps, will generally keep them on. If a stack should slip the builder will know that he either did not tramp the foundation enough or has made his stack project out too far.

Who Pays for Advertising

You do and you don't. All merchandise must be sold. Perhaps the most common method is by word of mouth—traveling man to jobber, jobber's traveler to dealer and dealer to the consumer. For unknown brands of even standard merchandise that is a very costly method of selling.

Just here is where advertising helps. If it's well advertised you ask the dealer for it, the dealer asks his jobber and the jobber seeks the manufacturer. It's easier and advertising helps to sell, that's all.

Buy from advertisers in UP-TO-DATE FARMING. They are guaranteed.

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Where wheat is in the shock and has become wet from rains and threshing is done from the fields, much of the grain will go into the bins very damp. It is a serious mistake to thresh grain when damp, because it is frequently the cause of serious loss. When one is compelled from any cause to thresh his grain wet he should lose no time in taking immediate care of

The Self-Rake Reaper

it, otherwise it may damage or spoil before he is aware of it. A few dry bricks thrown into the grain as it is put into the bins will absorb large quantities of moisture. Sticks of very dry stove wood will answer the same purpose. A dry cedar post or sticks of dry cordwood from poplar, basswood or jack pine trees will absorb their weight in moisture from a bin of damp grain. This has been demonstrated thoroughly on several occasions when damp or wet grain was being stored. Burlap or jute sacks filled with dry chaff, when buried in a bin of damp grain will absorb moisture readily and also provide space for air. The simple and inexpensive methods of protecting wet grain such as I have mentioned above are practical and are much more desirable than shoveling it over and over day after day, as is usually done, in order to keep it from heating. Grain that has been allowed to get hot in the bin is worthless for seed. Musty wheat is no good for flour and should not be used or sold for that purpose.

HOG CHOLERA—ITS CAUSE AND TREATMENT

(Continued From Page 5)

blood for the manufacture of serum. They are placed in crates in which they are confined, lying on their feet, naturally. The crate, hog and all is then covered with a white cloth, through which the tail protrudes, and a piece of the tail about one or two inches in length is cut off, the blood flowing into glass jars. After about one quart has been removed the bleeding is stopped. The bottle is labeled, numbered and recorded and its contents kept separate from all others until final tests before described for purity and potency have been made, proving it absolutely free from harmful bacteria of any kind whatever and its power to counteract cholera demonstrated beyond doubt.

After several days the hogs are bled again and after another lapse of time the third time, each time by cutting off a section of the tail. Another bleeding is made later through the jugular vein, taking all the blood and killing the hog. All of this blood is used in making the serum.

The bottled blood is then taken to a room, the "clot" removed and the serum sent to storage until the tests are completed and the product ready for market.

The carcasses of the hyper-immunes, after final bleeding, are sold to meat dealers, being fully as good for food as any.

The first article, and this one thus far, together with the photographic illustrations, gives a fairly complete account of the discovery, manufacture and use of the serum method of cholera prevention. Thoroughly understood, we can see how it is possible for it to do the work intended only if it be pure and potent, manufactured and tested with the utmost care and

administered in the right manner by those who know how and are conscientious in their work, for even with serum of good quality a careless or ignorant workman may do harm rather than good.

In conclusion, I should not feel my duty fully done if I neglected to impress upon every farmer the necessity of using every precaution to prevent cholera from reaching his herd, from the sanitary standpoint. Keep cholera away from your farm if possible. Give your hogs the most approved sanitary conditions, keeping them in high state of health and vigorous. Keep their eating and sleeping quarters free from dust and filth. Clean up and disinfect the pens frequently. Shoot the pigeons that carry germs from one farm to another. If your community is not organized, organize at once. This sanitary work is a work for co-operation. Do all that can reasonably and profitably be done and as a rule it will be all-sufficient. But if cholera should break out in the neighborhood, or in your own herd, which, regardless of your precautions, is possible so long as cholera exists and birds, dogs and men travel about, be ready to make proper use of a good serum. It is precaution against heavy and needless loss.

+ + +

Editor's Note—Sanitary Prevention of Cholera will be given in an early number.

BUCKWHEAT AS A CATCH CROP

Pure buckwheat flour is a scarcity in any market, principally because the buckwheat grown nowadays is made into a mixture flour and sold as buckwheat, yet containing but a small percentage of the grain. The demand for buckwheat even for this purpose is much greater than the supply. Hence buckwheat raised in any quantity, of good quality and intelligently marketed, usually nets the producer a fair return.

Buckwheat has the advantage of being able to mature in a short sea-

son. On suitable soil, when corn makes a failure by reason of inadequate stand, flood or early summer drought, buckwheat can be sown with a reasonable expectation of making a fair profit.

The three principal varieties grown are the Japanese, the Silverhull and the Grey. Both plants and seeds of these three varieties differ in size, the Japanese being the largest and the Silverhull the smallest. There is probably little choice as to variety, though some prefer one to the others. The yields are most variable, from fifteen to thirty bushels to the acre being commonly expected. Under favorable conditions much more than thirty bushels may be harvested, while under very poor conditions a New York farmer is said to have sown four bushels and harvested three!

From three pecks to one bushel per acre is commonly sown, the better the soil the lighter the seeding.

While this grain, like ordinary wheat and corn, will adapt itself to a wide variety of soils, it does its best on a rich, well-drained, light loam. It is often sown with good success on even such heavy, sour soils where other grain would not be expected to yield anything like satisfactory returns. While it has marked ability to take care of itself under hard conditions, yet it well repays good soil and good treatment. Requiring cool weather for the proper development of grain, it should be sown as late as possible to insure maturity before frost. The range of time for seeding covers about one month, beginning the 15th of June.

Commercial fertilizer in form of phosphate and potash is used with excellent results, and phosphate alone is in most cases very beneficial and profitable applied at the rate of about 500 pounds per acre.

When buckwheat is grown as a regular feature in the farm operations the ground should be plowed as early as possible, several weeks prior to seeding, and then kept harrowed and

in good tilth until seeding time.

Buckwheat is ready for harvesting about eighty days after sowing. It should stand as long as it safely can, as it improves in weight as the days go by, but every effort should be made to have it cut before even the slightest frost. It is usually harvested with a cradle or drop reaper.

All our readers who want pure buckwheat flour for home use, in making the delicious and delectable old-fashioned buckwheat cakes, for which there is and can be no substitute, should grow their own grain and if possible get some honest home miller to grind it.

THE HOME CANNERY

Putting up fruits and vegetables in cans for winter use has never received the attention from the average family it could profitably give it. There are plenty of opportunities for money making and money saving by a more extensive means of canning products of orchard and garden than the cook stove, stewing kettle and glass jars. A home canning outfit is not expensive and the work is not difficult, while the products thus saved will pay the cost of a good canning outfit the first season, and much more, if there are sufficient supplies of products to be canned. A man, a boy and two or three women or girls can put up 500 cans a day with a small-sized apparatus. Many farmers buy canned goods in winter which they might readily produce on their own farms, and home-canned products can be made far superior to factory put-up material. Other people soon learn the truth about this and when one establishes a reputation for packing high class goods the home cannery can out-sell the commercial product without difficulty. Retail merchants and even wholesale houses are on the watch for strictly fancy home-canned foods, which they desire in preference to others, finding them to sell better and give better satisfaction to the consumer.

The family living on a small farm should make a study of home canning. Small farms are especially adapted to the growing of fruits and vegetables and much of these crops can be marketed most profitably in cans.

There is no "secrets" or "luck" in the canning business. It is a very simple matter. The material to be canned must be heated to an extent that every bacterial organism which causes the product to spoil is totally destroyed. Then the air must be excluded to keep more from getting in to the food and if this properly done the canned goods will keep indefinitely. To do it properly only pure, wholesome, well-matured products should be used, everything kept clean, the sterilizing or cooking done to the extent and in the manner required for the different products handled and then the cans properly sealed.

There are excellent home canning outfits on the market, for any sized farm, which can be bought at a very reasonable price. The manufacturers print books of instructions which any one can follow and succeed. There are a few books and a number of bulletins on this subject, so no one need fail for lack of information, material or opportunity.

It is a matter well worth the farmer's study.

"Large crops have never brought about hard times," says the Grain Reporter. Now read this: "It is a curious fact agriculture was really prostrate twenty-five years ago, owing to great overproduction of foodstuffs, and corn was burned for fuel—wasn't worth hauling to market."—The Banker-Farmer. Evidently all great minds don't run in the same channel, nor do all authorities authorize in harmony. We burned 10-cent corn as fuel on the Nebraska plains in 1888 and, remembering the "times" quite clearly, we believe it is up to the Grain Reporter to revise its statement.

New Perfection
Oil Cook-stove

No Heat, Dirt
or Trouble

No Smoke
No Odor
Clean
Convenient
Money-Saving

Cook With Oil
and Keep Cool

Don't put up with your coal range another hot summer when a NEW PERFECTION Wick Blue Flame Cook Stove will keep the kitchen cool and make the heavy summer cooking easy.

Has a cabinet top, with warming shelves, a splendid portable oven, while the special odorless broiler broils on both sides at once.

Does everything a coal range can, without its suffocating heat. A blessing on washing and ironing days. No coal or ashes to carry.

A million NEW PERFECTIONS are now in use in comfortable Middle West kitchens, many all the year 'round. And the number increases, each season, by scores of thousands.

Your dealer can show you the different sizes—two, three and four burner and explain their exclusive features. Ask about the newest PERFECTION with Thermos oven. See him before the first warm day, no need to endure an hour's discomfort.

72-Page Cook Book Free for 5 Cents to Cover Mailing

The Standard Oil Co., Chicago, Ill.

(AN INDIANA CORPORATION)

(182)

A NEW PERFECTION is an investment that pays because of the big saving in fuel cost. Oil, the most convenient of all fuels, the cleanest and one of the safest, is also by far the most economical. Soon saves the price of the stove.

Strike a match and your fire is ready, turn it off when you are through. Filling the patented supply reservoir is practically all the care required. No smoke or smell, none of the dangers of gas-oil.

For Best Results Use Perfection Oil.

The Hired Help Problem on Large Farms and How to Manage It

By W. Clement Moore

THERE is a vast difference in farm methods so far as the management of the work of the place is concerned. In visiting several different farms in a day one may notice the contrast to a marked degree. At one farm we find fences down, weather boards off the buildings, shingles loose, crops weedy and a careful inspection reveals many other odd jobs which ought to be done, while the hired help may be found going slowly to their work arguing over details and methods of working with the farmer himself.

Another farm will show us a "cleaned-up" appearance with most of the "odd jobs" done. It will show the different men employed on the farm busily engaged with some definite task which has been planned for them by a "real farmer" and the directions he received from that farmer were short, simple and easy to understand. There was no chance for argument or debate, for the "help" were made to realize that the farmer knew his business.

The success of this second farm must of course be greater than the first, because there is no waste of either work or energy.

A successful farmer recently remarked: "Show me the farmer who is unable to keep his men busy and I will guarantee him to be a failure in less than three years."

And there is a large amount of truth, as well as a wise suggestion, in what he said.

A "plan book" will help to map things ahead so it will not be difficult to keep a force of men at work, or even a vest pocket notebook will help greatly in this matter. But most of all, the farmer must look ahead and learn to be a keen observer. It is a wise plan never to go to bed at night without knowing exactly what should be done the next day. Of course, circumstances will occasionally arise which will prevent doing just as intended, but systematic planning is a feature of all the best-managed farms.

The practical reason for this method of handling help is best illustrated by supposing that the average cost of farm help is \$10 a week. During a year we will suppose that three men employed spend only fifteen minutes each morning and afternoon in arguing and debating various ways of doing their work either with the employer or with the other help. This is a waste of a half-hour of 312 working days, which is equal to more than fifteen working days or more than two weeks for each man, making a total loss of \$20 for each man, or \$60 for all.

I do not mean by this that there should never be fifteen minutes spent in talking or discussing methods, for it is a wise thing sometimes to do so, but I am speaking of useless discussion and loafing. Nor is it wise to work without pause or rest at any hard labor, but even in this some definite program should be arranged so it is understood pauses may be for rest only and not to fool away time. Such things may be easily brought about without seeming to be harsh and unjust in any way.

If one allows his men to waste two weeks or more of time each year it would be far better to keep them busily employed while at work and give them a week's vacation on full pay. They would enjoy it better and you would receive much greater credit for it.

Again, many farmers prefer to pay their help low wages and "throw in" all vegetables, etc., used by the "help," as well as firewood and house rent in many cases. This is all very good and proper if the employe is brought to realize what he is receiving. Thus if you pay him \$1 a day cash and give him various things figure it up in this way:

Wages for the year..	\$365.00
House rent.....	50.00
Potatoes, fuel, etc. . .	50.00

Total\$465.00

Thus you can make it clear to him that he is really receiving almost \$40 a month instead of \$30.

It is best always to have a complete understanding with men before they are employed, and if you draw up an agreement in which your obligations and his are clearly set forth it will be found profitable. This is a simple matter and will prevent all sorts of trouble and misunderstandings.

Help should be kept busy, but it does not follow that they need be treated unfairly in any way. Give them a square deal and show appreciation of the man who works to the interest of his employer.

Large farms should have the work so organized that certain men may look after certain kinds of work, and in fact all chores should be assigned to each man so he will know exactly what is expected of him.

HOW LONG OUGHT A TENANT REMAIN ON THE FARM

THERE are two sides to this question. One is the tenant's side, the other the owner's. The farm owner fortunate enough to secure a successful farmer

as a tenant wants him to stay—the longer the better. An incapable one is unwelcome as soon as his shortcomings are known. A good farmer who is a renter should prefer to remain on one farm until circumstances compel him to leave, or he buys a farm of his own, provided the farm is one adapted to him and the owner gives him a fair deal.

There is no question but that the farmer who stays on one farm continuously can do better year after year than if he is constantly changing. It requires three or four years to learn a farm and then longer than that to bring it up to maximum returns. Frequent changes effectually prevent a man from becoming a thoroughly efficient farmer and the farm itself suffers from the lack of systematic treatment. The farm owner suffers because of the failure of his farm to increase steadily in productiveness and yields.

There is too little care taken in the selection of a farm by a renter, and also on the part of the owner in leasing the farm. It usually is a matter of haggling over terms. Of course, terms are a very important feature, but not the only important one, by any means. Every farm should be operated on a system adapted to it. Its size, topography, character of soil, location and condition of improvements all have a direct bearing on the system of farming which should be adopted. Every farm should have such a system or policy as a permanent plan. Once established, no tenant should be permitted to change it for another except he can demonstrate that the change will be adapted to the farm and will be for its greater improvement. The farm

owner should exercise care in the selection of a tenant, getting one that will be able by experience and ability to fit in with the system of farming employed on the farm. The renter himself should choose some specific line of farming, study out the system best adapted to that line, and then, in seeking a new location, try to find a farm he can handle to advantage. He should also make investigation as to the performance of the prospective farm in former years, the general character and peculiarities of the owner, and be prepared to have a perfect understanding at the very beginning. The owner and renter should thoroughly discuss the plans of farming, so the owner may know what sort of a farmer it is he proposes to place in charge of his farm, and the renter may know how his own ideas may fit with those of the owner.

This is a matter which has not heretofore received the consideration its importance deserves and which the future welfare of agriculture demands. It is coming more to the front as the necessity for it becomes greater.

FARM HENS PAY OVER \$3 PROFIT APIECE

On our little ranch in western Oregon we derive much profit from our poultry. In 1912 we bought three settings of Plymouth Rock eggs, which we hatched in an incubator. These were hatched July 4. We sold the roosters and the cull pullets at market price and saved twenty of the best pullets as layers.

These pullets were separated into two pens of ten hens to each pen. The pens were 25x25 feet, the houses 8x10, made good and tight of shiplap, with open front enclosed with wire netting, and burlap curtains were used to keep out drafts.

The roosts were placed three feet above the floor, with dropping boards beneath. The floor of the house was used as a scratching department, and all grains were fed there in deep litter. In the mornings wheat was fed in the litter. At noon a wet mash, consisting of equal parts of rolled oats, bran and shorts, was fed, and at night a variety of grains were scattered in the litter. We fed this rather early in the evening so that all the hens could eat all they desired before roosting time. We kept dry mash, oyster shell grit, charcoal and green before them at all times.

The houses were built off the ground to allow a dry scratching and dusting place. Here I emptied all ashes from the stoves.

From these pullets, from March 1 until the following March, we got 298 dozen eggs, or an average of 179 eggs for each hen. For the year we received an average of 23 1-3 cents per dozen for eggs, making an amount of \$84.43. From this we deducted \$1.20 for feed for each hen, leaving a net profit of \$60.43, or \$3.02 net profit for each hen. My husband is a member of the Farmers Society of Equity. We receive UP-TO-DATE FARMING and like it very much.—Mrs. Hattie Burke, Clatskanie, Ore.

"We farmers must learn to advertise our products. One of the biggest problems that confronts us is that of getting next to the consumers. Modern advertising is the life of all business and should be made to serve farmers as well as manufacturers."—Successful Farming. UP-TO-DATE FARMING taught this doctrine 'way back in 1903, in a series of articles. Other papers are coming along the right road, even though they are miles behind us. And before we leave that advertising matter, let us say that only through organization and co-operation can it be made to pay the average farmer. Some day other farm papers will tell you the same thing, but why wait?

Buy a car the way you'd buy a farm. Two 80's lying side by side may vary 50% in worth. So the shrewd farmer examines the soil, carefully inspects the buildings, the fences, the drainage, the water supply. He takes the farm all apart. Then, and not before, can he compare the value with the price asked.

Can a car be bought that way? Yes, it MUST be bought that way if the buyer is to be permanently satisfied.

Stop and think before putting the price of several acres into a piece of machinery! In the name of reason, why not analyze the value while your money's yet your own?

Let us examine a typically well-built car—the beautiful Detroit. Take the motor first. It's a 32-h. p., long stroke, ball-bearing motor (3 1/2 x 5), carries its capacity load anywhere its wheels can find traction—and that is not barring 50% grades, either.

The Detroit rear axle is full-floating and laughs at 2,000 pounds overload. Ask the man with a sagging axle how he likes it—he'll tell you something about the good sense of comparing before buying.

Your own mechanical judgment will tell you that the Detroit rear platform spring is superior construction. A ride over rough roads, thank-you-moms and all, will clinch the spring question.

Durability is also a big factor. Continually sending to the factory for repair parts is both costly and annoying. From January, 1913, to January, 1914, every Detroit car in operation (young and old) averaged only \$3.81 per year apiece for repair parts.

Now aren't these the sort of facts your judgment tells you to get before buying that car? Wouldn't you buy a farm, or a horse, or a plow in this same careful, sane, particular way?

Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

A BOY'S HOGS IN LOUISIANA

(Awarded First Prize of \$3.00)

In 1911 I joined the Hog Club, which was one of the first organized in southern Louisiana. Taking the advice of the State Department of Agriculture, I purchased a pure-bred Duroc Jersey gilt for \$20. Her sire, Prince Pilot, No. 31,125, took first prize at the Chicago Fat Stock Show in the yearling class and her dam was a county prize winner and both had previously belonged to E. S. Kelley, a prominent breeder in Ohio, he selling them to a breeder in this state.

I made the purchase without telling my father of the price, my mother being my confidant. When I finally told him he was dumbfounded to think that I had given such an "exorbitant" price for a pig just weaned, and many were the jests about me and my pig.

Paying no attention to them, I fed my pig on skim milk, potatoes and corn meal, trying at all times to give a balanced ration. When about three months and a half old she weighed ninety pounds. This was to me a wonderful weight, for we had pigs which were eight months or more of age and would not weigh more than eighty pounds. I told the skeptical farmers who saw her of the difference in weights and they sneered and said: "I reckon that thar hawg weighs so much 'cause you fed her on cooked grub and milk. You take one of them razorback hawgs and put it with that one and feed them both the same and they'll both weigh the same."

To test this point I had put a common pig in the same pen with mine. Both got the same feed and treatment and my pig continued to gain on the other, two to one.

I allowed her a large grazing patch of lespedeza (Japan clover), a leguminous grass somewhat resembling alfalfa. A box of salt, ashes, charcoal and coppers was kept in the feed pen.

When my pig was six months of age she weighed 210 pounds, the other about 120 pounds. The pig I placed with her was much better than the usual run of razorbacks, for she was about one-eighth Duroc Jersey.

At eleven months my pig weighed 385 pounds and I took her to the parish fair, where she won over all other breeds. I was given a pure-bred pig and \$3 as my prize. She was then sent to the state fair and I was given a free trip there also. She won a prize of \$10 and I was given a free trip to Columbia, S. C., to the International Corn Exposition. February 15th she presented me with a litter of ten fine little pigs. I lost one of them, mashed when one day old. I sold the whole bunch when they were about three months old for \$10 per head. I bred the sow again and she farrowed eleven and despite careful attention two were killed.

I sold four when ten weeks of age for \$10 per head and one when three months old for \$12. I have four left and am at present corresponding with a party who wishes to purchase these for \$15 per head. It will be seen the price for my pigs is increasing as my reputation grows, for every pig that I have sold has taken a prize when shown at the parish fairs.

I have a bunch of grades fattening for meat. We intend to ship a car

load to Fort Worth, Tex. It will be a co-operative shipment, for we have organized a shipping club and ship produce by the car load instead of small individual shipments.

I have the satisfaction of selling hogs to the very men who laughed at me the loudest. It took them a long time to find out that one razorback hog would eat more corn in two years and make no gains worth mentioning than a fine hog could in eight months and weight two hundred and fifty.—Bentley Mackey, Hope Villa, La.

DON'T NEGLECT FRUIT RAISING

(Awarded Second Prize of \$2.00)

I have been strongly impressed by the average farmer's indifference to growing fruit as a permanent feature of his farm practice and for the purpose of profit. Rightly managed, fruit growing can be and should be a valuable adjunct to mixed farming. The kind of fruit to be grown depends wholly upon the location and the soil conditions of the farm. (This should be carefully studied with the help of the state agricultural college.)

Many farmers have told me they "tried" fruit raising, but it was such a failure they were convinced it could not be profitably done in these days, especially in their particular locality. Invariably investigation has shown that they bought any kind of stock from almost any agent or nursery, without any regard for its real quality, its suitability to the farm and its chance in the market, or its place in connection with the regular run of the farm's operations. Fruit trees and plants are more often than not selected by their pretty pictures in some catalog, or agent's book, or from beautifully preserved specimens preserved in alcohol. Where they were grown, or how, makes no difference to the purchaser when selecting. Neither does he look into the matter of markets nor study whether or not his other farm work will permit giving it the proper attention at the time attention is needed. No farmer would plant corn if he knew that during corn plowing time he would be so busy hoeing cotton he could not take time to plow the corn. The same rule should apply to fruit.

A fruit tree isn't a forest tree and will not do its work under forest conditions—that is, it will not grow and do its duty without care. The farmer who actually desires to have good fruit, plenty to eat and some to sell, can do so if he will take the time and trouble to learn the rules governing successful fruit growing and be willing to do his part by his trees and plants. The expense in time or money will not be at all heavy and the returns will be profitable.

Marketing the surplus is one of the problems the average farmer really believes is a matter of luck or chance. Not at all, if system is given attention. First get a marketable product, then produce it in marketable quantities and put it on the market at the right time and in the right manner and it will pay, and pay handsomely.

Community co-operation will do far more in this connection than individual enterprise, especially for the farmer who does not specialize or have time or opportunity to give much care to the marketing of the crop. A number of farmers should plan together in

producing fruits in a total quantity that will command attention, and then market as a unit. A co-operative cannery can be made profitable in many cases.

There is no lack of opportunity to add greatly to the attractiveness and profit of home life on the farm in the production of more fruit. The luck is for the men who will take advantage of the opportunities at hand.—One Who Observes.

SUCCESS WITH MIXED FARMING

(Awarded Third Prize of \$1.00)

Not every farmer can be a specialist. The opportunities for successful specialization are limited. The great majority of us must do general farming in the general way and win our rewards from the products that are lost to individual identity as soon as they arrive at the shipping station.

In the section of Kentucky where I live mixed farming is the most profitable, when the growing of live stock occupies an honored place on the chart of farm management. All our best farmers practice some form of crop rotation, each selecting the system which seems to him best suited to his soil and labor force. Tobacco, corn, wheat, oats and grass are our leading field crops, but many good farmers contrive to add a little rye, sorghum, beans and other minor crops to fully round out their operations.

Probably half the area of our cultivated lands is kept in grass or other forage crops for stock feeding and we have found most conclusively that the best stock we can raise will return us the highest percentage of profit. It is the rule, and a wise one it is, that all grain and grass should be sent to market in live stock.

A few years ago this section was a "one crop" section. We put our faith in tobacco, pinned all our hopes to it and placed our dependence in it year after year. We tried to make this part of the country one great tobacco field, and succeeded to our sorrow. Tobacco became so much of a good thing it wasn't good at all. Our soils became depleted, our corn cribs empty, our smokehouses vacant and the land covered with tobacco was in many cases covered also with mortgage. But we came to a realization of the futility of the one-crop method and we have put new faces upon both country and man. We are not soil miners, but constructive farmers, who understand that a farm, as well as cattle and hogs, require "balanced rations."

Verily, we live on the fat of the land.—Noah P. Greear, Index, Ky.

DOING THE EVERLASTING CHORES

Don't keep the boys and the hired man half the night doing chores. After the day's work is done there generally ensues a long list of chores to be done. It is hardly fair to expect a man to do a big day's work and then extend it far into the night. No wonder the boys get disheartened and leave the farm.

In offices and shops there are no chores after working hours. Quit regular work in time to do up all chores by supper time if possible. By planning this can generally be done, except in the very busiest seasons. Let the boys and hired man have the evenings to themselves, the same as they do in other kinds of work.—A. C. M.

Too Much Exercise

"Doctor, do you believe in athletics?"
"Indeed I do. It is a most excellent thing."
"Then I guess I'm all right, for I've got a tooth that's aching and jumping like thunder."

MILKING MACHINES

Viewed from a mechanical stand-
point, milking machines cause very
little trouble in operating. It is safe
to conclude that with reasonable care
the milking machine can be success-
fully and profitably operated on the
average farm having at least twenty
cows.

Cows giving a large flow of milk
are easily broken to the use of the
machine. In general little difficulty
is experienced in getting any of the
cows accustomed to the milking ma-
chine. The operator, in order to op-
erate most successfully, should study
the individuality of the cows.

It is best to strip the cows at once
after the teat cups are detached to
make sure that no milk remains. If
the teat cups are properly attached
very little milk remains in the udder
after the cow is milked by the machine.

No definite statement can be made
as to the effect of machine milking
upon milk and butter fat yield, as ex-
periments have not extended over a
sufficient period of time. Results in-
dicate that if the machine and cows
are properly handled the amount of
milk and butter fat is not materially
affected by machine milking.

Milk drawn by machine is free from
sediment and other visible impurities.
It, however, contains more bacteria
than does the milk drawn by hand
into a partially covered pail.

The barn air drawn in by the ma-
chine is an important source of con-
tamination. By filtering this air
through cotton filters the bacterial con-
tent of machine-milked milk can be
greatly reduced.

The germ content of machine-milked
milk can also be reduced by soaking
the various rubber tubes and teat cups
in an antiseptic solution.

SELECTING THE BREED OF SHEEP

In all there are thirty breeds of
improved sheep. Of these, twelve are
already well established in the United
States and others are gaining in popu-
larity. Each has its own points of
superiority and the farmer must be
guided in his choice by the individual
conditions.

Although it is hardly to be expected
that every farmer in a neighborhood
will select the same breed of sheep,
there are several advantages to be
derived from a number doing so. For
example, new rams can be purchased
for the common benefit when any in-
dividual owner might well hesitate at
the expense, and if the lambs are ready
in large numbers for market at the
same time, they may be shipped cheaply
by the car load or the buyers may find
it worth their while to come after
them.

No system of sheep farming is likely
to be long successful which leaves out
of account either wool or mutton. One
or the other, however, may well be
emphasized according to local condi-
tions.

In order to assist the farmer in this
choice the United States Department
of Agriculture has published Farmers'
Bulletin 576, "Breeds of Sheep for
the Farm," with descriptions and
photographs of the principal breeds,
together with the addresses of the sec-
retaries of various breeding associa-
tions, from whom additional informa-
tion can be obtained. These breeds
may be divided into three main groups,
the middle wool, the long wool and
the fine wool. All the middle wool
breeds have been developed primarily
for mutton. The long wools also are
bred chiefly for mutton. They are the
largest of all sheep and thrive best
where food can be obtained without
much travel. They do well also in
regions of excessive rainfall. The fine

wools, including the American Merinos
and the Rambouillet, have been bred
almost entirely for their wool alone.

Some of these may breeds, says the
bulletin, should be selected and main-
tained, for it is rarely good policy to
cross sheep.

EDUCATING A COLT

A noted horse trainer and a friend
of his were walking through the exhi-
bition grounds at one of the large
state fairs last fall and the horse
trainer, following his natural bent,
finally drifted over to where a large
number of horses were tied. They
passed twenty or thirty with various
comments, but paused when they came
to a beautiful black colt. He was
champing his bit, pawing at the ground
and restless in every way. At a dis-
tance he was beautiful, with his arched
neck and his graceful form, but as
they came closer his vicious eye and
his disagreeable manner marred his
beauty.

The horse trainer reached out his
hand toward the colt, but only to be
snapped at viciously.

Turning to his companion, the
trainer said: "This is a result of
neglecting the colt's early education.
Without a doubt there were a couple
of mischievous boys on the farm where
he was raised and they teased him un-
mercifully. They forgot to put on a
kicking strap, too, when they first be-
gan to train him, I'll bet."

"Why?" asked his friend.
"See how the dashboard is scarred
on the buggy. He is not a vicious
kicker, but when he gets a little angry
he shakes his feet."

Just then an ill-natured farmer
came up, untied the animal with a
few slaps and jerks, jumped into the
buggy and drove away.

"That farmer is another good rea-

son for the cranky colt," said the
trainer. "No person has a right to
train a colt who is not sympathetic
or at least possessed of a little 'horse
sense'."

If you are training a colt it will pay
you to think of what this experienced
man said.

FEED 'EM ON COAL

In a certain farming community a
few years ago nearly every farmer lost
several hogs from illness of some kind.
Some would have one disease and some
another. There was one of them,
however, who suffered no loss.

One day a neighbor of his paid him
a visit and found him shoveling a ton
of soft coal into a bin near the hog
house.

"What on earth are you doing,
Jim?" asked the visitor. "Going to
heat your hog house with a coal
stove?"

"Hardly," answered Jim. "Just
go in' to feed it to the hogs is all."

"Feed 'em on coal? Go on, you're
joking!"

"No, I'm not. I simply cover the
floor with a layer of it about once a
month and they gradually eat a large
portion of it. It seems to do them
good. You have had trouble with your
hogs, so I would advise you to try it."

"You bet I will," said the neighbor,
"but gosh! who'd ever thought of soft
coal for medicine!"

"The time was not so many years
ago when society did not pay the
farmer what his products were worth.
Those were the days of 20-cent corn
and 3-cent hogs. But that time is
forever past."—The Banker-Farmer.
If present prices paid to farmers rep-
resent the actual value of the product,
and the consumer pays \$1 for that
for which the producer gets 35 cents,
is the consumer being forced to pay
more than the worth of the product?
By the way, just what determines the
worth of farm crops, anyhow?

DE LAVAL SEPARATORS

Used Exclusively by
**98% of the World's
Creameries**

TEN YEARS AGO THERE WERE
a dozen different makes of cream-
ery or factory separators in use.
Today over 98 per cent of the
world's creameries use De Laval
Separators exclusively.

IT MEANS A DIFFERENCE OF
several thousand dollars a year
whether a De Laval or some other
make of separator is used in a
creamery.

EXACTLY THE SAME DIFFER-
ences exist, on a smaller scale, in
the use of farm separators. Owing
to the fact, however, that most
farm users do not keep as accurate
records as the creameryman, or
test their skim milk with the Bab-
cock tester, they do not appreciate
just what the difference between a
good and a poor separator means
to them in dollars and cents.

NOW, IF YOU WERE IN NEED
of legal advice, you would go to

a lawyer. If you were sick you
would consult a doctor. If you
had the toothache you would call
on a dentist. Why? Because these
men are all specialists in their line
and you rely upon their judgment
and skill.

WHEN IT COMES TO BUYING A
separator why not profit by the
experience of the creameryman
which qualifies him to advise you
correctly? He knows which separ-
ator will give you the best service
and be the most economical for
you to buy. That's why 98 per
cent of the world's creameries and
milk dealers use the De Laval ex-
clusively.

THERE CAN BE NO BETTER
recommendation for the De Laval
than the fact that the men who
make the separation of milk a
business use the De Laval to the
practical exclusion of all other
makes of cream separators.

YOUR LOCAL DE LAVAL AGENT WILL BE GLAD TO LET YOU TRY A DE LAVAL
FOR YOURSELF ON YOUR OWN PLACE. IF YOU DON'T KNOW THE NEAREST
DE LAVAL AGENCY SIMPLY WRITE THE NEAREST MAIN OFFICE, AS BELOW.

The De Laval Separator Co., 165 Broadway, New York
29 E. Madison St., Chicago

DIPPING SHEEP PROMOTES PROFITS

"Surprising as it may seem, there are some Wisconsin sheep owners who do not seem to realize the importance of dipping their flocks," says Frank Kleinheinz, shepherd of the Wisconsin Experiment Station flocks.

"Sheep which have gone through the winter infected with ticks have certainly suffered day and night from the constant annoyance caused them by these pests," he continued. "Much of the food given the flock went for the support of the ticks.

"After the flock has been sheared, nearly all of the ticks leave the old sheep and crawl on to the lambs, where they find more comfortable shelter and younger and fresher blood to suck.

"As the ticks become more numerous the lambs become thinner and the farmer's prospective profits soon fade."

Mr. Kleinheinz recommends that both sheep and lambs be dipped as soon as possible after shearing. He has found that it promotes their health, insures better gains and prepares them to go on the market in the pink of condition, ready to command the highest prices.

Any of the good coal tar dips now on the market, if properly used, are satisfactory tick destroyers.

GETTING RID OF BOT FLIES

The following, taken from a report of the Bureau of Animal Industry, should have the thoughtful consideration of all our readers:

"The United States Department of Agriculture has recently thoroughly tested a very unusual cure for the disease of horses called bots. Bots are the larvae of the horse bot fly and live in the stomachs of horses. They interfere with digestive processes to such an extent as to cause loss of flesh, general poor condition and often death. Dislodging them is extremely difficult.

"In the treatment tested the horse was fed a little hay and oats in the morning and allowed to go without food the rest of the day. In the evening a purgative was given. Next morning the horse was given three drams of carbon bisulphid in a gelatin capsule three times at intervals of an hour. When the capsule reached the horse's stomach it dissolved and the carbon bisulphid, a liquid that is extremely volatile at the temperature of a horse's body, evaporated rapidly. The gas suffocated the bots and other parasites in the horse's stomach without injuring the horse in the least. The remedy was tried with complete success on a large number of affected animals."

WHITEWASHING THE POULTRY HOUSES

By Archie Vandervort

Lime wash is a very essential thing in the poultry yard, and midsummer is the best time to whitewash. In applying it I use a spray force pump. Before spraying the windows are taken out, as well as all nesting material and everything movable, and all cobwebs swept down.

Attach the pump to a small barrel

Smith Inter-Locking Stave Silo

First and Total Cost Small—Once Up, Always Up

Does not cost as much as a first-class wood stave silo and is absolutely permanent and immune from heat, cold, rain or wind. Will stand ten times more pressure than it can ever receive. Business farmers everywhere recognize the advantage of the concrete silo which is NOT a SOLID wall and which WILL contract and expand without cracking. The secret is in the grooved stave. Write for illustrated literature, details, proof from users.

Concrete Silo Co., Bloomfield, Ind.

STOP THE HOG CHOLERA

Save Your Hogs—Don't Let the Cholera Get Them this Summer. Hog losses from cholera amounted to \$59,000,000 last year. Think of the losses in your own neighborhood. All these losses can be stopped. You can save every one of your hogs. You can prevent the cholera absolutely.

CHOLERA CAN BE STOPPED

Yes, absolutely prevented—we have experimented for years—we have a complete course of treatment—the result of hundreds of successful experiments—we have proved beyond the ques-

tion of a doubt that anyone can absolutely and positively save his hogs from the cholera. Thousands of hog raisers did it last year. This treatment is known as the

WILBUR HOG CHOLERA TREATMENT

the only common sense treatment known. It's not a cure—it's an absolute preventative—it will positively stop the cholera from killing your hogs. It's the only safe, sane and practical way of preventing cholera. The whole principle is endorsed by the United States De-

partment of Agriculture and leading authorities on cholera. Makes serum unnecessary. Cost is practically nothing and results are certain. All this is explained in a big book which we will send you free. Tells what cholera is, what causes it, how it is spread and how it can be prevented.

SEND FOR THIS BIG BOOK—IT'S FREE—it gives the results of thousands of experiments. It tells you how you can save all your hogs—stop the cholera absolutely—it's the result of years of study and work—it's absolutely free to you now—just fill out the coupon and mail it at once—no obligation whatever. This will be the worst year in history of hog cholera—protect yourself—send for this book at once.

B. F. Walton, Geneva, to whom all prospective organizers should apply.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

After production must come marketing.

This is the problem that every farmer must face.

Something is radically wrong with the system of marketing that a crop must be a lean one to return a good profit to the producer.

We have aimed to aid wheat growers to rightly face the problem of marketing this year's wheat crop. Our aid, however, can only be in an advisory way.

If you, a wheat grower, want to do more this year than dump your crop into the great, yawning speculators' hopper, that swallows your legitimate profits, read the balance of this page and the next one, and keep reading future numbers of this paper.

The way of marketing is briefly described and proofs submitted that if wheat growers do the few simple things as outlined, there is nothing more certain in human events than that wheat can be put to \$1 for the early marketing and kept there for the whole crop.

And, on the other side, if the wheat growers themselves will not take hold of this matter, the cream of the crop will go off at the speculators' prices only to go into consumption at the price we want the farmer to have now. Thus the farmers' profits will be transferred to a class of people who produce nothing, but merely get and manipulate what others produce.

While the crop is a bumper one in this country, the world's crop will not be more than an average, judging by all available evidence. So don't get panic-stricken, to sell as quick as you can. Effect the simple organization we recommend and then each grower will be able to store and hold and get money for pressing needs. All of this can be done in a week or two in any community, if the people want to do it.

What more can you ask? Would you not like to get about as much

money advanced on your crop, if you are a needy farmer, as would be paid you outside of the co-operative organization and still hold your wheat and get 25 cents a bushel more a little later?

The speculative element in price making must be eliminated. This can only be done by keeping the temporary surplus out of the hands of speculators. Set a price on the crop and feed the demand as it expresses itself at such price.

This means for wheat that \$1 per bushel must be asked and when it will be paid, sell. Thus the price can not go above \$1 and it will be no more possible to speculate in wheat than it is in gold dollars.

We want every wheat-raising farmer who reads this paper to join in this movement with the assurance that what we start out to do will be done. And when it is done this time for wheat, it will be done for every other crop, not only this year, but in all the future years.

And we want all other people who measure the prosperity of their own business by the prosperity of the farmer, to join with us to insure the speedy success of this movement. Let us accomplish this work and give to the producers of the crop the \$218,855,000 that they otherwise will lose, or which will be taken by speculators who are already rich, and who are a negligible quantity as contributing to the prosperity of the merchant and manufacturer.

Tell your friends about this and send us their names for a copy of this paper.

The way to market used to lie ahead, all uncertain. It is now plainly charted. Follow in the charted way and you can soon destroy the baneful marketing system and establish in its stead the Equity System all over the land.

A Demand for

Year	Wheat Crops of the World	WHEAT CROPS OF THE UNITED STATES, VALUES AND DISTRIBUTION

1904.....					92.4	510,490,000

(a) Estimate by Department of Agriculture May 1, 1914. (b) Average of the last five years. (c) Will be the total crop of year if May 1 estimate of winter wheat and the average of the past five years on spring wheat are fulfilled. (d) If this crop brings the farmers this price.

An Appeal

TO ALL FARMERS, FARMERS' ORGANIZATIONS AND BUSINESS MEN IN THE UNITED STATES

We know, and will give the proofs, that every bushel of wheat that is grown in the United States this year will be worth ONE DOLLAR a bushel on the basis of supply and demand and considering the cost of production and comparing it with the cost of other commodities and the margin of profit put on them.

It is also true that if the magnificent wheat crop that has already begun to be harvested goes on the market at around 75 cents to the farmers, that it will not pay the average farmer—who, with the farmer who grows less than the average yield, is in the great majority—much above actual cost of production, while, if it brings him \$1 a bushel he will have a fair profit and money with which to buy what he desires for the farm, the farm home and his family.

Therefore the Farmers Society of Equity, a national society, with members and subordinate organizations in nearly every state, and with an official paper that has a circulation exceeding 200,000 copies and which goes in practically every county in the country, takes the lead in a campaign to put the farmers in a simple, co-operative state, so that they can easily obtain \$1 per bushel for this wheat crop. And we call upon all other farmers' organizations to join with us in this campaign and thus demonstrate to the farmers that each of your organizations recognizes the farmers' needs and that you exist to extend a helping hand in the time of need. And likewise the Farmers Society of Equity appeals to business men to support this campaign in every way possible so as to rescue the grand wheat crop from the fate of going on to the markets of the world at less than a fair price to the creators of the same. You need not be told that \$1 per bushel for the 1914 wheat crop—\$1 in Texas, Oklahoma, Kansas, Missouri, Montana, the Dakotas, Indiana and all over the nation—will put the farmers in the market for your goods as they have not been for years and will start nearly every idle factory and machine and bring a degree of prosperity that nothing else can, and will counteract the dire results from some of the acts of Congress as nothing else will.

And we appeal to the millers and all the necessary handlers of wheat to join in this movement for a definite price for wheat and a stability that will give you confidence in the present and the future. Farmers need not blame the buyers for the low price threatened for the new wheat crop. For their own protection they must buy as low as they can, because, under the old marketing system, they never could tell how much wheat would be dumped or how low prices would thus be forced. Therefore all handlers outside of the pure speculators and gamblers should lend their hearty support to this movement.

Knowing, as we have said, that good wheat is worth \$1 per bushel; having in mind the prosperity and other blessings that will come to all the people of the country if the crop sells at \$1 to the farmer; having the simple but adequate form of organization that can be established in any community in a few days, and having the matter of financing the crop for the needy farmers, and also having the matter of storage for those farmers who can not hold their wheat on the farm arranged for, we launch this movement with every confidence that our appeal will be heeded by all the parties addressed, and particularly by the farmers themselves, and that early victory will crown our efforts.

Farmers, you are the backbone of the country. You produce the stuff on which life depends and which is the life blood that flows through the arteries of trade. In all equity you are entitled to \$1 a bushel for this wheat crop. Fix DOLLAR WHEAT in your mind. Talk it, demand it, hold for it and you will get it. You can't fail to get it if you decide you want it and ask it. If necessary to suffer a little inconvenience endure it, but be true to yourself and your brother farmers in your demands for Dollar Wheat for 1914. The first victory may be the hardest, but once won you will there-

after put the price on everything you produce. Decide now that you will never again sacrifice your manhood and independence by letting some other person price your products. Gain this right and then guard it as you do your honor and that of your family. Don't be bullied and made afraid. Remember the destiny of the world is in your keeping. Comforts, business, even the lives of others all are in your hands. You can give or withhold all these. You can live within yourself, from what you produce, but others can not live a week without you. QUIT DUMPING AND CONTROL YOUR CROPS. The world cries to the farmers of America for wheat. Give it to them, but first take a price that will put your business on a basis of profits equal to others, and which will permit the AVERAGE farmer to live as an American citizen should live.

By order of the board of directors of the Farmers Society of Equity, the National Clearing House, Indianapolis, Ind., June 8, 1914.

J. A. EVERITT, President, Indianapolis, Ind.; W. H. MITCHELL, Vice-President, Hutchinson, Kas.; C. HAYES TAYLOR, Secretary-Treasurer, Indianapolis, Ind.; A. Y. SATTERFIELD, National Organizer, Sterling, Idaho; S. W. MORRIS, Rochester, Minn.; C. B. LOZIER, Robertsedale, Ala.; J. HARRIS LENKER, Sunbury, Pa.; DAVID HOLMGREN, Tremonton, Utah; WILLIAM GRISENTHWAITE, Oregon City, Ore.; A. O. WEBER, Geneva, Neb.; O. E. SCOTT, Pocatello, Idaho.

NE DOLLAR Per Bushel for the 1914 Wheat Crop.

The Problem and How to Solve It

Suppose one man had all of the wheat and he would not part with it for less than \$1 a bushel, the price would be paid, wouldn't it?

The people will not do without the wheat. It is about the cheapest product of the farm at \$1 a bushel. Whether the farmers get 75 cents or less, or \$1, the price of flour, and what is made from it, will be the same to the consumer.

The country is not overprosperous. If this year's fine wheat crop sells around 75 cents a bushel to the producers it will not help to bring prosperity. But if it brings the farmers \$1 a bushel, prosperity among the wheat farmers will abound and every man, woman and child in the country will share in the blessings of our farmers amply rewarded for their investment, toll and skill.

The Crop Is Worth \$1 on Its Merits

The average yield of the winter wheat crop will be seventeen bushels per acre if the May promise is finally realized. If it sells at 75 cents then \$12.75 will be the amount realized from an acre by the average farmer. This will be for the use of an acre of ground a year, labor of preparing the ground, seed, sowing, care, harvesting,

twine, threshing and marketing. Add to this interest on investment, plant food consumed, wear of machinery, hired help, and the time of the wife and girls in the home boarding the help. If all the cost is subtracted from \$12.75, and the balance would be allowed for the farmer's wages, it would give him about 50 cents a day. The boy in the factory and the girl in the office get more wages than the AVERAGE FARMER will get from the magnificent wheat crop of 1914, if he must sell it for around 75 cents a bushel.

Wheat Is a World Commodity

But you look at the table and say: This wheat crop promises to be about one hundred million bushels larger than we ever raised before, and we will have a great surplus and we can't help ourselves.

Let us see. Wheat is a world commodity. It flows freely to wherever there is a demand for it. It is true that the prospect is for the greatest crop of wheat the country ever raised. And it is equally true that some foreign countries have poor prospects. The world's wheat yield is very uniform year by year. It usually follows that when one part of the globe has

an exceptionally large yield another part has a small yield to compensate. See the column "Wheat Crops of the World." Note how little variation there has been in ten years. And what has been true before will unquestionably be true this year. All reports from foreign countries indicate it. So it will be an unpardonable blunder on the part of our wheat growers to let the speculators take the cream of the crop soon after harvest and store it up and get the advance that is bound to come when European countries MUST HAVE OUR SURPLUS.

Consumption Increasing Enormously

The world's consumption of wheat is increasing enormously and there must be more wheat raised to meet the demand. For instance, last year's world crop was 230,000,000 bushels greater than ever raised before. But it has been consumed and the fear is being expressed in European central markets that there may be a real scarcity before the new crop flows to them freely.

So, if this country has a large surplus over domestic demands, that will be no good reason why the farmers should give it away to some other people. To illustrate: Assuming that the final figures show that the crop is 875,420,000 bushels, and that the usual buyers tell you that for this size crop they can pay only 75 cents a bushel on an average. If the crop would be sold at 75 cents it would bring \$656,565,000. Now, 656,565,000 bushels of wheat at \$1 would amount to exactly the same. Then the question comes up, would a crop of only 656,565,000 bushels sell at \$1 a bushel on its merits, and considering supply and demand? Reference to the table shows that every wheat crop that was less than seven hundred million bushels sold at over \$1 at Chicago without the farmers trying, particularly, to make the price. The crop of 1908 was 664,602,000 bushels. It sold to \$1.07 in December and the following June up to \$1.60. We could draw a great many astonishing illustrations from the table, but we ask the reader to study it and he will understand the wheat crop and the problems of marketing better than he probably ever did before.

The Proposition

So here seems to be the proposition: The speculative marketing system proposes to take the coming great wheat crop on the basis of around 75 cents a

bushel to the farmer—some say it will be less—or to give them about \$665,565,000 for it, if it would all be sold. But they would pay the same amount of money if the crop was 200,000,000 bushels less. Then, since wheat growers must gauge their success by the money they get and not by the gross crops, why not hold the extra 200,000,000 bushels back and get as much money for the balance? Isn't it downright foolishness to raise 200,000,000 bushels of wheat and give it away for nothing?

Any Farmer Can Hold

But you say: We can't hold it.

Any farmer can hold one-fourth of his wheat if he wants to, particularly when he can get just as much money for three-fourths. It is largely imagination when he says he can't.

But let's take the very worst construction of the matter and assume that many farmers can't hold any of their wheat back. We know that when they haul it to town and sell it faster than the demand for consumption needs it, somebody must hold the surplus. Get this fixed in your mind. SOMEBODY HOLDS IT SOMEWHERE. The demand for consumption in this country is about 1,500,000 bushels a day. So, when, after harvest, five or more million bushels of wheat are sold daily, the buyers must find storage room for the surplus. And they do. There is enough storage room for all the surplus wheat and the buyers know where it is and they use it.

Sell Only at \$1.00

Now suppose this thing would happen, to-wit: The farmers themselves would say, I will sell only the wheat that I can get \$1 a bushel for and the balance I will put in storage and hold, instead of letting somebody else store it.

Well, there would not be anything so remarkable about that. It would be a most sensible resolve and there is no use for any person to say that the farmers can not store their own grain just as well as other people can. If you say that they can't be out of the money while storing it, we will just remind you that this country must have about 1,500,000 bushels a day to eat. Cash will be paid for this much every day and the price will be the farmers' price, too—\$1 a bushel. Also the world must have our surplus. Perhaps Argentina and Russia can supply that demand a little while. But remember, the world must have all the wheat, not a part of it, and soon will be paying \$1 a bushel for our export surplus. Then what you store in the big and little elevators you will get a warehouse receipt for and arrangements have been made to finance the stored wheat whenever a farmer needs quick money. That is the way the other fellow does anyhow. You don't think that elevator man, Jones, at your town has enough money of his own to pay you and your neigh-

bors and just store the wheat and wait until the consumptive demand comes? Or that the big operator down in the city has enough money of his own? They all borrow money on warehouse receipts. Recall how the secretary of the treasury furnished tens of millions of dollars last year TO HELP MOVE THE CROPS. That money did not give the farmers a cent better prices, but it helped the men who stored the crops to buy more stuff to speculate on. When we get ready this year let's see that any money from the United States treasury that is turned loose to move the crops helps the farmers instead of the middlemen.

A Degree of Organization Necessary

The definite way to handle this wheat crop to get \$1 a bushel for it is to organize in local units with a secretary or business agent. Then these local units organize county or district units with a business agent. Then when you thresh wheat, if there is nobody at hand who will pay \$1 a bushel, store it in a granary, or in the local elevator, or load it on cars and ship to the big elevators in the central markets. The local and county business agents will attend to all of the details of selling or storing. It's their business. This is just as practical to do as it is to haul the wheat to town and sell it at somebody else's price. True, some places there may be some bother because of lack of an elevator of your own. At such places make the move unanimous and you can then dictate terms to the local elevator man because, when you control the wheat, his elevator will be junk if you won't put the wheat through it.

Need there be more evidence that a condition can be produced that will cause wheat to sell for \$1, if the farmers say it shall and back their declaration up? We have said the world must have all that is raised. It always took it and consumed it. As much wheat will be consumed at \$1 to the farmers as at 75 cents. It is not an exorbitant price. Twenty-five cents advance a bushel is only \$1.37 a year per person, or \$6.85 a year for a family of five. But the price of bread is now high enough for wheat at \$1 or more and we predict \$1 wheat will scarcely add a dollar a year to the average family's expenses, but it will do more to bring back prosperity and furnish labor and good wages than any other thing that can be done.

Easy to Put Wheat to \$1.00

But if more argument need to be presented that it will be easy to put wheat to \$1 and hold it there, see the column of visible supply in the table. The visible supply is that wheat that is in big elevators that was marketed faster than the demand for consumption wanted it. Of course there is much more in small elevators over the country, but it is not measured and is not used by the speculators. This visible supply is the great trouble, because the owners of it can place some of it on the market any time to break the price. As long as the farmers build up a big visible supply they have

competitors in marketing. By keeping up the visible supply they put a powerful club in the hands of middlemen. Now if enough less wheat would be marketed to do away with a visible supply, farmers would have no competition in price making and they would absolutely be in control of the whole matter. December 1, 1913, the visible supply was 58,868,000 bushels. If 500,000 farmers would have marketed about 120 bushels less than they did market, there would have been no visible supply. Consequently whoever wanted wheat would have been compelled to get it of the farmers and that would have given them their opportunity to make the price. Or if 58,000 farmers would have held back a thousand bushels each, that they marketed, there would have been no visible supply and no competition and no club to beat down price. Fifty-eight million bushels was less than 7 per cent of the 1913 crop.

Two hundred fifty counties raise 60 per cent of all the wheat. Who will pretend to argue that if such 250 counties would organize on this plan and hold their wheat that they could not put the price where they want to? Yes, one-half of this number can do it.

The Movement a National One

But this movement should not be confined to a few counties. It is a matter that should interest every grower of wheat to sell, and we appeal to all such to do their part now. We appeal to the wheat growers to join in this movement at once. Thus we can rescue the most magnificent winter wheat crop that the country ever produced from the vicious marketing system that has impoverished our farms and has largely deprived the average farmer and his family of many of the things that by right should be theirs.

Any man or woman can send the coupon attached and as fast as the mail can come to headquarters and return, full instructions and blanks will be sent for the canvass and to organize and immediately the local or county organization is reported it will be chartered and supplied with all needful directories and helps to sell or store, get advances on stored crops, etc.

Prompt Action Will Save the Price

There need be no delay. Harvesting has begun in the southwest. There is ample time to save the crop for the price even there, if the local people will do their little share promptly. There is no use of depending on other classes of people to do it for them. Independence and prosperity are things that are not forced on a people, but the people must reach out their hands and take them, and sometimes they must fight for them.

Is it worth while to fight for \$218-855,000 more for the 1914 wheat crop? Or is it worth while to reach out your hand and accept the plan already prepared, effect your simple organization with your own business agent, and do the easy business of marketing along with the hard work of producing?

THE BLANK

National Clearing House, F. S. E.,
Indianapolis, Ind.

GENTLEMEN: I will give.....days in the interest of getting what this wheat crop is worth, providing the plan, as further outlined in your reply, meets with my entire approval. I can see about.....

wheat growers in that time. I will travel by.....
(write automobile or whatever form of conveyance you have). Please send full particulars and supplies.

My Name.....My P. O.....

Rural Route..... County..... State.....

Instructions

Cut out the blank. Fill in all spaces. Write name and address perfectly plain. You have given perhaps 100 days to producing a wheat crop, now each reader of this paper who will have wheat to sell should give one day or more toward getting a price that it is worth. You will not be expected to do more than distribute the printed matter we send and say a few words about this movement and take the names and addresses of those you see.

Question Box

QUESTION—We have organized here in Daykin, Neb. We have twenty-five members now. We are thinking of buying or leasing an elevator to handle our grain. There are two elevators in our town. We are told that we can not run an elevator without incorporating. Then we are told, too, that as soon as we incorporate then the Farmers Society of Equity is done—that is, we will no longer be a part of the Farmers Society of Equity. So, can you give us a plan that we can buy or lease an elevator and run it through the Farmers Society of Equity? We can lease one of the elevators at a rate of about 1/2 cent per bushel.—William W. Fox, Daykin, Neb.

ANSWER—The plan is to incorporate your local clearing house under the same name that it now bears. We send you the plans for incorporating, with the proposed constitution and by-laws, and also a form of amortization bond, which probably will meet your requirements for raising the necessary capital.

We never recommend a separate corporation, but always incorporate the local clearing house, when it will still remain a unit of the national organization.

Q.—If the government can issue money to the banks at 1 per cent on our security, why can't it do the same with us direct?

(2) Why should we kick on the merchant's profits and stand for the banker's profit? Are not the bankers middlemen also?—E. W. Keown, Secretary, Florence, Mont.

A.—There is no question but that the government could loan money to farmers at as low a rate of interest as it loans it to the banks, providing, of course, the farmers could give absolute security. It is not a question of what the government can do, but it is a question of what the government will do or what the farmers can oblige the

government to do. In their unorganized condition the farmers are powerless to exercise any particular power in any particular direction, also in their present unorganized condition they have no way that they could secure the government for loans.

(2) It is not so much a matter of kicking about the merchant's or banker's profits, but the kick should be directed against the losses incurred through the vicious marketing system that farmers are permitting to continue in the country.

Q.—Please tell me whether we are required to give all orders for supplies through our Intermountain Clearing House after we organize our district clearing house.

(2) Also give us some information on a line of hay machinery that we may get for use in this part of the state.—M. E. Scott, Organizer, Montpelier, Idaho.

A.—Yes, as a part of the section clearing house it is required that you operate both in selling and buying through the central head.

(2) This is answered in the former—that is, you should communicate with Mr. O. E. Scott, secretary, Pocatello, Idaho.

Q.—When the matter of buying binder twine came up in our local clearing house it was decided that we would buy our twine independently and not go in on a general order, as this sometimes causes delay and possibly we would have had to hand it from some other station, since our order would not amount to a car load here. Also, we feel that the bond of our county secretary is not sufficient for the amount of business the twine of this county and other things will make. Hence we thought we did not want to get mixed up in that kind of a deal. Further, our county secretary is constantly importuning me with letters. He seems to think that we have no right to do business except through him. This we want to avoid. Otherwise we would build up a system as bad as the wholesalers, jobbers and retailers between us and the manufacturers. We believe in co-operation, but it must not interfere with direct dealing.

BINDER TWINE

If you and your neighbors have not bought your binder twine you can hear of something to your advantage by writing
The Equity System Indianapolis, Ind.

Real Money-Saving, Money-Making Opportunities—You Can Sell Anything or You Can Buy Almost Anything by Placing Your Offer Before Our Million Readers

CLASSIFIED ADVERTISING—50 Cents a Line, or for eight (8) words. No display, except the first words will be set in capitals, each initial, numeral, abbreviation and key counts as one word. All orders must be received ten days before the date of the paper in which it is to appear. Remittance or reference should accompany all orders. Circulation guaranteed, 200,000 copies or more. When writing to these advertisers say "I saw it in UP-TO-DATE FARMING."

FARM LANDS

FOR SALE—50,000 acres in the fruit and clover belt of Michigan in Mason, Manistee, Lake and Wexford counties: fine for fruit, stock or general farming, grains, grasses and vegetables; prices \$10 to \$35 per acre, and much good land at \$18; payments \$10 to \$50 down and \$5 to \$10 monthly on 40 acres. Write for 72-page book and large map, and ask about our private car excursion leaving Chicago Tuesday, June 30th; round trip fare to Wellston, my Michigan headquarters, \$8.30, rebated on purchase; return Friday, 7:20 a. m. Come now and get a good selection and see the growing crops. George W. Swigart, Z-1250 First National Bank Bldg., Chicago, Ill.

YOUR LAST CHANCE—80 acres or more 1 mile from 2 railroads, on main road; good markets; graded school; telephone line, rural route; prosperous and good neighbors. Get my terms; by owner. Harold Waldner, Poyette, Wis.

FARMS WANTED—We have direct buyers; don't pay commissions; write describing property, naming lowest price; we help buyers locate desirable property free. American Investment Association, 71 Palace Building, Minneapolis, Minn.

MICHIGAN FRUIT AND FARM LANDS—24,000 acres of cut-over hardwood; small or large tracts; well located; easy terms; very special prices. Write Wiley-Ruell Co., 957 Spitzer Building, Toledo, O.

SELL YOUR PROPERTY quickly for cash, no matter where located; particulars free. Real Estate Salesman Co., Dept. 6, Lincoln, Neb.

FOR SALE—TOBACCO

FOR SALE—40,000 pounds best leaf tobacco, from 2 to 6 years old. Mail stamps for sample to Anton Warrin, Franklin, Ky. R. No. 5.

HELP WANTED

LOCAL REPRESENTATIVE WANTED—Splendid income assured right man to act as our representative after learning our business thoroughly by mail; former experience unnecessary; all we require is honesty, ability, ambition and willingness to learn a lucrative business; no soliciting or traveling; all or spare time only. This is an exceptional opportunity for a man in your section to get into a big paying business without capital and become independent for life. Write at once for full particulars. National Co-operative Realty Company, L-511 Marden Building, Washington, D. C.

THOUSANDS of government positions open to men and women over 18; \$90 month; vacations; short hours; write immediately for free list of positions now available. Franklin Institute, Dept. G-26, Rochester, N. Y.

AGENTS WANTED for first-class Arkansas land proposition; no rocks, hills nor swamps; big money for reliable men and women. Call or write Wm. C. Unhoff & Co., Times Bldg., St. Louis, Mo.

WILL PAY reliable man or woman \$12.50 to distribute 100 free packages Perfumed Borax Soap Powder among friends. No money required. R. Ward Company, 222 Institute Place, Chicago.

GOVERNMENT FARMERS WANTED—Good pay; free quarters; prepare for examination now. Ozment, 112-E, St. Louis.

PATENT ATTORNEYS

MEN OF IDEAS and inventive ability should write for new "Lists of Needed Inventions," "Patent Buyers" and "How to Get Your Patent and Your Money." Advice Free. Randolph & Co., Patent Attorneys, Dept. 28, Washington, D. C.

PATENTS THAT PROTECT AND PAY. Advice and books free. Rates reasonable. Highest references. Best results. Watson E. Coleman, Patent Lawyer, Washington, D. C.

SEEDS, PLANTS, TREES

SEEDS WANTED—We buy clover, timothy and all seeds from farmers direct. Highest prices paid. O. K. Seed Store, Indianapolis, Ind.

MISCELLANEOUS

FREE FOR SIX MONTHS—My special offer to introduce my magazine, "Investing for Profit." It is worth \$10 a copy to any one who has been getting poorer while the rich, richer. It demonstrates the real earning power of money, and shows how any one, no matter how poor, can acquire riches. Investing for Profit is the only progressive financial journal published. It shows how \$100 grows to \$2,200. Write now and I'll send it six months free. H. L. Barber, 452, 20 W. Jackson Boulevard, Chicago.

COAL—Any society needing either Kansas or Colorado coal write for prices and send orders to Farmers Coal Co., Colorado Springs, Colo.

HOLSTEIN CALVES, beautifully marked, 3 to 5 weeks old, 15-lbths pure, \$20 each, crated for shipment anywhere. Edgewood Farm, Whitewater, Wis.

SHEET MUSIC—Three good samples and catalogs, 10c; satisfaction guaranteed. Paul A. Miller, Dayton, O.

WANTED—To buy 4,000 foxes and mink, \$2 to \$5 each. Beechhurst Co., Shelbyville, Ky.

after put the price on everything you produce. Decide now that you will never again sacrifice your manhood and independence by letting some other person price your products. Gain this right and then guard it as you do your honor and that of your family. Don't be bullied and made afraid. Remember the destiny of the world is in your keeping. Comforts, business, even the lives of others all are in your hands. You can give or withhold all these. You can live within yourself, from what you produce, but others can not live a week without you. QUIT DUMPING AND CONTROL YOUR CROPS. The world cries to the farmers of America for wheat. Give it to them, but first take a price that will put your business on a basis of profits equal to others, and which will permit the AVERAGE farmer to live as an American citizen should live.

By order of the board of directors of the Farmers Society of Equity, the National Clearing House, Indianapolis, Ind., June 8, 1914.

J. A. EVERITT, President, Indianapolis, Ind.; W. H. MITCHELL, Vice-President, Hutchinson, Kas.; C. HAYES TAYLOR, Secretary-Treasurer, Indianapolis, Ind.; A. Y. SATTERFIELD, National Organizer, Sterling, Idaho; S. W. MORRIS, Rochester, Minn.; C. B. LOZIER, Robertsedale, Ala.; J. HARRIS LENKER, Sunbury, Pa.; DAVID HOLMGREN, Tremonton, Utah; WILLIAM GRISENTHWAITE, Oregon City, Ore.; A. O. WEBER, Geneva, Neb.; O. E. SCOTT, Pocatello, Idaho.

ONE DOLLAR Per Bushel for the 1914 Wheat Crop.

The Problem and How to Solve It

Suppose one man had all of the wheat and he would not part with it for less than \$1 a bushel, the price would be paid, wouldn't it?

The people will not do without the wheat. It is about the cheapest product of the farm at \$1 a bushel. Whether the farmers get 75 cents or less, or \$1, the price of flour, and what is made from it, will be the same to the consumer.

The country is not overprosperous. If this year's fine wheat crop sells around 75 cents a bushel to the producers it will not help to bring prosperity. But if it brings the farmers \$1 a bushel, prosperity among the wheat farmers will abound and every man, woman and child in the country will share in the blessings of our farmers amply rewarded for their investment, toil and skill.

The Crop Is Worth \$1 on Its Merits

The average yield of the winter wheat crop will be seventeen bushels per acre if the May promise is finally realized. If it sells at 75 cents then \$12.75 will be the amount realized from an acre by the average farmer. This will be for the use of an acre of ground a year, labor of preparing the ground, seed, sowing, care, harvesting,

twine, threshing and marketing. Add to this interest on investment, plant food consumed, wear of machinery, hired help, and the time of the wife and girls in the home boarding the help. If all the cost is subtracted from \$12.75, and the balance would be allowed for the farmer's wages, it would give him about 50 cents a day. The boy in the factory and the girl in the office get more wages than the AVERAGE FARMER will get from the magnificent wheat crop of 1914, if he must sell it for around 75 cents a bushel.

Wheat Is a World Commodity

But you look at the table and say: This wheat crop promises to be about one hundred million bushels larger than we ever raised before, and we will have a great surplus and we can't help ourselves.

Let us see. Wheat is a world commodity. It flows freely to wherever there is a demand for it. It is true that the prospect is for the greatest crop of wheat the country ever raised. And it is equally true that some foreign countries have poor prospects. The world's wheat yield is very uniform year by year. It usually follows that when one part of the globe has

an exceptionally large yield another part has a small yield to compensate. See the column "Wheat Crops of the World." Note how little variation there has been in ten years. And what has been true before will unquestionably be true this year. All reports from foreign countries indicate it. So it will be an unpardonable blunder on the part of our wheat growers to let the speculators take the cream of the crop soon after harvest and store it up and get the advance that is bound to come when European countries MUST HAVE OUR SURPLUS.

Consumption Increasing Enormously

The world's consumption of wheat is increasing enormously and there must be more wheat raised to meet the demand. For instance, last year's world crop was 230,000,000 bushels greater than ever raised before. But it has been consumed and the fear is being expressed in European central markets that there may be a real scarcity before the new crop flows to them freely.

So, if this country has a large surplus over domestic demands, that will be no good reason why the farmers should give it away to some other people. To illustrate: Assuming that the final figures show that the crop is 875,420,000 bushels, and that the usual buyers tell you that for this size crop they can pay only 75 cents a bushel on an average. If the crop would be sold at 75 cents it would bring \$656,565,000. Now, 656,565,000 bushels of wheat at \$1 would amount to exactly the same. Then the question comes up, would a crop of only 656,565,000 bushels sell at \$1 a bushel on its merits, and considering supply and demand? Reference to the table shows that every wheat crop that was less than seven hundred million bushels sold at over \$1 at Chicago without the farmers trying, particularly, to make the price. The crop of 1908 was 664,602,000 bushels. It sold to \$1.07 in December and the following June up to \$1.60. We could draw a great many astonishing illustrations from the table, but we ask the reader to study it and he will understand the wheat crop and the problems of marketing better than he probably ever did before.

The Proposition

So here seems to be the proposition: The speculative marketing system proposes to take the coming great wheat crop on the basis of around 75 cents a

bushel to the farmer—some say it will be less—or to give them about \$665,565,000 for it, if it would all be sold. But they would pay the same amount of money if the crop was 200,000,000 bushels less. Then, since wheat growers must gauge their success by the money they get and not by the gross crops, why not hold the extra 200,000,000 bushels back and get as much money for the balance? Isn't it downright foolishness to raise 200,000,000 bushels of wheat and give it away for nothing?

Any Farmer Can Hold

But you say: We can't hold it.

Any farmer can hold one-fourth of his wheat if he wants to, particularly when he can get just as much money for three-fourths. It is largely imagination when he says he can't.

But let's take the very worst construction of the matter and assume that many farmers can't hold any of their wheat back. We know that when they haul it to town and sell it faster than the demand for consumption needs it, somebody must hold the surplus. Get this fixed in your mind. SOMEBODY HOLDS IT SOMEWHERE. The demand for consumption in this country is about 1,500,000 bushels a day. So, when, after harvest, five or more million bushels of wheat are sold daily, the buyers must find storage room for the surplus. And they do. There is enough storage room for all the surplus wheat and the buyers know where it is and they use it.

Sell Only at \$1.00

Now suppose this thing would happen, to-wit: The farmers themselves would say, I will sell only the wheat that I can get \$1 a bushel for and the balance I will put in storage and hold, instead of letting somebody else store it.

Well, there would not be anything so remarkable about that. It would be a most sensible resolve and there is no use for any person to say that the farmers can not store their own grain just as well as other people can. If you say that they can't be out of the money while storing it, we will just remind you that this country must have about 1,500,000 bushels a day to eat. Cash will be paid for this much every day and the price will be the farmers' price, too—\$1 a bushel. Also the world must have our surplus. Perhaps Argentina and Russia can supply that demand a little while. But remember, the world must have all the wheat, not a part of it, and soon will be paying \$1 a bushel for our export surplus. Then what you store in the big and little elevators you will get a warehouse receipt for and arrangements have been made to finance the stored wheat whenever a farmer needs quick money. That is the way the other fellow does anyhow. You don't think that elevator man, Jones, at your town has enough money of his own to pay you and your neigh-

A.—This is a case where the local clearing house, of which the writer is the secretary, joined in organizing a county clearing house. In view of this the writer can not be too severely criticized for his stand. The plan of the Farmers Society of Equity provides that the farmers shall organize a local clearing house and that the local clearing houses shall organize a county or district clearing house. The object is to assemble the orders of the county or a district in a sufficiently large unit that in selling the quantity will be such as to attract large buyers and get the best prices. Also in buying, that large quantities can be ordered and the best prices gotten. The course taken by the secretary who wrote the letter is just the reverse of co-operation. Such proceedings can not be permitted in the Farmers Society of Equity, as that would certainly lead to disruption. Any person having a grievance must present it in the way provided in the by-laws of the society. Also, if a county business agent is not sufficiently bonded, the course is open to have him placed under sufficient bond, considering the amount of business done. We recommend to you that you study the plan of the Farmers Society of Equity very carefully, and you will find, by trying it out, that you have the best system of co-operation ever extended to the farmers.

Q.—The local secretaries are instructed to fill out and forward list of new members, but to whom shall they be forwarded? If to national headquarters, how is the county secretary to keep track of the membership?

(2) How is it customary for the county secretary to proceed in the collection of dues?—W. D. Graves, Secretary, Missoula County Clearing House, F. S. E.

A.—The local secretaries are required to forward lists of new members to the state secretary, if one. If there is none, then to the national secretary. He can forward a duplicate of the list of names to the county secretary if desirable. This should be done with the remittance by the local clearing house secretary of the county clearing house portion of the fee. Please see instructions in Section 5 of Article IV, National Clearing House constitution and by-laws.

(2) The county secretary is not required to collect the annual dues. This duty falls upon the local clearing house secretary. Instructions are given in Sections 7, 8, 9 and 10 of Article X, National Clearing House constitution and by-laws.

A LOCAL CLEARING HOUSE WANTED

In every farming community, at once. This is necessary to market the crops to get all that the final market pays now and to soon bring about such control as will allow the producers to get their prices at their shipping point. Anybody who stands well in the community can organize. See blank on page 12. Fill it out and send today.

Two Money-Making Rules for Every Farmer—

Keep Out the Weeds and Worms

You can't make money raising weedy corn—or wormy stock. It's impossible. Worms cause even bigger loss than weeds, because most farmers don't fight what they don't see. But one thing's sure, and that is—

Every Farm Animal Needs SalTone

Government reports say nine out of every ten animals are wormy—that the annual worm loss is more than \$25,000,000.00. It's nine chances out of ten YOUR animals are wormy.

What It Is

SalTone is the oldest medicated salt on the market. John E. Robbins, the famous stockman, has been making it for over thirty years. You feed it like common salt.

What It Does

SalTone has made International prize-winners for Mr. Robbins—you've heard of the famous SalTone herds. Don't pour expensive feed into worms. SalTone will drive them out—will make your stock fat and fine. One penny's worth lasts a hog 12 days. Read our offer:

Send the Coupon and Try 100 lbs. of

The Wormicide and Conditioner for All Farm Animals.

SAL TONE Will Stop Your Worm Losses.

Read These Letters

I have not had a sick animal since I commenced to use SalTone. Oscar Robards, Robards, Ky.

SalTone saved me from losing a bunch of 80 hogs. Louis Krautz, Higginsport, Ohio.

SalTone made my stock do many times better than ever before. Albert Miller, Batavia, N. Y.

My hogs wintered better than ever before. Earl Rogier, Atlanta, Iowa.

Try SalTone 60 Days—See for Yourself

Send the Coupon—No Money

We'll send 100 pounds of SalTone on 60 days' trial. Give it as directed and at the end of that time tell us your experience. If it does not do as we claim, it will cost you nothing but the freight charge. If it does, it will make you ten, perhaps a hundred times its cost. Send no money—just sign and mail the coupon TODAY.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

ON JUNE 6 Bradstreet's summarized business conditions as follows:

Improvement. Weather favors crop progress. Cereals benefited.

Texas rains cease. Moisture in southeast. Still dry in central belt. Retail and jobbing trade better in cereal states and large eastern centers. Cotton goods lead in buying. Wool active. Woolen manufacturing active. Large sales of southern pig iron. Finished steel slack. Building dull. First gain at New York in fifteen months. Shifts in foreign trade. Creeping market in stocks.

The United States government crop report for June 1, issued on the 8th, estimates the total wheat crop at 900,000,000 bushels. The winter wheat crop is credited with 638,000,000 bushels and the spring wheat with the balance, 262,000,000 bushels. A condition of 92.7 per cent is credited to winter wheat on June 1. This is about 2 per cent lower than May 1, but is much higher than the ten-year average. The condition of spring wheat was given at 95.5 per cent. Spring wheat is in the very early stages of its growth and harvest will not come until August and September. The excess yield of this year's crop is given at 137,000,000 bushels. Final figures on the winter wheat and threshing returns, we predict, will indicate less winter wheat. In short, we feel that the crop has been over-estimated. Quite serious deteriorations have occurred in several states east of the Mississippi river from drought. This dry weather cut the growth short and came at the time the heads were filling. The dispatch from Washington says the United States crop will be "almost half of the average world's wheat production." This is wrong. If the estimate is realized it will be a little short of one-fourth of the recent world's average crop.

The estimated yield of oats is 1,216,000,000 bushels, compared to 1,121,768,000 bushels in 1913 and 1,418,337,000 bushels in 1912. This latter was the largest crop ever produced.

An extraordinary happening was the shipment of a cargo of United States wheat to Brazil. This is said to have been because of the scarcity of good grades of Argentine wheat in that country. Farmers should keep this in mind, as the Argentine crop is free to come into this country now and the speculators will use it as a club whenever they can.

Weather has been good for the crops in the main. Droughts prevail in some considerable sections, but excessive rain occurred in Texas and drought in the Atlantic coast trucking sections has operated to keep a scarcity of early potatoes and other truck crops and prices have ruled high. Cotton needs rain some places and has too much in some other places. Old potatoes are closing the season at top prices.

All grains show a lower visible supply than two weeks ago. Wheat and barley are lower than a year ago and wheat and corn are lower than two years ago.

The price of cash wheat declined over 2 cents since our last report at Chicago and Cincinnati; is about the same at St. Louis, and Kansas City shows a raise of 1 cent. New York cash quotation is 11 cents under two weeks before. September wheat is quoted at 85½¢ and the tendency is lower.

Corn is higher in some markets and lower in others, as the table shows. Oats does not show much change from two weeks before and the price is about the same as it was a year before.

Advice

WHEAT—We assume the old wheat has been marketed and the bins, granaries and elevators are ready for the new crop. Store the new wheat and put a placard on the granary door, "To be sold at \$1 a bushel." See page 12 for further advice about wheat. **CORN**—Market gradually. **OATS**—The indicated crop bespeaks higher oats prices. **POTATOES**—Market any that are left. **COTTON**—Market gradually. For definite marketing advice address Farmers Society of Equity, Indianapolis, Ind.

Visible Supply

The visible supply of grain in the United States by Bradstreet's on May 30, 1914, with comparisons, are shown in the following table:

	May 30, 1914	Change from two weeks before
Bushels		
WHEAT	32,024,000	-3,713,000
CORN	5,915,000	-1,676,000
OATS	10,275,000	-1,733,000
BARLEY	2,647,000	-450,000

The visible supply of wheat in Canada on the same date was 26,471,000 bushels. This is 4,189,000 bushels less than two weeks before and is 2,659,000 bushels more than a year before. The visible supply of oats was 10,201,000 bushels on the same date, which is 1,965,000 bushels less than two weeks before and is 259,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on June 6, 1914, two weeks before and a year before as follows:

WHEAT, No. 2 RED

	June 6, 1914	Two weeks before	A year before
Chicago	95¼@96¼	97¼@98¼	1.03½
St. Louis	95¼@96¼	95 @96½	1.04½@1.06
Kansas City	92¼@93¼	91¼@92¼	92 @ 95
Cincinnati	95¼@96¼	98 @99	1.05 @1.08
New York	95	1.06½	

	Chicago	St. Louis	Kansas City	Cincinnati	New York
CORN, No. 2 WHITE	73 @73½	71½@72	59½@60½	60	58½
OATS, No. 2 WHITE	40½@41	40½@41½	40½	40½	40½

Future Grain Prices

Chicago grain futures closed on May 23, 1914, and two weeks before as follows:
Wheat—July, 86½¢; September, 85½¢. Two weeks before, 97½¢ and 87½¢ respectively.
Corn—July, 70½¢; September, 67½¢. Two weeks before, 70¢ and 68½¢ respectively.
Oats—July, 40¢; September, 37½¢. Two weeks before, 41¢ and 39½¢ respectively.
Winnipeg, Canada—Spring wheat: July, 96½¢; October, 86½¢. Two weeks before, 95½¢ and 96½¢ respectively.

Cotton

New York, June 6, 1914.—Cash cotton closed as follows: Middling upland, 13.65¢; middling Gulf, 13.90¢. Two weeks before, 13.70¢ and 13.95¢ respectively. A year before the price was 12.10¢ and 12.35¢ respectively.

Firmness pervaded the market and fancy Rurals sold 2¢ higher. Trade was quiet, but the supply was limited and good stock was readily taken.
Sales reported were: Per bushel, bulk—Wisconsin, Rurals, 2 cars at 85¢, 1 car at 87¢, 1 car at 88¢, 1 car at 90¢.

Per bushel, bulk or sacked, Wisconsin Tri-umphs, Burbanks and Kings, poor to good, .75@80¢ Round white .78@85¢ Duster Rurals .85@90¢ Michigan, round white .78@85¢ NEW POTATOES—Trade quiet today, a heavy rain in the morning and the fact that it was Saturday combining to cut down the attendance of buyers. Market was steady, with fresh receipts of 15 cars.
Sales reported were: Per bushel, sacked—Texas Triumphs, 1 car badly rotted at \$1, 1 car fair at \$1.25, Barrels, Alabama red, .50@.55, .50@.55, .50@.55, Georgia, not well graded, 4.00 Per bushel, sacks, Louisiana red, 1.00@1.35 Alabama red, 1.00@1.35 Texas red, dirty and muddy, resacked, 1.00@1.40 The price of old potatoes is about 12¢ a bushel higher than two weeks before and about 45¢ a bushel higher than a year before. The price of new potatoes is about the same as two weeks before and about \$1.50 a barrel higher than a year before.

BEANS—Rule rather quiet. Dealers seem to be supplied. No changes quoted.
Pea Beans—Hand-picked, choice, \$2.20@2.23 Common 2.00@2.15 Red Kidneys, common to fair, 2.65@3.15 Fancy 3.20@3.25 Brown Swedish, long, 1.80@2.10 Round 2.00@2.25 Pea Beans and Red Kidneys are unchanged from two weeks before. Brown Swedish are 20¢ a bushel lower than two weeks before.

HAY—Receipts, 1,055 tons. Offerings moderate and demand good. Feeling firm.
Choice Timothy Hay, \$18.00@18.50 No. 1 Timothy, 15.00@16.00 No. 2 Timothy, 13.00@14.00 Iowa and Nebraska Prairie, 17.00@19.00 Illinois and Wisconsin Prairie, 9.00@11.00 Timothy hay is unchanged from two weeks before. All kinds of prairie hay are \$1 to \$2 a ton higher than two weeks before. A year before choice timothy hay was quoted \$15 to \$16 a ton.

STRAW—Rye straw quotable at \$8.50@9. Oat straw at \$7@8. Wheat straw, \$6.50@7. There is no change in the price of straw from two weeks before.

BROOM CORN—Steady, but dull. The demand remains slow.
Per ton, Illinois corn, \$115@135 Oklahoma 90@130 Damp and damaged less.
The price of broom corn is the same as two weeks before.

	Change from period last yr.	Change from a year before	Change from 2 years before
Bushels			
WHEAT	5,633,000	-8,621,000	-1,605,000
CORN	1,822,000	X 1,596,000	-1,433,000
OATS	X 226,000	X 259,000	X 1,045,000
BARLEY	-734,000	-153,000	X 1,855,000

before. A year before the price of Illinois corn was \$100 to \$120 and of Oklahoma was \$50 to \$80 per ton.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
Cases			
Monday	22,239	22,220	29,431
Tuesday	24,704	19,549	25,545
Wednesday	25,237	23,612	22,659

Read Wheat Prices at Right, Corn and Oats at Left

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago for the period, 1909 to May, 1914, inclusive. The lowest figures in May, 1914, were: Wheat, 94¢, on May 2; Corn, 65½¢, on May 2, and Oats, 38¼¢, on May 2.

Thursday	16,854	13,396	21,392
Friday	16,962	16,935	14,630
Saturday	22,846	..	15,985
Totals	128,342	95,712	129,642

*Decorated Day.

Receipts April 1, 1914, to June 6, 1914, 1,421,058 cases
Receipts April 1, 1913, to June 7, 1913, 1,530,851 cases
Receipts April 1, 1912, to June 8, 1912, 1,512,957 cases
Receipts April 1, 1911, to June 10, 1911, 1,308,441 cases

The market is ruling a little more quiet and it is not so easy to effect sales. The best eggs meet with sales to local dealers for home use and to fill outside orders, but anything but the best are dull.

Fresh Firsts, 18¼@18½¢
Ordinary Firsts, 17¼@17½¢
Checks, 14¼@15¢
Ditties, 15¼@16½¢
Miscellaneous, cases included, 16 @18¼¢
Cases returned, 15¼@18¢

Storage packed eggs are meeting with a moderate demand. Firsts are quotable at 19@18¼¢, with a sale at 19¼¢, and Extras quotable at 19¼¢.
The price of eggs is the same as two weeks before.

Fruit

Chicago, June 6, 1914
Apples—An easy feeling continues. Demand so limited that trade is dull. It is the end of the season and demand can hardly be expected to pick up. Those who have stocks on hand are anxious to sell and clean up. Rather than to miss sales when buyers appear concessions are sometimes made.

CHERRIES—Sour cherries when good size and nice are good sale. Sweet there is not so much demand for, as the trade goes more to California. Still, if the sweet are large size and fine they are saleable, but if small or ordinary then few care for them.

LEMONS—Quoted as quiet. The weather is not settled, not warm enough. Domestic in only moderate supply. There is a good supply of imported.

ORANGES—Continue to meet with a good, steady demand and there is plenty of fruit to supply the trade. At late prices the market is just about steady. Grape fruit rules quiet. Offerings and demand both are on a very moderate scale.

BLACKBERRIES—A few held over on sale. They were common, soft when they came in. No regular market for such goods.

GOOSEBERRIES—Not many offered, but enough for the demand, which is very small as yet.

RED RASPBERRIES—A very few nice Illinois in early sold at \$5@6 for 24-pint cases. There may some come later.

STRAWBERRIES—There was a good, firm market for nice berries. Receipts larger from Michigan—about 4,000 cases. They were moderate from elsewhere. The Indiana came late. All grades of stock saleable, but prices had to be made to correspond with the quality.

Melons

CANTALOUPE—These melons are selling fairly well, especially considering that so many are still rather green and can not satisfy all that is expected of them in the way of flavor. The Pink Meats are sold before they get here.

WATERMELONS—Are as yet in only tame demand. The weather is not right yet and prices are above the point where buyers want many. Receipts today, 3 cars.

Vegetables

BEETS—Saleable and steady at strong prices when fine, clean, uniform in size and with nice tops. Supply moderate.
ASPARAGUS—Trade quiet today, as usual on Saturday. Supply moderate and market steady for nice thick stock.

CAULIFLOWER—Fair sale when fine, good size, with nice green leaves. Poor, small stock is dull, even at a discount.

CARROTS—Market shade easier today. There was a fair supply and the trade was quiet, as usual on Saturday.

CABBAGE—There is a large supply and buyers take only nice, green, good-sized and solid cabbage. Poor, small, yellow is neglected.

CELERY—A little Louisiana on sale. It is not really desirable, being green and rusty.
CUCUMBERS—Southern are dull and weak. Good many offered. Few are really nice. A good many are common. Home-grown are getting the best trade.

EGG PLANT—Market is well supplied, but there is not much demand as quality is not really desirable.

GREEN ONIONS—Home-grown supply the trade at low prices.

GREEN PEAS—Saleable when green, good and fresh. There is an ample supply and poor, dry, discolored peas are neglected.

KOHLRABI—Slow sale. Supply is moderate, but ample.

LETUCE—Home-grown is plentiful and supplies the trade. The quality is not fine, but it is as good as the bulk of the outside lettuce coming.

ONIONS—Saleable when fine, sound and clean. Poor, soft, dirty or mixed stock dull. Supply is small.

PIE PLANT—Market is supplied with home-grown, which has moderate sale.

PEPPERS—Demand is slow. There is a fair supply and much of the stock on hand is poor, mixed, more or less shrunken and soft. This is dull and does not clean up.

RADISHES—Market is supplied with home-grown, which have moderate sale at low prices.
SPINACH—Little demand. There is a good supply of home-grown and it does not clean up.
STRING BEANS—In good supply for Saturday. They must be sold. There was no chance to dicker long on sale. The poor, and there were quite a few, had to

be sold low. In the case of very common it was a matter of taking bids.

SWEET CORN—Little demand as yet. Quality is not fancy and the best trade does not take hold.

SQUASH—Few hampers of white and crookneck squash in from Alabama. Quality was common and sales were slow.

TOMATOES—Floridas still in liberal supply and easy. Fair sales reported. A good many will remain over to next week. Mississippi slow. Some of these had green and leakers in the same case.

TURNIPS—Supply of nice, clean, white turnips is small. There is a fair demand for that kind and they are firm. Poor, yellow, wilted stock not wanted.

Straight Talk by a Member

TO WHOM IT MAY CONCERN:

We, as members of the Farmers Society of Equity, having joined ourselves together for our own greater betterment, are deeply sensible of our duty in doing our part of the work necessary to attain our only object in uniting and becoming a part of one body. We need not and should not neglect the simple, but nevertheless important duties our membership imposes upon us.

The one thing, probably the most important of all, and yet the most neglected, is to attend the regular and special meetings. They do not come often enough to be burdensome. It will not do to say we can not spare the time, for we can, and we know we can. It is not true that it matters little whether we go or not—it matters much, even though we take no active part in the deliberations except to vote. Our place is there and our presence in our place is encouraging to the officers and lends great strength to our local.

It is no credit to us to stay at home and then complain of what was done or what was left undone. It is true a few must do most of the work, but one thing every one must do, and that is to show sufficient interest to lend the neighborhood your presence for a few hours in a cause that is for the common welfare of all.—C. E. Squires, Taylor, N. D.

A Wrong View of Independence

The Planters' Protective Association of Kentucky and Tennessee, an organization of tobacco planters which sells the crop of its members, has filed damage suits against ten of its members for violating their pledges by selling their own tobacco outside the association. There are some farmers who are willing to pay dearly for what they delude themselves to believe is "independence."

Money Lenders to Farmers Form a League

Dealers in farm mortgages in Iowa have formed a league of their own. Now how are the mortgagors to look after their (the borrowers') interests unless they also organize? Or will they depend upon the dealers' league to look out for them?

Co-operative Associations Should Federate

H. V. Bruce, secretary of the Greater New York market committee, also secretary of the Wholesale Co-operative Association, says the great drawback to successful co-operation is the fact that the many co-operative institutions are disassociated, working independently instead of working together.

Farmers, Preachers and Prohibition in Texas

The Texas Farmers' Union awhile ago passed resolutions opposing the political agitation of the liquor question, and thus called down upon their devoted heads the wrath of the clergy, who consider it a momentous political problem deserving every attention. The union responded by saying the clergy are mostly supported by the farmers, and, in any event, would best keep theology out of politics. Tut, tut, folks! Do all the good you can, in all the ways you can, to all the people you can. But, after all, don't stir up political strife in a farmers' organization. They have other fish to fry.

Woman's Work and Welfare

Helpful Hints for Homefolks

Fireside Social Chats

Conducted by Aunt Sophia

FEEDING BABY FOR HEALTH

Mrs. Barthold had my sympathy. I have had three babies who cried for three and four months instead of sleeping and growing as babies should. I thought, and the doctor said, they had "indigestion," yet in the light of a broader experience I doubt it. I had an abundance of milk—they would nurse and immediately throw it all up.

I worked and worried, tried this and that, punishing the little innocents whom I loved dearer than my life with all kinds of "remedies," and can plead only my ignorance for such a course.

As later developments proved, they needed only a chance to be good and grow. There was no nourishment in my milk and the poor little dears were just simply starving. As soon as I began to feed them and use common sense in the care of them they changed so swiftly into happy, healthy little ones that my neighbors could hardly believe them to be the same children.

Doctors sometimes know very little about the ills of babyhood or, perhaps I'd better say, the prevention of illness. Experience is the best physician, but unfortunately by the time we are able to rely on him the nest is empty, or our children have suffered an irreparable injury at the hands of the one who loves them best, even though they have survived our indiscriminate dosing, jolting and idiotic feeding of anything and everything we happen to have in the house.

The little stomachs are very tender and delicate, able only to take very easily digested food, well prepared.

Humanity in general relies too much on medical advice—of this I am more and more convinced as the years come and go. Every mother ought to study the laws of nature and abide thereby. Cleanliness—absolute cleanliness—and plenty of fresh air, good water, and plenty of it (the tiniest babe needs a drink of water often) and the right kind of food, with common sense care, will, to my notion, do more to make and keep the babies (and ourselves as well) healthy and happy than a whole bushel of doctor bills.

We used to have a big doctor bill to pay every year. Now listen, sisters—I have discarded my "apothecary's shop" and rely on water mostly, and haven't had a doctor in the house for five years and all my family have had better health in that time than ever before. Every mother should use her own judgment—she knows her babe better than any one else. It's all right to confer with others, provided you sift their advice carefully, using only that which would be good and apply to your own particular case.

Baby's welfare should be the first consideration always. Mind you—I mean his best interest, not his own little lordly wishes by any means. But dear me! I am overstepping all "first call" privileges. But the care of babies, both big and little, is a subject so broad, deep and important that a lifetime of talk and study only reveals to us just a little of what we ought to know.

I have found that salt water sprays, with an application both in and outside the nose of mentholatum, good for nasal catarrh. Have had no experience with asthma.

Our farm papers can do a great work for busy, tired farm mothers and children through the medium of carefully planned woman's and children's pages.

I was a farmer's daughter and am a farmer's wife. As such I am deeply interested in everything that tends to the uplifting of the farm home and the bettering of its conditions. I read everything I can get hold of on the subject, take several high class woman's magazines and farm papers, and have collected from here and there and yonder what I call my "Bureau of Home Information," carefully sorted and labeled for ready reference.

UP-TO-DATE FARMING is all right—may it continue to grow and prosper and preach its sound doctrine to all is the wish of "The Farm Home Friend."

GARDEN NOTES

By A. C. McPherson

Chicago Market and Golden Dawn Crookneck are both excellent summer squashes and are prolific bearers. Those having trouble with the squash beetle will do well to make plantings remote from previous crops that have been troubled with this pest. An application of soot will generally put the beetles to rout.

We have discarded the Valentine bean or Early Six Weeks as it is often called and substituted the Kentucky Stringless. Pods are edible and fine flavored and tender and entirely stringless. It is very prolific. It is of the bush variety. If the first crop is sown early a second crop can be grown on the same ground and will be immune from the bean weevil. Kentucky Stringless is a favorite with market gardeners and canning factories.

Dwarf Lima beans do not give either the satisfaction or profit of the Mammoth Lima. Dwarf Limas are liable to mildew and decay very soon from being in close proximity to the soil, while the flavor is not equal to the climbing Lima. As a lazy man's bean they are a success.

Egyptian Blood beet proves a very early, excellent kind, sweet and fine grained—a desirable quality in beets. They do not need to be reset, but if planted closely can be thinned as needed. Among radishes the French Breakfast stands at the head of the list of the early sorts. They are small, but of excellent flavor. Cincinnati Market radish is an early radish, one of the long sorts six or seven inches in length, of good flavor, flesh crisp and brittle.

Early Cluster cucumber has stood the test of years, and for table use or for pickling has no equal. Flesh fine grained and of excellent flavor, seeds small. Should be gathered or shipped when about two inches in length, for pickling. Long Green cucumbers are best for market purposes. Their size is their chief recommendation. We gave them up long ago. They were too elusive when wanted of a certain size. Then, like "Jonah's gourd," they grew in one night to outlandish proportions, unfit for pickling.

Early Winningstatt cabbage holds its own among early sorts. Being a firm header and well on the way to maturity before the cabbage moth appears, its chances are better for growth. It is a good keeper and does not rot easily.

McIvor Sugar watermelon is an excellent sort, very sweet and of good size. Kleckley's Sweet is also a delicious melon. Both are excellent for the home garden or for field planting.

Dwarf Champion tomato possesses many desirable qualities. Bush compact and foliage dense. They can be set two feet apart in the row, as they make upright growth and are desirable

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

THE CLIPPER

There are three things that destroy your lawn—Dandelion, Buck Plantain and Crab Grass. In one season the Clipper will drive them all out. Your dealer should have them. If he has not, drop us a line and we will send circulars and prices. Clipper Lawn Mower Co. Box 5, Dixon, Ill.

DAISY FLY KILLER

placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or sent prepaid for \$1.

WOMAN'S NATIONAL WEEKLY

Box K. G., UNIVERSITY CITY, ST. LOUIS, MO.

OLD FOLKS

What 15c Will Do!

You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world and that tells the truth and only the truth. The Pathfinder is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its 21st year of increasing success. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you want a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address: THE PATHFINDER, Box 7 WASHINGTON, D. C.

BIRTHDAY PILLOW TOP GIVEN

Each member of the family should have a pillow, showing the respective month in which they were born. These pillows are tinted on Ecru Art Cloth, showing the birthday flower in natural colors. Size, 17x21 inches. We include a complete course in embroidery with each order.

OUR FREE OFFER—Send date of birth with 35c for a one-year subscription to our Magazine, or 50c for two subscriptions, and receive pillow top FREE. If you are prompt we will also send 10 Dress Pattern Coupons FREE. By using these coupons you will save 50 cents. THE HEARTHSTONE, 3357 Michigan Avenue, Dept. 4 CHICAGO.

3-PIECE Kitchen Set

Here are three useful articles. You will need them over and over again every day in the kitchen. They are made of best steel and will prove to be true friends to the housewife. A fine paring knife; a good, strong butcher knife and a cleaver that is heavy and made for work.

This set of three pieces given for a club of two subscribers, at 50 cents each. UP-TO-DATE FARMING Indianapolis, Ind.

A FLORAL NOVELTY

Two Sacred Resurrection Plants
These rare and curious plants grow and stay green by placing them in water. When taken out of water they dry and curl up and go to sleep. They will keep in this state for years. Simply place the whole plant into water; it will open up and start to grow in about 20 minutes. We will send two of these sacred plants postpaid and to any one sending 10 cents for a six-month subscription to our monthly magazine. Y. CECIL CONCERN SPRING

where space is an object. Fruit of good size, solid, firm flesh, purplish pink in color and of good flavor and very productive. They ripen early and are among our latest keepers. We have kept them until the middle of January. The Dwarf Champion withstands droughty seasons on account of its dense foliage much better than the thin-leaved sorts, as the Stone and General Grant tomato.

THE BACK GARDEN DOCTOR

A druggist's shop can not provide better remedies than your own back garden. Take the leaves and stems of the sunflower, steep them in spirit and you have an excellent tonic. For sore throat nothing is better than blackberry jam and a decoction of the leaves is good for whooping cough. If you can not sleep take some powdered root of the common cowslip. For asthma try coltsfoot. Onion gruel is excellent for a cold. Slice a few onions and boil in a pint of new milk. Stir in a little oatmeal and a very little salt. Boil until the onions are tender, then sip rapidly and go to bed.

RATS IN A BARREL

Fill a hardwood molasses barrel about one-fourth full of cracked corn and set it in the rat's runway. They can easily climb up the wooden hoops on the outside of barrel and get to the corn, but the inside of the barrel is so smooth that they can't get out again.

THE USEFULNESS OF CHEESE CLOTH

This cloth is most useful for the cellar, a garden, stable or chicken house. Frames covered first with chicken wire, then cheese cloth tacked tightly over them, let in air and light, yet keep out dust and insects. The windows of stable and cow barn should have these protections as soon as hot weather comes. Cellar windows ought to have cheese cloth frames inside their bars.

TO RENOVATE FEATHER PILLOWS

Open one corner of the ticking and pour boiling water in. This makes the feathers a wet mass, which can be handled easily. Take them out and wash thoroughly with soap and water, rinse in several waters until free from soap, put back into the clean cover and hang out in the sun. The feathers will swell to fit the cover and will be very light and clean, with no scattering or blowing about.

HINTS FOR HEN KEEPERS

Instead of using china "nest" eggs, try some home-made ones. Take one pint of lime, one-fourth pint of cement, one teaspoonful sulphur and one moth ball, well crushed. Moisten all with water. Mix well with water and mold in empty egg shells. These are unbreakable and help to keep the hens free from vermin.

What is Now the Fashion

Some Practical Designs

Women are wearing such numbers of separate waists, and especially in the plainer models, that variety is hard to obtain. Two styles are here shown, both novel and both easy to make.

6717—LADIES' WAIST. This is the accepted thing in plain waists and we find it developed in printed wash silk, crepe de chine and the inexpensive lawns, cambrics, voiles and the like. It has body and sleeves in one and the open neck is trimmed with a wide collar. Cuffs to correspond trim the elbow sleeves. The closing is placed diagonally in front. Sizes 34 to 44 inches bust measure. Medium size requires, without seam at back, 1 1/4 yards of 36-inch material; with seam at back, 2 1/4 yards of such goods.

6731—LADIES' WAIST. This is a trifle more elaborate than the other blouse shown. It has a plain, seamless shoulder yoke, with drop shoulder, and to this yoke is attached the full lower portion, gathered in both front and back. The sleeve is straight and plain, open below the elbow. The neck is open and there is a pretty collar as a finish. Sizes 34 to 44 inches bust measure. Medium size requires 2 1/4 yards of 36-inch material.

6716—LADIES' HOUSE DRESS. This has a plain blouse with a side front closing and regulation sleeves and a skirt which has three gores and which opens at the side of the front. Sizes 34 to 46 inches bust measure. Medium size requires 4 1/4 yards of 36-inch material, with three-fourths yard of 27-inch contrasting goods to trim.

6732—LADIES' SKIRT. A skirt which will develop well in either taffetas, serge or wash materials. This is a three-gore skirt, which may be made with either high or regulation waistline. It closes in the center of the front. There is a tunic, also, which is cut away in the front in an ornamental outline and which hangs about half way down the skirt. This may be omitted if preferred. Medium size requires 4 yards of 36-inch material.

6746—CHILD'S DRESS. This is designed to be slipped on over the head. It has a long-bodied blouse, resembling the middy style, and this is cut with body and sleeves in one. The skirt is attached to the blouse and is pleated all around. Sizes 2, 4, 6 and 8 years. Medium size requires 1 1/2 yards of 36-inch material.

6750—BOYS' SUIT. This model is very smart. It has a plain coat or blouse and the sleeves may be either short or long. The closing is in the center of the front and the neck is a trifle open. The suit has an underwaist and to this is joined a pair of small trousers, which may be gathered in at the knee or left with the lower edge straight and open. Sizes 2, 4, 6 and 8 years. Medium size requires 2 1/4 yards of 36-inch material.

Latest Fashion Book 2 Cents—We publish four times a year a Quarterly Fashion Book, illustrating 200 styles for ladies, misses and children, and containing many valuable dressmaking lessons. The regular price is 10 cents a copy, but if you will order the book at the same time you order a pattern we will send the spring number,

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

CASH PAID for all kinds Medicinal Roots, Barks, Herbs, etc. Write for circular. L. GRUND CO., Logan Station, PHILADELPHIA, PA.

Splendid New COOK BOOK GIVEN

Most cook books are more or less extravagant or impractical. Here is a cook book that is different. It contains 1,000 proved, tested, practical, prize-winning recipes—all calling for only such ingredients as nearly every housekeeper has on her shelves. Included in this book are recipes for 39 salads, 32 fruit and egg desserts, 18 cakes, 68 pies and puddings, accurate rules and measurements, ways of canning and preserving—1,000 valuable recipes in all. One of the greatest collections ever published in one book.

We will send this book free and postpaid to all who send only 10 cents to pay for a 3 months' trial subscription to our big family and story paper, the Household. Address The Household, Dept. C B-360, Topeka, Kan.

Bracelet 25c It's all the rage. Girls, wear it to school and all the others will envy you. Handsome gold finish, heart shape design, set with stone. Adjustable to any wrist. Not more than two to one person at the introductory price of 25c. S. E. FERRY, Irvington, Ind.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET of EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER of EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

ULIVUS FOLGER of Elberta, Mich., is so much interested in the Cadet letters and sees so clearly the possibilities of the Cadets of Equity that he writes to ask if it would not be possible to make of this department a separate paper to be issued every week instead of twice a month. We appreciate the kindly suggestions of our friends, but such a thing is entirely impractical because of what it would cost. Besides, this is only one of the departments of UP-TO-DATE FARMING, truly "a paper with a mission," and devoted to the building up of all that is good. It is also impractical to date the letters, as it is seldom we can print them near the date when they were written, but when something specially pertaining to the date is mentioned we give the date in parentheses. Mr. Folger is seriously afflicted and does not expect to be well again. He takes great interest in fossils and mineral curios and would be glad to correspond with persons of like mind.

We begin with the following letters from Nebraska and Kansas:

DEAR CADETS—I think UP-TO-DATE FARMING is a grand paper. My brother has taken it for several years. I live on a 640-acre farm and was 18 years old May 25 and would like to exchange cards and letters with the Cadet boys and girls, and will answer all I receive.—Frances Morey, Angora, Neb.

DEAR CADETS—I am a farmer boy and live on an 800-acre farm. We have 625 acres of winter wheat and it looks fine (April 27). I have just begun to take UP-TO-DATE FARMING and I consider it a good paper. I would like to join the Cadets and exchange post cards with them. Some can get views of the country. I live about twelve miles out, but we have an auto, so we can soon get to town. We have many amusements here.—Richard Buckles, St. John, Kas.

But we must continue the letters as they come now, beginning with this nice little Montana girl:

DEAR CADETS—I have been reading some of your letters and enjoy them very much. I am a country girl, but I go to town school. I am 9 years old and in the fourth grade. My father tends a ranch of 200 acres, 150 acres of which is in oats and the rest in pasture. We have seven horses, eight cattle, and hogs and chickens. I enjoy gathering the eggs and feeding the chickens, but best of all I enjoy reading the Cadet letters in UP-TO-DATE FARMING. I would like to hear from all the Cadet girls and boys.—Evelyn Dennis, Victor, Mont.

DEAR CADETS—I always welcome the day when we receive UP-TO-DATE FARMING, but about the first thing I look at is the Cadet letters, for I think they are very interesting. I am a boy 16 years old and live in eastern Nebraska. The country here is very hilly, but we raise good crops. I live on a 160-acre farm and we raise wheat, corn, oats, potatoes and hay. I would like to hear from the Cadet boys and girls and will answer all I receive.—Levi Isaacson, Malmö, Neb.

DEAR CADETS—I am a New Hampshire girl, 17 years old, and live on a farm of 150 acres. My brother and I had a small garden last summer and we planted watermelons. After they were up about an inch there came a great rain and washed them all away. We planted again and they proved a success. In the fall we took our best melons to the fair and mine took first prize. I expect to have a garden this summer and raise more watermelons. I am quite musical and play the organ and violin and am an alto singer. I go to church about every Sunday and sing in the choir. I am a member of a club called B. B. S. and an associate member of the Christian Endeavor. It held a convention this spring and our society got the banner. I would like to get letters or cards from the boys and girls and will try to answer all I receive.—Clara R. Miner, Antrim, N. H.

DEAR CADETS—I am a Dixie farmer, 21 years old, and live in Baldwin county, Alabama. I like to farm here in the south, for we can farm nearly all the year round. We came from Indiana, where we used to own a farm of 111 acres, but my father

sold that and bought 140 acres here. I have a brother up north. He does not like it here. We raise all kinds of fruit, such as oranges, lemons, grapefruit, persimmons, figs, pears, grapes, peaches, strawberries, and I have seen bananas growing in the neighborhood. Flowers bloom here the year round. My favorites are magnolias, roses and carnations. We can raise corn as well as we did in the north, or better. Our other crops are rice, field peas and beans, oats, clovers, Irish potatoes, sweet potatoes, cucumbers, cabbage and peanuts. We have the best of climate and pure, cool water. I think Alabama, at least around Loxley and in Baldwin county, is as healthy a country as can be found anywhere. I will be glad to correspond with any of the boys and girls near my age.—Roy W. Marshall, Loxley, Ala.

DEAR CADETS—I am a Texas girl and would like to become a Cadet of Equity. My brother takes UP-TO-DATE and I enjoy reading the letters very much. I live on a farm of 200 acres and we raise cotton, corn, oats and wheat. August 12 I will be 15 years old and I have seven brothers and four sisters, but one of my sisters is married. I am a Bohemian girl, my mother and father having come from Europe. I would like to hear from all the Cadet boys and girls and will answer all I receive.—Mary Pancik, Temple, Tex.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and I enjoy it very much. I am 18 years old and a stenographer for a large department store of this town and I enjoy my work very well. I would be pleased to hear from all the Cadet girls and boys and will answer all letters or cards I receive.—Eleanor Sullivan, 149 S. Tamarack St., Laurium, Mich.

DEAR CADETS—I am taking UP-TO-DATE FARMING and think it is a grand paper. I am 21 years old and live with my parents in a little town called New Hope. I like to live in the country. I think it is so much more pleasant and healthy than in the city. I enjoy riding and driving and all other country sports. I would be glad to correspond with any of the Cadet girls and boys and will answer all I receive.—Robert M. Dickey, New Hope, Ala.

DEAR CADETS—I am a farmer's daughter and live with my parents on a 160-acre farm. We take UP-TO-DATE FARMING and think it is a fine paper. We raise most all kinds of grain and vegetables. I am fond of music and like to ride horseback. I like the country better than the city. I wish to be a Cadet of Equity and would like to correspond with any of the Cadets.—Beatrice Gano, Parkers Landing, Pa.

DEAR CADETS—Though I am not a farmer, I would like to become a Cadet of Equity. I have just been reading UP-TO-DATE and it greatly interested me. I am a girl of 16 and live in a small town near the center of Keweenaw peninsula of Michigan. Summer is here and it is my favorite season, with its nutting, rowing and many other sports. Winter has its sports, too, but I do not like it as well as I do summer. I hope to hear from the Cadets of Equity.—Amelia Sirola, Kearsarge, Mich.

DEAR CADETS—I have been reading UP-TO-DATE and would like to become a Cadet. I live in old Virginia on a farm of 172 acres. My father owns a grazing farm of 620 acres of fine bluegrass, and we have about 100 cattle, fourteen horses and we milk eight cows. This is a healthy country. I am 20 years old and would like to receive cards or letters from all the Cadet girls and boys, and will answer all.—C. C. Foltz, Edinburg, Va.

DEAR CADETS—I am a girl of 16 years, a reader of UP-TO-DATE, which I think a grand paper, and I live on a farm in northeastern Oklahoma. This is a timbered country and has a great many creeks and rivers running through it, which gives moisture to the farm land. But there isn't much farming done here, as we are in the oil and gas belt. We moved here from a prairie country and I like prairie much the best. I hope to hear from the Cadet girls and boys and will answer all who write.—Dallia E. Varnum, Chelsea, Okla.

DEAR CADETS—I am an Arkansas boy and read UP-TO-DATE FARMING. I have lived on a farm all my life and think farming a great business when done properly. I live near the state agricultural college at Magnolia, Ark., and have taken a number of courses there in agriculture. I think the college a great institution. The main building has twelve recitation rooms and a study hall that will seat about 500. There are four brick dormitories, one large dining hall and about twenty other buildings for various purposes. The college is only a little more than three years old, but the good work accomplished already by its fifteen teachers is very gratifying. I think every boy and girl who wishes to live on a farm should attend a college like this. Now, Cadets, send me your photos, letters and cards. I will gladly exchange with you and tell you more about our college and the country in general.—Grover Lee McCollum, Emerson, Ark.

We have again used all of our space, but still our good letters are not all printed.

Delivered to FREE on Approval and 30 days Trial

SEND NO MONEY but write today for our big 1914 catalog of "Ranger" Bicycles, Tires and Sundries at prices so low they will astonish you. Also particulars of our great new offer to deliver you a Ranger Bicycle on one month's free trial without a cent expense to you. Coral Necklace Given

Send 10c. for three months' trial subscription to the Household, with 5c. extra for mailing expense and we will send you absolutely free a handsome new style, Genuine Coral Necklace, made from corals of delicate light red color; very stylish and quite expensive, but we give away a limited quantity free, just to introduce our magazine. Send 15c. immediately. Your money back if not delighted. Address, HOUSEHOLD, Dept. CN-60, Topeka, Kan.

Baseball Curver GIVEN

Boys, you can simply make money out of the other boys with this curver. You can be as big a hero in your town as any big league pitcher. The curver which is worn on the hand enables the pitcher to give the batter a rapid whirling motion thus causing a wide curve. It is so small that the batter cannot see it and they all wonder where those AWFUL CURVES come from. You can fan them out as fast as the wind and get a complete set of directions for throwing curves goes with each curver. Our Offer: We are giving these baseball curvers away free as a means of introducing our great farm and family magazine, Missouri Valley Farmer. Send us for a three months' trial subscription and immediately upon receipt of same we will send you one of the curvers, by return mail free and postpaid. If you want one of these wonderful little curvers do not delay but send us your subscription at once to the address below. Our supply is limited. Do not put off sending in your order now. Address MISSOURI VALLEY FARMER, Box 24, Topeka, Kansas

Join Popular Motorcycle Club

Special Edition in attractive paper covers, 10c each—3 for 25c postpaid. COONER & FORTUNE Indianapolis, Ind.

Lowest Prices Ever Made On World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing— Lasts as Long as the Building Stands

That's the kind of roof you want to invest your money in, isn't it? All roofing you have ever bought heretofore had three cost prices—the first cost per square laid on the roof—the cost per year for up-keep—the cost of property damage by leaks. Here then, is *real* roofing economy.

Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end for all time.

Its cost per square is the lowest ever made. It has no up-keep cost. Its property protection is absolute. Its years of service, as long as the building stands. Always beautiful in appearance. *Guaranteed Fire-proof, and Lightning-Proof. Reducing the cost of your fire insurance.*

EDWARDS Exclusive Tightcote Process Makes Rust-Proof Roofing

The Edwards process of galvanizing makes the zinc spelter practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingles, Grip Lock Roofing, Pressed Standing Seam or Roll Roofing is dipped in a bath of molten zinc, one at a time after the metal has been stamped and resquared. This insures a uniformity. The edges are galvanized as heavily as the sides. Not the space of a pin-point on the steel is exposed to the rain, snow, frost, acids or anything that eats or destroys a steel roof.

How to Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with the finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking—not a space on the metal the size of a pin-point exposed to rust.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking—Protects Nail Holes—They Can't Leak or Rust

This device not only takes care of expansion and contraction so that an EDWARDS Steel Roof never warps, buckles or breaks, but it is so designed that nails are driven through the *under* layer of metal only—nail holes are protected from exposure—cannot rust. No special tools or experience needed to lay it—anyone can do the work—lay over old shingles if you wish.

Reo Steel Shingles

cost less—outwears three ordinary roofs and are your joy and pride forever. A most beautiful roof.

No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Roofing exactly suited to your needs. We manufacture and sell all of the many patterns of Edwards Reo Steel Shingles, V-Crimped, Corrugated, Standing Seam Roofing, Siding, Ceiling, etc., painted or galvanized, and all other kinds of the best grade of sheet metal building material.

Freight Paid Factory Prices

This is positively the greatest roofing proposition ever made. You can't afford to neglect investigation. All we ask is a chance to prove to you that we do indeed offer the lowest prices ever made on the world's best steel roofing. Won't you write today for our freight prepaid price and be convinced. We

are the largest manufacturers of Iron and Steel Roofing in the world. We sell direct to you from the largest, most modern sheet metal plant in existence. We save you all in-between middlemen's profits. Because of our immense purchasing power of raw materials—our wonderful manufacturing facilities and enormous output, our prices are rock bottom. We prepay freight and give you a binding guarantee against lightning losses.

FREE—Our Big Roofing Book—FREE

No matter whether your building is a corn-crib, barn, shed or mansion, Don't for an instant consider investing your money in roofing of any kind until you have received our Roofing Book, illustrating and describing every conceivable kind of Sheet Metal Roofing and Building Material—special offer and free samples of Steel Roofing. Postal or coupon brings FREE copy of Roofing Book No. 691

The Edwards Manufacturing Co.,

UP-TO-DATE FARMING

17th Year

July First, 1914

Number 13

What Are You Going to Do About It?

The 1911 wheat crop was 730,000,000 bushels. There was not a month from July 1912, to June, 1913, that it did not sell at over \$1.00 for cash wheat, in Chicago. We will say the crop was worth \$730,000,000 basis Chicago.

The 1914 crop is estimated at 900,000,000 bushels and on the strength of this enormous estimate the price has been put down to 79 cents (Chicago price on June 25th).

Detroit

The Car for Rough Roads

Bad roads have no terrors for the Detroit. Built with such big factors of safety that it is practically as good the second and third seasons as the first, it is the ideal light automobile for hard work and lots of it.

\$925

With Detroit-Remy Starting and Lighting System

\$1050

The 32-horsepower motor carries the Detroit anywhere its wheels can find traction. The multiple disc clutch never slips. The platform rear spring needs no shock absorbers. Ball bearings throughout cut friction down to next to nothing.

Easy to keep in order, light on repairs (\$3.81 a year is the average), simple to operate and running from 20 to 25 miles on a gallon of fuel, the Detroit, beyond question, is the best car ever designed for country use.

WHEN WRITING TO ADVERTISERS PLEASE
MENTION UP-TO-DATE FARMING

What We Want You to Know and Why

Being a Few Words on Particular Matters

Farmers' Institutes and Their Attendance

The growth of farmers' institutes in the United States is quite remarkable. In 1902-3 there were held 9,570 institutes, with a total attendance of 904,654, an average attendance of 94 at each institute. In 1912-13 there were 20,640 institutes held, with a total attendance of 2,897,391, and an average attendance of 141. What a great work these institutes might do if they were to add to their curriculum practical teachings on co-operative marketing for better prices. The attendance would increase more in one year than it has increased in the last ten, if this were to be done.

A Boy Dairyman

Farmer Sonda, of Ohio County, West Virginia, bought three Guernsey cows four years ago. One of them has a record of 13,600 pounds of milk and 626 pounds of butter fat in a year. Her daughter, at 23 months of age, produced 12,000 pounds of milk and 600 pounds of butter fat in a year. Mr. Sonda has a son, George, 12 years of age, who is caring for a heifer 21 months old, with her first calf, under an official test, doing all the work of caring for and milking the young cow. At present she is producing thirty-five pounds of milk daily, testing 4.7 per cent. George, we venture to say, will never leave the farm for a cheap job in the city, but will turn out to be a successful farmer and a substantial citizen. Here's a hint to fathers who are wondering how to keep the boy on the farm.

How Much Is the Cholera Loss?

The West Virginia Agricultural College has published estimates of the losses from hog cholera in Jefferson county of that state, giving the money loss annually at from \$10,000 to \$30,000. It then figures the total annual loss for the entire country (\$73,000,000) and maintains that with cholera entirely eradicated farmers would save this amount in cash. There is one thing these expert statisticians invariably fail to take into account when figuring on how much money farmers would have by preventing losses. They never figure on the probable price that would be paid for vastly increased quantities. Instead, they figure the losses on the basis that if the hogs were saved they would bring the same price per pound the smaller supply brings. But every one knows the larger the supply the lower the price. Losses from cholera should be prevented, if at all possible, for the sake of those who lose or may lose, but loss of profit is as great a disaster, and anything which lowers the price without just cause should be combated as vigorously as the cholera itself. While we are saving the hogs, let us also save the profits.

Beet Sugar Production

The beet sugar output for the season of 1913-14 is the largest on record, according to statistics obtained by the United States Department of Agriculture. The total quantity was 733,401 tons, which is 40,845 tons more than was produced the previous season. The total acreage devoted to sugar beets was 530,006 acres, an increase of 24,706 acres over the preceding year, the average yield per acre being over nine tons of beets both years, the exact figures being 9.76 tons per acre in 1913 and 9.41 tons in 1912. (An average acre yields about 2,500 pounds of refined sugar.) The farmers received \$5.34 per ton for their 1913 crop and \$5.78 per ton for the 1912 crop, a difference of 48 cents per ton. They received \$30,406,000 for the smaller crop of 4,225,000 tons of beets grown in 1912 and only \$30,222,000 for the larger crop of 5,660,000 tons grown in 1913. By raising the larger crop, and allowing the buyers to dictate prices, they practically gave away 1,435,000 tons of beets and paid the buyers \$184,000 in cash to accept the gift. Is it any wonder the buying interests are able and anxious to contribute liberally to the greater production movement? Now just think a moment, brother farmer. Here the buyers got 1,435,000 tons more of beets, made 40,845 tons of sugar more than they made the year before, yet they paid you \$184,000 less for the larger amount than they paid you for the smaller quantity, and there is no reason why you should suffer the loss. Get together, men, for the sake of your wives, your boys, your girls and posterity, get together.

The Home Value of the Farm

Farms may be valued in many ways. They have an earning value, a speculative value, a cash value, a social value, a potential value and other less important values. When buying a farm the prospective purchaser should study the farm he considers buying in the light of each of these values. How much will the farm earn—i. e., on how much money will it be able to pay, net, an income of 6 per cent? What are the prospects for the farm, if maintained in its present state, to sell for a higher price some future time? If placed on the market, at a forced sale, what would it bring in cash? How desirable is the neighborhood, socially? Given good treatment, with wise investment in capital, how much can its earning power be increased and its other values also increased—its potential value? But there is another value, a very real one, not usually considered. That is the home value. The business man of the city or town, when he embarks in business, looks after the values carefully—the earning, speculative, cash and potential values of his business. He buys his business on those foundations alone. His home he must buy separate and apart. But the farmer, in buying a farm, buys his home at the same time, and it is this home value, more than anything else, which contributes to the high prices of farm lands. Farms are not worth the prices paid for them, in many cases, for their earning power, for speculation or for their future usefulness, but the man desires a home and is willing to pay a good sum for that alone. So, whereas the townsman buys a business on one hand and a home separately, paying what he considers each to be worth, the farmer does the same thing, only he buys both together. This accounts, in a great measure, for the abnormally high farm land values in many sections—high when based upon earning power.

5,918,098
gallons Polarine sold last year
1,536,232 gallons more than in 1912

These figures form indisputable evidence of POLARINE'S lubricating efficiency. For all makes and types of motor cars, motor trucks, motorcycles and motor boats. Maintains the correct lubricating body at any motor speed or temperature.

Polarine
FRICTION REDUCING MOTOR OIL

POLARINE remains liquid at zero. POLARINE differs from all other motor oils, in that it lubricates perfectly at extremes of temperature.

Balanced Rations

Independence Day is at hand.

Dollar wheat will come if the farmers do their part.

Some day farmers will celebrate the day of their commercial emancipation.

Sugar in barges was the first cargo to pass through the waters of the Panama Canal.

Salvation is free, but we must ask for it, then work for it. It is the only way to get it.

If you must be a hero worshiper, don't make the mistake of picking yourself as the hero.

The boy who will work without being watched will some day be able to watch others work.

Now that you've got your wheat crop, what are you going to do about getting an honest price for it?

There is liberty enough to go all around, but farmers must ask for, then take the liberties that belong to them.

The grain dealers are never going to hand the liberty of the markets to the producers on a silver platter—not on your life!

Louisiana farmers want to increase the consumption of "black-strap" molasses. Why don't they try making it really good to eat?

The farmers who really make a big thing of farming are those who are their own middlemen, dealing direct with the consumers of their products.

The war of revolution in marketing farm products is now on, and commercial independence will be the final outcome. The old system will meet both its Waterloo and its Yorktown.

From January 1 to March 25 over 62,000 cases of eggs were shipped from Shanghai, China, to ports on the Pacific coast of North America. Their value, delivered in America, is quoted at \$4.63 per thirty-dozen case, or 15½ cents per dozen.

The first three men were agriculturists. Adam was a gardener, Cain was a plowman and Abel was a shepherd. Adam was banished, Cain turned murderer and Abel was killed. Farmers have been in tough luck from the very beginning, it seems.

If every one who eats oleomargarine instead of butter on his bread and baked potatoes knew at the time it was oleomargarine, the price paid for the butter substitute would not be what it is. It is the demand for butter that makes high-priced oleo.

It is high time to organize good citizenship economy leagues to see whether or not our high taxes are justified. What goes with the money? Do the people get value received? Taxes are becoming a real burden, and it is growing worse all the time.

The patriots of 1776 could never have won independence for America if each of the colonies had fought the enemy alone. By uniting they won. Farmers' associations can not win the great reward so long as they stand independently. They must all get together under one flag.

To Whom Does Control Belong?

Congress and the Country

WITHOUT in any sense taking a partisan view of the matter, the present Congress of the United States is making a grievous mistake. No matter what party may be in power for the time, the national interests watch Congress while it is in session and are more or less handicapped by the agitation of questions that affect the country at large and the doubt as to what may be finally done. That Congress should remain in continuous session for more than a year, therefore, is not only absurd, but it is a manifest mark of a lack of statesmanship. There have been many times when the present Congress could have adjourned with every show of a finished work, and with an honorable record that could not have been assailed even by those who opposed its enactments. But to dwindle on and on, agitating this question and that question, assailing this concern and that, favoring or opposing this action or that, keeps the whole country in suspense and benefits nobody at all. A year of this unsettled condition is more than any party, any administration or any set of politicians or statesmen, if such a word in this case is advisable, has a right to inflict upon the country. Many have been driven to the belief that it would be better for the nation if Congress met only once in five years. Some think the sessions should be even farther apart than that and a few doubt that Congress, as it works at present, is any benefit to the country at all.

At all events, common sense should rule even in that distinguished body. It should do a reasonable amount of the most important work it thought devolved upon it and then retire to quietly await results, and give the country a chance to settle down and adapt itself to the changed conditions. Staying in session a year, and constantly jumping from one disturbing thing to another, is unjustifiable and inexcusable. Adjourn and get out of the way.

What Others Say and What We Think of It

"We all want larger yields."—Prairie Farmer. Yes, of both crops and cash.

"Alfalfa is good for 'greens' to use on the table."—The Business Farmer. Possibly so, but we prefer ours in the form of beef and butter.

Our readers should give particular attention to the articles now appearing in our columns regarding the marketing and price of wheat.

"If the farm pays well the boys will want to stay."—The Practical Farmer. Provided, undoubtedly, that the boys get a share of the profits.

"No remedy was ever infallible."—Ohio Farmer. True; while the electric chair puts an end to the criminal it doesn't put an end to crime.

"If you, Mr. Dealer, can help the farmer grow more grain you have helped yourself."—Farm Implement News. Oh, the dealer will help himself, all right.

"We suppose the early melons must be coming along nicely now."—Progressive Farmer. And we suppose that unless a careful watch is kept the early melons will be going as rapidly as they come.

"To the boy raised on the farm the city often lies like a paradise of ease."—W. C. Smith, in County Contributors. If the city ever tells the farm boy it is a "paradise of ease" it lies like a pirate.

"The constant discussion of the farmer and his problems means that in the near future farming will have taken its proper position."—Farm and Family. But not until something besides constant discussion is done.

"The state instructs farmers in scientific agriculture. Why should it not instruct them in economic agriculture?"—Ft. Worth Record. Do you mean to intimate that agriculture which is not economical may be scientific?

"We think there should be a silo on every farm of sufficient capacity to feed the stock on the place."—Indiana Farmer. We think there should be sufficient stock on every farm to feed up the contents of a silo of good capacity—and then, of course, have the silo.

"It is the hope of the consuming world that the farmer may produce more; it is the conclusion of the college men that the farmer can produce more and it is the aim of the business man to induce the farmer to produce more. The business man very naturally wants all he can get for his money."—Oklahoma Farm Journal. There is the milk in the "greater-production-propaganda" cocoanut of the boards of trade.

EDITORIAL

Again the Fourth of July

ONE HUNDRED and thirty-eight years are not many in the life of a nation, and yet that is as many as this great country can count. Four more days and in city, town and village and country our people will be celebrating the 138th anniversary of the nation's birth. Those who witnessed or took part in that great event are all gone—completed their work, accomplished their great achievement, wrote pages of history such as had never been written before, put the human race upon a higher level, and went to sleep amid the plaudits of the world.

They scarcely knew how great a work they had done, and could not with human eyes see what was to follow. The greatest nation on earth built up in a hundred and thirty-eight years! And its greatness consists in its uplift of mankind. Wild forests and wilder men and animals retreated before the breath of unpretentious labor and adventurous perseverance; a more ambitious but no nobler spirit followed and built cities made of palatial homes; the genius of restless aspiration sent vessels on the waters and carriages across the lands propelled by powers that were not realized when the Declaration of American Independence was signed! The things that have followed in such confusing, incomprehensible rapidity and almost weirdness paralyze the pen or the tongue that would enumerate them. Signs meaning words flashed by lightning along a thread of steel. Words themselves, the very human voice, going from tongue to ear hundreds of miles apart, and sometimes with no connection but the earth's natural envelope of atmosphere!

The Nation to Tyrannize Farming

WE OPPOSED the Lever agricultural extension bill and we are glad we did, not because of its pretended and apparent purpose, but because of its absurd propositions, its impractical methods and the hidden evils that we felt sure lurked beneath it. But it became a law in spite of opposition and already its hidden purposes begin to show themselves. The agricultural colleges that share in its unwise and extravagant appropriations must sign a contract entirely surrendering their independence as state institutions and make themselves subservient in their teaching and methods to the national Department of Agriculture. This virtually places the agricultural education of the country under the dictatorial control of one person, and he a politician, subject to the party administration that may at the time be in power. No such thing was ever heard of before, not even during the old days when the tillers of the soil were held to be serfs and were not consulted on any questions of government. The states and their educational institutions will certainly not accept such terms—will not sell their educational independence for the paltry dollars, though counting into millions, that the national government is offering for it.

These are serious matters and we are not alone in seeing them in this light. Read the following, which we quote entire as the leading editorial in a recent issue of one of the most prominent farm papers of the country:

In considering the new federal law to promote farm demonstration work in the several states, the rub comes with its administration. According to the law, supervision of funds appropriated by Congress is delegated to the United States Department of Agriculture. Right here is where

But the greatest achievement of all has been in the development of the human mind, the higher aspiration, the longing for greater and nobler things. All hail the American church and school, and the American press, though here it must be confessed things may have crept in that are neither elevating, inspiring nor uplifting. In fact, there is work yet to be done. There is still room for progress. The President of the United States has said there is as much to think about, as many evils to overcome, as much to do for the equality of men and in the interest of good government, as there was when Bunker Hill and Lexington became famous, when Washington suffered and prayed at Valley Forge, and when the heroes in Independence Hall in Philadelphia defeated the power of a king and dared the rope and the gallows.

Now no nation dares assail us. Our flag is our own, and patriotism guards our remotest border line, but as the egg may become foul within its unbroken shell, so many evils, dangers, usurpations, inequalities, unfairness, injustice, tyranny, selfish power and greed grow up and establish themselves in our very midst. There are classes here—classes that usurp powers, that actually rule in a way that does not belong to them; and there are classes that tamely submit rather than step out independently and with the peaceful means of victory given them by the declaration of 1776 and the constitution that followed, win almost as great a victory as the fathers won in war. There is more in this than the words we are writing, and the good sense, exalted ambition and patriotic instincts of the great masses of the common people must solve the problem.

the centralized policy of the government may defeat the very intent of the bill. You see, the federal Department of Agriculture is controlled by Congress, and Congress by congressmen, and these congressmen are politicians who every two years must stand for re-election; so they want to have a finger in this extension pie to get its aid in securing their re-election.

You would never doubt this fact if you were to read the articles of contract proposed by the national Department of Agriculture for the acceptance of the various colleges, in respect to the administration of this Lever act. This co-operating contract not only binds the agricultural colleges to do the bidding of the federal agents, but emphatically declares that all appropriations made by Congress under the Lever act shall be approved by the national secretary of agriculture.

Not content with that chain around the colleges' feet, they insist also that all state funds appropriated by states, or individuals, or otherwise, and used for co-operating and demonstration work shall also be approved by the secretary of the national Department of Agriculture. This means that if any state Legislature appropriates money for farm bureaus, agricultural extension work, those having charge of those expenditures must go to Washington and get approval before the projects may be undertaken. That is national control with a vengeance. You might just as well say that our state colleges are directed by men of so little consequence that they can not be intrusted to spend money for farm demonstration work even if the state directly makes the appropriation for a specified purpose. Furthermore, all moneys given by friendly citizens, boards of commerce, agricultural societies or farmers themselves must first be approved by the agents of the national department before any project can be taken up.

The proposed contract submitted by the federal department makes the farm bureau men and all other county agents and extension workers joint employees of the national department, and all of the work and all the projects undertaken, also direct projects of the Department of Agriculture where the final approval and authority rests. No agricultural college can afford to submit to such an arrangement as this.

This country can not afford to have its agriculture signed up in any sort of educational trust. Better far get no help from the national government than to have state initiative and state enterprise dominated

and controlled by the federal Department of Agriculture. Bind the extension service with political strings and you make impotent these very colleges that have done so much in the past.

The contract submitted by the federal government stipulates "that all funds which any college has or may hereafter receive for extension work in agriculture and home economics from appropriations made by Congress by the state Legislature allotment, and from its board of trustees, or from any other source, shall be under federal approval and control." Daniel Webster, one of our greatest statesmen, once declared: "The contest of the ages has been to rescue liberty from the grasp of the executive power." We appeal to our readers to prevent centralized executive power from destroying agricultural liberties in their several states. Make plain to the officers of your own agricultural college that they must not sign any agreement with the national Department of Agriculture that places the control and administration, or even its approval of state-raised funds, under the authority of the federal centralized government.

We seldom give our readers so lengthy a quotation, and we do so now only because we approve what is said therein and we are glad to know that others see the dangerous tendencies of the times as we ourselves see them. This unblushing effort to monopolize the farm education of the country ought to be an unmistakable warning concerning the much discussed rural credit proposition. The same power is behind both, and to increase the power of monopoly is the purpose of both. No matter who pays for farm education, the things taught must be controlled by a power able to exclude everything that would harm or weaken the monopoly market schemes that give farm profits to the few that "toil not, neither do they spin," and the rural credit scheme is to get liens upon or actual control of the farms themselves, the homes of the farmers, and thus complete the absorption we have so long and so persistently fought. But one power can prevent it, and that is the united power of the farmers.

Quantity and Price

IN THE YEARS when the farmers are "blessed" with bumper crops prices rule low, don't they? Nobody denies that fact and everybody knows it. That is why the product buyers are constantly urging increased production. They want more stuff on the market so that they can make the prices lower, not the prices at which they sell to consumers, but the prices they pay the farmers.

These speculating market monopolists can not always control the yield per acre nor the total production, but if they can bring cheap products from other countries they can produce the effect of a bumper crop every year, can't they? The thing these speculators need is oversupplied markets, and the effect is precisely the same whether that oversupply comes from bumper American crops or whether it is brought in from foreign fields or pastures. There can be no mistake about that, can there? The effect on the price must be the same. We speak thus particularly because some of the farm papers contend that the recent tariff changes can not unfavorably affect the farmers.

Let us see. The figures we give are from authoritative official sources. Imports of foodstuffs in their natural condition, just as they came from the farms, including food animals, increased from \$117,194,237 in the half year ending with March, 1913, to \$143,421,536 in the half year ending with March, 1914, and imports of foodstuffs partly or wholly prepared for use during the same periods increased from \$95,744,241 to \$100,967,378. Thus the increase in importation of all food products in the period named amounted to over \$30,000,000, or an average of \$5,000,000 a month.

The articles of food showing the largest increases in importations during the six months preceding the first of last April are fresh beef, cattle, corn, wheat, rice, fruits, molasses, etc. During that time we imported 550,000

head of cattle and 83,000,000 pounds of beef and veal, and nearly 9,000,000 bushels of corn, besides large quantities of wheat and other products. Had our farms, ranges and pastures produced that much more than they did, would there not have been great talk of a bumper crop? In fact, the Department of Agriculture reports for the period thus covered the greatest crop ever produced, and of our stuff was sent abroad during that same period \$502,000,000 worth of foods. That is proof that we did not need these importations, but the market monopolists needed them to depress prices and help them to buy cheaper. But there is no evidence from the retail markets that they sold any cheaper.

Farming was never before in so critical a condition so far as government is concerned as it is now. And it is not because of the Wilson administration either. It is because of the monopoly control of the politicians of all the parties, and the masses must assert their power.

Nine Hundred Million Bushels

THE DEPARTMENT at Washington persists in reporting for the harvest of 1914 an extravagantly large wheat crop. The June 1 report made the crop 900,000,000 bushels, the largest crop ever produced in this country. And all this in spite of the reports with which the papers are full of serious losses in various portions of the country—of losses from April and May droughts in the Illinois wheat belt, the ravages of the Hessian fly and the army worm in Missouri and Kansas, and damages from other causes in many other localities. In many places no small acreage has been reported plowed up and planted to corn.

We mention these things only as the press and personal letters give them, and they certainly do not indicate the enormous crop reported by the Department of Agriculture. Those reports, though, whether real or imaginary, have a depressing effect upon the price and make the farmers anxious to dispose of their wheat at the prices first offered. If that is not the object of the persistent urging to produce big crops, and the equally persistent reports that big crops are coming, then we confess our inability to understand what the object or purpose is. It is not that we need more wheat or other products, for we are constantly sending out more or less of these very products to other countries.

But in spite of it all, our contention is that American farmers are entitled to remunerative prices. If they are not offered such prices they should refuse to sell. Other creators of things of value sell at nobody's prices but their own, and the purchasing world thinks nothing of it. We ask the same business rule for farming. That is why a few years ago we waged and won our memorable campaign for dollar wheat, and it costs just as much to produce and harvest and market a bushel of wheat now as it did then. Hence we take the position that, no matter how large the crop nor how much is unfairly and unjustly brought in from abroad, our farmers deserve and should have a dollar a bushel for their wheat. And that does not mean that consumers should pay any more than they now pay for their bread.

They Looked Alike

"Miss Gertie, can you tell me who that hard-featured young fellow over there is?"
"Yes, that is my brother."
"Oh, excuse me. I see your favor now."

Would Clean Up

"Aunt Chloe, do you think you are a Christian and going to heaven?"
"I 'spects I is, pa'son."
"But don't you know anything unclean can't get into heaven?"
"Yes, I 'se heard dat."
"Well, you smoke and your breath is awful unclean."
"But when I goes to heaben I'll leave my bref here."

Hay and the Meadow

Photo from the International Harvester Co.

Making Hay While the Sun Shines

GRASS has ever been one of the chief foundation stones of agriculture. Before the flood ancient tribesmen grew wealthy from sheep and kine that waxed fat on the grasses of the valleys of southern Asia. Today, in America, hay ranks second to corn in value. The farmer, especially he who farms for the future as well as the present, should be deeply concerned in his meadow, greatly interested in the part grass should have in his scheme of farming.

There has been a steady, comparative decrease in meadow acreage in the middle west and the yields are not increasing as they should. This is a condition which can and should be remedied. There has been a lack of intelligent, far-reaching interest in this matter on the part of the farmers. The present system of short term tenancy has also a very important bearing on the subject. The wisest, most profitable system of farming, in the long run, requires careful attention to grass culture. This attention is not and will not be given by the short term tenant, who often plows up a sod, but seldom seeds one.

A good meadow requires a well-drained soil, which should not be allowed to become acid, and which should have an abundance of humus or organic matter. Humus holds moisture from evaporation. Growing grass requires an abundance of moisture. Ground limestone and barnyard manure are both excellent for top dressing meadows. In many sections of the country the best farmers apply manure only to the grass land. "Feed the clover, and it will feed the land, the stock and the farmer" is a favorite phrase with many successful farmers.

A good meadow is composed of a mixture of clovers and grasses. The seeding should be sufficiently thick to produce a fine stemmed hay. Coarse stems contain too much woody fiber. When seeding a meadow to a mixture only those plants which mature at the same time should be used. A first-class meadow, which is always the most profitable, is uniformly mature when it is time to mow the grass.

Farmers who are disappointed in the production of their meadows can well study the matter of feeding the grass. Suitable plant food should be abundant. The application of a good grade of commercial fertilizer can be profitably made in all cases, except possibly where the soil is almost devoid of humus. In such cases it is

better not to attempt a meadow, but plant cowpeas or soy beans and fertilize that crop. Pasture it off and turn under the residue.

From 300 to 400 pounds per acre

of good fertilizer should be used at seeding time. If for any reason a stand is not obtained, the fertilizer will push along a catch crop and its value returned. Proper fertilization will help to secure a stand in many cases.

Top dressing meadows with commercial fertilizer is also a profitable practice. The greatest benefit is obtained by spring applications, which may be distributed by a grain drill in the absence of a fertilizer distributor. Even where liberal applications of barnyard manure are made, commercial phosphates can be used with telling effect. Top dressing meadows with barnyard manure should always be done with a good manure spreader. One load properly spread with a spreader will do as much good as two loads or more thrown off a wagon with a fork.

It is always a good practice to run a spike-tooth harrow over the meadow in the spring after top dressing with either commercial fertilizer or barnyard manure.

The constantly growing needs of the country for a larger beef supply makes it imperative that farmers of the middle west and in the south should interest themselves in the problem of more productive meadows, increased production of live stock and more fertile farm lands. The soil is the basis upon which all are founded, and those who have given this particular problem careful attention are of the confirmed opinion that it pays handsomely to feed the grass on the meadow lands.

MONEY IN KIEFFER PEARS

By E. E. Troxell

THAT the Kieffer pear may be grown with profit, and at little expense, is shown by the experience of J. B. James, a Putnam County (Indiana) orchardist. Mr. James attributes his success to the fact that he ripens his fruit off the tree.

While the Kieffer is often, if not generally, considered to be a poor variety to plant, this grower thinks it has certain advantages. The first one he named was hardness. His four-acre orchard is just a part of his farm. It gets no special attention of any kind. About the only thing that is ever done is to spray about twice each year and to thin out the trees so that they will not bear too heavily. The orchard is not even well pruned. As for cultivation, it gets little or none. The orchard, as he himself says, was simply planted and let run wild.

And yet, in spite of this neglect, it has proven very profitable. Since it came into bearing there has not been a year when it has not produced a crop. Some years it does not do as well as others, but in no year has there been a complete failure—and it has been bearing for seven years. In many localities the blight makes pear growing a pure gamble. While it is a fact that this disease is liable to visit the central Indiana orchard at any time, it has never appeared in the James orchard.

The success achieved with Kieffers is attributed almost entirely to the

Mr. Dooley and a Sane Fourth

"Good mahnin', Hinnessy."

"Good mahnin', Mister Dooley. I iggspect ye're layin' in a plintyful sooply iv foirecrackers an' torpedoes to sillybrate th' galorius Fourth iv Juloy."

"Hinnessy, I till ye what, these sillybrashuns ain't what they're blown oop to be. Whin I was a young mon I thought it th' greatest injoymint in th' wurld to hold a cannon cracker betwane me teeth an' see jist how long it would take thim to git me to th' horspittul. but now whin I've only got two little squint eyes lift an' can carry all me teeth around in me vist pocket, I say to mesilf, 'Mister Dooley,' sez I, 'ye'd better lave th' Amerrycun aigle alone on th' ridge iv th' bahrn instid iv pullin' out his tail fithers.'"

"Thin ye're f'r a safe an' sane Fourth?"

"I am that, Hinnessy. Th' only min that have profited by all this hullabaloo have bin th' haythin Chinymyn who have pounded th' gunpowder into thim divlish foirecrackers."

"What do ye think has projuiced th' change in sintymint in th' last few years, Mister Dooley?"

"It's simply common sinse, Hinnessy. Th' paypul are gradually comin' to their sinces. They're findin' out that they've bin payin' th' fiddler thousands iv dollars, to say nothin' iv th' human flish an' bones thrown in f'r good measure. I till ye, Hinnessy, it's jist th' same with this Fourth iv Juloy bizniss as it is with high livin'. We've got to th' place where we must apply common sinse to thim both. F'r years an' years we've bin sillybratin' an' swingin' our shillalies, shoutin' at th' top iv' our loongs, 'Th' Amerrycun aigle is th' grandist burrd that was ivir hatched frum a riviloochinary incubator,' an' thin we've listened to a silver-tongued orator full iv limmynade till us iv th' 'boundliss raysources iv our glohryus nashun' and whin we cooled off we were wonderin' where we'd get enough taters to fill th' mouths iv th' comin' ginnyrashun."

"Then what is yure idee iv th' true paytriot, Mister Dooley?"

"Th' true paytriot is th' mon that iggstinds th' farm roight oop to th' kitchen door; that tells th' fahrmer an' th' consoomer to shake hands on a square deal; that declares a business indipendence day fer the projoocer an' th' consoomer; that makes loife more worth th' livin. He's th' true paytriot, Hinnessy, avin if he didn't shiver with Jarge Washington at Valley Forge an' pick oop loomps iv Pinnsylvania coal along th' railroad tracks."

A Well-Developed Kieffer Pear Tree in Full Bloom

methods used to ripen the fruit. The fruit is picked sometime between the 1st and 15th of October. It is then placed in a dark, cool, even-tempered room, where it remains until sold. When the fruit is put in the warehouse it should not be piled in big bins. On the contrary, it should be spread out over much space, so that there will be little weight on the lower layer of fruit.

The Kieffer, when ripened in this way, will keep as well almost as apples and will have a delicious flavor. If it is allowed to ripen on the trees it will get soft, will begin rotting around the core and will have a flat, disagreeable taste.

Sale for the fruit is found on the local market for the most part. When all the fruit can not be disposed of in this way a ready market at a good price is found in Chicago and Indianapolis. The annual profits range from \$75 to \$100 per acre.

A National Farmer's Market Place

The advertising columns of UP-TO-DATE FARMING are virtually a great Bazar for every reader—a market place to reach every corner of the nation. The advertisements are guaranteed and you may safely spend your money with these advertisers.

When you want to buy: First see if it's advertised in UTDF; if not, write us and we will help you.

Our Advertisers—Guarantee

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Running Water in the Farm House

RUNNING WATER is a luxury that can be had in every home, whether located in town or country. For the health, personal comfort and pleasure of the whole family it should be considered a necessity. Every home should be provided with an abundant water supply of unquestionable purity.

In the town and city this is taken care of for the resident. Every home or business house is supplied with running water for drinking and cleansing purposes, fire protection, lawn irrigation and other uses. For this service the city dweller gladly pays a considerable amount every year, either in the form of taxes or as a direct payment for the water used.

The country resident must provide this service for himself, but in doing so he has a great natural advantage over his city neighbor. He can have a water supply of much purer and

Fig. 2—Water Supplied by the Windmill

more palatable quality, at a very much lower cost. An abundance of clean, wholesome water can always be obtained from deep wells, springs and other convenient sources of supply, and the yearly cost to the country resident is small.

The country resident also has more uses for water supply than does his city neighbor. In addition to the house service and fire protection it affords, a reliable water supply on the farm provides water for the live stock and for irrigation. Every farm should have its own private water works system, just as every town has its public water works plant. There is no reason why the country home should be without the luxury of a running water supply for bath, laundry and kitchen.

Selecting the System

To have a running water system it is, of course, necessary to provide some means of pumping the water from its

source to a storage tank so it can be distributed through pipes to the various points in the house or outbuildings where faucets are installed. There are two general methods of distributing the water after it is pumped. In one the water is forced into an elevated tank, located higher than the highest discharge cock so that it will flow by gravity. In the other the water is pumped into an air-tight tank usually located below the ground to protect it from freezing, and the water is forced up to the various discharge cocks by the air pressure in the tank. This is called the pneumatic tank system. Air pressure in the tank is supplied either by a separate air pump or by a special arrangement on the pump which causes it to pump air with the water. Fig. 4 illustrates an elevated tank system with storage tank in the attic and hand pump in the basement, and Fig. 2 a pneumatic tank system.

Which of these methods is used is largely a matter of choice.

The factors which determine what equipment should be used are:

(1) Amount of water needed; (2) source of supply (whether shallow well or deep well); (3) height water is to be pumped; (4) method of operation (whether hand, windmill or power).

Amount of Water Needed

One of the first things in planning a running water system is to decide upon the amount of water needed. This can be determined approximately from the following table, which gives the average quantities of water per day required for the different services demanded of a water supply system:

Each member of the family will require for all purposes, including kitchen, bath, water closet, laundry, etc.	25 gals.
Each horse will require.....	10 gals.
Each cow will require.....	10 gals.
Each hog will require.....	2 gals.
Each sheep will require.....	1 gal.

If the water is to be used in the house only, therefore, and there is a family of six, the storage tank should have a capacity of $6 \times 25 = 150$ gallons for a one-day supply.

If water is to be used in the house and barn and there is a family of six, with eight horses, twelve cows, twenty hogs and ten sheep to be provided for, the tank should have a capacity of $6 \times 25 + 8 \times 10 + 12 \times 10 + 20 \times 2 + 10 \times 1 = 400$ gallons for a one-day supply.

If the pump is to be operated by a

Fig. 3—A Gasoline Engine and a Compressed Air Tank Keep Water Throughout the House

By H. F. Miller

Fig. 1—Hydraulic Ram System of Elevating Water

windmill the tank should be large enough to hold at least three days' requirement to tide over periods when there is not sufficient breeze to operate the mill. If any of the other equipments are used the tank need be large enough to hold a one-day supply only.

Source of Water Supply

After determining the quantity of water needed it is necessary to decide upon the source of supply, whether it is to be taken from a shallow well, cistern, spring or other source near the surface or whether it is to be taken from a deep well.

Shallow wells are considered as those in which the water level is near enough to the surface so that water can be drawn up by suction. The suction distance is usually considered as about twenty feet. The best practice is to eliminate suction lift if possible by having the cylinder under water. In no case is it good practice to have the cylinder more than twenty feet above the water level.

Deep wells are considered as those in which the water is too far below the surface to be drawn up by suction. In these wells it is always necessary to have the cylinder and standard separate, connected by pipe. The length of this pipe should be sufficient to bring the cylinder within at least fifteen feet of the water. Here again, however, the best practice is to have the cylinder below the water level, as this keeps the cylinder primed and the valves will not dry out.

After the source of supply is settled upon it is easy to figure the height the water must be pumped. This height should be taken vertically from the water level at the source of supply to the storage tank.

Type and Size of Pump to Use

Having determined the capacity required and the source of supply, it is

necessary to decide which general class of equipment to install—whether one operated by hand, windmill, gasoline engine or other power, or by a hydraulic ram which operates automatically, using the force of a few feet of fall between the source of supply and the ram.

The hand system is usually satisfactory when small quantities of water are required, as for house service only. When water is wanted for house, barn and trough service, one of the windmill, power or hydraulic ram equipments should be used.

The windmill has the advantage over the hand system that it eliminates the manual labor. As the windmill can not be depended upon at all times, however, it is necessary to use a larger tank with this system than with others, so there will be a reserve supply in the tank to tide over days on which there is not sufficient breeze to operate the mill.

Fig. 1 shows a hydraulic ram system, Fig. 2 a windmill system, Fig. 3 a power system and Fig. 4 a hand system.

The power pump, driven by a gasoline or kerosene engine, electric motor or water wheel makes the ideal equipment when running water is needed in any quantity for the house, barn, trough, etc. It eliminates the manual labor and is independent of weather

Fig. 4—A Cheap, but Efficient Hand Power System

conditions. Water can be pumped whenever it is desired. The expense for gasoline or other fuel is very small, while the engine can be made portable and used to great advantage for grinding feed, sawing wood, winnowing grain or other arduous tasks about the farm.

Hydraulic Ram Operated Systems

When a sufficient supply of good water is available in the farm of a spring or running stream, the hydraulic ram provides the ideal equipment. The ram operates automatically by using the force of running water to pump a part of the water to a higher level. It runs day and night, requiring no attention whatever, and a ram will last a lifetime. There is no labor of any kind required and no expense for fuel. The equipment is also very inexpensive and can be easily installed by any one. The ram is used most often with an elevated tank in the attic, loft or outdoors, as shown in Figs. 1 and 4, but can be used with the pneumatic tank system.

In cold climates the ram should have some sort of protection from freezing. As the water is always in motion, however, it will not be apt to freeze except in very severe weather.

Oat Facts For Progressive Framers

Photo from the International Harvester Co.
Harvest Time in the Oats Fields

OATS is one of the most popular and satisfactory of all the grain crops. The esteem in which oats are held as food for live stock, especially for young animals and those doing heavy work, is due partly to their digestibility, but mostly to their high protein content. The protein content ranges from 11 to 17 per cent, according to variety and season. In the same season different varieties will show a difference in protein content as high as 4 per cent, and the same variety in different seasons will vary its protein content as much as 2 or 3 per cent. For instance, at the Ohio Experiment Station the Alaska oats grown in 1905 showed 12.44 per cent protein. The same variety yielded 16.28 per cent. Soil and season seem to have much more to do with protein content than does variety.

The Ohio station has made a series of very interesting experiments of value to farmers in connection with the oats crop. These experiments have run nine years, and a summary of the results, given out by the station authorities, is as follows:

1. Of the varieties tested the five best, in order of rank, are: Siberian, Big Four, Silver Mine, Improved American and Sixty Day.

2. The judicious use of manure, limestone and fertilizer in connection with systematic crop rotation of corn, oats, wheat and clover has resulted in a net annual return of \$6.50 per acre for fertilizers used.

3. Eight tests, extending through four years, gave disk preparation for the seed bed an advantage over plowing of an average 3.34 bushels per acre.

4. Early and late seeding was carefully compared, the earliest being March 22, the latest May 10. The earlier seedings were the most satisfactory.

5. The rate of seeding was varied from four to twelve pecks per acre. The highest net yield was obtained from a seeding of nine pecks to the acre.

6. The value of a fanning mill in preparing grain for seeding was indicated by an increased yield of 3.4 bushels per acre in favor of the screened oats.

7. Oats from more northern climes showed no superiority over the home product and gained little, if any, in productiveness upon acclimatization. With but one exception, varieties imported from England and Sweden proved inferior to the domestic varieties on American soil.

In the south the varieties of winter oats give far the best results. On most southern soils it pays to fertilize

this crop with nitrogenous manures and phosphates. Cotton seed meal is the most satisfactory organic nitrogenous fertilizer and is applied at the rate of 200 pounds per acre in the fall at seeding time. Nitrate of soda, applied at the rate of 100 pounds per acre, as top dressing, in the early spring as soon as growth begins, is quite productive of satisfactory results.

Acid phosphate gave better results than ground rock or raw phosphate.

An excellent crop rotation for southern farms, to include oats, is the following, recommended by the Alabama Experiment Station:

First Year—Corn, with cowpeas between the rows.

Second Year—Fall-sown oats, followed by cowpeas, soy beans or peanuts.

Third Year—Cotton, with or without a cover crop.

Smut is a serious handicap to heavy yields in some southern sections. It can be prevented by treating the seed before seeding with formalin.

SHOCKING THE OATS CROP

By W. C. Smith, Thresherman

Taking care of the oats crop is a problem in many localities principally because of the nature of the straw. Every farmer who has raised this crop for several seasons has no doubt suffered loss caused by wind storms that blew the oats until a portion of the field lay flat on the ground. When such storms occur while the grain is in the ripening stage the only remedy is to get under the heads with the binder by cutting one way only. This is a slow, tedious job and many oats are lost even when the greatest care is observed.

Many oats, too, are ruined in the shock, especially in wet season, and during my experience as a thresherman I find one of the chief reasons for this is building shocks that are too large. If one is reasonably sure of being able to have the threshing

done soon after the grain is cut it is a good plan to set up but three or four bundles in a place without capping or placing a hudder over them. In nine cases out of ten it is poor practice to place a hudder or cap on the oats shock anyhow. If the season is rainy it affords but little protection and they must be taken off after a rain if the grain is to be threshed soon to allow the sun to get to the standing sheaves. The cap retains the moisture and the straw is too soft to afford the needed protection. After oat straw is once wet it is not an easy matter to thoroughly dry it again.

The grain will sprout more readily under a cap sheaf than in any other part of the shock simply because the moisture is retained longer there. Notice the cap sheafs in your oats shocks and you will seldom, unless it be an exceptionally damp and cloudy season, find a sprouted grain in it. On the other hand, the heads of the standing sheaves directly underneath will contain more or less sprouted grain, according to the amount of rainfall and the number of damp, cloudy days that have passed.

FIGHTING THE WEEDS

With the summer time comes the weeds—it wouldn't be summer without them—and now the farmers will be fighting them. For the benefit of these weed-fighting farmers I give below methods for killing the different kinds of weeds. These methods have been tried with success by expert agriculturists.

The Canada Thistle—Cut off the plants close to the ground and then pour oil of vitriol on the stumps.

White Tops—Keep the plants cut down and do not allow them to bloom.

Burdock—Treat in the same way as the white tops.

Cocklebur—Cut off the plants and put salt on the stumps.

Sour Dock—The plants must be pulled up by the roots.

Wild Mustard—This must also be pulled up by the roots.

Quack Grass—This may be killed by covering it with litter or manure.

Plantain—Cut off the plants with a hoe.—Buckeye Farmer.

CASH VS. CREDIT

"Production" of wheat does not cease until it becomes ready to eat. The baker is the man who puts the final touches upon the wheat, and he is entitled to just as much credit as a producer as is the farmer who grew the grain, because the baker has made the product of the farm fit for human consumption, and that is the purpose and the final purpose of grain production. Men do not produce for the sake of production but only for the sake of consumption."—The Price-Current Grain Reporter. Men produce for consumption for profit. The baker is entitled to both credit and compensation commensurate with the value of his time, labor, necessary investment, etc. So is the farmer. Of what good is credit for work done if it does not carry with it a just and equitable compensation?

SAVE THE WIFE

There will soon be as many co-operative laundries as there are co-operative creameries. Is there any reason why a farmer's wife should not have her washing and ironing done for her, as well as her churning? Why should she do her own washing and not her own churning? Let machinery save men's wives as well as the men themselves.

CORN CANNED OR DRIED

There is a debate on in some sections of the country as to whether sweet corn is best prepared for winter use by canning or by drying or evaporating. For market purposes the canned corn is likely to remain in first favor, because it requires but little cooking and is more readily prepared for the table.

\$10 Down Balance After Harvest

THE NORTHFIELD BIN
AND COMBINATION CORN CRIB

We'll trust you for the money. This offer is made to introduce our improved, strong, well made bins. Any responsible farmer can now get this bin on the above terms. The best made—Most serviceable most improved Grain Bin on the market.

2 Bins in 1

Guaranteed to Give Satisfaction

The Northfield Bin can be partitioned to hold two or more kinds of grain. Protects grain against fire, dampness, rats, etc. Ample ventilation through floor and sides, under eaves and through big cupola. Holds any small grain. Easily changed to thoroughly ventilated corn crib.

Anchor bolts make it wind proof. Smooth, rain-proof floor. Side and floor sections held by slip cleats stronger than bolts. Easily and quickly set up. Sections interchangeable. Heaviest bin of its size. Low cost. Takes cheap freight rate. 30 days free trial.

SANITARY GUARANTEED HOG TROUGHS

Galvanized iron. Easily cleaned. Lasts a lifetime. Write for circulars and prices.

NORTHFIELD IRON CO.
153 Water St. Northfield, Minn.

The Rat-Proof, Rain-Proof Bin

Protects grain from fire, water and vermin—saves insurance—keeps grain in perfect condition. You can hold grain for better prices, without fearing it will be damaged when you store it in a

BUSHNELL Galvanized Steel Grain Bin

This portable bin means more economical handling of grain. Costs no more than wood—is everlasting—can't rust or break. A permanent money-maker. Write now for descriptive booklet.

Bushnell Tank Works, 600-19 1st St. Bushnell, Ill.

GALVANIZED GRAIN BINS

These are the original and perfected Grain Bins and Corn Crib. Warranted to protect your grain against rats, storms and fire, never to burst, give perfect ventilation, made from best material obtainable.

Does not break, rot or burn. Lasts a lifetime; costs less than a wood grainery or corn crib. We make all sizes, from 150 to 2,500-bushel capacity, at lowest prices and pay the freight. Write now for free circulars of Grain Bins, Perforated Corn Crib, Hollow-Walled Metal

and Wood Silos, Cypress and Metal Tanks, Culverts, etc. Kretschmer Mfg. Co., Council Bluffs, Ia.

CUP ELEVATOR

Always ready for use. Placed inside the crib in the dry. Easy running, durable and strong. Elevates oats, wheat, or ear-corn, 50 bushels in three minutes.

SET IN YOUR CRIB BEFORE YOU PAY
The first successful Upright Ear Corn Elevator made—SOLD DIRECT to the Farmer. Free Catalog showing 8 styles with crib plans which save you money. Write for it today.

INTERLOCKING FENCE CO. BOX 54 MORTON, ILL.

KILLS RATS AND MICE

Rat Corn, the new and scientific discovery, is the greatest rat destroyer in the world. It mummifies rats and mice quickly and without bad, dangerous or disagreeable consequences. Accept no substitutes.

25c, 50c and \$1.00 Cans. All dealers, or sent by mail, Botannical Mfg Co., 315 Race St., Philadelphia

Natural Hen Incubator \$3—No freight. Actual hen controls everything. Over 600,000 sold. Agents wanted. Free catalog. Special Introductory Offer. NATURAL HEN INC. CO., Sta. H, Dept. 7, Los Angeles, Cal.

Ky. Blue GRASS. Genuine and pure. The last you bought you probably paid about \$3 a bushel for it. We will supply you at \$2.25 a bushel. Read orders to C. K. SEED STORE, Indianapolis, Ind.

Ways and Means of Holding Wheat

A Portable Bin or a Permanent Granary Should Be on Every Farm

HUNDREDS of thousands of farmers lose money every year of bumper crops (and in most years of short crops) by being compelled to market their wheat at threshing time. Such a situation confronts such farmers right now.

Certain investigators who have made a study of this problem during the past few years assert that since 1910, inclusive, the average loss to the farmers who sold their wheat at threshing time has been a little over 20 cents per bushel.

The farmer who stores his grain for a higher market, whenever the price is on one of its low levels, will profit greatly by the process, if he stores his grain under proper conditions. This year will be a year of low prices at threshing time, and is a year for big profits in storing and holding grain. Somebody holds and stores the wheat until it goes into consumption. The consumer gets his supply in small quantities, along as he needs it. The farmer has been paying the speculator a good price for this holding service.

In these days of modern invention and mechanical ingenuity grain storage on the farm is no longer impractical nor expensive. Portable and stationary bins and storage houses can be provided to supply storage facilities that are both safe and economical. This paper, always eager to be of real service to farmers, has made a thorough investigation on this subject and our advertising columns, in this and in succeeding issues, will carry the advertisements of makers of satisfactory storage bins and supplies for the farmer who will improve his opportunity and provide storage for his grain.

UP-TO-DATE FARMING's campaign in behalf of dollar wheat is founded upon years of study and a clear insight into past experiences and present conditions. It will result successfully if it receives the intelligent support of the wheat grower who can arrange to store his own grain, either on his own farm or in some terminal elevator. On the farm is the best place for it. In our next issue will appear an article dealing specifically with all phases of storing wheat on the farm, showing the farmer with a good crop how he can provide himself with suitable storage capacity and make the investment a most profitable one. Full data was not compiled in time for this issue. Watch for it in the next.

Points About Supplying Your Market For Farm Products.

By W. Clement Moore

Very often farmers make a complete failure in their business transactions after they have apparently won success. Sounds funny, doesn't it—but it's true. To illustrate the statement more clearly, I will tell you of a farmer who passed through the experience. He found that he could produce a certain crop to advantage—celery it happened to be—and he made a contract with a commission merchant to handle a certain quantity each year. This order was about all that the farmer could raise to advantage, and with the celery crops of a few other farmers was about all the celery that the merchant could well handle. For a couple of years things went well, but, due to the fact that the farmer did not properly feed his soil, his product began to deteriorate in value and quality and the demand grew less and prices dropped. With this shortage of money the farmer was financially unable to put his soil in proper condition again—and thus from a promising, profitable business a complete failure was made. The land and the business was "farmed to death." In reality it was "starved to death."

It is in just such cases as the above that it pays to study soil conditions and soil needs. The celery required a certain food, large quantities of nitrogen for instance, and this should have been given back to the soil after every crop was taken off. The same facts hold good in the raising of all crops—

fruits, vegetables, cotton, tobacco, corn, hay—everything must be fed by the soil and the soil must be given back that which it contributes to the life and growth of the plant produced.

In making a contract, therefore, to supply a certain product, your future must be guarded by keeping your soil in such condition that you will be able to uphold the standard of quality as well as quantity in filling your orders each year. Soil that is failing will give positive evidence of the fact in the crop it produces.

Sometimes farmers are confronted with the peculiar proposition of a larger demand than their supply will accommodate. I have known many farmers to meet such demands by making a contract with their neighbors to furnish them with the extra amount needed for their custom. Perfect fairness pays best in such cases. You should make sufficient profit on the produce bought from your neighbors to pay you for the handling of it, and you should insist that the quality shall be up to the standard you try to maintain. You should not disappoint your customers, even though you temporarily pay as much as you receive for the required product. This mutual interest will net a profit to both.

I know of a poultry farmer, too, who made a yearly contract with a large hotel to supply a certain number of absolutely fresh laid eggs every day

during the year, and the contract price was very high—I think 5 cents each—the contract to be annulled if at any test a single egg proved to be more than one day old. Such a contract might seem impossible to fulfil, but this farmer made an agreement with his neighbors to the effect that on any day he demanded, they would furnish him their entire day's production at 1 cent more than the regular prevailing price per egg. He always had the eggs and is holding the contract yet. This particular hotel was located in a fashionable resort and catered to the very wealthiest people, so they could well afford to pay a high price for eggs in order never to serve a stale one.

As much has been said in this article relative to contracts, it might be well for us to understand a few of the simple rules which govern the making of a contract and its fulfilment.

1. The thing to be done must be possible. That is, the act itself must be within reason.

2. No contract is binding if it is contrary to an existing law.

3. Contracts are not valid if in content or purpose they are injurious to the public.

4. Contracts are not legal if made on Sunday.

5. Parties making a contract must not be intoxicated. If so, it is not valid.

6. There should be a complete understanding in the arranging of any contract.

7. Any agreement that is clear in its purpose is lawful whether it is written after a set form or not.

8. It is not necessary that a contract be sealed or witnessed, even though it is better to have it so.

THE GAS ENGINE ON THE FARM

FARM HELP is scarce and wages are high. Farm work must be done by power of some kind. This power problem is one that keeps every farmer figuring all the time. It is a hard problem to meet. Farm power must be supplied by man, by horses, or by machine. To hire men means expense. There is a lot of farm work that can not be done by horses. The thing needed is power that is cheap to maintain—which, when idle, does not consume anything. This power must always be ready for action. The ideal power is economical, easy to manage, inexpensive and independent of wind and weather. Nothing represents this power so well as a gas engine—that I know from actual experience.

When I was a boy on the farm I had to pump water for a lot of live stock. It was mighty hard work for a boy. Finally we put up a wind mill. That did fairly well. A wind mill won't work half the time when you need it most—when the weather is hottest and the farmer busiest with the most important work of the year the wind mill is sure to stand idle for several days at a time and not pump a stroke. Then it is necessary to take valuable time from important work and pump water by hand for the stock. This means a greater loss in dollars and cents than the average man has ever figured out. There is also the danger that a severe storm will tear the wind mill down, making it a complete wreck. That means a big expense for repairs and also several days that the water must be pumped by hand.

In my farming operations during the last few years no other piece of machinery has saved me so much labor and made me as much money as the gas engines used. That which has been true on my farms ought to be true on every farm. I don't know a farmer anywhere who can afford to run his farm a single day without a gas engine.

Gas engine construction has reached a point where the practical and safe farm engine is simple and easy to operate. Anybody on the average farm can run a gas engine without any trouble at all without any previous experience.

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

IMPROVING CONDITIONS OF FARM LIFE

(Awarded First Prize of \$3)

My section of the country is very sparsely settled (northeastern Wyoming), few of us having more than one or two neighbors within a radius of eight or ten miles, so it is very lonely at times, and especially so for those of us having small families or whose families have gone out from the home, taking up land for themselves, teaching school or in other ways doing for themselves.

At election one year a number of us women (for we women are full-fledged citizens here) talked the question of our isolation over and decided it would ameliorate our condition if we should start a country club, so, in the course of time, we worked up the idea sufficiently to hold a first meeting at one of the more centrally located homes and had such an enthusiastic crowd (?) present that we forthwith founded our club for social and general improvement, which we call "The Book and Thimble Club." We have fifteen members, besides any other members of our families we find it necessary to take with us. Sometimes it is our husbands, who perhaps go along to drive or open gates.

We meet every two weeks and all this last winter never failed to have a quorum present nor missed holding a single meeting. We did talk of perhaps discontinuing during the busy season, but when voted upon we decided to continue to meet, the only change being to carry our own lunch with us instead of the hostess preparing for us, as then, if work or lack of teams and the attendance small, there will not be a quantity of food left to spoil, as it so quickly does in hot weather.

We have a short business session, roll call, and responses consisting of current events, or quotations, as outlined in the program, then a program of music by those who are musical, readings, etc., and have now taken up the study of our own state—its history, geography and resources—and are later going to take up its laws.

We take our fancy work, or mending if needs must, and do that before our luncheon or during the program if we wish to work then, also, and I need scarcely add how much better we have come to know and love each other and how eagerly we look forward to these semi-monthly meetings. If we can do this in so widely separated a community, how much more easily could it be accomplished in a more thickly settled one, so I suggest no better way of improving conditions of life on the farm than the method which we have adopted.

I should add that we have no regular president, but each lady takes her turn as acting chairman, and this gives us all a better chance at practicing the art of getting up before an assemblage and making a little talk—a task not so easy for every one, but which tends towards ease of manner and speech after being done a few times.—Mrs. W. E. Massie, Colony, Wyo.

ELECTRICITY THROWS LIGHT ON A DARK PROBLEM

(Awarded Second Prize of \$2)

With the advent of the economical storage battery, lighting and power possibilities heretofore considered en-

tirely out of question are within the reach of the average citizen. Electric lighting plants are now in successful use, giving highly satisfactory service on a steadily increasing number of farms, giving a safe and brilliant light throughout the houses, barns and out-buildings. Drafts of wind through open windows and doors never blow out the electric lamp. A few extra lights strung on a wire ready to be fastened to lawn trees turn the yard at night into a well-lighted place ideal for a lawn party. The improved lighting service will add an attractiveness to the home that will do much to keep the young folks satisfied with the farm.

In the barn the electric light is not only convenient, but safe. The only place it can not surpass kerosene is in portability. The kerosene lantern will still have its usefulness, though its use will be greatly diminished by the installation of the electric light.

The small, handy gasoline engine which should be on every farm is used to replenish the storage batteries and will do this while engaged with its regular duties. After first cost of the plant, the cost of light maintenance is very small. A fifteen-light plant is sufficient for most farm homes and the cost will depend much upon the quality of the fixtures used. It will range from \$175 to \$225, without the engine. (A one-horsepower gas engine will operate a 32-volt plant, sufficient for a fifteen-lamp lighting system.)

Boys are by nature inclined to take deep interest in machinery, particularly of unusual order. The electric plant will be of greatest interest and pleasure to them. With a little more extensive plant the boys will rig up motors to run a cooling fan in the dining room, the sewing machine, sausage grinder, coffee mill and other "contraptions" that will be useful to mother and the girls.

City homes are now rapidly being equipped with electrical devices for cooking, which devices are attached to the lighting wires in the kitchen in the same manner in which the lighting lamps are attached. Bread toasters, steak broilers, chafing dishes and coffee percolators are heated by electricity. No fire in the range is necessary—no heat outside the cooking utensil. With a good storage battery plant the country home can be equipped in the same manner.

Vacuum cleaners are a great blessing to the housekeeper who is fortunate enough to possess one. Electrically operated cleaners are now the most satisfactory for all ordinary work. These, too, can be operated by the electricity generated by the gasoline engine and stored for use in the storage battery.

Let the farm home be equipped in a manner to make life worth living and then we shall live longer and enjoy all our blessings to a greater degree.

Here's to the success of UP-TO-DATE FARMING in all its good work, and more particularly to its endeavor to make farming more profitable by better control of marketing. When farmers are properly organized and co-operating as they should all these things may be the privilege and possession of even the average farmer.—J. C. Milam, Clifton Hill, Mo.

THE TWO P'S

(Awarded Third Prize of \$1)

An interesting subject to the woman on the farm is pin money (interesting because it is so essential). Like all the others, I wanted to make a little extra money and was not contented until I found a way to get it for myself. This is where the two P's came in.

Our orchard was young and the trees as yet small. I took two spaces between rows of trees and planted one to peas and the other to parsnips.

My peas yielded heavily and sold readily to our grocer for 5 cents per pound. I could make two pickings a week, averaging forty pounds a picking.

As farm work was new to me (a city school ma'am), I did not know that different kinds of peas would mix, and planted one row of an earlier variety along one side of my main crop.

The next year I was very much surprised to find I had a new variety of peas that combined the excellent qualities of both kinds and which were medium early, neither as early as the one nor as late as the other. They were a fine, large podded pea, meaty and sweet, and continued in bearing longer than either of the other kind and yielded a heavier crop. But as the price that year was only 3 cents per pound, I did not average any more money. Still, I did well.

The parsnips were the sugar Hollow Crown variety and grew very well. I sowed them too thick and for that reason did not have so good a crop as I might have had. I dug five sacks of large ones, which sold for 90 cents per sack, and had several sacks of smaller ones for home use.

In this country the gopher is a serious hindrance to parsnip raising, as they are very fond of the vegetable and unless closely watched will take the whole crop.—A. N. A.

WHY I STAYED ON THE FARM

In regard to keeping the boys content on the farm, I will tell of my experience. When I was 13 years old we lived in Wise County, Texas, on a cattle ranch of 17,000 acres, also several farms, of which my father rented one, which was to be run in cotton. There were 2,000 acres near the house that had at one time been in cultivation, but had grown up in small saplings of post oak. My father told my brother and I if we would cut the growth off of this land we could have what it made in cotton. We went to work chopping off the growth and soon had the ground ready for the plow. Father plowed the land and helped plant it. How we boys watched the cotton as it came up and grew! We did most of the cultivating ourselves and felt like real farmers. We watched the first blossoms, first bolls, and when it began to open we felt like millionaires. After we picked it we were the proud possessors of \$48.80 each. Then we planned what to do with our money. First we each bought a suit of clothes and I bought a sow pig and father fed it as his for one year. She had five nice pigs and the next fall had another litter of seven. I gave father two for the feed and sold four for \$102.50 and had six pigs and the sow left.

At other times father gave me cotton patches, peanut patches, truck patches, etc., to keep our minds employed and let us be earning money.

We were always content on the farm because we could earn some money for ourselves and thus always were in good spirits. If fathers would encourage their children in this there would be better boys, happier homes and more contentment on the farm.—Lon Wilson, Lahoma, Okla.

THE PROOF OF THE HAY PRESS

Is its Capacity—Earning Power. SPENCER HAY PRESS Catalogues make great and definite claims proven by the press in action or no sale. Nature of contract protects you. Covers every claim by actual figures. More tons per hour guaranteed than by any other horse press, same size bale. Send for new Catalogue 6.

35 BUSHELS PER ACRE

was the yield of WHEAT

160 ACRES FARMS IN WESTERN CANADA FREE

on many farms in Western Canada in 1913, some yields being reported as high as 50 bushels per acre. As high as 100 bushels were recorded in some districts for oats, 50 bushels for barley and from 10 to 20 bushels for flax. J. Kays arrived in the country 6 years ago from Denmark, with very little means. He homesteaded, worked hard, is now the owner of 320 acres of land, in 1913 had a crop of 200 acres, which will realize him about \$4,000. His wheat weighed 68 lbs. to the bushel and averaged over 35 bushels to the acre. Thousands of similar instances might be related of the homesteaders in Manitoba, Saskatchewan and Alberta. The crop of 1913 was an abundant one everywhere in Western Canada. Ask for descriptive literature and reduced railway rates. Apply to Superintendent of Immigration, Ottawa, Canada, or Canadian Government Agent.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

I'll Stop Your Losses From WORMS

I'll Prove It or NO Pay—

IF YOU will fill out the coupon below—tell me how many head of stock you have, I'll ship you enough Sal-Vet to last all your stock 60 days. I'll do this entirely at my risk and without asking a single penny of pay in advance. All I want is the privilege of proving to you right in your own barnyard what I have proved to thousands of other farmers. I want to show you how to rid your stock of worms—how to make all your farm animals grow faster, thrive better, keep healthier, put on more flesh on no more feed—*make you more money.* You can't afford not to accept this remarkable offer.

The Great WORM Destroyer

REG. U.S. PAT. OFF. **Great LIVE STOCK Conditioner**

is the biggest boon to stock owners ever discovered. It is a wonderful medicated salt which rids farm animals of their greatest enemies—the deadly stomach and intestinal worms. It kills and expels these blood-sucking, life-sapping parasites and makes farm animals sleek, thrifty, healthy, flesh-building money-makers and greatly lessens the danger from hog cholera and many other diseases. Read these letters—

"The benefit which my horses, cattle and sheep derived from the use of 'Sal-Vet' is such as to make it almost indispensable."—A. L. Martin, Director of Institutes, Dept. of Agriculture, Harrisburg, Pa.

"Your 'Sal-Vet' has done all that you claim and perhaps more. Hog cholera has been all around me and I have not had one sick hog. I cannot praise 'Sal-Vet' too highly, and I do not hesitate to recommend it to all hog raisers."—A. O. Kellogg, Troy Grove, Ill.

I'll Feed Your Stock Sixty Days Before You Pay

Just as I have for hundreds of thousands of other farmers who sent me the coupon. Send no money. I don't ask you to risk one penny. Tear off the coupon below, mark down the number of hogs, sheep, horses, cattle and mules you own, give your name and address and shipping station and I'll send you enough Sal-Vet to last all your stock 60 days. You simply pay the moderate freight charge when it arrives and at the end of 60 days report results. Tell me what Sal-Vet has done for you and if it don't do what I claim—if it fails to rid your stock of the dangerous stomach and intestinal worms I'll cancel the charge—you won't owe me a penny. It is no trouble to feed Sal-Vet. Being a salt animals like it and run to it freely.

They Doctor Themselves

It requires no dosing, no doping, no drenching, no starving, no trouble at all. Surely then you can't afford to deprive your stock of this great blessing—you can't afford to turn down this liberal offer when many Agricultural Colleges, prominent breeders and hundreds of thousands of farmers will tell you it pays to feed Sal-Vet, especially since you can try it at my risk and without a penny of pay in advance.

THE S. R. FEIL CO.

Read What SAL-VET Users Say:

"Hog cholera broke out all around here, but not one of my hogs became sick. I cannot praise 'Sal-Vet' sufficiently, and I do not hesitate to recommend it to all swine raisers."—J. E. Strobil, Rt. No. 1, Box 15, Lohman, Mo.

"Have used 'Sal-Vet' on two of my horses and notice a marked improvement in their condition. They have passed a large number of worms and are now picking up in flesh."—Wallace W. Case, Rock Hill, N. Y.

"I am a large user of 'Sal-Vet' and we have a large flock of Shropshire sheep, and our farm is, as you might say, sheeped to death; we are not bothered in the least with worms. Out of 191 lambs that we had dropped this year, we lost only one, and that death was [not caused by] worms."—Henry L. Wardwell, Springfield Center, N. Y., Ex-President of American Shropshire Association.

"I honestly believe that the hundred pound keg of 'Sal-Vet' which I fed, paid me a profit of \$75.00."—R. J. A. Swafford, Litton, Tenn.

"As soon as the 'Sal-Vet' was received, we began feeding it at once to our sheep, that had been dropping off with no warning whatever. Am glad to say that we have lost only one since that day, but no more. Horses, hogs and cattle have done splendidly since having free access to 'Sal-Vet' and I am free to say that I never had better success with any preparation, than I have had with yours."—J. B. Burrows, Decatur, Ill., Director 19th Congressional District Illinois Farmers' Institute.

PRICES 40 lbs., \$2.25; 100 lbs., \$5.00; 200 lbs., \$9.00; 300 lbs., \$13.00; 500 lbs., \$21.12. Special discount for large quantities. No orders filled less than 40 lbs. on 60-day trial offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages. 60-day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular pkgs.

Mr. Feil is a Registered Pharmacist, a graduate of the Cleveland School of Pharmacy and of the National Institute of Pharmacy. He has been engaged in laboratory work for more than 25 years and was formerly assistant to Dr. Nathan Rosewater, former Chemist of the Ohio State Dairy and Food Commission, for many years has been engaged in compounding veterinary remedies.

The Cost of Raising a Dairy Cow

According to investigators in the Department of Agriculture, the average net cost of raising a dairy heifer one year old on a Wisconsin farm is \$39.52 and of a two-year-old heifer \$61.41. These figures are applicable to other dairy districts in the north and east where land and feed values are similar to those in Wisconsin. They are based on data obtained from raising 117 calves from birth to the time they enter the dairy herd. The details, with a complete summary of the investigation, have recently been published by the Department of Agriculture in Bulletin No. 49, under the title of "The Cost of Raising a Dairy Cow."

There are in the United States over 21,000,000 dairy cows. These figures give some idea of the importance of this economic problem to the country as a whole, for these cows must be replaced every few years. The cost of the production of these heifers is a large item in keeping down the profits of the dairymen.

The new bulletin contains numerous tables and several illustrations of the Jersey calves from which the items of cost were obtained.

The most important item was the cost of the food, which was estimated at market value and amounted to nearly two-thirds of the total net cost of the heifer, while labor formed 12½ per cent of the cost.

Figures for the average net cost of the one-year-old heifer are as follows:

Feed	\$24.67
Labor	4.45
Other costs.....	6.36

Total\$35.48

To this should be added the initial value of the calf, which was estimated to be \$7.04, making a total cost at the end of one year of \$42.52. This charge is justified in view of the fact

that dairy cows are credited with this item in determining the cost of milk production. By allowing \$3 credit for manure, it leaves a net cost of \$39.52 at the end of the first year.

Figures for the average net cost of the two-year-old heifer are as follows:

Initial value.....	\$ 7.04
Feed	40.83
Labor	7.81
Other costs.....	13.73

\$69.41

Credit for manure..... 8.00

\$61.41

One-half of the feed cost the first year and one-third for the full two years is for whole and skim milk.

The man labor required in raising a heifer is about forty hours during the first year and twenty-three hours the second year. The total cost of man and horse labor for the two years is close to \$8. The manure produced during the two years has been valued at \$8, consequently the cost of labor is practically offset by the value of the manure.

The item "other costs" consists of expenses usually overlooked in estimating costs. These are interest, charge for the use of buildings and equipment, expense for bedding, miscellaneous expenses, a share of the general expenses for the entire farm business and a charge to cover losses by death and discarding. The total for these forms nearly one-fifth of the total cost of the two-year-old heifer.

The foregoing figures show that it costs more to raise calves to maturity than is commonly supposed, and they support the idea that it does not pay to raise any but the best heifers. Raising scrub heifers and selling them at \$25 to \$40 apiece, as many do, is unprofitable except on cheap land or under other very favorable conditions. But it does pay to raise the

best heifers, for in good dairy sections well-bred heifers are worth considerably more than \$60 when two years of age. Furthermore, dairy farmers as a rule are obliged to raise their own stock, as it is difficult to buy productive cows at a reasonable price. In some sections of the west where alfalfa is worth only \$4 or \$5 a ton, or in the southwest where pastures furnish feed the greater part of the year, this cost may be greatly reduced. Even where it costs \$60 to raise a heifer, two-thirds of this amount is charged for feeds at market prices, a large part of which can be grown on the farm at a profit. Thus by raising the heifers the dairy farmer finds a home market for feeds grown on the farm at remunerative prices, and at the same time aids in maintaining the fertility of the farm.

AYRSHIRES

By C. M. Winslow, Secretary of the Ayrshire Breeders' Association

The Ayrshire breed originated in the County of Ayr, Scotland. Every surrounding from their earliest history has been conducive to making them hardy, rugged animals, capable of enduring any climate, subsisting on any kind of fodder and giving the largest returns for the food consumed. The cows are of medium size, weighing from 1,000 to 1,200 pounds at maturity, as a rule, though frequently weights run as high as 1,400 and 1,500 pounds. In color they are always red and white. Some are largely red, with clearly defined white patches; others are largely white, with red patches. The proportion of color can be controlled by breeding. In build the Ayrshire conforms strictly to the most approved dairy type, having the typical wedge shape, small head, thin neck, straight back, long, slim tail; large, well-arched barrel, large udder and large, tortuous milk veins.

The milk of this breed is admirably adapted to the wholesale and retail trade. As a producer of high-grade, healthy milk at a minimum cost, the Ayrshire has no rival. The milk has excellent keeping qualities, is easily digested, does not separate its cream easily, has a good body, is rich in appearance, never looking blue. It excels all others for feeding children and invalids. Ayrshire cream is particularly adapted to the manufacture of high-grade ice cream, giving it unusual smoothness and flavor.

In butter production this breed would take high rank if used for butter making. The average cow will produce from 400 to 500 pounds annually. But on account of the excellence of the milk the breed has not been largely engaged in butter production.

Calves make desirable veal. Steers fatten young and quickly and gain in weight rapidly. The breed will make a very good quality of beef.

The Ayrshire cow is productive up to a good age, and is found doing good, profitable work in the dairy at twelve to fifteen years of age.

Within the last two years, four Ayrshire cows have made official records of over 20,000 pounds of milk each in twelve months.

IT PAYS TO INVESTIGATE

Soy beans worth \$1 per bushel have been advertised and sold as a wonderful coffee berry at \$1 per pound. Cat-tail millet worth \$1.50 per bushel has been advertised and sold as a wonderful forage plant under high-sounding names at \$1.50 per pound. Investigate all the new and the so-called wonder-working plants before paying big prices for them.

Strange Combination

"Papa, I believe you said you was born in California?"
"Yes, my son."
"And mama in New York?"
"Yes, dear."
"And I was born in Indiana?"
"Yes, darling."
"Well don't it beat the dickens how we all got in the same family?"

DE LAVAL CREAM SEPARATORS save much time and labor in summer

BESIDES GREATLY INCREASING the quantity and improving the quality of cream and butter, De Laval Cream Separators save much valuable time and labor.

THIS GREAT SAVING OF TIME and labor counts for more in summer than at any other season and often alone saves the cost of a separator, aside from all its other advantages.

AS COMPARED WITH ANY kind of gravity setting the saving of man's time and labor and usually woman's drudgery with a De Laval is a big item in its favor.

AS COMPARED WITH OTHER separators the De Laval saves much time and labor by its greater capacity, easier running, easier handling, easier cleaning and freedom from need of adjustment or repair.

THESE ARE MERELY SOME of the advantages which make a De Laval Cream Separator the best of all summer farm investments, as every De Laval agent will be glad to explain and demonstrate to any one at all interested.

SEE THE NEAREST DE LAVAL agent at ONCE or if you do not know him write us direct for any desired information.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

One dollar for the 1914 wheat crop is the most vital matter before the whole country.

The article that appeared in our preceding number showed clearly the equity of dollar wheat and that it should not be difficult to get it. A few things, though, are necessary, as follows:

First—Fix the price, \$1, in your mind.

Second—Tell all your neighbors to fix dollar wheat in their minds and ask it. Write it also in your letters.

Third—If you are a member of a farmers' association, get it to join in this movement. If not a member of an association, join the local association, if one at your place, and if it will work for dollar wheat, or send the coupon below and you will be told how to proceed.

Fourth—If you can not sell your wheat at \$1, basis of No. 2 red, No. 2 hard or No. 1 spring, when threshed, store it, (a) in a granary, (b) or in a local elevator, (c) or ship it to a terminal elevator.

Fifth—If the local organization has no elevator now, arrange with the local elevator to handle at a price per bushel, or lease, buy or build one. One dollar per acre for the land tilled can well be invested in facilities for marketing. The more farmers there are in a community who agree to control their wheat, the better terms can be made with the local elevator.

Sixth—If you need money to meet pressing obligations you can get it when in an organization. Then there will be one secretary or business agent for the community. The people who control the big elevators and big banks don't want to bother with an infinite number of small transactions. But where a community has 50,000 to 500,000 or more bushels of grain to store, or needs \$25,000 to \$250,000 or more advanced, and all the negotiations can be made through one man, it becomes practical to control and finance the wheat crop, while it remains the property of the grower.

As the season of marketing is right on the wheat growers of the southern belt, and it may not be possible to organize in time, we recommend them

to try to store through the local elevator man. He should co-operate with farmers in this matter. He will get the same for handling the crop whether the price remains at 60 cents to 70 cents or goes to \$1. If he refuses to store your wheat, or ship it to be stored, subject to being sold when your price will be paid, you may reasonably conclude that he wants to buy it to get the advance himself.

Don't let the elevator man, or anybody else, discourage or frighten you. Remember, somebody stores the surplus and gets cash advances on it. It is just as legitimate for the grower to do this, or have it done for him, as for anybody. But the grower must do it if he ever hopes to be an independent business man.

So the wheat grower has the choice of two things. He can control his crop in one of the ways mentioned above or he can dump his crop to again feed and fatten the speculator sharks. To dump now he will only get about as much as can be borrowed against it, if stored, while if stored and the price goes to \$1 he will get a third to two-fifths more.

Send the coupon and help in this movement.

Farmers should write to the papers they subscribe for and ask them to help in the dollar wheat campaign.

This is not a task for one paper, but all should join in it, as all will be benefited if the wheat crop sells at \$1 instead of 60 cents to 70 cents.

We are pleased to say that the Farm Home, of Springfield, Ill.; American Fruits, of Rochester, N. Y.; Pennsylvania Grange News, Chambersburg, Pa.; Skordemann, Minneapolis, Minn.; Trans-Missouri Farmer and Ranchman, Cheyenne, Wyo., and Farm Life, of Spencer, Ind., have notified us that they will help to make the movement successful. We don't know why the other farm papers are silent, when their help would mean so much for farmers. We believe their subscribers can stir them up if they will tell them it is a matter of helping to win this fight or withdrawal of support.

There are over three hundred farm papers. Every one of them has taught the science of production dur-

ing the past year and persistently pointed out that big crops were necessary for farmers' prosperity. Their teachings, coupled with a favorable season, have produced the big crop, but at prevailing prices it will not sell for as much money as several smaller crops of recent years sold for.

There is something radically wrong when the crop must be a lean one to bring a good profit to the producer. As long as this is true the better farming instructions, as far as the farmer's prosperity is concerned, would better not be given.

So write to your other farm papers and tell them to advise all their readers who have wheat to sell to hold it for \$1. We believe if each of the 300 papers would do this in its next issue a condition would be produced in a few days that would stop the decline and begin to send the price toward the dollar.

Write them and demand their help or a reason why it is refused.

The visible supply of wheat in the United States on June 13 was 25,265,000 bushels (Bradstreet's report). This is the lowest it has been since September, 1912. Two weeks before it was 32,024,000 bushels. So the decrease in two weeks was 6,759,000 bushels. At this rate of decrease eight weeks would wipe out the visible supply entirely. We believe, if a fair number of the farm papers would print some of the facts, figures, arguments and proofs as we printed in our June 15th number, that a condition can be produced that will practically annihilate the visible in less than that time and put the price to \$1, notwithstanding that the heavy marketing season is approaching.

In other words, if the growers of wheat who read other farm papers were in the same frame of mind as are the readers of UP-TO-DATE FARMING, they would control enough of the wheat that otherwise will be marketed to win this fight in a few weeks. And there is no good reason, that we know of, why they should not do this, since all of them have been supplied with the article.

Write to them, then, to help. Demand that they help or give a reason for refusing. Insist on knowing why they are always silent on the subject of profitable prices. Let us know what reports you get.

The June government estimate of the wheat crop was 900,000,000 bushels. The leading states in production were credited as follows (bushels):

Winter Wheat—Kansas, 148,000,000; Nebraska, 65,000,000; Indiana, 42,000,000; Oklahoma, 41,900,000; Illinois, 41,800,000; Ohio, 37,800,000; Missouri, 36,700,000; Washington, 32,100,000; Pennsylvania, 23,000,000; Texas, 16,900,000; Michigan, 15,900,000; Oregon, 15,000,000; Montana, 13,000,000; Iowa, 10,800,000; Kentucky, 10,400,000; Idaho, 10,100,000.
Spring Wheat—North Dakota, 85,600,000; Minnesota, 63,800,000; South Dakota, 46,200,000; Washington, 21,300,000.

The winter wheat estimate is 630,000,000 bushels and the spring wheat 270,000,000. Then the estimate for Kansas is about one-seventh of the entire crop, or about one-fourth of the winter wheat. Kansas, also, heretofore has furnished about one-third of the shipping winter wheat—that part that is shipped out of the country where grown.

Kansas, Nebraska, Oklahoma and Missouri were in the great drought section last year and raised very little corn. They will be short of feed until the new crop of corn comes, which will be about three months yet. In the meantime, with the cost of a bushel of corn in those states more than can be gotten for a bushel of wheat, it is entirely probable that the extra production of wheat, over a normal crop, will be more than consumed at home for stock feed.

THIS IS THE CLUB THAT THE DUMPER PUTS IN THE HANDS OF THE SPECULATORS WITH WHICH TO BEAT PRICES DOWN.

Also, the price of corn is higher, relatively, than the price of wheat all over the country. So the person who has both wheat and corn will naturally feed wheat and sell corn, and the person who must buy feed will find that he can get more feeding value from a dollar's worth of wheat than from a dollar's worth of corn.

If the estimate of 900,000,000 bushels of wheat is realized we will have 137,000,000 bushels more than last year and 170,000,000 bushels more than the crop the year before, 1912. The crops of corn and oats in 1912 were by far the largest ever grown. We will say no wheat was fed of the 1912 crop, yet cash wheat sold in Chicago up to these prices for the months named: 1912—July, \$1.16; August, \$1.07½; September, \$1.07; October, \$1.11; November, \$1.07½; December, \$1.11½. 1913—January, \$1.15½; February, \$1.12; March, \$1.08; April, \$1.09½; May, \$1.09½; June, \$1.08.

It is only reasonable to assume that at least 170,000,000 bushels of this wheat crop will be fed to live stock. We predict that this estimate is too low. If it is, then the crop, for the usual channels of consumption, will be reduced to the same as the crop of 1912, which sold over \$1 every month of the crop year.

The oats and corn crops, particularly the latter, were very short in 1913, but the wheat crop was the largest up to that time grown in this country, as well as the largest world's crop by 230,000,000 bushels. The price of wheat ruled low and corn

SUPPLY AND DEMAND

The demand for wheat comes over a whole year, but you get your crop all at once. It follows, then, that the demand must be fed as it appears. This means that farmers must control their marketing. That's easy. Just fix ONE DOLLAR in your mind and ask it. Don't sell when it won't be paid. Sell when it is paid. Quit selling the minute it won't be paid. Only this and nothing more.

This Beautiful 21 Jewel Im. Railroad Watch
will be sent C. O. D. for your examination. If you think it equal in appearance to any 21-jewel 20-year guaranteed watch pay us only \$3.95 and the watch is yours. State if open or closed case is wanted. Will send a lady's watch if you prefer. Chain FREE for cash with order.

Hickory cured, and the purest, sweetest smoking and chewing tobacco on earth. Satisfaction guaranteed or money back. Send today or write for full information. Reference: First National Bank, Chicago, Ill.
H. C. DAY TOBACCO CO., DEPT. F, SEBREE, KY.

very high. Many millions of bushels of wheat were fed to stock and we see now not only a comparative scarcity and a stress for the new crop to come on the market in this country, but the same is true of Europe.

Our purpose in making these illustrations is to prove that notwithstanding the record-breaking crop of winter wheat, and the good prospects for spring wheat, that there is not the remotest prospect for a real surplus beyond actual needs. Consequently it will be the greatest folly to dump any wheat at prices that are now offered. But don't forget that the foreign wheat crops are reported short and the WORLD'S CROP will not be more than an average. In other words, the longage of our crop will be taken up by the shortage of foreign crops.

So here we have given the situation. It is one that presents a real golden opportunity to the wheat growers. They can embrace it or reject it. We mean if they will sit tight and refuse to sell under \$1, the price will be paid in a short time. But some won't take this advice and will dump, notwithstanding that the way is pointed out how they may store and get nearly as much money while owning the wheat as they would get by an outright sale.

And some wheat growers who would be glad to act on this advice will not get it because of our inability to reach them. And this emphasizes the importance of each reader of UP-TO-DATE FARMING doing what we requested above—write to all the farm papers you subscribe for and tell them to request their readers to not dump the fine wheat crop at present prices, but like one man hold it for \$1.

If other farm papers will do only that the battle for dollar wheat can be won in a few weeks. If they will not do it, it will take longer and millions and millions of bushels will be dumped to load up the speculation machine and which will be used as a club to beat down prices on all the controlling farmers have left. And the loss of \$300,000 to \$400,000 on each million bushels you should charge not to UP-TO-DATE FARMING and those papers that have signified their willingness to help, but to the farm papers that refuse to help in this cause.

And to the readers of UP-TO-DATE FARMING and all others to whom the Dollar Wheat and Prosperity message comes, and who are going to control their crops and ask a dollar, we say: Be of good cheer. You will need to wait awhile, but, regardless of the help we have, we predict the price will be paid for all the wheat bearing the "\$" label when the world finds it can not buy it for less.

And there is another important work each reader can do. Send the coupon and get some circulars and carry the message to all your neighbors.

Please send the coupon at once.

THE NATIONAL CLEARING HOUSE, FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.

GENTLEMEN: I will give.....days in the interest of the Dollar Wheat Campaign. I can see about.....growers in that time. I will travel by (write automobile or other form of conveyance, as you have)..... Please send me instructions and supplies.

My name.....My P. O.....

Rural Route..... County..... State.....

If you will consider taking the lead to organize your community, if paid for the service, say so here.....

Instructions Everybody should help a little. Cut out the blank. Fill in all spaces. Write name and address perfectly plain. You have given perhaps 100 days to producing a wheat crop, now you should give one day or more toward getting a price that it is worth. You will not be required to do more than distribute the printed matter we send and say a few words about this movement and take the names and addresses of those you see.

Notice to F. S. E. Members

The annual dues of a great many members are payable on July 1. Notices have been sent to all local clearing house secretaries where dues are payable at this time. It is expected that all members included in this class will turn in their dues promptly. The great campaign for Dollar Wheat is now engaging every facility and resource of the National Clearing House. To win this great victory is to pave the way to success in winning others. Members can aid materially by prompt payment of dues. To withhold them now is to aid and abet the forces working for low-priced wheat. This is your fight, brother member, and while we are doing our utmost at headquarters in your behalf, we are expecting you to do your part. The payment of dues helps to supply the munitions of war in this great price-and-profit battle.

Yours fraternally,
C. HAYES TAYLOR,
National Secretary, F. S. E.

Keep One Dollar Wheat Before You

(Selected from Songs of Equity, published by Farmers Society of Equity)

Ye sons of toil, who plow and who sow,
Who toil from gray morn till the sun has sunk low,
Whose labor yields riches yourselves never know,
Keep one dollar wheat before you.

Ye long have been faithful of heart and of hand,
Ye have fed many millions, from strand unto strand,
And for fruit of your labor still grows the demand;
Keep one dollar wheat before you.

Both "live and let live," though millions are fed
By the sweat of your brow; shall ye bow your proud head
To be crushed to the earth 'neath the rich gambler's tread?
Keep one dollar wheat before you.

All others who work in the world's turmoil
Name the price to be paid for the fruits of their toil.
Ye too are free men; ye sons of toil
Keep one dollar wheat before you.

For sake of the woman you won for your bride,
Who has faithfully loved you and toiled by your side;
For sake of the children, your joy and pride,
Keep one dollar wheat before you.

Let this be your motto, "United we stand,"
And with hands clasped together, a true, loyal band,
Let us all stand as one for the right you demand;
Keep one dollar wheat before you.

SELLING OR STORING

Mr. Wheat Grower: You can sell your wheat now at, say 60 to 70 cents, and other people will hold it until the demand of consumption needs it. As an alternative you can store your own wheat and get a cash advance of nearly this amount on it, if you need it, and in a short time sell it at one dollar or more. Read "Personal" article in this paper and send the blank.

Say No

When Anybody Asks You More Than Goodyear Prices For a Tire

16 makes of tires now cost more than Goodyears—up to one-half more. None offers extra quality. We undersell just because we build more tires than any other plant in the world.

What Goodyear Prices Buy

Goodyear prices buy No-Rim-Cut tires—the tires which outsell any other after millions of mileage tests.

They buy the only tires which embody our No-Rim-Cut feature, by which rim-cutting is made impossible.

They are the only tires which get the extra "On-Air" cure. That saves the countless blow-outs due to wrinkled fabric.

They are the only tires in which tread separation is combated in our patent way.

And the only tires with the All-Weather tread—the tough, double-thick anti-skid. It runs

as smoothly as plain treads, yet it grasps wet roads with deep, sharp, resistless grips.

We spend \$100,000 yearly to find ways to better tires. Scores of experts work all the time on this problem. You get in Goodyears the final result—the best men know in tires.

You get four great trouble-saving features which have made these tires the largest-selling tires in the world.

Any higher price is simply utter waste. Don't pay it. Any dealer will supply you Goodyear tires if you tell him that you want them.

and then sell. When we all do this the price will always be right.

The first step, and the most important one, is for the wheat growers to become members of a co-operative organization. Let them own a local elevator and do their own handling and shipping. These things properly carried out will solve the prosperity problem for the wheat growers.

Let us all get behind the movement now and hold fast. There is no need for this great wheat crop to force itself upon the market in a few short weeks—there is no reason why it should. There is a reason—a great, all-sufficient reason—why it should not, and that reason is the price. To dump the wheat crop is to dump the dollars.—A. Y. Satterfield, Pocatello, Idaho, National Organizer, F. S. E.

VICE-PRESIDENT W. H. MITCHELL, KANSAS
I surely indorse all that has been done at headquarters in the way of securing a better price for the wheat crop of 1914. Much can be accomplished if the proper activity be exerted, which I have no doubt will be done. While I should enjoy exceedingly the task of helping at headquarters to put the great machinery of the Farmers Society of Equity at work for the relief of the poor farmer, I regret that it is impractical for me to be with you. You have my hearty indorsement to go on.—W. H. Mitchell, Hutchinson, Kas., National Director, F. S. E.

J. HARRIS LENKER, PENNSYLVANIA
I approve the plan for the Campaign for Dollar Wheat. It makes little difference in cost to the consumer whether the farmer gets 70 cents per bushel or \$1. (It need not increase the cost to the consumer in the least. Wheat at \$1 to the farmer will supply bread at 5 cents a loaf, or flour at \$5 a barrel, at a fair profit to handlers, if the speculation, multiplicity of transactions and uncertainties are eliminated.—Ed.) It is high time for us to take a stand and establish fair prices on what we produce. The wheat problem is a great one, but I believe we can manage it for this crop.—J. Harris Lenker, Sunbury, Pa., National Director, F. S. E.

C. B. LOZIER, ALABAMA
In regard to the proposed action to put the price of new wheat to \$1 and hold it there by controlled marketing, I think the plan a good one, which will give the grain farmer the prosperity he has honestly earned. I believe the plan will succeed, and wish to assure the country of the hearty support and co-operation of the Gulf Coast District.—C. B. Lozier, Mobile, Ala., National Director F. S. E. and Business Manager of the Gulf Coast District.

S. W. MORRIS, MINNESOTA
Your letter concerning proposed activities for a Dollar Wheat Campaign is at hand.

Certainly I am in favor of such action. Wheat is entirely too low to pay a fair profit on labor, capital, land and loss of soil fertility.—Fraternal yours, S. W. Morris, Rochester, Minn., National Director, F. S. E.

SUPPLY AND DEMAND

The demand for wheat comes over a whole year, but you get your crop all at once. It follows, then, that the demand must be fed as it appears. This means that farmers must control their marketing. That's easy. Just fix ONE DOLLAR in your mind and ask it. Don't sell when it won't be paid. Sell when it is paid. Quit selling the minute it won't be paid. Only this and nothing more.

From a New York Business Man

Early this morning, when the mail came in, I read the articles on pages 13 and 14 of the June 15th issue relative to Dollar Wheat. It is one of the ablest articles the writer has ever had the pleasure of reading.

UP-TO-DATE FARMING is the only paper endeavoring (in a practical way) to put more dollars in the farmers' pockets.—George B. David, of Geo. B. David Co., Inc., Publishers' Representatives, New York and Chicago.

Standardize the Price

The secretary of agriculture had representatives of wool growers and manufacturers meet in conference at the Department in Washington recently. They declared it necessary to standardize by national law the grading of wool. Let the government standardize the grades and then let the wool growers organize and standardize the price for each grade.

Section Hands Want to Harvest Wheat

It is said that railroads in the wheat belt have had to raise the pay of section hands to prevent them from throwing up their jobs and going to work in the harvest fields where pay is better. The railroads will doubtless get it back after the harvest is done, by a reduction greater than the advance.

The Telephone Emergency

THE stoutest telephone line cannot stand against such a storm as that which swept the Middle Atlantic coast early in the year. Poles were broken off like wooden toothpicks, and wires were left useless in a tangled skein.

It cost the telephone company over a million dollars to repair that damage, an item to be remembered when we talk about how cheaply telephone service may be given.

More than half of the wire mileage of the Bell System is underground out of the way of storms. The expense of underground conduits and cables is warranted for the important trunk lines with numerous wires and for the lines in the congested districts which serve a large number of people.

But for the suburban and rural lines reaching a scattered population and doing a small business in a large area, it is impracticable to dig trenches, build conduits and lay cables in order that each individual wire may be underground.

More important is the problem of service. Overhead wires are necessary for talking a very long distance. It is impossible to talk more than a limited distance underground, although Bell engineers are making a world's record for underground communication.

Parallel to the underground there must also be overhead wires for the long haul, in order that the Bell System may give service universally between distant parts of the country.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY AND ASSOCIATED COMPANIES

One Policy One System Universal Service

SELLING OR STORING

Mr. Wheat Grower: You can sell your wheat now at, say 60 to 70 cents, and other people will hold it until the demand of consumption needs it. As an alternative you can store your own wheat and get a cash advance of nearly this amount on it, if you need it, and in a short time sell it at one dollar or more. Read "Personal" article in this paper and send the blank.

The Berry Growers of Neosho

There are 300 strawberry growers living in a radius of six miles from Neosho, Newton county, Kansas, who belong to co-operative marketing associations, and by means of these have marketed more than seventy-five car loads of berries, grown on less than 300 acres of land, each car containing an average of \$1,100 worth of berries, and all paid a profit to the growers. By thus co-operating, having their products graded and packed in the best manner and made ready in car lots enables them to command the best markets. The one weakness in the business is the multiplicity of associations. Business long ago demonstrated that combination, eliminating unnecessary duplicity, replacing competition with co-operation, is most efficient, less wasteful and consequently more profitable. But federation will come—is coming rapidly.

SALESMEN

Earn Larger Salaries Than Any Other Class of Men

We will teach you to be a high grade salesman, in eight weeks by mail and assure you definite proposition from a large number of reliable firms who will offer you opportunities to earn good wages while you are learning. HOLSTEIN CALVES, beautifully marked, 3 to 5 weeks old, 15-16ths pure, \$20 each, crated for shipment anywhere. Edgewood Farm, Whitewater, Wis.

FOXES WANTED—Ross Brown, McFall, Ala.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

IN JUNE 20 Bradstreet's summarizes business conditions of the country as follows:

"Excellent" is the word frequently used when referring to the crops. Improvement in the south. Corn helped by rain. Winter wheat harvesting in full career. Optimism spreading in agricultural sections. Demand follows closely. Industries slack. West and northwest send best reports. East repressed. South slightly improved. Heavy buying of new crop wheat by Europe. Exchange market breaks. Gold exports culminate. Stocks steadier.

Rarely has there been a season down to July 1 when the weather averaged as favorable for crops the country over. And the crops are a weather affair, except in irrigated districts, regardless of all other elements that may be at work. True, there has been too much rain, so claimed some places, but we rarely find that too much rain is harmful in the long run. So Texas, which was reported drowned out, is sending flattering reports about crops, although some delayed. If we were to judge the country by central Indiana we would say that the drought had cut the 1914 crops short. But there are only spots that have been hurt up to this time and our reports are so generally good that we can say the general crop prospect is splendid.

Interest naturally centers around wheat. Harvest is from a week to two weeks earlier than usual. This came very acceptably to millers and others dealing in the commodity, as the supply in elevators and bins was nearer exhausted than for several years at this season. The opinion is generally held that wheat will go to market with great freedom. We are inclined to think there will be some disappointed people, as growers are not satisfied with the price, which has had a straightaway decline of 12 to 15 cents, and the tendency of buyers is to put the price still lower. Many new granaries have been erected, a great deal of wheat will be stored by farmers' associations for \$1, and immense quantities will be fed to stock.

The visible supply of wheat is the lowest since September, 1912. The price of new wheat on June 26 reached the lowest price in twelve years—since 1902. Before the close of the market there was a rally which carried the price up 9¢ above the low. The reason given for this rally "seemed to be chiefly owing to farmers evidencing a disposition to withhold sales until offered better returns." The Chicago report says further: "Most of the big receiving houses here admit that country acceptances on bids for wheat had become decidedly less. Some of the principal handlers said responses, instead of being liberal, as heretofore, were now at best only fair." Comment on this situation is unnecessary, except we will say, if the people who produced the wheat will sit tight on it a little while they can put the price wherever they want to. Those big receiving houses without wheat will be like a kite's tail without the kite.

The corn visible increased liberally since our last report. This is not unusual just before the harvest time, when country elevators clean their bins for wheat and farmers market more, in view of the busy time ahead. The price of corn is a little higher, but we predict there will be a gradual decline in prices if the present good prospect for the new crop is maintained.

Oats, contrary to our expectation, are lower. In view of the short time before the new oats will come on the market, the price will probably be draggy. In view of some curtailment of acreage and damage by drought over a good part of the oats-producing area, we consider oats a good hold for better prices.

Cotton crop prospects have improved and prices are lower. Only the most favorable weather till the end of the season can give a bumper crop, so we predict prices to continue about as at present.

Potatoes are winding up their season at \$1 and over in all markets. This is the top of the season's prices. Quite in contrast, a year before they wound up the season at 15 cents, if, indeed, they could be sold at all.

We can't think much of a business where such absurdities in values are possible. Here is what President Wilson said on June 25 to a company of Virginia editors:

"There is nothing more fatal to business than to be kept guessing from month to month and from year to year whether something serious is going to happen to it or not and what in particular is going to happen to it if anything does. It is impossible to forecast the prospects of any line of business unless you know what the year is going to bring forth. Nothing is more unfair, nothing has been declared by business men to be more harmful, than to keep them guessing."

The President was referring to kinds of business, not agriculture, and it is proposed to enact some laws that it is hoped will remove some of the uncertainties of business. But few people are trying to produce conditions that will remove the uncertainties of agriculture. The Presi-

dent said: "It is impossible to forecast the prospects of any line of business unless you know what the year is going to bring forth." And why should not such a degree of definiteness be obtained for agriculture as for other business? It will be sometime and it can be done for agriculture quicker and easier than for any other business if a few more earnest people will work for it.

Advice

WHEAT—Hold it for \$1 a bushel. **CORN**—Market any old corn. Buy oats and wheat if you can to feed rather than feed corn at the price. **COTTON**—Market gradually. For definite marketing advice about any crop address Farmers Society of Equity, Indianapolis, Ind.

Visible Supply

The visible supply of grain in the United States by Bradstreet's on June 13, 1914, with comparisons, are shown in the following table:

	June 13, 1914	Change from two weeks before
WHEAT	25,205,000	-6,750,000
CORN	9,278,000	X 3,363,000
OATS	9,372,000	-903,000
BARLEY	2,202,000	-445,000

The visible supply of wheat in Canada on the same date was 21,195,000 bushels. This is 5,296,000 bushels less than two weeks before and is 1,577,000 bushels more than a year before. The visible supply of oats was 9,540,000 bushels on the same date, which is 661,000 bushels less than two weeks before and is 680,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on June 24, 1914, two weeks before and a year before as follows:

	June 24, 1914	Two weeks before	A year before
WHEAT, No. 2 RED

Future Grain Prices

Chicago grain futures closed on June 24, 1914, and two weeks before as follows:

Wheat—July, 79 1/2¢; September, 78 1/2¢. Two weeks before, 86 1/2¢ and 85 1/2¢ respectively.

Corn—July, 63 1/2¢; September, 67 1/2¢. Two weeks before, 70 1/2¢ and 67 1/2¢ respectively.

Oats—July, 38 1/2¢; September, 37 1/2¢. Two weeks before, 40¢ and 37 1/2¢ respectively.

Winnipeg, Canada—Spring wheat: July, 80 1/2¢ October, 81 1/2¢. Two weeks before, 96 1/2¢ and 86 1/2¢ respectively.

Cotton

New York, June 24, 1914

Cash cotton closed as follows: Middling upland, 13.25¢; middling Gulf, 13.50¢. Two weeks before the price was 13.65¢ and 13.00¢ respectively. A year before the price was 12.40¢ and 12.65¢ respectively.

Chicago Produce Market

Chicago, June 24, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	13	35	50
Tuesday	10	26	40
Wednesday	12	15	25

Total, 3 days... 25 76 115

Trade quiet and market steady at unchanged prices. Receipts were reported at 12 cars. They were ample for the requirements. Weather was hot and there was a little pressure to sell, although no concessions were made to attract bids.

Sales reported were: Per bushel—Wisconsin, bulk, 1 car mixed stock at \$1.10, 1 car round white at \$1.05, 1 car Rurals at \$1.10, 1 car at \$1.15. Sacked, 1 car poor mixed varieties at 90¢, 1 car nice Rurals at \$1.15. Per bushel, bulk or sacked, Wisconsin, Triumphs, Burbanks and Kings, poor to good, \$0.90 to \$1.00. Round white 1.05 to \$1.10. Dusty Rurals 1.05 to \$1.15.

NEW POTATOES—An easier feeling pervaded the market, but prices were without any particular change. Receipts were reported at 75 cars. A fair demand was enjoyed, but bidding was not as brisk as on earlier days this week. Little chance was noted in the quality, as most of the Texas were more or less heated and roted, while Oklahoma and Arkansas offerings were generally good.

Sales reported were: Per bushel, sacked—Texas Triumphs, 2 cars heated, shrunk 50 to 60 per cent, at 90¢, 2 cars shrunk 40 per cent at \$1.20, 2 cars good, sound at \$1.25, 1 car fancy at \$1.40; Oklahoma and Arkansas, 2 cars at \$1.40, 8 cars at \$1.45, 2 cars at \$1.50. Per bushel, sacks, Arkansas and Oklahoma

red 1.35 to 1.50. Texas, depending on quality, .90 to 1.40. Louisiana and Mississippi red, poor to good, .90 to 1.40. Per barrel, Virginia Cobblers, 4.90 to 5.00. North Carolina Cobblers, 4.50 to 4.75. Louisiana white, fair, not fine, 4.00.

The price of old potatoes is from 15¢ to 25¢ a bushel higher than two weeks before. A year before the only price quoted that any potatoes were sold at was 15¢ a bushel. New potatoes are much lower than two weeks before.

BEANS—Nothing new can be learned of. There was

little doing. Hot weather causes light demand. Not many beans coming in or offered. Quotable: Pea Beans—Hand-picked, choice, \$2.15 to \$2.20. Common, 1.95 to 2.00. Red Kidney, common to fair, 2.65 to 3.15. Fancy, 3.20 to 3.25. Brown Swedish, long, 1.80 to 2.10. Round, 2.00 to 2.25.

The price of pea beans is 5¢ a bushel lower than two weeks before. Other varieties unchanged. A year before hand-picked choice pea beans were quoted exactly the same as above.

HAY—Receipts, 2,232 tons. Supply liberal and demand good. Market steady.

Choice Timothy Hay, \$17.00 to \$17.50. No. 1 Timothy, 14.50 to 15.50. No. 2 Timothy, 12.50 to 14.00. Iowa and Nebraska Prairie, 17.00 to 19.00. Illinois and Wisconsin Prairies, 8.00 to 11.00.

The price of timothy hay is 50¢ to \$1 a ton lower than two weeks before. Nebraska Prairie hay is unchanged, while Wisconsin Prairie hay is unchanged to \$1 a ton lower than two weeks before. A year before choice timothy hay was quoted at \$18 to \$18.50 a ton.

STRAW—Dry straw quotable at \$3.50 to \$3.90. Oat straw at \$7.00. Wheat straw at \$6.50 to \$7. All varieties of straw are unchanged from two weeks before.

BROOM CORN—Quiet as lately noted.

Per ton, Illinois corn, \$115 to \$135. Oklahoma, 90 to 130. Damp and damaged less.

The price of broom corn is the same as two weeks before.

Change same period last yr.	Change from a year before	Change from 2 years before
Bushels	Bushels	Bushels
-4,349,000	-10,031,000	-3,803,000
X 5,029,000	-70,000	458,000
X 1,400,000	-2,054,000	X 3,198,000
-325,000	-273,000	X 1,395,000

A year before Illinois corn was quoted \$100 to \$120 and Oklahoma \$50 to \$80 a ton.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
Monday	20,387	15,012	13,614
Tuesday	15,899	13,299	17,292
Wednesday	17,220	20,969	18,142

Totals 53,506 51,280 49,045

The market is dull at quotably unchanged prices, excepting for low grade stock, which was weaker. There is general complaint about the slowness of trade and parties having anything but the finest eggs find it difficult to effect sales unless by favoring buyers.

Fresh, Firsts 17 1/2 @ 18¢. Ordinary, Firsts 16 1/2 @ 17¢. Checks, good sound, 14¢. Musty and moldy, 9 @ 10¢. Dirty, good, 14 1/2 @ 14 1/2¢. Heated, showing heavy loss, 12 1/2 @ 13¢. Miscellaneous, cases included, 16 @ 18¢. Cases returned, 15 1/2 @ 17 1/2¢.

Storage packed eggs are meeting with a moderate demand. Firsts are quotable at 19 @ 19 1/2¢ and Extras at 19 1/2 @ 19 1/2¢.

The market is about 1/2¢ per dozen lower than two weeks before.

Fruit

APPLES—Not much doing in either old or new. Demand limited for either kind. None of the new are really attractive as yet. Old are taken very sparingly. Stocks are being slowly worked off. Holders are anxious to close out.

CHERRIES—Are meeting with fair sale. Receipts are very good from outside mainly from Michigan. Home grown and nearby cherries also are being brought to market. There was a weak market.

CURRENTS—Are fair sale when of nice quality and quotable as follows:

GOOSEBERRIES—In good supply. They were easier. Sales had to be made largely to canners.

RED RASPBERRIES—Were a shade firmer when good. Receipts only moderate. One thing against them was that they came late. Michigans are rather dark color.

STRAWBERRIES—Were weak. Poor condition of the berries and hot weather caused it. Many Michigans are running small. Berries from all quarters show effects of rains and hot weather, being wet, tender to soft, some scalded. They had to be sold at the first opportunity as they would not hold up.

LEMONS—Are ruling easy. Trade has not been just satisfactory of late. Prices recently have weakened some. Supply is good.

ORANGES—Are held steady. There is at the same time only a tame demand. Supply is ample.

PINEAPPLES—Are ruling firm. Selling very well and supply only moderate.

PEACHES—Were selling in a moderate way. Only offerings noticed were Oklahoma white.

PLUMS—No change in this market. Good size red plums fair sale. Small are dull. Very small, yellow plums coming have no value; not wanted.

Melons

CANTALOUPE AND GEMS—There is a liberal supply, causing an easy feeling to prevail. Standard crates, standard melons are selling very well. Small melons in such crates and pony crates are slow. Not many flat crates offered. They are moderate sale.

WATERMELONS—Hot weather favors these melons. There is a good demand. Receipts today were reported at only 12 cars, and higher prices were quoted.

Vegetables

CARROTS—Market is now supplied with home-grown. Outside carrots are not wanted and they do not sell unless very fine. As a rule the southern are not as good as the home-grown and they have little value.

CELERY—Michigan has fair sale when fine and well bleached. There is an ample supply and market is easy.

ASPARAGUS—Market is slack. Buyers say it is too warm and they are not taking hold. There is a good supply and prices are lower. Trade dull and receivers have a hard time cleaning up.

BEETS—Home-grown now supply the trade. Outside beets do not sell unless they are exceptionally fancy and there are not many coming fine.

CALIFLOWERS—Home-grown is plentiful and sells according to quality.

CUCUMBERS—Home gardeners keep the market well supplied. Outside stock not wanted unless very fancy.

CABBAGE—Salable and steady when fine, large and green. There is a good supply, including home-grown and southern. Trade is slow as it is too warm.

EGG PLANT—In limited demand. There is a fair supply and market is easy.

GREEN ONIONS—Home-grown are in good supply and easy.

GREEN PEAS—Home-grown now supply the trade. Outside peas usually arrive dry and common. They do not sell and are no longer wanted.

KOHLRABI—Home-grown supplies the trade. It is plentiful.

LETTUCE—Home-grown in good supply and supplying most of the trade. Outside lettuce does not sell unless it is very fancy.

ONIONS—Market is firm. Stocks remaining on hand are limited and fresh receipts are small. Some of the California arrive soft and poor and have to be shaded to sell.

OKRA—Moderate sale and easy. There is little demand.

PEPPERS—Market a shade better for nice, fresh, good size and dark green peppers. Demand moderate.

PIE PLANT—Market is well supplied with home-grown.

PARSLEY—Trade is quiet. There is an ample supply of home-grown.

RADISHES—Home gardeners keep the market well supplied. Demand fair.

STRING BEANS—Slow. Southern and eastern beans are about done. Home-grown are coming more freely and will soon supply most of the trade. Just now there are practically no fancy beans on the market. The best offered are only fair and sell slowly. The bulk are common or ordinary and do not clean up, although offered at low prices. Some have to be dumped.

SWEET CORN—Fair sale when good, green and well developed. There is not much coming and market is steady.

SPINACH—In moderate supply and salable when fine and fresh.

SQUASH—Dull. Supply is moderate, but ample, as there is little demand.

TOMATOES—Quiet trade. Supply of fancy, sound, fine stock not large. Market firm for that kind. Poor, green or mixed stock dull. Receipts also included poor leakers that have little value.

TURNIPS—Trade quiet and supplied with home-grown.

SUPPLY AND DEMAND

The demand for wheat comes over a whole year, but you get your crop all at once. It follows, then, that the demand must be fed as it appears. This means that farmers must control their marketing. That's easy. Just fix ONE DOLLAR in your mind and ask it. Don't sell when it won't be paid. Sell when it is paid. Quit selling the minute it won't be paid. Only this and nothing more.

SELLING OR STORING

Mr. Wheat Grower: You can sell your wheat now at, say 60 to 70 cents, and other people will hold it until the demand of consumption needs it. As an alternative you can store your own wheat and get a cash advance of nearly this amount on it, if you need it, and in a short time sell it at one dollar or more. Read "Personal" article in this paper and send the blank.

Measuring the Value of Agricultural Education

Three thousand six hundred ninety-eight farmers, scattered over fourteen states, have been personally interviewed to get their views on how the different methods of educating farmers are looked upon by farmers themselves. Two-thirds of them take farm papers. Three-sevenths of them get agricultural bulletins. Three-ninths attend farmers' institutes. Two out of every thirteen belong to a farmers' organization. One in fourteen writes to the experiment stations for instruction. Half the number interviewed stated none of these methods helped them any. One from each six thought the bulletins the most helpful. One in three preferred the institutes, one in forty got the most good farm papers and one in four considered all agencies equally valuable. But now, after this has been determined, what good is it? Who is to benefit by this knowledge, and how? What do the taxpayers get for the money the investigation cost? Wake up and think about these things.

Two Roads to Rural Credit

There are two "schools" of rural credit advocates. One, led by Senators Fletcher and Moss, and having the indorsement of President Wilson and Secretary of Agriculture Houston, advocates the establishment of private land mortgage banks, using capital secured from individuals, the profits to go to the banks. The other school, with Congressman Bathrick of Ohio and Senator Norris of Nebraska as sponsors, advocates the issuing of government bonds to secure the capital to loan to farmers, as direct as possible, upon a narrow margin of profit, the profit to go to the government. The committees on banking and currency in both the House and the Senate have a bill for rural credit which is a compromise between the two schools. These measures will be important legislation in the next term of Congress and farmers should be watchful.

Woman's Work and Welfare

Helpful Hints for Homefolks

Fireside Social Chats

Conducted by Aunt Sophia

MOTHERS ARE NOT BLAMELESS

THERE are too many girls growing up with the very wrong idea that work is very undesirable, if not actually a disgrace. Such girls are not getting the right foundation for a happy life. There are only a limited number of millionaires and men of wealth sufficient to support wives in luxury and idleness—not nearly enough to go around. The average, everyday man, God bless him, is good enough for any woman, and a wife good enough for such a man must be both willing and trained to work. Such a pair can be happy, and will be useful and respected members of society. The girl who is looking for a life of ease in the lap of luxury is looking at life from a wrong position. Very, very few of them find such places, and of those who do not one in ten find enduring happiness at the same time.

Girls are not always to be blamed for the way they look at such things. Really they see things very much through their mothers' eyes, so to speak. The way to keep nonsense out of a girl's head is to fill it full of common sense. This is the mother's duty. She can train her daughter to respect labor, to believe in it and to enjoy it. In this she can not begin too early.

Sisters, hope for the best for your girls, but give them a training that will assist them to meet vicissitudes that may come to them.

AUNT SOPHIA.

WASTE BASKETS ARE STEP SAVERS

By Mrs. W. C. Palmer

Waste paper baskets are among the greatest step savers we have. They are cheap and should be placed in every room in the house, not excepting the front and back porches. It will not take long for every one to learn to remember to place their scraps in the baskets. It will mean less sweeping and tidier rooms.

The wire waste paper basket is the best for the kitchen and back porch, as it can be washed and scalded when it becomes soiled. It is nice to save the large paper bags to place in these. When the bag is full, lift it out and replace with a fresh one. Then burn the filled bag with its contents. In this way the basket does not become soiled as quickly and it saves an extra trip by not having the empty basket to carry back to its place. It will be surprising how often the basket in the kitchen will become filled. It will soon be looked upon as a joyful discovery for saving labor and steps in this room alone.

The basket in the living room should be of good material, as it will be used fully as much as the one in the kitchen. A good, substantial basket made of palm leaves can be purchased in most places from a dollar up. While these are not fancy, they are rich looking and add to the appearance of any home. As they become soiled they can be scrubbed in warm suds with a brush and after rinsing in cold clear water and dried they will look as bright as when new.

Those for the bedrooms can be made of pasteboard and covered to match the room or fancy baskets can be bought for this purpose. A covered vegetable shipping hamper makes a nice one.

While the baskets in the kitchen,

living room and porches will need emptying quite often, those upstairs will need gathering up only on sweeping day and the contents burned.

It is better not to burn too many papers or scraps in the stoves, as it not only clogs them, but the chimneys as well. A holder of sheet iron in some obscure place in the back yard makes a very convenient receptacle to dispose of such waste matter. In this way one can more easily look over the contents of each basket to prevent anything of value from being burned. By having this receptacle there is never any danger of fire while the waste matter is burning.

After the baskets are all emptied and back again, one begins to realize how much help they really are in making the housework lighter, and wonder how they ever did without them.

If one has a large, old-fashioned willow basket with a good stout handle it can be used in carrying the waste matter from the baskets upstairs. This will save carrying the baskets down and upstairs again. If a large paper bag is used to hold the sweepings from each room, the one trip with the willow basket will do.

TEACH GIRLS TO SAVE

It is no particular hardship to learn to save money. It is something that has to be learned; it rarely comes naturally. If the girl who earns \$5 a week and pays \$2.50 for board can be depended upon to put a dollar of the remainder aside, well and good; if not, she should be encouraged, nay, even compelled to do so. A bank book is a great help in these matters, and if she is not willing to put in a dollar at a time, she should hand it to her mother or father until it becomes five. When the postal banks, which are reaching out for just these small savings, become established throughout the country, they will be an infinite help. For Uncle Sam disdains the large depositor, and will not accept more than \$100 a month from anybody. But he gladly furnishes a stamp book for the stray dimes.

The girl who saves a dollar each week will have fifty to spend on a summer visit or some pretty clothes—it matters little what she spends it for as long as the habit of thrift is established. And the girl who pays her board and saves a little is the really self-respecting wage earner. She is neither a spendthrift nor a slave and she is self-supporting. She is getting more out of her work than the mere occupation or the mere money. She is forming habits of industry, thrift and independence.

Was Going Some Anyhow

"Billy, you must not be so bad or you can't go to heaven."
"Well, I've been to the ball game and the show and I can't expect to go everywhere, can I?"

Wasn't Sure

Cross Guest—Waiter, you are not fit to serve a dog.
Waiter—That may be so, but I am very successful in serving men and women.

That Ended It

"How long did your honeymoon last?"
"Till I asked my husband for some money."

Not a Question of Looks

"Thank you so much," said the lady, as she took the seat given her by an Irishman in a crowded car. "That is all right, ma'am," was the reply. "Some men never give a seat to women who are not young and pretty, but that don't make any difference with me."

"RUBY GORDON Or Back From The Grave" GIVEN

By Libbie Sprague Phillips.

Here is a thrilling story of love, mystery and adventure that will grip your attention from the first word to the last! It is one of the greatest novels this famous writer has ever produced. Ruby Gordon, a poor orphan girl, becomes engaged to one of the young men in the town, who is the adopted son of a wealthy reclusive. The old gentleman took a great dislike to Ruby Gordon because she reminded him of his wife who had left him years before and had been lost at sea in crossing the ocean; he felt that she was his wife's spirit reincarnated, and forbade Lawrence, his adopted son, to marry her, and made so much trouble that the young man finally broke his engagement and married another, but it is not their fate to so easily evade Ruby Gordon, as you will discover when you get your free copy of this great book and read the story yourself! Ruby Gordon will surely find a warm place in your heart—she is one of those sweet pure characters every reader admires. We purchased a large edition and will send the book free and postpaid to all who send 10c to pay for a 3 months' subscription to our big home and family magazine. Send today. Address **The Household, Book Dept. 160, Topeka, Kansas**

"Songs of Equity"

A new song book just published. Eighty pages and cover. Every local should have one for each member and it should be in each farm home. There is nothing like a song to open a local clearing house meeting and there are no songs equal to these, which were nearly all written expressly for this society.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

THE CLIPPER

There are three things that destroy your lawn—Dandelion, Buck Plantain and Crab Grass. In one season the Clipper will drive them all out.
Your dealer should have them. If he has not, drop us a line and we will send circulars and prices.
Clipper Lawn Mower Co.
Box 5, Dixon, Ill.

DAISY FLY KILLER

placed anywhere, attracts and kills all flies. Nest, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent prepaid for \$1.
HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

PARKER'S HAIR BALM

Cleanses and beautifies the hair. Promotes a luxuriant growth. Never Fails to Restore Gray Hair to its Youthful Color. Prevents hair falling out. 50c. and \$1.00 at Drugists.

WE GIVE THESE AWAY

Every girl, little or big wants one of these beautiful Vanity Coin Purse. The very latest out. Silver case beautifully engraved, with chain 44 inches long. Patent Coin Holders inside. Given FREE to any one who will assist us to introduce our big offer to a few of your friends. You can do it in a half hour. Write to us now.
HOME DISTRIBUTORS CO., 408 Friend Bldg., Kansas City, Mo.

What 15c Will Do

The little matter of 15c in stamps will bring you the **Pathfinder** for 13 weeks on trial. The **Pathfinder** is an illustrated weekly, published at the **Nation's Capital**, for the **Nation**; now in its 21st year of increasing success. The paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation 13 weeks. The 15c does not pay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box 7, Washington, D. C.**

BIRTHDAY PILLOW TOP GIVEN

Each member of the family should have a pillow, showing the respective month in which they were born. These pillows are tinted on **Eru Art Cloth**, showing the birthday flower in natural colors. Size, 17x21 inches. We include a complete course in embroidery with each order.
OUR FREE OFFER—Send date of birth with 35c for a one-year subscription to our Magazine, or 50c for two subscriptions, and receive pillow top FREE. If you are prompt we will also send 10 Dress Pattern Coupons Free. By using these coupons you will save 50 cents. **THE HEARTHSTONE, 3357 Michigan Avenue, Dept. 4, CHICAGO.**

3 big dolls given away

Girls, if you want 3 of the cutest dolls you ever saw send for this doll family. Louise is over 2 ft. tall, very like a real youngster in size. She can wear a real baby's clothes. She will sit or stand. Brother Jimmie is a husky fellow and Sister Susie is too cute for anything. **JIMMIE AND SUSIE ARE FULLY DRESSED** and you will be delighted with all three dollies. I want to give this doll family to a little girl or boy in each home. The only condition is that you secure a new 6-months subscriber to 25c to Up-to-Date Farming. It is published twice a month, 12 issues in 6 months. **Big Surprise Free** I will also tell you how to get Princess, the big, talking doll sensation from Germany. She says "Papa" and "Mama" like a real child. Send 25 cents and new subscriber and dolls will be sent by parcel post, prepaid. **Miss Gertrude Allerton, Dept. A, Indianapolis, Ind.**

No Plates—No Films New Camera Just Out

Here at last—the very camera you want. No experience needed to operate. Amazing invention. Finished pictures made at the spot in a minute's time.

The "Mandel-ette"
A one minute camera. Eliminates films, plates and dark room. No fuss or trouble. Pictures made at small cost. Great discovery. For your vacation, at home or all occasions, you can't afford to be without a "Mandel-ette."

Special Money Back Offer

As makers and inventors, we want everybody to own a "Mandel-ette" camera. We sell direct to you at rock bottom price. A FLORAL NOVELTY

Two Sacred Resurrection Plants

These rare and curious plants grow and stay green by placing them in water. When taken out of water they dry and curl up and go to sleep. They will keep in this state for years. Simply place the whole plant into water; it will open up and start to grow in about 20 minutes. We will send two of these sacred plants postpaid and free to any one sending 10 cents for a six-months trial subscription to our monthly magazine.

V. CECIL CONERN SPRINGFIELD, OHIO

3-PIECE Kitchen Set

Here are three useful articles. You will need them over and over again every day in the kitchen. They are made of best steel and will prove to be true friends to the housewife. A fine paring knife, a good, strong butcher knife and a cleaver that is heavy and made for work.

This set of three pieces given for a club of two subscribers, at 50 cents each.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

What is Now the Fashion

6721—NEGLIGEE SHIRT. For the men of the family. This may be made of some cool cotton fabric such as batiste, wash silk or madras. It has the neck quite open and trimmed with an ornamental collar with large points. If preferred, the usual band finish may be used, as the pattern provides for both. The sleeves are the usual shirt sleeve, and in the back there is a small shoulder yoke. Sizes 34 to 42 inches breast measure. Medium size requires 3 3/4 yards of 36-inch material.

6725—WOMAN'S APRON. The mother who has much real work to do can wear the apron without any dress underneath it. It is of plain sacque cut, with kimono shoulder and with a side front closing. Two patch pockets add to the comfort of the wearer. Gingham, calico and other similar wash fabrics are suitable for these aprons and wash braids may be had to match all the standard colors and these are nice as trimming for the edges. Sizes 36, 40 and 44 inches bust measure. Medium size requires 5 1/4 yards of 36-inch material for apron and cap, with one-half yard of 27-inch contrasting goods to trim.

6739—WOMAN'S SKIRT. This odd skirt may be developed in wash fabrics or in woolen goods. It is a two-gore, sectional model and may have either the high or the regulation waistline. It is made to simulate the tunic effect, but the upper part is attached to the lower. Sizes 22 to 32 inches bust measure. Medium size requires 3 yards of 36 or 44-inch material.

6745—CHILD'S DRESS. This offers a novel idea in a child's dress. The body and sleeve sections are in one and the frock is intended to be slipped on over the head. Those who wish may open the shoulder seam along its entire length, or else only a few inches need be opened. Sizes 2, 4, 6 and 8 years. Medium size requires 1 1/4 yards of 36-inch material.

No. 6748 also offers a pleasing design for a little girl's dress. This has a long-waisted blouse and is slipped on over the head. The skirt is pleated all around and is attached to the blouse. Sizes 6, 8, 10, 12 and 14 years. Medium size requires 2 1/2 yards of 36-inch material.

6737—ROMPERS. A very serviceable pair of rompers may be made by this pattern. These have the body and front of the bloomers in one piece, but there is a division across the back at the waistline. Sizes 2, 4 and 6 years. Medium size requires 2 yards of 36-inch material.

These patterns are guaranteed: there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

HOT WEATHER DRINKS

By May B. Brooks, in the Mother's Magazine

Iced Chocolate—Use the following syrup: Pour one-half pint of boiling water over three tablespoonfuls of cocoa, stirring until dissolved. Add one pint of granulated sugar and boil for three minutes. Then cool, add one tablespoonful of vanilla and bottle. Pour two tablespoonfuls of this syrup into a tumbler with some cracked ice, stir in three tablespoonfuls of whipped cream, a dash of milk and drop in a spoonful of vanilla ice cream.

Coffee a la Marion Crawford—Make a strong infusion of good coffee. Do not allow it to stand on the grounds or it will be bitter. Add sugar and chill. Put one tablespoonful of chocolate syrup in a tumbler, stir in the coffee and fold in a spoonful of whipped cream.

Midsummer Dream—Crush ripe peaches and very soft pears to a pulp. To two cupfuls of this add one-half cupful of pineapple juice and the same of plum juice. Sweeten and add ice water. Lay a small bunch of plums with their foliage on the plate.

Piazza Party Punch—The juice of one pineapple, six lemons, three oranges, six large crushed peaches, one pint of preserved strawberries, the same of preserved cherries, one bottle of grape juice. Sweeten and add one cupful of chopped ice, one gallon of water and a cupful of crushed mint leaves.

Jam Punch—Put a tablespoonful of strawberry jam in a glass, add the juice of half a lemon and stir until dissolved. Add a little sugar and fill the tumbler with crushed ice and water.

Grape Nectar—Mix the juice of two lemons, one orange, one pint of grape juice, one cupful of sugar and one pint and a half of water. Serve with a small float of whipped cream bearing a bit of orange on the surface.

MILK DESSERTS

Junket served very cold is a refreshing dessert in hot weather, as are the numerous milk sherbets, frozen custards and similar desserts in which milk is used. Baked milk, made by cooking sweetened and flavored milk for a long time in a slow oven, is also good. Many different kinds of puddings are made by baking milk with cereals and molasses or sugar. The cereal may be rice, corn meal or buttered white or whole-wheat bread. In this class of food belongs, so far as nourishment is concerned, the scalloped potatoes made by cooking sliced raw potatoes for a long time in a large amount of milk.

Could Keep Out of the Shade

"No, Pat, I would advise you not to move to Texas. It gets 98 in the shade down there."
"Be Jassus," replied Pat, "and I don't have to stay in the shade all the time, do I?"

Beyond Human Construction

"Higgins is a self-made man, isn't he?"
"He claims to be, but I do not believe a man could make himself as mean as he is. He must have been born that way."

No Danger

"Don't pull that dog's tail, Billy; he'll bite you."
"Why, mama, a dog ain't got no teeth in its tail."

A Hard Lot

"In India it is said they bury the living wife with the dead husband. Ain't it awful?"
"Yes," replied Grouchy, "in that country the husband gets no relief even in death!"

Announcing the NEW MODEL ROYAL No. 10

THE MASTER MACHINE
that need not be traded out
FEATURE No. 7

to "trade out" periodically machines made of iron and steel. And the expense of it in the aggregate is enormous!

**Built for "Big Business" and its
Great Army of Expert Operators**

"Big Business" demanded a typewriter of long-term service, that must improve the presswork and stand the modern "grind" at high speed for years without "trading out." For years, men who have done big things—heads of great corporations and far-seeing executives have been asking: "Why is it necessary to trade out typewriters every little while? Is it because they have been built to be traded out?"

The ANSWER to this big question is the new Royal Master-Model 10—built for long-term service.

We believe the No. 10 Royal will outlast any other writing-machine in the world. It will stand the grind. Turn the machine sideways, and you can see daylight right through it. Mark the absence of complicated mechanism! It's what you don't find there—a 1,000 working-parts less-than-others—that proves the Royal's durability. Here at last is the master-machine that need not be traded out—the typewriter that won't "die young!"

Get the Facts!

Send for the "Royal man" and ask for a DEMONSTRATION. Or write us direct for our new Brochure, "Better Service," and a beautiful Color Photograph of the new ROYAL MODEL 10—"THE MACHINE WITH A PERSONALITY"—Read our advertisements in Saturday Evening Post, Collier's, System, Everybody's, Cosmopolitan, Hearst's, Metropolitan, McClure's, Business, and many more! "Write now—right now!"

Price \$100 (\$125 in Canada)

Branches and Agencies the World Over

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE EARLY SUMMER has again been very dry in some portions of the country and crops will be shortened. That makes it all the more important for farmers to be in position to make the most of what they have. This paper is so earnest in its desire for those who till the soil to manage their business as other people do, and not take things so much as they happen to come, that we hope our young people will help us. Let us get everybody to study these facts that so many of the other papers refuse to discuss.

It is wonderful the different conditions that prevail in different portions of the country. Here we have a letter from the artesian well regions of New Mexico:

DEAR CADETS—I am 16 years old and live in the country. Lake Arthur is in the artesian belt and is about thirty miles south of Roswell. Our principal crop is alfalfa, though we raise a good deal of vegetables and fruit. In some places land is cheap, especially so when you take the trouble to "file and prove up." But it is not so cheap when you try to buy a farm with an artesian well on it. I would like to correspond with Cadet boys and girls.—Jessie A. Johnson, Lake Arthur, N. M.

Our next letter is from the region of big farms in Texas:

DEAR CADETS—I am a Texas girl of 14 years. I live on a farm of 6,000 acres and I think farm life is fine. Our chief crops are cotton, corn, etc. I will be 15 August 11. I have an organ and can play very well.—Pattie Medlin, Annona, Tex.

We also have a letter from Mamie Medlin, 16 years old, with the same postoffice, but we can not well make room for both of them. We must continue with the letters as they come now.

DEAR CADETS—My brother is a Cadet and I would like to become one so as to learn interesting things about the different states, especially about the schools, for I am always interested in them. I graduated

from high school and training class and now I teach school. I think the Cadet letters serve as quite a substitute for traveling. I have lived twenty-one years on the farm, but this spring my father moved to a village. I will answer all letters or postals.—Stasia N. McCarthy, Nunda, N. Y.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and surely enjoy it very much, especially the boys and girls' page. I am a farmer's daughter, age 14, and we live on a 360-acre farm. My sister and I attend to the cows. We milk seven Jerseys. I think UP-TO-DATE is a good guide to farming. I go to school, and even there I get a great deal of my information from this paper. I would like to correspond with the boys and girls and will answer all cards and letters.—Ida A. Nordloh, Hayden, Ind.

DEAR CADETS—I am a West Virginia girl and I wish to be a Cadet. I enjoy reading UP-TO-DATE FARMING. I am 17 years old and have lived all my life on a 120-acre farm in the beautiful Shenandoah Valley. The scenery around here is grand. I think there is no place like the country, where you can get all the fresh air you want and everything to eat fresh from the garden, and home-produced eggs and meat. We raise wheat, corn, hay, apples, peaches and pears. Land sells at from \$100 to \$200 an acre. We also run a dairy and keep bees. I am a junior in the high school. I play the organ and piano and am learning to play the violin. I will be glad to hear from all the Cadets, and will answer.—Mary E. Mish, Inwood, W. Va.

DEAR CADETS—This letter is from southwest Missouri. It is an old settled country here and land is thin and high. We raise corn, wheat and oats, but we must fertilize for wheat. We also raise stock. I am going to Oregon to take up a homestead next spring, so will some of you homesteaders and residents of Oregon write me all you know about that state and Washington—climate, rainfall, native soil, crops, etc.? I will answer all letters and will be thankful for them. I have taken UP-TO-DATE for five years.—C. W. Gresham, Bowers Mill, Mo.

DEAR CADETS—I have long wished to become a Cadet. We live on a 300-acre farm and I think farm life is the best. We milk thirteen cows and have a lot of pigs and chickens, but not very many geese. I would be delighted to have the Cadet boys and girls write to me, and I will be sure to answer all. I think UP-TO-DATE

is a dandy paper. I would love to live on a ranch out in some of the western states and I live in hope of getting there sometime.—Martha M. Scharff, DeWitt, Ia.

DEAR CADETS—I am a country girl, 22 years old, and I enjoy reading your letters in UP-TO-DATE FARMING. I would be pleased to hear from any or all of you and will answer all cards and letters I receive.—Lena E. Rice, Sterling, Idaho.

DEAR CADETS—I am a farmer boy, 19 years old, and live on a farm of forty acres in the Bitter Root Valley of Montana. It is planted in orchard—ten acres of apples, peaches, pears and walnuts. There are spuds, peas, garden stuff and grain in some and strawberries and raspberries in the rest. I would like to become a Cadet and would be glad to hear from the girls and boys. Will answer all I receive.—Edwin L. Neilson, Hamilton, Mont.

DEAR CADETS—I am an Ohio girl, 14 years of age, and live about a mile east of Bremen on a farm of eighty acres. My brother takes UP-TO-DATE and I read the Cadet page every week. I wish to become a member of the Cadet family and will be glad to receive cards and letters from all the Cadet girls and boys, and will answer all I receive.—Alice McCandlish, Bremen, O.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and I enjoy it very much. I have been taking it for three years. I have lived in the country all my life except nine years when I was small. I moved from Alabama and have lived in Texas thirteen years. I like Texas better than the older states. I live on a farm of 200 acres and we raise most anything that farmers grow. I love to read UP-TO-DATE better than any other paper. I would like to correspond with the Cadet girls and boys from every state in the Union. Age 24.—Lela Pinkston, Hubbard, Tex.

DEAR CADETS—I am a Georgia girl, 16 years old, and would like to join the Cadets. I live on a farm of 170 acres. We take UP-TO-DATE FARMING and think it the grandest paper for a farmer ever printed. It is a great advancement to both young and old. I have lived on a farm all my life and think it is the sweetest life anybody could ever live. But let me tell you, it is no easy work. There is a lot of hard labor about farming and it is a work that lasts all summer from sunup to sundown. Some of you Cadets write to me and tell me about your country. I will answer all I receive.—Zudie T. Yson, Tenville, Ga.

DEAR CADETS—I am an Iowa girl, 15 years old. I live on a farm of eighty acres. We have thirteen horses and four cows. I keep house for my father most of the time, as my mother is not at home. I have 115 little chicks now and an incubator of 110 eggs will hatch soon. I am a prompt reader of UP-TO-DATE and would like to join you. I will gladly answer any cards or letters from the Cadets who wish to write to me.—Laura Tubbs, Corydon, Ia.

DEAR CADETS—I would like to become a Cadet of Equity. There is a farmers' union in our village and every one who belongs to it takes UP-TO-DATE. My father joined and we like the paper fine. We live on an 80-acre farm, and as my father is gone a good part of the time, and as I haven't any sisters or brothers at home, mama and I are by ourselves and we get very lonely. I would be glad to receive postal cards and letters from the boys and girls. I will try to answer all I receive.—Beauannah Trimmell, Morehead, Kas.

DEAR CADETS—I have been reading UP-TO-DATE FARMING and think it is just fine. I read all the Cadet letters first. I think it is a nice way for the young people to get acquainted. I live with my mother on a 40-acre farm only a few rods from the St. Joe Valley line. For pets I have a cow and a hen with fourteen little chicks. Mama has 120 little chicks. Indiana is a very beautiful place, mostly level. I am 16 years old and wish all the Cadets would write to me. I will answer all.—Juanita Shafer, LaGrange, Ind.

DEAR CADETS—I enjoy reading your letters very much. They are certainly interesting. I am a farmer's daughter and have lived on a farm in good old east Tennessee all my life. My father owns two large farms now. The one we live on has a fine spring, but it is so far away we pump the water into a large tank in a cemented cellar. Our principal crops are corn, wheat, oats and all kinds of hay. I go to high school and have to walk about two miles. I will graduate next year. I have been taking piano lessons for about five years and I now have a small class. Would be glad to hear from the Cadets.—Hallie A. Friar, Shepherd, Tenn.

DEAR CADETS—I am a country girl, 13 years old, and a reader of UP-TO-DATE FARMING, which we have taken for some time, and I like to read it fine. I live on a farm of 56 acres among the hills of West Virginia. The chief industry of our country is farming, though it is rough and hilly. I like farm life. I have three sisters and two brothers and a mother, but my father has been dead more than twelve years. One of my sisters is married, but the other two are at home. We have two churches, one of which we attend regularly. We all joined the church and were baptized. I wish to hear from any Cadet girls and boys near my age.—Gracie L. Jamison, Copen, W. Va.

Everything must have a close, and this fills our space for Cadet letters.

EXTRAORDINARY OFFER—30 days free trial on this finest of bicycles—the "Ranger." We will ship it to you on approval, freight prepaid, without a cent deposit in advance. This offer is absolutely genuine. **WRITE TODAY** for our big catalog showing our full line of bicycles for men and women, boys and girls at prices never before equaled for like quality. Baseball Curver

Fits on the hand; can not be seen. With illustrated instructions how to throw all curves, for 10c, stamps or coin. **ARDEA CO.**, Dept. H. So. Norwalk, Conn.

Baseball Curver GIVEN

Boys, you can simply make money out of the other boys with this curver. You can be as big a hero in your town as any big league pitcher. The curver which is worn on the hand enables the pitcher to give the ball a rapid whirling motion thus causing a wide curve. It is so small that the batter cannot see it and they all wonder where those AWFUL CURVES come from. You can fan them out as fast as they come to bat. A complete set of directions for throwing curves goes with each curver. **Our Offer:** We are giving these baseball curvers away free as a means of introducing our great farm and family magazine, **MISSOURI VALLEY FARMER**. Send us 10c for a three month's trial subscription and immediately upon receipt of same we will send you one of the curvers, by return mail free and postpaid. If you want one of these wonderful little curvers do not delay but send us your subscription at once to the address below. Address is limited. Do not put off sending in your order now. Address **MISSOURI VALLEY FARMER, Box 24, Topeka, Kansas**

Up-to-Date Farming Indianapolis, Ind.

This PONY GIVEN

Boys! Girls! Do you want this beautiful Shetland Pony for your own? Write today—Quick! You can get him Free—but Hurry!

Carriage and Harness, Too, Come With Me

All Given

Who Wants Me? QUICK!

My name is "JOE"

I am 42 inches high and three years old. I am a pet, too. My color is black, and I have the silkiest, fluffiest mane and tail in the world. I am considered a very handsome pony. I am well trained. You can either drive or ride me and I am just as gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy.

I WILL GO ANYWHERE to find a kind little boy or girl as my owner. I am ready and waiting. I'll make you happy because that is what I was made for and it's what I like to do. If you want me, and I know you do, just send your name and address to Uncle Billy and I'll do my best to come to you in a hurry. I am going to some boy or girl, so be quick. Send your name this very day.

I have already given away 34 real, live Shetland ponies. Do you want "JOE"? Of course you do. So easy to get a pony if you do as I say. I will also send you pictures; tell you how to get "JOE" and his outfit free, and prove that what I say is absolutely true. But you must hurry. So write while you think of it—**once—don't put it off.** Just say that you want "JOE."

Send Me Your Name Today

Write me at once and I will send you **2,000 Pony Votes Free** for your promptness. I will also show you how to get more pony votes. So easy to get a pony if you do as I say. I will also send you pictures; tell you how to get "JOE" and his outfit free, and prove that what I say is absolutely true. But you must hurry. So write while you think of it—**once—don't put it off.** Just say that you want "JOE."

A Postal Will Do Address **Uncle Billy, Pony Man, 142 W. Ohio St., Chicago, Ill.**

From a photograph of Mr. C. E. Brooks, inventor of the Appliance, who cured himself and whose experience has since benefited thousands. If ruptured, write today to Marshall, Michigan.

The Truth About Rupture

The Wonderful Success of the Brooks Appliance Has Caused Many Irresponsible Parties to Seek to Imitate It.

Do Not Be Tricked by These "Fly-by-Night" Advertisers Who Offer Such Wonderful "Guarantees," But Who Have No Responsibility to Back Up Their Promises.

The Brooks Appliance Has Been Manufactured and Sold By Us for More Than 30 Years.

Our Customers Include Thousands of Physicians, Many Noted Men and Women. **OUR LARGEST SINGLE CUSTOMER IS THE U. S. GOVERNMENT.** Our Business Is Conducted Along the Same High Plane of Business Integrity as That of the Largest Banks and Mercantile Houses. There Are No "Ifs and Ands" When You Deal With Brooks, and the Appliance Is

SENT ON TRIAL TO PROVE IT!

The London (England) Home of the Brooks Rupture Appliance Co. Corner Kingsway and Portugal St.

The Home of the Brooks Rupture Appliance Co. at Marshall, Mich., U. S. A. Owned and entirely occupied by the Brooks Company. 15,000 sq. ft. of floor space. Largest establishment of its kind in the world.

The Amsterdam (Holland) Home of the Brooks Rupture Appliance Co. At No. 4 Pleisstraat.

The Most Universally Endorsed Appliance for the Retention and Cure of Rupture in the World.

The Brooks Appliance is the result of 30 years' experience and stands today as the most perfect device ever invented for the relief and cure of all forms of rupture. It brings instant relief, and in an astonishing percentage of cases, accomplishes an ABSOLUTE and PERMANENT CURE.

There are no "salves," no "harness," no "paraffin"—no lies.

The Brooks Appliance is never sold in drug stores, nor in any other way than by mail, direct from the maker, and every Appliance is especially built for the case for which it is intended.

It is small and pliable, and can not be detected through the clothing. Can be washed without injury, is ventilated and a real pleasure to wear. One of these Appliances will make life better worth the living for every ruptured man, woman or child.

It is sent on trial and you are the judge whether our claims are true or not.

Fill out the FREE COUPON today and mail it at once, whether you try this Appliance or not. It will bring you much valuable information and should prove the first step toward your final and complete cure.

Endorsement from Surgeon-General of U. S. Army

Let us send you a fac-simile endorsement from the Surgeon-General of the U. S. Army. We have sold hundreds of Appliances to the Government for use in Army Hospitals.

The Surgeon-General says: "In each case the Appliance was satisfactory."

Southern Physician Cures Himself

In writing to you sometime since, endorsing your Appliance, I was conscientious in giving, as I believed, its just deserts, but since, I am even more agreeably pleased to state in addition thereto a "supplement"—a positive cure. Had engaged a surgeon to operate on me about 1st of February inst., but no recurrence of trouble for the past four months assures me my trouble is over and no knife needed. I have (and deem this necessary in all cases) been strict in observing all careful directions and am happy in the enjoyment of its fruits, for the trouble was a serious one and now I am as well as I ever was. Thanking you for courtesies and your invaluable appliance, I am, believe, me,

Most gratefully yours,
(Address) W. W. Hill, M. D., D. D. S.
Washington, Ga.

Brooks Rupture Appliance Co.,
Marshall, Mich.

Gentlemen: I have for several years used your Rupture Appliance to the exclusion of all others with perfect satisfaction. It has not failed to give relief in any case in which I have used it. It is especially to be relied on in old chronic cases—in old persons, especially laboring men. I can not overestimate its value to my patients. Every old chronic case that I have applied it to has sent another sufferer to me for one.

Sincerely yours,
U. V. Williams, M. D.

Cured at the Age of 76

Mr. C. E. Brooks, Marshall, Mich.
Dear Sir: I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable.

Very sincerely yours,
High Point, N. C. SAM HOOVER.

REMEMBER

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon and mail today. No salves—no harness—no plasters—no lies—no false or misleading promises.

FREE Information Coupon

Mr. C. E. BROOKS, 1690A State St., Marshall, Mich.

Please send me by mail in plain wrapper your illustrated book and full information about your Appliance for the cure of rupture.

Lowest Prices Ever Made On World's Best Roofing

Lightning-Proof, Fire-Proof, Rust-Proof, Rot-Proof Galvanized Steel Roofing Lasts As Long As the Building Stands

That's the kind of a roof you want to invest your money in, isn't it?

All roofing you have ever bought had three cost prices—the first cost per square laid on the roof—the cost per year for up-keep—the cost of property damage by leaks.

Here, then, is *real* roofing economy.

Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end for all time. Its cost per square is the lowest ever made. Has no up-keep cost. Property protection absolute. Its service, as long as building stands. Always beautiful in appearance. *Guaranteed Fire-proof, and Lightning-Proof.* Reducing the cost of your fire insurance.

Edwards Exclusive Tightcote Process Makes Rust-Proof Roofing

The Edwards process of galvanizing makes the zinc spelter practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingles, Grip Lock Roofing, Fressed Standing Seam or Roll Roofing is dipped in a bath of molten zinc, one at a time assures a uniformity. The edges are galvanized as heavily as the sides. Not the space of a pin-point on the steel is exposed to rain, snow, frost, acids or anything that destroys a steel roof.

How To Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with the finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking—not a space on the metal the size of a pin point exposed to rust.

Edwards Patent Interlocking Device Prevents Warping, Buckling or Breaking, Protects Nail Holes —They Can't Leak or Rust

This device not only takes care of expansion and contraction so that an EDWARDS Steel Roof never warps, buckles or breaks, but it is so designed that nails are driven through the *under* layer of metal only—nail holes are protected from exposure—cannot rust. No special tools or experience needed to lay it—any one can do the work—lay over old shingles if you wish.

Reo Steel Shingles

cost less—outwear three ordinary roofs and are your joy and pride forever. A most beautiful roof.

No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Roofing exactly suited to your needs. We manufacture and sell all of the many patterns of Edwards Reo Steel Shingles, Patented "Grip Lock", Corrugated, Standing Seam Roofing, Siding, Ceiling, etc., painted or galvanized, and all other kinds of the best grade of sheet metal Building Material.

Freight Paid Factory Prices

This is positively the greatest roofing proposition ever made. You can't afford to neglect investigation. All we ask is a chance to prove to you that we do indeed offer the lowest prices ever made on the world's best steel roofing. Won't you write today for our freight prepaid price and be convinced. We are the largest manufacturers of Iron and Steel Roofing in the world. We sell direct to you from the largest, most modern sheet-metal plant in existence. We save you all in-between middlemen's profits. Because of our immense purchasing power of raw materials—our wonderful manufacturing facilities and enormous output, our prices are rock bottom. We prepay freight and give you a binding guarantee against lightning losses.

FREE—Our Big Roofing Book

No matter whether your building is a corn-crib, barn, shed or mansion. Don't for an instant consider investing your money in roofing of any kind until you have received our Roofing Book, illustrating and describing every conceivable kind of Sheet Metal Roofing and Building Material—and special offer and free samples of steel roofing. Postal or coupon brings FREE copy of Roofing Book No. 691.

The Edwards Manufacturing Co., 641-691 Pike St., Cincinnati, Ohio

We simply want the right to prove to you that our prices are really the lowest ever made on the World's Best Roofing. Ask us to send you the proof, which can not be disputed, free and by mail prepaid.

What We Want You to Know and Why

Being a Few Words on Particular Matters

Live Stock Losses Caused by Railroads

When live stock is killed by railroad accidents the railroad companies pay the shipper damage costs. But the railroads require shippers to sign a maximum liability contract which releases the company from obligation to pay more than a stated amount, usually about half the actual value of the animals. This is unfair discrimination, for when railroads cause the loss of other freight they are compelled to pay full value of the shippers' loss. Senator Cummins of Iowa introduced a bill in the United States Senate, where it passed, providing that railroads must settle claims for live stock losses in shipment on a fair basis, the shipper to receive actual value of the loss sustained.

Toll Rates at the Panama Canal

A freight-carrying, ocean-going steamship of average size, passing through the Panama Canal, will pay a toll of from \$9,000 to \$12,000 for the privilege of going through the canal, a comparatively short distance. That seems like a large sum of money to pay for the privilege, but let us see: The fastest steamers make the trip from New York city to Vancouver, B. C., going around Cape Horn, in from sixty-five to ninety days time. The daily expense in running a steamer of this kind is from \$500 to \$600. On a basis of sixty-five days for the trip, at a cost of \$500 per day, the total trip costs (operating expenses only) are \$32,500. By going through the Panama Canal, the trip will be shortened forty-five days, as the trip by way of the canal can be made in twenty days, at an operating expense of \$10,000, effecting a saving over the longer route of \$22,500. Surely, then, a charge of \$12,000 is not excessive. The ship profits \$10,500 each trip because of the canal. Moreover, a ship formerly could make but five trips one way each year. Now it can make three times that number, thus greatly increasing the annual earning capacity of the ship. To put it another way, a ship transportation company can do now as great a volume of business annually with a single boat as it formerly did with three and with a reduction of operating expenses amounting to \$67,500.

The Grain Movement and Car Shortages

We are oft reminded of the saying, "figures can't lie, but liars can figure." Some amusing and astounding figuring is being done on the wheat crop by those whose inclination statistically far overshadows their ability as accurate and astute statisticians. We have before us a table of figures on freight cars and the grain movement that are as absurd as they are astounding. "Estimates of the wheat to be moved in the next sixty days," says this figure juggler, "are around 900,000,000 bushels, requiring approximately 1,000,000 cars." He then goes on to show how far short of that number of cars the available supply is, and by his process of mathematical calculation decides that wheat will be held back from the terminal markets, willy-nilly. For a few weeks there may, indeed, be shortages in the car supply, but as a matter of fact there will probably be less than 900,000,000 bushels harvested and threshed, and the threshing season will run well into October. Millions of bushels will be fed on western farms, because at the comparative prices of wheat and corn wheat will prove by far the most economical and profitable feed. Then many millions more will be held on farms, in granaries and storage bins. This is always the case, regardless of conditions. Many millions more will be ground into flour by local mills for local consumption. Only the winter wheat crop will be available for transportation prior to August 15 and not all of that, by any manner of means, and the winter wheat crop amounts to only 630,000,000 bushels.

The Trusts, the Anti-Trust Laws and the Farmers

The United States Supreme Court recently set aside several fines of \$5,000 each imposed upon the International Harvester Company by a number of county courts where suit was brought against the company for violation of the anti-trust law, thus reversing the action of the county courts and of the Kentucky Court of Appeals. Soon afterward the Supreme Court rendered an opinion which declared invalid the Kentucky law authorizing farmers to form pools for selling their products. The pooling law was declared to be too vague to be enforceable. There can be no question as to the constitutional rights of farmers to form pools for selling their crops, so long as they do not operate in criminal restraint of trade. The Supreme Court's decision in the cases of the International Harvester Company is prima facie evidence of that fact. The law which authorized and permitted such pooling was not necessary, and, being defective in its principles, was declared invalid. This leaves the Kentucky farmers where they were before the law was passed, and where they always were. It does not take from them the right of pooling. The intentions of the Kentucky legislators and courts were good, but their performances have been ill-advised and imperfect, to judge by the decree of the Supreme Court of the United States. But if the Supreme Court permits the International Harvester Company to do business in Kentucky it will also permit the farmers' marketing organizations to have the same privilege, so long as the Sherman anti-trust law is not violated.

The Supreme Court of Missouri recently issued a decree fining the International Harvester Company \$25,000 for violating the anti-trust laws of that state (not the Sherman anti-trust law, which is a federal law), and revoking its right to do business therein. This decision means that the company can not do business in Missouri. This case will in all probability be taken to the Supreme Court of the United States and then we shall see if the Missouri lawmakers were better at lawmaking than those of Kentucky.

While Congress is dealing with the trust problem it would confer a great boon upon the country if it could settle it on a basis which would admit of no doubt or misunderstanding.

INDIANAPOLIS, INDIANA, JULY 15, 1914

No. 14

Balanced Rations

A full pail is easily spilled.

Good roads will pay if not too costly.

No one seems ever to tire of singing the praises of alfalfa.

Man may build a house, but it takes a woman to make a home.

Trying to make the best better is a fine exercise for both body and soul.

Dentists are not the only class whose success depends much upon making good impressions.

Save your best farm papers for a more careful reading next winter when you have more time.

"Examine the horse's feet" is the advice of an exchange. If you have mules get some one else to do it.

It is a disappointing thing to read a whole column of items called "Wit and Wisdom" and find none of either.

The farmer with not enough time to read a farm paper will generally admit he can't afford to subscribe for one.

Farmers ought to have plenty of the best things to eat, but some do not. If life is worth living it is worth living well.

If you are raising a good crop of corn prepare to raise a silo. These are two things which should naturally go together on every farm.

As a rule we find the older men on the farms more enthusiastic over better farming methods than the younger ones. They realize the need more.

The canning clubs will soon be busy at work, putting up their products. It is a fine thing to learn how to do things worth while in the best manner.

The fellow who wants a pull must have a lot of push in him. Remember that, young man, and remember also that real push will show, wherever you are, and whatever you do.

Give the boy a trip to the state fair this year. The trip, as well as what he can learn at the fair, will give him new ambitions of the right kind and better courage for the next year's tasks.

When you offer help be sure it is real help that you are offering. Do not be like the small boy who in pity and goodness of heart gave a blind man a ticket to a moving picture show.

We feel really sorry for the boys of the city streets, whose only watermelon patch is in front of a grocery store, and a policeman stands at the nearest corner. What chance has a lad in a case like that?

The soil is a part of the machinery the farmer employs in the production of crops. Like other machinery it will wear out and break down if not kept in repair. Attend to the conservation of soil fertility. It is the one big job on every farm.

Let every farmer do his part in the country-wide fight to stamp hog cholera out of existence. Your part may be to first become thoroughly informed yourself, and then inform your neighbors who are not, and awaken community co-operation in the matter.

The average farmer does not see the inside of the market until too late. Those who are frightened by the "bears" lose their profits to the speculators. Farmer control of marketing is the only safeguard.

Who Does Farming Pay?

An Analysis of Agriculture, Based on the 1914 Wheat Crop

By J. A. Everitt, President Farmers Society of Equity

The Indiana Grain Dealers' Association met in Indianapolis the last week in June.

Following the meeting there was published in the local press and sent over the country an article credited to Mr. Edward W. Bassett that attempted to prove that the great wheat crop of 1914, notwithstanding the low price that it is selling for from the producers, is going to be an unmixed blessing to everybody and a source of great national prosperity.

It Is the Common Practice

This calls to mind that a year before, when the crops of the country were very short and the prices high, similar articles appeared in the press of the country and attempted, in a similar way, to prove that the farmers and the country were going to enjoy extraordinary prosperity. Some astute people can prove anything with figures.

We have no quarrel with the grain dealers or their association, but we

have serious doubt as to the ultimate benefit to the people at large of these articles, prepared and printed for the object of deceiving the people and lulling them into a false sense of security. It is going to be a difficult matter to convert the country to the belief that a business condition that we sometimes refer to as "stagnation" and at other times refer to as "prosperity" is purely a psychological one. In other words, some people appear to believe, regardless of the state of business of the country, that it is either good or bad, or will be good or bad, according to the mental attitude of the people. In the article referred to Mr. Bassett aims to prove, at any rate he asserts, that the excess yield of the 1914 wheat crop, over what the country ever produced before, and which the farmers are destined to give away for nothing and pay some money besides providing the present price is continued, is a benefit to the farmers and a benefit

(Continued on Page 6)

What Others Say and What We Think of It

"God could not be everywhere, so He made mothers."—Old Proverb. Thereby is the omnipotent wisdom of the Creator proven again.

"Farmers are entitled to the relief which is about to be granted to them."—Farmer and Stockman. Who is going to grant farmers what relief?

"There are some things that most naturally go together."—Wallace's Farmer. Yes, and there are some things which naturally come apart.

"There is always hope for the man who says 'That sounds good. I'll try it.'"—Farm Journal. There's no hope for the man who always says it, but does nothing more.

"Probably the size of our winter wheat crop has been stretched by enthusiasts."—National Stockman and Farmer. The more they stretch the size of the crop the more the price contracts.

"If a man's mind is dirty his hands are not apt to be clean."—Hoard's Dairyman. Many a man with a clean mind frequently has dirty hands, however. There are a few good rules which do not work both ways.

"Many people are unable to conceive a business man in any other guise than a monster."—American Industries. Where there is much smoke there must be some fire. Possibly, as Post used to say, "there's a reason."

"Farmers are living next to their problems every day."—The Nebraska Farmer. And with wheat selling at 75 cents, and going down, many a farmer will take his problems to bed with him. Organize for dollar wheat!

"It is just beginning to dawn upon the mind of American business that dishonesty does not pay in the long run."—Carlson's Rural Review. And yet we've had that century-old proverb, "Honesty is the best policy," constantly before us! It takes experience to teach us, after all.

"Great stories have been written regarding the large yield promised of the wheat crop. Naturally these stories become 'bear' stories when it comes to price."—Ohio Farmer. And the men and motives behind these stories will bear watching by the farmer. It is barely possible some one not engaged in farming will profit from them to the farmer's hurt.

"The greatest danger to any country is the dependence upon outsiders for foodstuffs. It is a weakness that neither protection nor free trade alone can eliminate. It is Britain's vulnerable point and is rapidly becoming America's danger."—New Zealand Farmers' Union Advocate. Make farming sufficiently profitable and America's farmers will find a way to avert this danger for another century at least.

EDITORIAL

The Source of High Prices

THE GENERAL THEORY of the reason for the high cost of provisions is a shortness in the supply, and the "expert" agriculturists who "farm" in the cities and the schools are constantly urging farmers to produce more of the material that constitutes food for the people and feed for domestic animals. Relying upon the scientific knowledge of these "experts," the educational world, with very few exceptions, takes up the doctrine, and about all one hears is the cry for increased production of farm crops. To prove that the evil is not a lack of production we have in vain called attention to the fact that almost every year great quantities of the products are shipped from American farms to other countries and that other quantities go to waste without being taken from the farms or orchards, because the system of marketing and distribution is so mercilessly controlled by those who accumulate millions by buying low and selling high.

We wish once more to give the proof. We have before us the figures giving the buying and selling prices of corn for several years. It will be noted that these prices are little affected by the season's production except that large crops are taken advantage of by buyers to force down the price paid the farmers. The prices quoted are Chicago prices and are controlled by the Chicago Board of Trade, and since Chicago is really the world price-maker for corn, no more instructive figures could be given. In January, 1874, corn sold off the farms at 49 cents; in September the speculators' price was 86 cents. In 1892 the January buying price was 37½ cents; in May the selling price was \$1. In December, 1902, when, of course, the farmers were selling, the price was 43½ cents, but in July, when the speculators were selling, the price was 88 cents. In 1908, when the farmers were selling in February, the price was 56½ cents, but in May and September the price was 82 cents. In 1911 the buy-

ers paid 45½ cents in January, February and March, but the following fall, when the farmers were not selling, the price was 76 cents. In 1912 the price in December, one of the farmers' principal selling months, was 47½ cents, but in August following the price was 83 cents. Only last year at gathering time the price was 46½ cents, but now and even earlier than this the price has climbed to near a dollar.

Need we give any more figures? Will the experts and educators still refuse to be convinced? Or must the public be driven to conclude that they are in some way in alliance with the marketing combines? Our plea is for reliable and steady prices. Cut out these side profits. Add a portion to the farmers' price and make it reliably steady, and take the remainder from the price charged the consumers and make that price also reasonably steady. It can be done if the producing sellers and consuming buyers will co-operate. And that is indeed a simple thing to do. Why should such stuff be bought by those who do not need it and never expect to? They do it for the profits they make in forcing down the prices at one end and building them up at the other. The trouble is, the farmers have accustomed themselves to sell in bulk and at honest time, and the consumers buy only to supply their immediate needs—supplies that cover only a day or even less. The latter can scarcely be changed in the centers of consumption, and that makes retail dealers a necessity, but speculating buyers for hoarding purposes are not necessary. The farmers themselves can manage that. It only remains for them to sell to satisfy demand. They can hold as well as the speculators can and they must prepare to do it. It will make their business both profitable and dependable, and it will increase the demand for their stuff by giving the consumers lower prices. This is our plea for dollar wheat. It is our plea for fair prices for all crops, and the way is open for its accomplishment.

Farmers Mere Puppets

THOSE who have read UP-TO-DATE FARMING for any length of time, as so many thousands have done, know we are not speaking diminutely of the farmers in the above leading. We regard no class of people higher than we do the farmers, and there is no class so absolutely necessary to the existence of the human race. But their exclusive devotion to the work of their calling and the cunning schemes of those who plan to get what their labor creates have made them mere puppets in the hands of a reckless and conscienceless few. It is to redeem them from this thrall-dom that we are making such persistent efforts and involving ourselves in almost unbearable personal sacrifices. Everybody admits that as the quantity increases, the demand remaining the same, the price must and always does go down—we mean the price paid the producers. The price charged the consumers is a different matter, as that price is controlled by the storing sellers.

In spite of these admitted truths, the farmer gets no advice, no instruction, no encouragement to do anything except to produce more and more. When the bumper crop comes the effect is seen in the lower prices and the farmers suffer. This season an unusual crop of wheat has been proclaimed from the sowing of the seed to the harvesting of the grain, and prices have fluctuated as the reports

seemed true or false. But as selling time came the prices to farmers went down. A St. Louis daily paper, as early as June 22, said "wheat futures worked to new low levels." Two cars of new grain were auctioned in that city at 87 cents a bushel. Think of a farmer's labor, his dependence for a living, the support and hope of his family, selling to capricious if not combined bidders in the streets of a great city! "As usual," says the paper, "when the new wheat begins to find its way to the market, prices are likely to seek lower levels, both because of increased supplies and the effort of buyers to pay as little as possible."

How can any people live in the midst of such doubts as to the value of their labor? The exalted thoughts of the world ought to revolt at such a marketing system. It is no guarantee that the users will get the stuff cheaper because the surplus that robs the farmers of profits is held back, diverted to other uses, or actually destroyed to keep it from interfering with the sellers' high prices. Note the destruction outside the cities of car loads of southern fruits to prevent the lowering of retail prices in those cities.

Is it not a fact, then, that farmers are used as mere puppets by these speculating classes? Must such things continue? They will unless the farmers themselves put a stop to it. No one else will, because others think it is not their business. What, then, is the matter with the farmers? Why are

they so indifferent? We plead with them and they scarcely listen. The world must have the produce, and the farmers own it first. If they refuse to sell except upon an owner's terms, the stuff will be bought and paid for, every pound and bushel of it. There is no doubt about that, and only dishonest speculation will be injured thereby. Now, listen. Make it DOLLAR WHEAT this year.

Strange Editorial Opinions

WE ACCORD to everybody the right to his opinion, and in the great work in which we are engaged we can not take time to much discuss the opinions expressed so numerous and so voluminously by others, especially by our editorial contemporaries, but once in awhile we feel justified in referring to them. For instance, on the farm price question we recently found in a prominent farm paper ideas like these: "The only safe and sure way to sell a crop is to keep an accurate account of the cost of production, then we can tell whether the price at which we can sell is fair or not. * * * When we can command a price which gives us a fair or even a small profit over cost it is better to sell rather than take the risk of farm storage. * * * If for two years in succession the crop does not sell for more than it costs it is time to produce something else. * * * At any rate a fair idea of the cost of production is the essential factor."

Think a moment. It is well to keep accounts and know what the crops cost the producer, but what effect can that knowledge have upon the price? Under the present marketing system the farmer has nothing to do with fixing the price. He must accept what is offered whether the crops cost much or little. The farmer never "commands" a price. He simply accepts it and it is of little financial benefit whether he knows it is profitable or not. If he sells he must accept the buyer's price. No other producer on earth is in that condition. But, says this wise one, "it is better to sell than take the risk of farm storage." What risk is there in farm storage? What risk is there in the manufacturer or miner holding his stuff and storing it himself if he can not obtain his price? Risk or no risk, he does it all the same and nobody tells him he ought not to.

But if a crop don't pay for two years cut it out and raise something else. Of course that wise advice is not intended for just one producer, but for all the producers of that crop. The result: The very next year the abandoned crop will command a bigger price than any other crop grown!

Our readers can not fail to see the absurdity of such instruction. There is nothing to it one way or another. We are not contending for high prices for farm products. All we want is reasonable, equitable prices and steady prices so the planter may have a reliable knowledge as to what the harvest will bring him. A plow costs about the same one year as another, and so does a wagon or a reaper; so do dry goods and groceries. But nobody knows what the farmer's produce will be worth from one year to another.

Does not the farmer deserve this regularity and assurance of price as well as any other producers do? He may have it if he will, but it will take a personal and united effort to get it. Try it specially on wheat of this good year 1914.

Department of Agriculture and Veal Calves

WE can scarcely express our surprise at receiving from the Department of Agriculture a press circular recommending the sale of calves for veal! The bur-

den of the Department's reports for some years has been that there is a scarcity of cattle in this country and that the scarcity is becoming more pronounced all the time. The necessity for raising more cattle has been emphasized and farmers have been urged to increase their stock so as to counteract the reduction on the ranges. This has not only been urged by the Department of Agriculture, but the market centers, particularly the consuming centers, have done the same thing. How can stock production be increased without the breeding and growing of calves? How strangely inconsistent, then, is this circular from the Department recommending the slaughtering of the calves!

But the Department has not only issued such a circular, but it has issued a bulletin to that effect. We quote from the bulletin:

The demand for veal has increased rapidly, and not only are the surplus dairy calves slaughtered, but thousands of beef calves as well, until a calf will now sell for from \$8 to \$12 when only two or three months old.

We may remark parenthetically that veal calves are usually sold at from five to eight weeks old and they bring more than the prices mentioned above.

But the above quotation means, says the circular, that "unless the farmer has unlimited cheap feeds, it is usually more profitable to market the dairy or dual purpose calves than to attempt to raise them, even though some of them might make good steers," and "the consumer's demand must be met."

Isn't that strange teaching for the farm department of the government to give the farmers of the country? A veal calf will make perhaps 150 pounds of meat, and it will bring the farmer, in fact, from \$12 to \$15. Kept two years, it will make from 600 to 800 pounds of meat and it will then bring the farmer from \$35 to \$40, or even \$50, and every calf thus saved adds one to the cattle supply. If a heifer it may itself bring a calf at or about two years old, and it is then worth from \$50 to \$60 in the country market, besides the addition of itself and its calf to the cattle supply.

Then is the slaughter of the calves the wise thing to do? In the matter of dollars and cents is it the most profitable course for the farmers? It is natural for thinking people to seek a cause for such a document. Other countries are shipping cattle and beef to the United States. Is it possible those shippers would prefer that we should kill our calves that there may be greater vacancies for imported cattle, and that these interests should get the ear of some department "expert?" We are unwilling to think so, but such things as the circular and bulletin referred to make us tremble for the Department of Agriculture.

Saving Money

"Papa, you wouldn't be mad at me if I saved you a quarter, would you?" "Indeed I would not," said the elated father as he handed the boy a dime by way of encouragement. "Well, you said you'd give me a quarter if I got a good report at school today, but I didn't, and that saved you the quarter."

No Need for That Instruction

"Now, Willie," said the anxious mother, "when they ask if you will have something at the big supper tonight you must say, 'Yes, thank you,' but if it is something you don't want, say—"

"Never mind, mother, you needn't tell me that," said the boy. "I'll be sure to want it."

Not a Moth

Druggist—Did you kill any moths with those moth balls I gave you yesterday? Customer—No, I tried nearly half a day and never hit a moth. Those balls are no good.

Just From the Ball Game

"That's a wonderful boy of yours. At the game today he drove a ball a hundred yards." "That's better than he does at home. This morning I couldn't get him to drive a big fifty feet."

Storing the 1914 Wheat Crop

A Good Type of Storage Bin

THERE are several reasons, each of them an excellent and sufficient one, for storing the present wheat crop on the farms where it was grown so long as the price is unprofitable.

One reason is that unless farmers hold back deliveries, terminal elevators will quickly become filled to overflowing. Cars loaded with wheat will be held on track on sidings and at terminals for days, awaiting an opportunity to unload. These cars being tied up will bring about a car shortage, and the local elevators at shipping stations will become filled. With local and terminal elevators full, and thousands of loaded cars standing on tracks piling up expense, a condition will ensue which furnishes another reason for storing wheat at home. This reason is price and profit.

Both regular buyers and the grain speculators take advantage of the congested condition of wheat markets which almost invariably occurs as soon as threshing is in full blast. The price goes down and millions upon millions of bushels are sold by the farmers at prices far below the actual value of the grain. Somebody, somewhere, holds this wheat until it is wanted for consumption. Consumers use only a stated quantity each week, and use no more, regardless of the price paid to the farmer for his grain. Consumers, as a class, live from hand-to-mouth and buy their supplies daily or weekly. They do not desire to carry a quantity of flour on hand. Millions of them buy no flour at all, using bread baked by the great commercial bakeries. Somewhere between the producer and the consumer the wheat is held by a class who manage to increase its price and take a fat profit from it. The free, uncontrolled dumping of grain by the farmers adds millions to the profits of these middlemen, gives the consumer little if any benefit of the low price and robs farmers of millions in profits which should be theirs.

UP-TO-DATE FARMING has long taught that a fundamental principle of equity, of justice and of prosperity, gives farm-

ers the right and morally obligates them to demand and obtain their rightful share of the price the ultimate consumer pays for the finished products of the farm. This principle goes even farther and declares that those who produce the necessities of life are entitled to a fair profit over and above the costs of production. In other words, the price to consumers should be based first upon a price profitable to the producers. Farmers are under no moral obligation to feed and clothe the world at prices unremunerative to themselves. This being true, it is consequently true that farmers have the moral right to take whatever action may be found necessary to compel the world to pay them a just and equitable price for the products of their farms.

Based upon the average costs of production (which must include the fertility removed from the soil), wheat is worth \$1 per bushel to the producer. Being worth \$1 per bushel, the farmer should demand it and enforce his demand by refusing to sell until that price is paid. Farmers who grow wheat can, by common understanding and consent, put the price on a \$1 basis. Once this is done, and it can be done through education, organization and co-operation, the market for wheat will rule as steadily secure as the price of staple groceries in the grocery stores.

With the present low price for wheat in the country farmers can not lose if they store their grain in safe and economical storage bins. Not all wheat growers have need for all the proceeds of their crops at once, so if those in need will store part, and if those not in need will store, the supplies of grain going into market will be so reduced that the price must

be advanced to bring out the wheat. This is the principle (and an economically sound one) that underlies the Equity system of co-operative, controlled marketing. It is the same principle which makes any and all businesses profitable. Farmers, by acting in unison, with a common understanding of general conditions, can thus control the prices paid to them for their products. In order that they may have the common understanding, and act in unison, it is desirable they should be organized by communities and federated into a national body. The sooner this is done the better. There is need for it now, a need felt by every farmer who sells his wheat crop at a price too low to give him an adequate profit.

The silo is a very important and profitable structure on the stock and dairy farms. Only a few years ago there were very few silos to be seen. Now there are but few neighborhoods where one or more silos can not be found. In a large number of localities silos appear in plentiful numbers. They have been demonstrated profitable in obtaining greater profits from the crops grown and fed to stock. The day is at hand when the grain growers realize their need for grain storage facilities and that greater profits will be obtained by the storage of the grain, and marketing gradually, sensibly, systematically. In the vast grain fields of the country storage bins can now be found on but few farms in any locality. In the near future their numbers will increase until nearly every farm has storage capacity sufficient to hold the total production of the farm when necessary.

Price
Probably the best and the cheapest means of providing farm storage for grain is found in the steel bin or granary. Illustrations of two excellent

Another Bin of Excellent Features

types accompany this article. Such bins are not expensive. They are strong, durable and are fire-proof, vermin-proof and moisture-proof. They are portable and may be placed wherever most convenient when being filled. They can be obtained in different sizes, ranging from 200 to 2,000 bushels, at a cost of from 10 cents to 20 cents per bushel capacity. Bins of this character have been in use for nearly ten years, giving the utmost satisfaction. (Advertisements of standard bins will be found in our advertising columns.)

Filling the bins, particularly those of the larger sizes, is rendered an easy task by the portable elevators which are manufactured for farm use. These elevators can be operated by any power and make quick, easy work of unloading grain from wagons and putting it in bins or granaries. Advertisements of elevators are also found in our advertising columns.

Where wheat is stacked, to be threshed at convenience and sold when the price is right, a portable grain bin can be placed in such close proximity to the stacks that the threshed grain can be run directly from the machine into the bin, effecting a considerable saving in labor at threshing time.

The problem of storage is intimately and inseparably connected with the questions of price and of profit. With wheat stored in the great terminal elevators under the control of a comparative few, prices can be and are manipulated to the advantage of those in control and to the detriment of the farmers who have wheat to sell, and to the consumers who must buy. With wheat stored on the farms, or if in terminal elevators, still under the control of the farmers who produced it, it can be held until the price offered is sufficient to give the producer an honest profit. With the wheat under such stable control, and the opportunities for speculation reduced to the minimum, the trade in flour and wheat products will settle down upon a steady and dependable basis and the consumer will be benefited as well.

These are problems which demand the attention of every grower of wheat, upon whose shoulders rests the burden of their solution, and upon their solution depends, to a large degree, the future welfare and prosperity of the laboring millions of this country in the shop, the factory or on the farm.

"With wheat stored in the great terminal elevators, under the control of a comparative few, prices are manipulated to the advantage of those in control."

Who Does Farming Pay?

(Continued From Page 3)

to the nation. We might ask if it is a good thing for the farmers to produce this wheat and give it away, why not have the manufacturers produce a few million more agricultural implements, or the coal mine operators produce several millions of tons more coal, and the manufacturers of clothing produce and give them away for nothing for the benefit of the nation?

We quote the following from Mr. Bassett's article:

(1) Nine hundred million bushels of wheat have a farm value of 70 cents a bushel, or a total value of \$650,000,000. This is to pay the farmers for the yearly labor in the wheat field.

(2) There has been political and business stagnation for a year or two. But our country as a whole is a most prosperous one. Factories have not been running full time and have not employed their men full time. But when we are forced to do so we can all live a little more economically and probably eat a little less and this situation precludes the probability and even the possibility of high prices for our big crop of wheat.

(3) We are starting off, from the very first, with about the lowest price we have

to produce all that they can and sell it cheaply, so that they, the former, can sell it at high prices and make enormous profit.

Analyze the Farmers' Income

Mr. Bassett said in quotation No. 1 that the farmers will receive \$650,000,000 for their services in the wheat field. But his price is fully 5 cents a bushel above the average price that has been paid for new wheat until this time. Also he has not deducted 75,000,000 bushels of wheat which must be reserved for seed and which will not be sold. However, taking his price, 70 cents a bushel, but deducting 75,000,000 bushels, then we have the sales value of the 1914 wheat crop, \$597,500,000.

The wheat crop is raised on approximately 2,000,000 farms. Thus the average value of the crop per farm is \$298.75. In other words, the average farmer will get out of the great 1914 wheat crop \$298.75. If it re-

the farm at 40c per bushel is... 6.00
Estimated for wear and tear of implements per acre..... 2.00
Cost of threshing, and twine paid for in cash, at 3c a bu.. .45

Total cost, not counting any labor or the feed of horses, etc., is.....\$12.95
15 bushels of wheat sold at 70 cents is..... 10.50

Loss per acre in the transaction, not counting any wages for the farmer and his helpers..\$ 2.45

Loss on the Crop

The acreage in wheat of the 1914 crops was 53,377,000 acres (government estimate). Therefore, assuming that the above statement is correct, then the loss to the farmers and the nation producing this crop of wheat, if it continues to be sold at 70 cents a bushel, will be \$130,773,650, and this does not include any labor put on the crop or the expense for horse feed

cause Europe will buy our low-priced staff of life." But he did not count the fearful cost. Our people and our government have not counted the cost in the past of feeding the world at unfairly low prices for the crops off of our farms. The people of this country have probably been the most unwise and the most improvident people that ever occupied any part of God's earth. Consider, if you please, our vast domain of virgin soil, with the accumulation of plant food that it required eons of years to store, extracted from the soil and sold in the crops, much of it sent to foreign countries for a mere pittance, in the last fifty years. The results of this method are seen by all those writers who predict that ours will soon cease to be an exporting nation, and some even predict our soil will soon be unable to feed our own people. At the rate we have been going, and by our system of agriculture, if continued, both of these prophecies are right. It is only a matter of a few years more that we can expect to have any exportable surplus, unless the average yield per acre can be increased. When that time comes, when we have arrived at a balance of production and home consumption, it will be only a few years more until we will be compelled to import much of our food from foreign countries. Our Congress, anticipating this condition, unwisely threw down the bars for the products of the world, by removing the duty, instead of doing the things that are necessary to increase our own crops.

The First Duty of Farmers

I claim that the very first duty falling on our farmers when they have produced a crop is to know how much plant food was removed from the soil and provide so that it can be replaced. And on those farms that have been much run down in fertility even more than the amount removed should be returned. This clearly demands that the commercial value of the plant food must be charged for in the sale of the crop. As well might the business man expect to always have his checks honored at the bank without making a deposit, as for the farmer to expect his demands on the soil to be always met without making new deposits of plant food.

experienced in a great many years and as the wheat crowds upon the market there is good reason to believe that we will probably see the lowest prices for wheat that we have known for a long time. But this is not an unmitigated evil, for it is apparent that a large crop and a low price is far better than an ordinary crop and a high price, as it means that every farmer will have something that he can turn into money and turn it at once in other directions.

(4) One of the most beneficial effects of our extensive crop is the checking of the outflow of gold to other countries with which we trade. After we have stopped the outflow we may go them one better and actually start an inflow. For, of course, the densely populated sections of Europe will buy our low-priced staff of life.

Mr. Bassett defends free trade in grain and cheap grain from the producer in these words:

(5) But on the other hand there is a large army of consumers, and the man who is the consumer of bushels of grain for the maintenance of his own life and that of his animals is entitled to life as well as the producer. * * * The high price we might give the producer at the same time strangles the consumer and would in the end simply be a boomerang of destruction. The law that was passed last October (the removal of the duty on agricultural imports) should have been passed a great many years ago. * * * We can supply the other side with millions of dollars worth of wheat in the next twelve months. This fact again shows the value of free trade. * * * May the flow of golden grain outward and the inflow of gold in payment therefore be continued for the prosperity of our people.

Lack Understanding of Agriculture

The article is cleverly written. But an analysis of it reveals that it is not so remarkable for what it shows as for what it conceals from the ordinary reader. It is a regrettable fact that very few people understand agriculture as a business, at large. And the farmers themselves are as ignorant on many of the factors that enter into the business of agriculture as the people who merely take the products and consume them. And worst of all, the very people whom we have a right to look to for reliable facts and information—the agricultural leaders and teachers—do not appear to see the vital things connected with the farmers' business, or seeing them, for some reason, refrain from expressing them. So glaring is this that they might be accused of being in league with that class of people who want the farmers

quired the work of two men 100 days each to produce the crop and market it, they will get \$1.49 per day for their labor, not counting any other expense. Some other expenses, however, properly chargeable against the crop, outside of the labor are as follows:

Items Chargeable to the Crop

Interest on investment, plant food required to produce the crop, wear and tear and upkeep of implements, twine for binding, cost of threshing, etc.

We will estimate the average value of an acre of wheat ground at \$75. Then the interest on investment at 6 per cent is.....\$ 4.50

Of plant food it requires the following to produce a bushel of wheat:

Nitrogen or ammonia, 2 lbs. Commercial value at 15c a pound.....\$0.30
Potash, 11-15 lbs. Commercial value at 5c a lb. .06
Phosphoric acid, 2-3 lb. Commercial value at 6c a pound..... .04

Total value of plant food to produce a bushel of wheat\$0.40

The average yield per acre of the 1914 crop is estimated at about 17 bushels. Deducting for seed we have left to sell about 15 bushels per acre. Therefore the plant food removed by the crop and sold off

and a number of other things that are properly chargeable against the crop.

Important Item Usually Overlooked

The item of plant food is quite uniformly overlooked or ignored by writers on agricultural subjects. The reader can now begin to understand why I said the article of Mr. Bassett's was quite remarkable for what it did not reveal. Also he can understand

THIS REPRESENTS A 5-CENT LOAF OF BREAD MADE FROM 1909 WHEAT, AND THE SIZE HAS BEEN MAINTAINED TO THE PRESENT TIME.

A 5-CENT LOAF OF BREAD MADE FROM 1914 WHEAT, CONSIDERING THE LOWER PRICE, SHOULD BE THIS SIZE.

what I meant when I said that the facts that I would show in this article are vital, not only to agriculture as a business, but to all the business of the nation and to the nation itself.

The Fearful Cost of Wheat Exports

Mr. Bassett said in his quotation No. 4 that one of the most beneficial effects of our extensive crop is the checking of the outflow of gold to other countries with a possibility of starting the flow to this country, "be-

Former Efforts to Increase Yields Futile

We have said it before that the enormous outlay of money and the enormous effort made to increase the average yield of our crops in the past fifty years, since the agricultural colleges and experiment stations were established, have utterly failed to increase them a fraction of a bushel per acre. True, sometimes, because of an exceptionally good season, the average for one or more crops will be higher. But as far as a maintained higher average is concerned, they have not succeeded. The reason is that this important factor of returning the plant food, or maintaining a high percentage of plant food in the soil, while recognized, has not been provided for in the adequacy of price paid for the products. It will not be denied that farming methods are better now than they were formerly, and even the machines are the best now that they ever were. The improved methods and the improved machines help to increase the yield. But always a counter force has been the constantly diminishing fertility in the soil, which more intelligent work and better machines could

The Dollar Farmer

The reader of UP-TO-DATE FARMING is a Dollar Farmer, because the mere size of crops is not his only object. It is your trade our advertisers seek. And you should become acquainted with the merchandise of our advertisers for your own benefit. It pays to buy of UTDF advertisers, because they are guaranteed.

Our Advertisers—Guarantee

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

not do more than balance. As well might we try to increase the yields of our crops while constantly decreasing the plant food as to lift ourselves by pulling on our boot straps.

Farming and Manufacturing Contrasted

Referring again to the 1914 crop of wheat, no person will attempt to argue that the heavy yield of wheat has not taken from the soil more plant food than a small crop would. This being true, then if the farmer gets no more for his crop than for a small one, he has lost in the transaction as far as drawing on his reserve plant food is concerned. If he gets less for this large crop than he has been getting for a smaller one, his loss is still greater. If a manufacturer would thus go to his lumber yard and store house and continually draw raw material, and manufacture and sell the finished product for the market value of the raw material, or less, he would not last very long. So an interesting question for our economists is: How much longer is agriculture in the United States going to last if this robbery system is continued?

Cheap Wheat Does Not Mean Cheap Bread

In quotation No. 5 Mr. Bassett attempts to justify cheap wheat from the producer by claiming the benefits will reach the consumer in lower cost of living. Considering the fact that the most ardent former advocates of free trade in agricultural products now admit that cheaper raw material has not reduced the cost to the consumer, Mr. Bassett subjects his whole article to the test of his sincerity. But let us consider a few lines of relationship of prices to the producer of wheat and the consumers of it:

The producer gets 70 cents a bushel for his wheat. Four and one-half bushels of wheat make a barrel of flour (196 pounds). One barrel of flour makes 340 5-cent loaves of bread. Besides the flour from 4½ bushels of wheat there is also a side-product of 74 pounds of bran and shorts.

The following quotations were Indianapolis prices on July 1:

Mill price of flour, \$4 per barrel for spot local trade, \$3.60 per barrel for September delivery.

Grocery store retail price of flour, 80 cents for an eighth barrel (24½ pounds) and \$6 a barrel.

The mill price of bran on the same day was \$25 a ton, bulk, or \$13 for one-half ton. Retail prices of bran were \$1.50 to \$1.60 per 100 pounds.

So we are able to make the following illustrations:

The salable wheat crop will bring the growers	\$ 597,500,000
It will make 183, 333,000 barrels of flour, which at \$4 a barrel will bring the millers..	733,332,000
If sold at \$3.60, which is supposed to be the new crop price for flour, it will bring the millers	659,998,000
Besides the flour, the millers will get in bran and shorts 6,781,500 tons. This, sold at the ton price of \$25, will have a value of.....	169,537,500

When sold by the retailers at \$6 a barrel the 1914 wheat crop will have a value of... 1,099,998,000

But if sold in eighth-barrel packages at 80c it will amount to..... 1,173,331,000

The bran sold by the retailer at \$1.50 a hundredweight will cost the ultimate consumer.... 203,445,000

The wheat sold via the bakery will be represented by 62,333,220,000 loaves of bread. At 5c a loaf the cost to the consumer will be..... 3,116,661,000

We do not know what the average cost of transporting a bushel of wheat is, but if it is 12 cents the railroad's share will be..... 99,000,000

The country handler will get, say 2 cents a bushel for his services, or 16,500,000

The broker on the market will charge 1 cent a bushel, or..... 8,250,000

For storage, probably an average of 1½ cents a bushel will be charged 12,375,000

A Summary

The farmer, as we have shown, will receive 597,500,000

The consumer will pay for the crop in the form of flour and bran from the retailer..... 1,303,443,000

Or in the form of 5-cent loaves of bread and bran 3,320,106,000

THE VALUE OF THE 1909 WHEAT CROP AFFORDED A WELL-FITTING SUIT LIKE THIS.

BUT THE MONEY RECEIVED FOR THE 1914 WHEAT CROP AFFORDS SUITS THAT FIT LIKE THIS.

Who Farming Pays

With the above figures before us we can now see who farming pays. And in this connection we will quote what some person wrote on the same subject:

It pays the road that hauls the grain, It pays the store that keeps from rain, It pays the agents when they buy, It pays again whenever they sell, It pays the banks that make the loans, It pays the man the mortgage owns, It pays the shops that make machines, It pays the merchant all his liens, It pays the tax, federal and states, It pays the trust to keep up rates, It pays everybody so grand Except the men who own the land.

Are not the figures eloquent testimony to the fact that agriculture pays everybody but the men on the farm?

Then is it not the duty of the people who want to see prosperity abound in our great agricultural country to work together to make farming pay the farmer first?

From Whence Comes Prosperity?

We don't know just why it is so, but it is a fact that at this season of each year the newspapers continually print articles about the great prosperity that will come from the great crops at low prices or from small crops at big prices. From one of the articles we quote:

Conditions are fundamentally sound. So that while these disasters (referring to some business failures) may be confusing to the lay mind, they do not indicate any serious unhealthy condition in the general economic situation.

But in the same article, from the same writer, we get this:

It is doubtful if in the history of American banking there has been so much nursing of weak business concerns as there has been in the recent financial disturbance. This accounts, probably, for the small volume of failures. The banks have been strengthened * * * to such an extent that they are enabled to nurse along those business concerns whose credit has been weakened through the overextension caused by the business reaction a year ago.

These statements are contradictory. In the first the claim is that conditions are fundamentally sound. But how can they be when the number of business concerns on the verge of receiverships was never so great before. We claim that the trouble is not so much an overextension or overexpansion a year or more ago, because the average business man was then doing only what was necessary to meet the demands of his trade. But when the crops were short, or they were large and the prices low, as was the case with the 1913 wheat crop, farmers were forced out of the market and the demand for goods was reduced. It was not overextension by business concerns that made the condition that made nursing necessary, but it was a contraction of demand. There appears to be further evidence of this in the statement of Mr. W. S. Thomas, a manufacturer of Springfield, O., and who is chairman of the dealers' association committee of the National Implement and Vehicle Association. He recently said:

The farmer sells for cash and buys on credit. The farm implement manufacturers of the United States are carrying farmers on their books now to the extent of \$200,000,000.

Appeal to Business Men

Isn't it reasonable to assume that the farmers are so much in debt for agricultural implements because they must have the machines in their farm operations, but their crops have not sold for enough money to enable them to pay cash for them? How many farmers would give notes in settlement for machines, and pay interest on the notes, if they had the money

\$10 Down Balance After Harvest

We'll trust you for the money. This offer is made to introduce our improved, strong, well made bins. Any responsible farmer can now get this bin on the above terms. The best made—Most serviceable most improved Grain Bin on the market. **2 Bins in 1**

Guaranteed to Give Satisfaction

The Northfield Bin can be partitioned to hold two or more kinds of grain. Protects grain against fire, dampness, rats, etc. Ample ventilation through floor and sides, under eaves and through big cupola. Holds any small grain. Easily changed to thoroughly ventilated corn crib.

Anchor bolts make it wind proof. Smooth, rain-proof floor. Side and floor sections held by slip cleats stronger than bolts. Easily and quickly set up. Sections interchangeable. Heaviest bin of its size. Low cost. Takes cheap freight rate. 80 days free trial.

SANITARY GUARANTEED HOG TROUGH

Galvanized iron. Easily cleaned. Lasts a lifetime. Write for circulars and prices.

NORTHFIELD IRON CO.
Northfield, Minn.
158 Water St.

GALVANIZED GRAIN BINS

These are the original and perfected Grain Bins and Corn Crib. Wanted to protect your grain against rats, storms and fire, never to burst, give perfect ventilation, made from best material obtainable.

Does not break, rot or burn; lasts a lifetime; costs less than a wood grainery or corn crib. We make all sizes, from 150 to 2,500-bushel capacity, at lowest prices and pay the freight. Write now for free circulars of Grain Bins, Partitioned Corn Crib, Hollow-Walled Metal and Wood Silos, Cypress and Metal Tanks, Culverts, etc. Kretschmer Mfg. Co., Council Bluffs, Ia.

CUP ELEVATOR

Always ready for use. Placed inside the crib in the dry. Easy running, durable and strong. Elevates oats, wheat, or ear-corn, 50 bushels in three minutes.

SET IN YOUR CRIB BEFORE YOU PAY

The first successful Upright Ear Corn Elevator made—**SOLD DIRECT to the Farmer.** Free Catalog showing 8 styles with crib plans which save you money. Write for it today.

INTERLOCKING FENCE CO. BOX 54 MORTON, ILL.

Everybody Buying STEEL Shingles!

All over the country men are tearing off wood, prepared paper, tin and galvanized roofs. Nailing on "Tightcote" S-T-E-E-L. For only "Tightcote" STEEL can be rot-proof, fire-proof and rust-proof. It had to come, for this is the Age of Steel.

Cheaper, Too!

Curiously enough, Steel shingles, as we sell them, direct from factory to user, are now cheaper than wood.

And easier put on. Instead of nailing one at a time, these shingles go on in big clusters—100 or more at once. No extras needed. No special tools. No expert workmen. No painting required. Yet practically no wear-out to an Edwards Steel Roof.

How Rust Was Done Away With

Ordinary metal roofing rusts. This doesn't. For we invented a method which, applied to Open Hearth Steel, absolutely prevents rust from getting started. Called The "Edwards Tightcote Process." It does the work like magic, as 125,000 users are glad to testify.

Edwards' Offer We not only sell direct, but pay the freight. No such roofing bargain ever offered before. Just send Postal for Roof Book No. 791. Then see if you ever before saw such prices and such quality. Please give size of roof, if you can.

THE EDWARDS MFG. COMPANY
741-791 Lock St. CINCINNATI, OHIO

THE HOME CANNERY

CANNING fruits and vegetables for home consumption and for a limited, select, private trade is a very profitable enterprise for careful, thorough, methodical and enterprising farmers whose farming operations permit of the production of fruit and vegetables of excellent quality.

For small farmers, fruit and truck growers a home cannery can be made a paying affair if one has the inclination to take up the matter in a practical, business-like manner. On other farms the profit in such a venture depends very much upon the kind of farming done on the farm. To make a worthy success of home canning, material to be canned must be grown abundantly and of a quality that will win favor when the cans are opened for consumption. Other farm work must not interfere with the necessary work of production, gathering and putting up the goods at the right time and in the right manner. Half-way measures in this business are sure to result in failure and disappointment. But where the work can be arranged properly, and then care is taken to put up goods that will prove of high quality, canning can be very profitably done and a private trade, either with the ultimate consumers or with grocers catering to a select trade, can be worked up in a most satisfactory manner.

The strictly home canning outfit is not expensive to buy or to operate. With a few children to help, the farmer's wife, if she is a business-like woman, can operate a home cannery with perfect success. She needs only to be carefully accurate and to so supervise her work that each operation shall be performed as it should be.

When the new agricultural co-operative commonwealth is ushered in, as it will be some day, and the marketing of farm products is done in a business-like and scientific manner, it will then be easy to find a market for home-canned products of select brands put up by careful householders in the most approved manner. In the meantime there are many opportunities for those who are willing to take advantage of them and find their own markets.

FEDERAL STANDARDIZATION OF WOOL

THE FEDERAL GOVERNMENT seems determined to have its fill of governing. The Lever law, proposing to give the national government absolute and tyrannical control of the agricultural education of the country, must strike all thinking people as something actually alarming—a menace to popular independence. The next thing is for some political demagogue (we don't like that expression and we would not use it did not late government action clearly justify it) to sit back at Washington and say just how wool shall be handled and graded all over the United States. We wish the people to know what is good wool and what is not, and we wish wool and everything to be sold on its merits and at its value. But whom do these governmental rules benefit? Department rules for grading wheat, corn and other things have been promulgated. The farmers do not grade the products any more than they fix the prices. The speculating buyers do both. You could not have failed to notice the cartoon in a previous issue of this paper showing how the buyer graded the farmers' wheat when he bought it, and then how he graded it when he sold. While it belonged to the farmer it was low grade and worth little; after the speculator got it it was high grade and worth much. It is so with all these things. Every step taken by the authorities seems to be in this direction. The farmers have not equal rights in the battle of life, and it is all because they are too quiescent. They must

assert themselves. The fields claim them and much of their time they must spend between rows of growing stuff. But for all that it is necessary for them to think—for them to confer with one another, to act together, to protect their interests, and to see that justice is done them in the affairs of life. In this we are asking for the farmers no special privileges—simply equality and justice. The government makes no rules that enable the buyers to place one grade on manufactured goods when they buy them and another grade when they sell them to the users. Neither should they on farm crops.

HOW TO MAKE USE OF PARCEL POST

THERE are excellent opportunities for wide-awake, progressive farmers living within 150 miles of a city in supplying city homes with fresh fruits, vegetables, poultry and dairy products by means of parcel post.

There are several methods of finding as many customers as one can supply. The farmer may visit the city in person, shipping a few "hampers" of products, and by personal visitation in the residence district, taking with him his hampers, dispose of them to the householders and make arrangements for a continued supply. Or he may visit the offices and make arrangements with the men. He may place an advertisement in the daily papers of the city, or he may make arrangements with some responsible grocer to handle his hampers for him on a satisfactory basis. Again, he may write the postmaster for his co-operation in getting a line of satisfactory customers.

The farmer who undertakes this must be alive to the needs of his customers. He must use discretionary judgment. The profit in this business is in working up a steady, reliable trade among responsible people. He must be constant and sure in his supplies and not fail the expectations of his customers. He should only take on as much business as he can supply steadily. He must be ready and willing to go to some neighbor and buy supplies when he has none of his own to supply his customers, rather than disappoint them, even though he makes no profit on such transactions. He must be exceedingly careful to keep the quality of his shipments up

to a high standard, must pack them neatly and securely, guarantee them and stand behind his guarantee. No farmer need expect a customer to take any risks with him that it is not necessary to take with the city grocer. The farmer who builds up the most remunerative parcel post business will study his market, its needs, requirements, tastes and peculiarities very carefully and then cater to the whims, fancies and wishes of his trade as religiously as the grocer does. He will begin carefully and grow gradually. If he can come into more or less personal contact with his customers, so much the better.

A very important feature of these "direct-to-consumer" enterprises is the hamper, or shipping case. This must be fully satisfactory. It must be strong, light, durable and easily handled. It must protect the contents absolutely, when properly packed therein, and must safely carry butter, eggs, berries, poultry and vegetables, all in one shipment. The lack of such hampers has been a handicap to the growth of parcel post products shipping. Recently, however, some excellent hampers have been devised and placed upon the market. One of the best of these is made of a very high grade, double-faced, water-proof fiber board, reinforced and protected on top, bottom and all corners with rust-proof steel. It can be sent empty with egg cartons and pads for 8 cents. With twenty pounds of produce it can be mailed 150 miles for 32 cents and 1 cent for each additional pound up to fifty pounds. It will hold ten dozen eggs, or a mixed shipment of chickens, eggs, butter, honey, fruit and vegetables. It is good for two years' service, very strong, very light and exceedingly durable, easy to handle and costs but a dollar.

The opportunity for profit in parcel post business from producer to consumer awaits those who are willing to do the essentials for business success.

Origin of Silk

Ma—This nice silk dress all came from a worm, Johnnie.
Johnnie—Papa is the worm, ain't he, Ma?

Too Much of a Hustler

"When I bought that dozen of hens from you you said you got eight to ten eggs a day from them. I only get two or three. How are you going to explain that?"
"I expect you go after them too often. If you'll gather them one day in a week, as I did, you'll get as many eggs a day as I did, and know I told you the truth."

We have RAISED THE STANDARD OF ELEVATOR CONSTRUCTION by putting in a BETTER and HIGHER GRADE OF MATERIAL, such as SPECIAL TEMPERED GALVANIZED SHEETS, GALVANIZED BOLTS, etc.

The standard of efficiency has been raised on account of MORE PRACTICAL DESIGN OF CONSTRUCTION, using HIGHER GRADE MATERIAL, REDUCING THE DRAFT, while increasing THE CAPACITY.

It is EASIER TO ASSEMBLE, EASIER TO MOVE and less liable to break down.

We sell them on EASY TERMS of three years in which to pay and will mail to you FULL DESCRIPTIONS, etc., on request.

AGENTS WANTED in all unoccupied territory.

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

FARM SUCCESS THROUGH COMBINED INTERESTS

(Awarded First Prize of \$3)

MANY FARMERS have made great failures in their work on account of one very simple fact—that is, being interested in one particular kind of farming, they neglected all other kinds in order to give their undivided attention to that particular line. Now, as a matter of fact, it is right and proper that a farmer should specialize on one or two kinds of products, but in doing so it is not wise to neglect the other things which must be looked after also in order to insure the success of your specialty.

To present this idea in a clearer light we will suppose that a farmer becomes deeply interested in raising grain and rashly decides to dispense with much of his live stock. In doing this he naturally robs his soil of fertility from these sources and it will be necessary for him to replace that fertility with artificial fertilizers at great expense, in the near future, or else lose heavily on the results of his special crops.

The same thing applies in a similar manner to the raising of stock and neglecting the other crops. Beginners in the chicken business are very apt to overlook this most important feature and in doing so they will buy a sandy, unproductive farm, simply because it is healthy for the chickens. It is true that such land is healthy, but if there is no soil calculated to produce food for the chickens then the loss from food supply will be as expensive as the loss from less healthy surroundings would be in the end. The ideal farm for chicken-raising purposes is one having a small field on the side of a little hill where the slope faces the south. In this field the chicken houses should be located and the balance of the farm should be made up of soil good enough to raise clover or grain.

In fact, in all farming there should be enough stock kept or enough improvements placed in the soil to keep it up to its standard. There should be no such thing as "worn out" soil, for its life is endless if the proper care is taken of it at all times and under all conditions. For this reason every farmer should be a student of soils, in a moderate sense at least, and even if he is intensely interested in the study it will do him no harm.

Mr. Taylor, in his work on soils, gives us the following two chief aims of the farmer:

1. To produce wealth from his land sufficient to compensate himself and family for their labor and yield a reasonable interest on the value of his investment.

2. To till the land and manage his operations so that the fertility of the soil will not become exhausted.

Haphazard methods and careless work will not accomplish these results, but systematic management, modern methods and a scientific knowledge of plant and animal requirements will surely bring success in a high degree.

Farming is a profession no less important nor less difficult to master than many of the so-called learned professions, and the man who believes that farming is a fool-proof occupa-

tion will usually make an abject failure of the business.

Two features must be observed, namely, stock raising and crop raising. It has been fully demonstrated that under better farming methods it is not difficult to produce from the soil, and we know that when the production is greater than the consumption the price is correspondingly low. Therefore it is very necessary that the farmer should create a market for the products of his soil. This he can do by observing the stock-raising feature of farming. If he will market his corn and coarser grains through live stock he will receive double and possibly treble the market price for them if the foods are made up in a balanced ration.

The two features, namely, tilling the soil and stock raising, are interdependent—they lean on each other and neither one will long endure alone. The crop consumes plant food from the soil, but the supply is no more inexhaustible than the farmer's bank account. The soil fertility must be stimulated to activity, otherwise the soil becomes sick and unproductive. Live stock should consume the major portion of the product of the soil in order that many of the organic substances essential to make inorganic elements (which exist in most soils in abundance) available, may be returned to the soil in the form of manures. Eighty per cent of the fertility removed by the crop is restored to the land if the manure is properly preserved and applied.—W. Clement Moore, New Jersey.

ROOT CROPS FOR POULTRY

(Awarded Second Prize of \$2)

WHEN the winter arrives and we have no green feed for the hens we wish we had planted a field of beets or turnips so we would have had a supply. Do not wait until winter to think of it, for it is then too late to do it. Provide them by thinking ahead.

I like to have a variety of roots so they can have a change. Last winter I fed carrots, beets, turnips and small potatoes. This year I shall try to add a good supply of winter radishes to the lot, also some cabbage and pumpkins.

The large yellow mangel beet is my favorite, the Golden Tankard, for it is easier to pull than the long-growing sorts. A small patch will yield an immense supply. Carrots are harder to grow, as they require some care when they are little, but I think the hens relish them even better than the beets. I have never given them the winter radishes, but they are very fond of the summer varieties. Turnips they are certainly glad to get. The radishes and turnips are planted after sweet corn or early potatoes, as neither wants to be planted until mid-summer.

When the potatoes are dug be sure to save all the little ones, for they are so good to boil up with the oats or wheat for the mid-day meal.

There is a large amount of waste when the cabbages are cut and if this is left on the cabbages and then fed as they are used during the winter it can be saved. If the cabbages are cut out of the stalks in the field there will be considerable growth afterward

if they are cut early, and this whole bunch can be pulled up and stored away as you would the cabbages, turning the butts up and burying the tops in the trench. When they are to be fed take them out and hang by the stalk where the hens can reach them.

As long as you have pumpkins remember the hens like them and they are good for them. They like a change of diet as well as you do, and it will cause them to eat more heartily, and that is what you want if you would get the eggs. Anything you can do to whet the appetite of your flock the better results you will obtain from them.—L. S. Cobb, Kansas.

PAINTING BARN WITH SPRAYERS

(Awarded Third Prize of \$1)

IT IS SURPRISING the large number of farmers who never paint their barns, although they know that a painted building looks better and lasts longer than an unpainted one. Usually this neglect is due to the fact that it takes a large amount of paint and much work to paint a rough-boarded barn and a professional painter, by adding these two things together, can contrive a price that makes the owner of the barn feel of his pocketbook nervously. However, one Ohio farmer has solved the problem. After having a contracting painter bid on his barn and finding that he could not afford having it painted in the usual way, he asked the painter if he could mix a paint that could be used in a spraying machine. The painter said he could, and he did. With the help of his hired man the farmer painted his barn with a spray pump in less than a day at a mere fraction of what would have been the cost otherwise.—R. Hewes, Ohio.

FARM TRAVEL RECORDS

I find it of special interest and value on a farm to keep records or accounts of certain things on the farm. I have for the last half year kept an account of all driving on public roads in connection with my father's farm and thought it might be of interest to UP-TO-DATE readers to give them a few statistics.

I started keeping a record of all miles driven on the public roads, a special record for each horse and also for each person. At the end of six months our family traveled 3,224 miles. We had made 291 trips, an average of eleven miles a trip, and an average of eighteen miles a day. The largest number of miles traveled in one day was sixty-one miles. There were only eighteen days in these six months that we did not travel any on public roads. We averaged 537 miles a month. In one month we traveled 609 miles.

We used six different horses for driving. One of the horses traveled 1,212 miles in this half year, making an average of nearly seven miles a day.

My father traveled 1,665 miles himself this half year, sometimes making over 300 miles a month.

If we would add together four years at this rate it would make over 24,000 miles, or as much as once around the world. Newspapers write columns about some one making a trip around the world, but they seldom record what the busy farmer accomplishes as a traveler.

Such an account as this is of some value as well as interesting. You can find out how much your horses are doing for you. It is often surprising to find out real facts.—John T. Neufeld, Inman, Kas.

(The above is indirectly an excellent argument in favor of good roads.—Ed.)

Too Much Lost Motion

"Your husband never spans the children, does he?"
"He used to, but he doesn't now?"
"Why don't he?"
"He wants everything he does to be effective, and in spanking, you know, the upward motion don't hit anything."

Concrete Fence Posts

WHERE cement is easily obtained and proper aggregates are available, which applies practically to the greater part of the United States, farmers are finding it profitable to substitute concrete posts for posts of wood.

Concrete posts are indestructible, keep in better alignment than wooden posts and, under normal conditions, cost little more if as much as the latter. In some sections of the country they can be made cheaper than a good wooden post. Their fire-proof and everlasting qualities make them especially desirable. A simple type of post can be easily made on the farm. A farmer may make his own molds, or he can purchase them from one of the various concerns that manufacture molds on a large scale.

The easiest and cheapest wooden mold to make is the straight mold, or one for a post which does not taper. Such molds are merely long boxes having various devices for making the molding of the post a simple matter. On account of the amount of lumber saved and the ease with which these molds are filled, straight molds are generally made in "sets" or "gangs" by constructing several side by side with a continuous bottom and end pieces.

Posts should be reinforced with a rod, or wire in each corner. In most cases round bars three-sixteenths or one-fourth inch in diameter are used.

After the molds have been oiled or soaped the concrete should be placed in them at once. If for any reason the concrete stands thirty minutes before using, it should be thrown away and a new batch mixed, for cement, if it has once partially set, makes weak, dangerous concrete, even though it is rettempered by turning or adding water. After the molds are filled evenly to the depth of three-fourths of an inch or one inch, according to the spacing of the reinforcing rods or

wires, the reinforcement should be laid in, properly spaced by means of at least three "fool-proof" wire spacers. The concrete should then be poured in until the molds are filled within three-fourths of an inch or one inch of the top, when the remaining reinforcement is fitted in place in the manner described above and the molds are completely filled. To render the concrete more compact a crowbar or a pinch bar should be placed under each corner of the mold successively and moved up and down quickly. This vibration makes the concrete more compact by shaking out the air bubbles, but there will be very few of these bubbles if the concrete is thoroughly mixed and of proper consistency. If desired, the exposed corners of the post may be beveled with an "edger" and the open face given a neat finish by using a trowel immediately after the surface water has been absorbed and before the concrete has become too hard.

The following are exceedingly important precautions:

Do not expose the newly made posts to wind, hot sunshine or frost.

Do not remove the mold from the green post until thoroughly hardened, which generally requires two or three days. Even then the post must remain on the bottom board in the shade and not be disturbed for at least a week. During the first two days keep the post wet and covered with canvas, burlap or other clean material, and dampen it thereafter each day for about a week.

The Mixture—In mixing the concrete, if unscreened "bank-run" gravel is decided upon, it should be used in the proportion of one part of cement to four parts of gravel. For crushed rock or screened gravel (which is much better than "bank-run" gravel) the concrete should be used in the proportion of one part of cement, two parts of sand and four parts of rock or gravel.

Thousands of Farmers in

all winter wheat states unite in praising the Marvelous wheat. Save money on your seed; increase the yield and make more money from the harvest by sowing Marvelous.

(An advertisement largely written by our customers---read the extraordinary letters from growers of the Marvelous wheat)

Read what others have done. You can do as well. Save money at the start and make big money in the end

55 Bushels per Acre

I sowed one acre of the new wheat according to instructions, on the 10th of October, 1912. It stood the winter well and in the spring soon led all others. The straw grew 4½ feet tall, stood up well and when threshed it yielded 55 bushels. This yield has beat any wheat ever raised in our section of the country. Its fame spread all around and people came a long distance to see it. I can not furnish seed for all who want it.—Charles Houser, Lincoln County, N. C.

It Is "Marvelous"

I sowed four acres of the new wheat according to instructions, on October 5, 1912. This was late to sow, but it stood the winter as well as the best. As to its growth in the spring, I know of no other word to express it better than "Marvelous." I estimate the yield at 25 bushels per acre.—H. H. Flint, Decatur Co., Ind.

50 to 60 Bushels per Acre

I sowed one-half acre of the new wheat. The yield is estimated at 50 to 60 bushels per acre. Compared with other varieties it beats them all. It is the purest wheat of all and there will be a demand for seed. I just want to say that it is the finest wheat ever raised in this neighborhood. My neighbors say it is the finest they ever saw.—Larry Sowash, Miami Co., Ind.

At Rate of 63½ Bushels per Acre

I sowed only six-tenths of an acre with the new wheat, the first week in October. It made a good growth and far exceeded other varieties in standing the winter. It grew five feet high, stood up extra well and the yield was at the rate of 63½ bushels per acre, which is fully three times more than other varieties of wheat yield through this section. The wheat is perfectly pure. There will be a demand for seed of this wheat through this section.—H. B. Austill, Warrick County, Ind.

Will Yield Double Any Other

The yield is estimated at 40 bushels per acre and it will yield double any other variety about here. I regard the new wheat as the best I have ever sown.—Hugh S. Espey, Ohio County, Ind.

Will Produce Double as Much

I sowed the new wheat obtained from you on seven-eighths of an acre, on October 3, 1912. It started out with an extra growth in the fall and stood the winter 40 per cent better than other varieties. It excelled all others in growth in the spring. Average height, 4½ feet. It stood up extra well and will produce double as much as other varieties in this section. I sowed the wheat on thin land and the test is very pleasing to me.—Sumner Flippin, Tippecanoe Co., Ind.

It Easily Doubles My Other Wheat

Marvelous heads are larger and more grains to the head than other wheat. I did not give it a fair chance, but it easily doubles my other wheat in yield.—J. E. Holt, Augusta County, Va. U. B. minister of 50 years standing.

Neighbors Taking Notice

Marvelous simply can't be beat for hardness. The winter did not affect it in the least. I sowed my wheat the first week in October. It was no time until it was ahead of other wheat sowed in September. The heads run from three to five inches in length and three to four grains in a mesh. I think it is the greatest wheat I ever saw. I have been canvassing some this summer and have seen some fine fields of wheat, but the heads look very small in the best of them beside the Marvelous, which were about twice their length. The neighbors are sitting up and taking notice.—Mrs. G. O. Castleman, Polk County, Mo.

About Doubles Other Varieties in Yield

Marvelous beats my other wheat for hardness and is far ahead in growth. Marvelous heads are four to six inches long, with 50 to 78 grains in a head. It will yield about 30 bushels. Other varieties run from 15 to 18 bushels.—U. S. Nave, Carter County, Tenn.

Best of Any Wheat

Marvelous was sown on poor, stony land. It is looking the best of any wheat now, and we had a lot of dry, hot, windy weather and other wheat nearly died out. Marvelous will double the yield of other kinds.—Joseph D. Batty, Tloga County, N. Y.

Heads Are Six Inches Long

I have not seen any wheat in the neighborhood that could compare with Marvelous. I counted fifteen stalks from one grain. Heads are six inches long. It will thresh more wheat to the acre than any other wheat in this neighborhood.—J. N. Early, Washington County, Ohio.

72 Grains to the Head

Marvelous is very vigorous, good straw, with fine, large heads. We counted one head that had 72 grains. Found one mesh that had five grains and nearly all of them had four. The seed we got of you was as fine wheat as I ever saw.—Geo. Stauffer, Bond County, Ill.

85 to 100 Grains to the Head—Others 25 to 30

Marvelous wheat is a very vigorous grower, straw very stiff. The heads run from five to six inches. Marvelous had 85 to 100 grains to the head, other kinds from 25 to 30.—John W. Surface, Highland County, Ohio.

Heads 5½ Inches Long, With Five Grains to Mesh

Marvelous grew as tall as five feet eight inches. It was the strongest straw I ever had. Heads as long as 5½ inches and five grains to mesh.—J. D. Elkin, Daviess County, Ind.

Sell 10 bu. of your common wheat at market price, say 75c making \$7.50. For this sum, \$7.50, we will send you enough of the wonderful Marvelous wheat to sow 10 acres. Yes, we mean TEN acres.

All we ask is that you read the reports written by our customers. We need not add another word. In this business for 34 years we have never received such wonderful reports on any wheat, for the very good reason there never was such a wheat before. We could print hundreds of letters, but give a few only to prove beyond a doubt that Marvelous wheat is just what we said it was.

Every up-to-date farmer is on the lookout for improved machinery and live stock. Why not get the best in grain, too? At an actual saving in cost you can sow part or all of your crop with Marvelous wheat. It will cost much more to sow common wheat from your granary.

You're skeptical, and we don't blame you a bit. But we have the proofs to "show you." You need not take our word for it. Read some reports of farmers from all the winter wheat states. Write to us for still other reports, photographs and our whole proposition. All you need risk is a 2-cent stamp for letter—or send a post card.

If you grow winter wheat you owe it to yourself to get our proposition and the proof. It's money saved right now in your seeding and more bushels of wheat and more money for you next harvest. Whether you sow one acre or more this advertisement should interest you more than anything else printed in this paper.

The top bushels are profit. It requires so many bushels to pay your expense; all over that is clear gain. Don't be satisfied with 10 to 15 bu. an acre! Strong, vigorous, heavy-yielding varieties will produce 30 to 50 bu. per acre at the same expense. Strive for the top bushels—the extra profit.

All you need to do now is to send the coupon for full particulars and proofs and our proposition. Write now, today.

O. K. Seed Store
Dept. 2 Indianapolis, Ind.

Sending This Coupon

Places you under no obligation, but you owe it to yourself to sign, clip
And Mail It

Change your seed wheat, get new blood, life and vigor. Increase hardiness, productivity and quality. Save money

100 Bushels From One

I think my Marvelous wheat will make 100 bushels from the one bushel I sowed. W. E. Goldsmith, Freble County, Ohio.

500 Bushels From 8 Acres

I have a fine crop of Marvelous wheat. I have 8 acres and I believe it will thresh out 500 bushels.—H. B. A., Warrick County, Ind.

96 Heads From One Grain

Marvelous wheat is taller than other kinds. It stood up well and the heads were better filled. I think Marvelous will make 40 bushels to the acre, and the other 15 bushels per acre. I counted 96 heads from one grain of the Marvelous wheat. This wheat is a great wonder to every one. I will sow all Marvelous this fall.—J. R. McLeod, Stewart County, Tenn.

Ahead of Any Other Kind I Ever Saw

Marvelous is ahead of any other kind I ever saw grow. It is a strong grower. We have wheat that stands five feet four inches, with stiff straw, long heads, more grains to the head and prettier head I ever saw. Old varieties will yield about 14 bushels to the acre. This looks like 28 bushels to me. We never will believe this wheat has not been doped and doctored until we grow another crop. It seems so different from the other kinds.—Chas. L. Palm, Richland County, Ohio.

Neighbors Want It

It was sown October 15, which is very late, on stalk ground and pastured until April. It made four to five grains to the mesh, with large straw and long heads. It is harder than any other wheat. Marvelous is the wheat and my neighbors are all wanting a start of it this fall.—C. P. Swobber, Owen County, Ind.

Just What You Claim

Marvelous wheat is just what you claim for it.—Allen Scales, Warrick County, Ind.

The Stuff for Sure

Marvelous is the stuff for sure. You don't advertise it half strong enough.—Thos. O. Smart, Jefferson County, Ind.

40 Bushels to the Acre

My Marvelous is fine. Will make 40 bushels to the acre.—J. A. Zimmerman, Tazewell County, Ill.

Best I Ever Raised

Marvelous is far better than other wheat. Has longer heads and more grains to the head. I think it will yield twice as much per acre. Marvelous is the best wheat I ever raised. I found from 40 to 60 heads to the grain.—David Wile, Montgomery County, Pa.

More Than Fulfilled Expectations

Marvelous has more than fulfilled our expectations and your advertisement of it. The heads are large, well filled and we estimate the yield at 35 bushels to the acre.—Mrs. Annie L. McBeth, Champaign County, Ohio.

Heads Have 70 Grains

Marvelous wheat is more vigorous in growth, stiffer straw and heads longer than Pool grown in the same field. Many heads have 70 grains in them.—Joseph M. Smith, Washington County, Pa.

Far Ahead of All Others

Marvelous is far ahead of all other varieties. It made 25 bushels on upland without fertilizer. The best others did with fertilizer was 20 to 25 bushels, and only one field made.—R. J. Hasty, Washington County, Okla.

Crop Engaged at \$5 a Bushel

The new wheat was sown on two acres of ground on September 25, 1912. It was not winter-killed in the least. No other wheat grew any better in the spring. I estimate the yield at 50 bushels per acre, which is much better than any other variety around here. All that I will have to sell is already engaged at \$5 per bushel. I think it is the greatest variety of wheat ever introduced into this country. Dozens of my neighbors have seen my wheat and pronounce it wonderful.—J. H. M., Atchison Co., Kans.

Marvelous Wheat Is All Right

The Marvelous wheat is all right. I sowed it on the 8th of October and it came up and grew very fast. It has fine, large heads and is a fine-looking wheat. I think it can easily be made to produce 40 or 50 bushels or more to the acre. I will sow only the Marvelous.—Chas. McClelland, Wayne County, O.

Will Sow My Whole Crop of Marvelous

I got my Marvelous sowed very late, but it is going to do better than my other wheat. I think it will make about two times as much as the other. I sold all of mine for seed and I am going to sow my whole crop with it this fall.—John S. Harmon, Carroll County, Md.

Beats Them All by Far

Marvelous is the wheat for me. It beats them all by far.—C. J. Mosier, Newton County, Mo.

50 Bushels to the Acre

Marvelous wheat is as fine as I ever saw grow. Some of my neighbors say it will yield 50 bushels to the acre. Six of my neighbors have spoken for 285 bushels.—W. M. Peak, Scott County, Ky.

Selling Seed at \$4 a Bushel

I wish to say my Marvelous wheat is all you claim for it. It stood all the heavy wind and rain. Many visited the field with much surprise. Some went so far as to say if they did not know me to be straight they wouldn't believe it. I must say it is properly named. It is certainly Marvelous. Judges say it will make 40 bushels or more per acre. Several have spoken for seed at \$4 per bushel.—G. W. Parker, Franklin County, Kentucky.

One Acre Equal to Three

I sowed one acre of the new wheat in October. It made a good growth in the fall and stood the winter as well if not better than the others. In the spring it soon took the lead of other wheat sown in the same field. The one acre of the new wheat will make as much grain as three acres of other varieties.—W. J. Willis and Son, Kittyton, Tenn.

The Original Letters from Growers, extracts of which we have printed, are on file in our office for the inspection of anyone interested. We refer to the Continental National Bank and any Bank or Business House in Indianapolis.

STOOLS OF MARVELOUS WHEAT PULLED IN THE DEPTH OF THE FIELD

Department of Organization

Practical Organization, Federation and Co-Operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, \$2.50; Dues, \$1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

Members of the Board

J. A. Everitt, Indianapolis, Ind., president.
W. H. Mitchell, Hutchinson, Kas., vice-president.
C. Hayes Taylor, Indianapolis, Ind., secretary and treasurer.
A. Y. Satterfield, Sterling, Idaho, national organizer.

B. F. Walton, Geneva, to whom all prospective organizers should apply.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

In the last weeks of June the grain dealers' associations in the various grain-raising states of the country held their annual meetings.

Notice that the meetings were held just at the harvest time for winter wheat. Just at the time when the farmers had completed their work of producing and were ready to market their grain.

It is plainly evident why they selected that season for the meeting. It was because the crop of winter wheat was then made and could be measured and the grain dealers met to discuss the matter of price and decide what would be paid for the wheat, as well as methods of marketing, etc.

A very good idea of the value of the association to the members can be gathered from the following quotation taken from the address of the secretary of one of the associations. The meeting of the association that he is secretary of was the twenty-first annual one. The secretary said in part:

The twenty-first annual financial statement of the association again shows the same strong condition, there being an increase in both the cash balance and the membership. There is no longer any question as to the position of this society. The continuous, vigorous support given by the membership evinces an earnest, ardent belief in the future of the organization and the work it is to do. No society has to a greater extent realized the hopes of its loyal and constant membership. Organized for the benefit of the trade, it has gathered into its membership these profound, sagacious men who have taken the grain trade as their life work, and to these thorough, intense workers for the betterment of the trade is due whatever of advancement and progress has been made in the past twenty-one years. Having reached its majority, become of age, may it not be hoped, expected, that the coming year may see further advancement, to greater achievements for the good of all grain dealers?

It is a very general and well-grounded belief that the grain business can not be conducted without the Grain Dealers' Association.

In the local meeting ways and means are discussed for handling the product from the producer. * * * Attend the local meetings, gentlemen, for they are the very bulwarks of the whole construction of grain associations. Through the local meeting the state organization is strengthened, and thereby the national society is vitalized.

Secure the attendance of every dealer in your vicinity at the local meeting. Get him to join the state association and thereby he is affiliated into the national association, thus upholding, sustaining, the whole structure.

Strenuous efforts should be exerted in the coming year to add to the association those yet remaining unenrolled, and this can only be done by the membership, and if they

will but give to this work the same vigorous, patient effort that they exert in the support of the work of the state organization, the next year will be the banner record of increased membership.

So we see that the grain dealers' associations begin their work when the farmers' work has ended. Now be it understood that we have no fault to find with the grain dealers or their association. The grain dealer has been necessary. Without the grain dealer in the past the farmer would have gone to town with a load of wheat and he would not have been able to sell it. Neither have we any quarrel with their plan of organizing. It is an admirable plan and just such a one as is needed for the business in hand. They have local organizations, state organizations and a national organization. This appeals to us as the logical form of organization, because the business is local, then it has elements in its business that are state-wide and also the handling of grain is a national business. The grain dealers realize that because the same kind of grain is offered for sale in many different states and across the whole continent their organization must be as comprehensive. Otherwise, instead of being able to co-operate in the matter of prices, and in methods of conducting their business, there would be competition between different sections and a chaotic condition.

We admit that we like the plan of the grain dealers' organization so well that we are going to say farmers should take a lesson from it. Now let us suppose that the farmers had an association of their own, patterned after the grain dealers' association, and that they would meet in local and state meetings and in a national meeting for the purpose of canvassing the crop and deciding on the price that the grain would be sold for. Would it not be a very wise thing to do?

True, the farmers are organized to a very great extent. But a comparison of the two organizations will show the weakness of the farmers.

The grain dealers, as we have said, have their local organizations, where, quoting from the secretary's report, "ways and means are discussed for handling the products of the producers." They have their state organizations, where the locals meet by representatives, and there they discuss

the larger matters of ways and means for handling the grain and the prices. Also, as we have stated, they have the national society, where representatives from the various state associations meet and there discuss the same thing and provide for that uniformity of price and action that is necessary to eliminate competition amongst the members of the society.

On the other hand, the farmers have their local organization, where they meet more or less regularly to discuss ways and means for marketing and prices. But as far as any solidarity is concerned, they stop there. It is only in a few states that they meet in state meetings, and in such states, until this time, the meetings are by no means representative of the entire agricultural industry of the state. And the same way when it comes to the country at large. There are national organizations that hold annual national meetings. But they are not representative of the whole of agriculture, nor is there uniformity of action, because there are several of such national societies. Instead of the farmers continuing this way it would be a very simple matter for all of the local associations, whether affiliated with a national association or standing alone, to federate for the one thing of having a national meeting, as the grain dealers have, for the important things of discussing ways and means for marketing their own products and agree on the prices that they should sell for.

Suppose, then, the various local associations of farmers would hold a meeting and at that meeting prepare plans and articles of federation. Then hereafter the federation would meet as the grain dealers have been meeting, each local organization or district organization in the state sending a representative to the national meeting to discuss ways and means of marketing the crops and the prices that should be paid for them. Would not such an association of the farmers hold a more important place than the grain dealers' meetings? And would not the latter wait until the farmers had their meeting, if, indeed, they would then consider it necessary to meet at all?

This is exactly what we have advocated through this paper and we have already called one conference and the Farmers Society of Equity has federated quite a number of independent associations for marketing. But the whole country wants to be apprised of this plan and awakened to a sense of the immediate necessity of national federation.

The opportunity appears to be presenting itself in the proposed meeting that will probably be held within a month, reference to which is made in another column of this paper.

TWINE ALL SOLD

July 10 we received notice from the Hoosier Twine Mills to the effect that its supply of twine was all sold and that they could not accept any more orders. Members of the F. S. E. will please take notice and be governed accordingly.

Mr. Fogarty, the superintendent of the mills, said in his letter:

Mr. J. A. Everitt, President:
I feel that I should tell you frankly that you have so far exceeded our expectations in your orders for twine that you have driven us to the utmost time and again. You will recall that I have kept asking you what you had in sight. Our reason for this was that I saw our pile of millions of pounds of twine melting fast and I grew apprehensive that we might get caught in the chase. When I saw that we could not meet the demand running normally I put a night force crew at work. Since June 1 we have been running day and night.

We have for some time been running a neck and neck race, the demand with the supply. But now I am confronted with the fact that my raw material is almost exhausted and I can not get more here inside of thirty days, so I have to tell you that your orders have so far exceeded my expectations that we miscalculated the requirements. The business has been a splendid one and, while we made you a close price, it has resulted in opening fields that we

never entered before. We have bought new machinery and have erected a large new plant which will double our capacity for next season.

I do thank you and your M. K. Slight for the uniform promptness and good business methods displayed in all your season's business with this factory, and I express a hope that it will be mutually to our benefit to renew our business relations another season.

Sincerely yours,

E. J. FOGARTY, Supt.,
Michigan City, Ind.

Members of the Farmers Society of Equity will no doubt be equally elated with the officers of the National Clearing House over the splendid outcome of the first attempt to do business as a national unit, and far more than this feeling of satisfaction is the fact that the organization has been instrumental in saving many of its members considerable money. With this example of success before us let us make our plans for doing multiplied times as much business next year.

CONTROLLING THE WHEAT CROP

There are several ways to control the wheat crop and out of the lot any grower should be able to select one that will be practical for him.

First we will mention stacking. While stacking is largely a lost art, its advantages are so many that it could be revived with great benefit. There is some extra labor over threshing from the shock. But the latter is a wasteful method and if followed it calls for a granary or other storage or dumping the crop and the great sacrifice in price that usually attends the early marketing. Besides, the farmer who threshes out of the shock often must wait for the machine and run the risk of damage to the grain from wet weather. If the wheat is stacked it can be done immediately following the cutting and if well done it will be safe an indefinite length of time.

If the wheat is not stacked then the best way is to store in granaries or storage bins on the farm. These latter are comparatively new inventions. They are manufactured by many firms and can be obtained at a moderate expense. An article in this number gives much valuable advice about such storage utilities.

One argument against farm storage is in the fact that the logical time to sell may come when the roads are bad for hauling. If this looms up as a serious obstacle, then the wheat grower has the alternative of shipping to a central market and have his grain stored in a public elevator. This presents a difficulty when a home elevator is not available. But this may be overcome by getting a portable elevator that can be set beside the track and unload from the wagon to the car.

We have made some inquiry about cost of storing in public elevators and find the following schedule to be about the average:

First fifteen days (covers unloading and loading out), per bushel, 2 cents.

For each additional or fraction thereof, per bushel, one-third cent.

For commission per bushel, 1 cent.

These charges cover insurance and natural shrinkage. That is, the number of bushels weighed in will be sold for the storer, ultimately.

We see, then, that the cost of storing for six months and selling is 7 cents a bushel, or for nine months the charge is 9 cents a bushel. Of course the actual freight will be charged against the grain, but when sold it will be at the terminal market price instead of the country price.

The person who wants to store in a terminal public elevator should first decide what place he will ship to. If a local or county clearing house of the F. S. E. or federated association the secretary should get instructions from the National Clearing House. Having decided on the market, then order cars through the local agent, telling him the destination. If unusual delay in getting cars report to the State Railway Commission, address at the Cap-

ital. When the car is loaded get a bill of lading from the agent and send it to the society's representative on the market with instructions to store. If a loan is wanted on the grain arrange beforehand with the market representative how much. If 50 cents a bushel this amount may be drawn for against the bill of lading and your local bank will ordinarily pay the money on presentation of the bill of lading and the draft.

The freight will be paid by the receiver, also the insurance and other expenses, and held as charges against the grain until sold. In brief, the person who stores in a public elevator will be to no cash expense and the accumulating charges will be those mentioned above.

Will it pay to store?

The object of the Dollar Wheat Campaign is to prevail on farmers to hold their wheat back and produce enough of a scarcity, at the low price, that a higher price will be offered to cause it to move to market. This campaign is a factor in the case now that is not ordinary. It is going to have a big influence as we notice the papers very generally are advising against selling wheat at present prices, but to hold for \$1. Outside of this extraordinary factor it will be interesting to know how early and late prices compared heretofore when only the ordinary conditions prevailed. The following table shows:

The highest and lowest cash prices at Chicago, by months, in ten years:											
	1913	1912	1911	1910	1909	1908	1907	1906	1905	1904	1903

June95	.86 1/2	.99 1/2	.99 1/2	.99 1/2	.89 1/2	.81 1/2	.69 1/2	.77 1/2	.94	.94
July94 1/2	1.07 1/2	1.15	1.25 1/2	1.36	.95 1/2	1.05	.77 1/2	1.15	1.20	1.20

This table shows that in nearly every year the price was lower at the beginning of the season than later. We have taken September as the beginning because then the spring wheat harvest comes and it is really the first month when the actual yield can be known. Also with the combined marketing of winter and spring wheat the prices are likely to be the lowest. With the Dollar Wheat Campaign this year, the fact that wheat is cheaper than corn to feed and the great scarcity of corn, also the shortage in some European crops, we have every confidence of a big profit from holding wheat.

Parties who can not control their crops at home should write to headquarters of the F. S. E. for instructions. Such communications should come through the secretary and not from individuals.

WHO DOES FARMING PAY?

(Continued From Page 7)

from their crops sufficient to pay cash for the same implements?

Isn't it time for each business man to give these matters that I have referred to careful consideration on his own account, and not take for granted that the business conditions of the country are fundamentally sound because some clever writer presents figures on only one side of the case to prove it? How can conditions be fundamentally sound with agriculture in the condition that the analysis I have made shows it to be?

The Backbone of the Country Weak and Wobbly

Agriculture is claimed to be the backbone of the country. Then it follows that the backbone should be kept

strong so it can support on the shoulders of agriculture all the other industries. But agriculture has been weakened gradually for fifty years or more by a perpetual drain on the soil. Farming has been a mining operation, taking out of the soil its natural riches and selling it at prices that did not permit of it being replaced. This kind of farming is as sure to exhaust the richness of the soil as ordinary mining is to exhaust the treasures of the earth.

The people have permitted this thing to go on these many years because they did not understand it. As long as the virgin soil needed only to be tickled and it would smile with an abundant harvest, we, perhaps, could afford our prodigality. But it was much like the ravishing of the forests in the years past by our fathers and grandfathers, and now we are paying the penalty in exorbitant prices for lumber. Or as it will be at some future time when the supply of coal is nearing exhaustion.

Now Paying the Penalty

We are now paying the penalty of our shortsightedness in not getting adequate returns for the crops produced from our farms year after year. We can only have regret for the past. But is it not the duty of every man who hopes for a still more glorious future for our country to realize without further delay that we have al-

ready gone too far and that it is time now to halt in our mad career, and from this time forward do everything possible to repair the waste and damage already done?

Better Organization and More Effective Co-operation

I plead for a serious consideration of the present and an earnest look into the future by those men who are in the habit of finding causes for effects. They should turn to this analysis of the agricultural situation, as it relates to the 1914 wheat crop, and see if they can not find a cause for some of our business stress. And what is true of wheat is equally true of all other

farm crops. If the cause, or part of the cause, of a letting up in business can be traced to the farmers being out of the market, and if the farmers are out of the market because they have not received sufficient money for the crops, or if they lack confidence in the future because of the present inadequacy of price for the wheat crop and are unduly economizing, then let us all put our minds to the problem of giving our greatest class of people an ample reward for their time, talent and investment. If we find that the farmers have not been adequately rewarded for their crops then the solution of the problem must come through a better organization of the farmers and more effective co-operation.

A few people—some grain dealers, the millers and speculators—will not want these things changed. But on the other side are all the farmers, all the consumers of their products and all of the merchants and manufacturers who look to the country for sustenance and trade.

Let's undertake the problems of getting a fair price for everything produced from the soil, and restoring the fertility in the soil of our farms. When these things are done and our farmers will be kept prosperous and we can't have business depression.

Reduction in the Price of Milk

The elimination of the wholesaler's profit and a substantial reduction in the retail price of milk in Vancouver is expected to result from the organization of the milk producers of British Columbia, who will engage in the retail distribution of their products. The dairymen declare their intention to retaliate on the wholesale milk dealers, who are said to have failed to keep an agreement with the Milk Shippers' Union and are trying to force down the price paid to the producers. The milk shippers are already incorporated to sell milk by retail, and an efficient organization to look after the distribution in Vancouver and other provincial towns will soon be completed.

Georgia's Chambers of Commerce and a State Marketing Bureau

The chambers of commerce of Georgia are working for a state marketing bureau. Marketing farm crops is the farmer's business. All economists admit successful marketing requires co-operation and co-operation requires organization. Every one knows that farmers' organizations can not long survive if they enter into politics. The establishment of a marketing bureau by the state puts it into politics, puts the farmers' own business into politics, puts farmers' organizations into politics. There are only 163,000 white farmers in Georgia and on political questions they are divided. Georgia farmers will be wise if they organize and establish their own marketing bureau and keep it free from state or political control. The chambers of commerce can control the political wires, whereas the unorganized farmers can not.

The motive which prompts these commercial bodies to seek to establish a state bureau for the marketing of farm products may or may not be a righteous one. If the motive is a sinister one the sooner the farmers of Georgia take the matter out of the hands of greedy speculators the better. If the motive is to really and truly assist in obtaining better prices and better marketing facilities, the farmers are the ones to take the initiative.

FOR SALE—Town lots in all growing towns. Ask for information on industrial and business openings.

400,000 Settlers a Year

Immigration figures show that the population of Canada increased during 1913, by the addition of 400,000 new settlers from the United States and Europe. Most of these have gone on farms in Manitoba, Saskatchewan and Alberta.

Lord William Percy, an English Nobleman says:

"The possibilities and opportunities offered by the Canadian West are so infinitely greater than those which exist in England, that it seems absurd to think that people should be impeded from coming to the country where they can most easily and certainly improve their position."

New districts are being opened up, which will make accessible a great number of homesteads in districts especially adapted to mixed farming and grain raising.

For illustrated literature and reduced railway rates, apply to Superintendent of Immigration, Ottawa, Canada, or to the Canadian Government Agent.

This Real Shetland Pony Outfit

PONY, CARRIAGE, HARNESS, SADDLE AND BRIDLE—ALL GIVEN AWAY

This is the rig
Who Wants Me?

Any Boy or Girl can get all this—
Just send me your name

Emma Williams is the name of the little girl below. I made her a present of this pony and outfit seven years ago. She still has it. It took several prizes at fairs. She writes me a letter every Christmas and sends me a picture of herself and pony. See her smile. She's glad she sent me her name and told me she wanted a pony. I am still giving ponies away to boys and girls. DO YOU WANT ONE? Do like little Emma did,—send me your name. My plan is simple and easy. Do as I say—and

Send Your Name Quick

The next pony I am going to give away is a beauty—jet black, about as high as the dining-room table, round, plump, well trained, as gentle as a lamb. Perfectly safe for any little boy or girl to ride or drive. The carriage is just as pretty, with rubber tires and nickel side-lamps. Fine black leather, nickel-plated harness, russet leather saddle and bridle. Could you think of a finer outfit? Do as I say and you can have all as a present from me. I want your name. I have a story to tell you. I have the pony all ready to send to the lucky boy or girl. It can be yours just as well as not. Send me no money. I don't want money—I just

want you to send me your name—today—NOW.

Will you do it?—and get this real live Shetland pony and complete outfit. DO IT. Address

MATT YOUNG, Pony Man,

220 South Wittenberg Avenue,

Springfield, Ohio

FOXES WANTED—Ross Brown, McFall, Ala.

The Market Place

To Bring Seller and Buyer Together

As an additional help to MEMBERS OF THE FARMERS SOCIETY OF EQUITY in marketing their crops we have instituted this form of communicating what they have to sell to farmers and local clearing houses who may be in need of the things. Any reader of this paper, who is also a member of the Farmers Society of Equity, or will become a member, is entitled to report his crops to the National Clearing House and get this service. See blank for reporting below.

The Miners' Co-operative Buying Association at Minden Mines, Mo., wants to buy potatoes and vegetables of all kinds. Shipments should be made on draft attached to bill of lading. Care must be taken to ship nothing but first-class goods. H. Rinehart, agent.

Buy mare pony, gentle and sound, about 600 lbs., just the thing for farm boys or girls. Want to sell to one of the F. S. E. people. A. W. Helde, Fulton, Mo.

Washington Shingles

Red Cedar

at wholesale prices to members of F. S. E. Have your local clearing house write us for particulars and prices on all grades delivered to your station. We ship nothing but the best. We also furnish anything in Fir, Cedar, Spruce, Hemlock Lumber. ROBERT EMERSON CO., Box 1156, Tacoma, Wash.

Two cars baled No. 1 midland prairie hay to sell. Is of good quality, not of the real lowland grade, but coarser than the upland prairie hay, without weeds; \$7.50 per ton if sold soon. Will have several more cars in next 20 days. A. R. Baxley, Sec., Humboldt, Kas.

Squashes, potatoes, apples and watermelons for sale a little later in the season. Harold K. Robinson, White Cloud, Mich., R. 3.

COAL

for Threshing and Winter

Our mines will supply all your coal needs. Highest grades. Satisfaction guaranteed. Be sure to write us. FARMERS COAL CO., Colorado Springs, Colo.

District clearing house at Tobias, Neb. (R. M. Tyson, manager) wants peaches and other fruit.

C. M. Parr, manager, Hamilton, Mont., has 40 car loads choice white oats.

I or We have the following crops to buy now:

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION—Does the Dollar Wheat Campaign mean to put the price of wheat at \$1 on the farm or \$1 at Chicago?—Several Correspondents.

ANSWER—The thought of this headquarters was that the price be \$1 to the producer at his market town. We believe this will be practical now since there is practical free trade in wheat, and the price of wheat will be nearly uniform in all parts of our country. There will be a difference in value depending upon the variety of wheat and the quality of the different varieties. The reason that the price of wheat in the future, or as long as present conditions remain, is that, should the price of wheat in the eastern part of the country, we will say the Atlantic coast district, be higher than the price in the Mississippi district, wheat would immediately pour in from Argentina and force the eastern markets down. This is because wheat can be brought from Argentina and delivered in our eastern markets cheaper than it can be bought from producing sections west of the Mississippi river. Also, with the large marketing through Galveston and New Orleans of southwestern wheat for export, we have another factor that tends to equalize the prices throughout our country. But this is a matter that will be left to the meeting that is expected to be called before the next issue of this paper appears.

Q.—We receive inquiries from individual producers who have a car load or more of wheat to store, and ask whether it is practical.

A.—It is possible to ship to the central markets one car load or more for storage, but the detail that is involved in handling the proposition is so much as to make it objectionable. Wherever there is one individual who has a car load to store there are probably fifty or more farmers in the community who have wheat that they would like to control by storing. It will be much more practical for them to all join together and select one man to do all of the business. This is exactly the Farmers Society of Equity plan of community clearing houses. A community thus may have from 50,000 to hundreds of thousands of bushels of wheat that will either be marketed for other people to control or controlled by the growers. If the handling of this would all be placed in the hands of one agent it will make the ideal condition for storing, getting cash advances and eventually for marketing. Where no regular elevator for loading we recommend the portable elevators that are advertised in this paper, and the names of which this headquarters will give on request. With the aid of these wheat can be loaded from the wagons direct into the car almost as satisfactorily as if an expensive elevator were maintained.

Q.—Our local, which we expect soon to be a district clearing house, is about to take over the grain elevator at this place. In doing this we expect to adopt the Farmers Society of Equity amortization bond plan. Therefore we have some members who will want to invest less than \$100. Can we have the bonds issued in denominations less than \$100? (2) If I subscribe for a \$100 bond in the company is that all that can be collected from me, after I have paid in my \$100? (3) The price of the elevator will be in the neighborhood of \$8,750. Beyond paying for this we will need some money to do business on. (4) If we would issue bonds to the amount of \$10,000 or \$12,000 can headquarters place the bonds for us, so we can get par value out of them to purchase the elevator and have capital to do business with?—John Tyler, President, Pine Bluff, Wyo.

A.—(1) Yes. (2) The stock or bond holder is liable only for the amount of his subscription and when that is paid in he is not liable for more. (3) Inasmuch as the bonds of the corporation shall be sold to and held by members of the Farmers Society of Equity in good standing, and not transferred to any but members of the Farmers Society of Equity in good standing, then the issue of bonds should be made to cover the property of the society and if the issue is more than the real value all the members will know that it is for the mutual benefit of the members. Should it in the future be necessary to go into liquidation and the property would not sell for as much as the issue of bonds, each one would lose an equal proportion and none could lose very much. (4) The society has no facilities for placing the bonds for you.

Q.—We have around Oregon City a number of locals which meet at schoolhouses and most of which are doing nothing in the way of business. I have under consideration a plan to form them into one local at Oregon City, which is the shipping point for all of them.—F. G. Buchanan, State Secretary, Oregon City, Ore.

A.—This is what should have been done in the first place. Please see Section 4 of Article IV of by-laws of the National Clearing House, and particularly the explanatory paragraph in italic type. This headquarters recommends holding meetings at schoolhouses to get members for the local clearing

house to be eventually organized at the shipping point. When the communities are remote from the shipping town the local clearing house may be maintained. Such community organizations may be made permanent, as explained in the by-laws. One reason for holding meetings at country points is that many farmers dislike to go to the town to organize in the first place. But they have no objection to going to a meeting in their own neighborhood.

Q.—Please let us know the relation of the Equity Warehouse Company at Portland, Ore., to the Farmers Society of Equity.—Several Oregon and Washington Inquirers.

A.—The Equity Warehouse Company at Portland, Ore., is not a Farmers Society of Equity institution and is not chartered by the National Clearing House. It stands in the same relation to the Farmers Society of Equity as any other receiving institution or company in Portland would stand with the members if there was a working agreement between them—that is, if an agreement was made by the members of the society to market their produce through one particular Portland house.

Q.—Our local is established twenty miles from a shipping point. Must we do business through the local at such shipping point? (2) Heretofore we have been clearing our business through the Pine Bluff Local Clearing House. Are we permitted to do that? (3) Clearing our business through the Pine Bluff Local Clearing House, what is an equitable division of the commission? (4) Where there is no county or district clearing house or state union, may any part of the fees apportioned to such organization be retained in the local clearing house treasury?—C. H. Malm, Secretary, Albin, Wyo.

A.—(1, 2) Without making investigation we might assume that the logical shipping place for your community has no local clearing house of the Farmers Society of Equity at this time. Therefore, since you are clearing through the Pine Bluff Clearing House, that will be satisfactory. If, however, there is a local clearing house at the town you refer to, then it would be a matter of your own choice whether you would clear through it or through the Pine Bluff local. (3) The commission will vary according to the produce handled. In case the commission is 5 per cent for selling a commodity an equitable division of the 5 per cent would be 2 per cent to the Pine Bluff Clearing House and 3 per cent to you. If the commission is less than 5 per cent then the same proportion would be fair. (4) A local must not retain in its treasury any part of the membership fee except what is apportioned to it. You can read in the by-laws of the National Clearing House, F. S. E., that the National Clearing House is obligated to remit to a county clearing house or state union its portion of the fees when such are subsequently organized.

Boys! and Girls!
I Will Give Away This Dandy Pony

I am going to give away this real live Shetland Pony, with a Brand New Buggy and Harness, absolutely FREE to some little boy or girl living in the United States who will do me a small favor. Any child can do what I ask, as it is so easy. I have already made thousands of children happy and you can just as well be one of the next ones. I just send away several free Shetland Ponies and Outfits to some worthy little boys and girls, because they sent me their names and did the little I asked them to do. One of these free ponies went way to Holley Smith of Cheney, Wash., Rt. 4, and I even prepaid \$30 shipping charges, so it didn't cost him one cent.

If You Want a Pony Send Me Your Name Today

Be sure and send me your full name and address today, no matter where you live, and I will tell you how to become the proud owner of this Shetland Pony without one cent of cost. I shall also tell you all about the hundreds of dollars worth of other prizes I am going to give away free to boys and girls who answer this ad and about the BIG SURPRISE I have for them. So don't wait a minute, but send me your name today and simply say, "I want the next Shetland Pony and Outfit you are going to give away free," and I will answer at once. Just write a post card or send a letter to

Uncle Bob, The Pony Man
603 Second Ave., So. Minneapolis, Minn.

How To PITCH the "Fade-away" by Christy Mathewson

of the New York Giants

FREE

Boys, it's FREE! Complete, personal instructions from the great Mathewson, himself, showing you how to pitch his famous "fade-away" so the best batter in your town can't hit it safe. Send no money—simply write and ask for Mathewson's complete instructions—he will show you plain as day how to throw this baffling, puzzling, unhittable "fade-away"—the curve that the best batsmen in the League can't hit. Send for the New York Giants three consecutive years. Boys, with this curve you can make all the other boys in your town look like monkeys—you can simply play horse with them—you can be assured of batters, and cheered by the fans as Mathewson is in the National League. For "fade-away" it is all to you.

FREE
to every
boy who
writes.
No money
needed.

All Absolutely FREE
He explains every secret of his pitching to you—how to stand, how to grip the ball, how to "wind-up," how to let go. Photographs of every move make it all plain as A-B-C, so anybody can master this great curve at once and become the pitching hero of his town, the boy whose team is bound to win. It doesn't cost you a penny—the complete instruction is free, just for selling a few papers. Don't wait a day to learn how to throw the "fade-away," get it first and put one over on the other boys. Send no money—simply write and say "send on the papers to sell and give me free, Mathewson's complete instructions. Address: W. D. Boyce Co., Dept. 420 Chicago.

Do You Want to Go to the San Francisco Fair Free?

We are able to offer you a splendid chance to see this magnificent Exposition, as well as the many other wonder places of California, without a cent of cost to yourself. Side trips to points of interest on the way there and back. Immediate decision necessary. Write today for free sample copy giving full particulars of this great proposition.

Baseball Curver GIVEN

Boys, you can simply make money of the other boys with this curver. You can be as big a hero in your town as any big league pitcher. The curver which is worn on the hand enables the pitcher to give the ball a rapid whirling motion thus causing a "wide curve". It is so small that the batter cannot see it and they all wonder where those AWFUL CURVES come from. You can fan them out as fast as they come to bat. A complete set of directions for throwing curves goes with each curver.
Our Offer: We are giving these baseball curvers away free as a means of introducing our great farm and family magazine, Missouri Valley Farmer. Send us 10¢ for a three months' trial subscription and immediately upon receipt of same we will send you one of the curvers, by return mail free and postpaid. If you want one of these wonderful little curvers do not delay but send us your subscription at once to the address below. Our supply is limited. Do not put off sending in your order now. Address MISSOURI VALLEY FARMER, BC24, Topeka, Kansas

Equity Field Work

Kansas Official Indorses the Dollar Wheat Campaign

FARMERS SOCIETY OF EQUITY:

I am unqualifiedly for the "Dollar Wheat Convention" proposed by your Society and will surely attend it when held.

Let me give you some official Kansas figures to show who controls the price.

Total receipts of grain at Kansas City during one year were as follows:

Rye	161,700 bushels
Barley	404,800 bushels
Oats	6,349,500 bushels
Corn	11,547,150 bushels
Wheat	36,617,700 bushels

Total receipts..... 55,080,850 bushels
Bushels sold in option trades during the same year..... 1,159,000,000

Each bushel was bought and sold twenty times over. These official figures prove conclusively that 95 per cent of all the bushel transactions on the Kansas City Board of Trade are wind and water, or straight gambling transactions. In the face of these it is not difficult to determine who controls the market.

I am for the producer and Dollar Wheat.
—W. T. Watkins, Supervising Grain Inspector, Kansas City, Kas.

Good Advice to Locals

I would advise all locals to buy and sell through their county (or district) clearing houses. I find some locals are buying alone and if they keep it up it will be very discouraging to their members.

I heartily indorse the resolutions of the Jefferson (Idaho) County Clearing House, F. S. E., published in the June 1st issue of this paper. The matter of equal taxation should be taken up in every county. For instance, pine land, from which the lumber barons have stripped the pine and then sold the land to the poor, struggling settler, should not be taxed double what it was when the pine was on it. That it is no one's fault but our own. This government of ours is like our home—it is what we make it. By organizing we can effect great changes for our betterment. So I say, let us awake to our duty as good, loyal Americans and for our homes, our families and our country unite for the betterment of conditions for all. We can do it under the banner of the Farmers Society of Equity, the greatest (in principle and practice) of all agricultural organizations today. Best wishes to all members.—D. McGuire, Hamilton, Mont.

Organized Farmers Fight Centralizers

In the debate over the anti-trust bill in Congress several congressmen took up cudgels in defense of co-operating farmers. Representative Townner of Iowa introduced an amendment to prevent dealers from going into a community where there is a co-operative organization of farmers, overbidding and underselling until they put the co-operators out of business, and then resume the old tactics of extortion. These dealers are known as centralizers, as they concentrate their efforts upon one locality at a time, and are said to be perniciously active against co-operative creameries in Illinois, Iowa, Wisconsin, Michigan and Minnesota. The easiest way to rid the earth of such cattle is to give them rope enough and they will hang themselves, but only this is possible when farmers are solidly combined throughout the country and understand the meaning of loyalty to their organization. In the meantime possibly a law might help.

From an Old Granger

UP-TO-DATE FARMING:

In your appeal in the July 1st issue, asking the question, "Shall there be a convention?" I say yes, of course. Now, we are all Grangers, composed of farmers and almost every other industry except rum sellers. So in our organization the question of prices is suppressed. Reason—members engaged in the mercantile or creamery business. A few of us are pounding away, hoping still to initiate something we sorely need at the selling end of our business. The Grangers are "doing good" in every way but selling, which makes the work worse than child's play to those of us who realize our real needs. I am inclined to urge turning our organization into the F. S. E., to take in the most important feature of farming.—Yours, N. H.,

Must Make Farmers Think

PUBLISHER UP-TO-DATE:

I have missed a couple of copies of your paper, and as I can not do without them please send them.

You are certainly working along the right line; therefore keep at it. Let the good work go on. You have the thinking farmers with you. Now we must try to get the other farmers to thinking.—R. W. Phillips, Pocatello, Idaho.

Says We're on the Right Track

DEAR EDITOR:

I have been a reader of your valuable paper, UP-TO-DATE FARMING, several years and like it fine. I think you are on the right track to help the farmers.—William Heimberger, Saltsburg, Pa.

Given Away

OUR COMPLETE DINNER SET CONTAINS: 6 Dinner Plates, 6 Butter Plates, 6 Fruit or Cereal Dishes, 6 Cups, 6 Saucers, 1 Meat Platter, 1 Vegetable Dish and 1 Cake Plate—33 pieces in all, and full size for family use.

It is impossible to show the beauty of this wonderful set of china on a printed page. The beautifully embossed, scrolled borders, with their delicate pure gold tracings and the pretty clusters of roses in their natural, life-like colors, have to be seen as they really are to be appreciated. Our "Queen's favorite" Complete Dinner Set is too gorgeously pretty and beautifully decorated to be described. The decorations are burned into the ware and stand out as in real life—making it the prettiest and richest of all Dinner Sets.

You are bound to be delighted, for this is the biggest and most extraordinary offer we have ever made. Write us a letter, enclosing 1 cent (to help pay postage and packing), and we will send you a book of 115 high-grade, extra quality needles of all sizes and a set of 10 beautiful post cards and at the same time we will tell you how, for just a little of your time pleasantly spent, you can secure this 33-piece Complete Dinner Set, with 50 other presents, together with a very extra Surprise Gift. The needles alone would sell for 25 cents in the stores.

Our Plan Write us a letter, enclosing 1 cent (to help pay postage and packing), and we will send you a book of 115 high-grade, extra quality needles of all sizes and a set of 10 beautiful post cards and at the same time we will tell you how, for just a little of your time pleasantly spent, you can secure this 33-piece Complete Dinner Set, with 50 other presents, together with a very extra Surprise Gift. The needles alone would sell for 25 cents in the stores.

Write Now and let us send you a photograph of the dishes and testimonials from many of the hundreds of our friends who have received one of our Dinner Sets.

You will be surprised at how quickly you will be using one of our 33-piece Dinner Sets on your own table. We have studied a long time trying to figure out the easiest plan by which all of our friends could own one of our "Queen's Favorite" Dinner Sets and we believe you will agree with us that this is the very easiest of any.

"Songs of Equity"

A new song book just published. Eighty pages and cover. Every local should have one for each member and it should be in each farm home. There is nothing like a song to open a local clearing house meeting and there are no songs equal to these, which were nearly all written expressly for this society.

\$25 for a Name for this Pony

I will give \$25.00 FREE for the best name for this beautiful prize Shetland pony. Send the best name you can think of right away. Prize winning names for other ponies were Patch, Domino, Nemo, and Laddie. In case of tie each contestant sending name tied for will receive \$25. Not only do you have a good chance to win the \$25 prize but

You Can Win the Pony, Too

for I am going to give him to some boy or girl who will do a little work for me. I have given ponies to Blanch Barringer, N. C., Varná Turpin, Ky.; Edwin Olson, Minn.; Mott Souders, Mont.; Doris Leet, N. D.; Z. G. Barnett, La.; and now I am going to give away this pony.

1500 VOTES FREE

Just as soon as you send me a name for the pony I will tell you all about my great offer and I will also send you a special coupon good for 1500 free pony votes. Remember, I will give \$25 for the best name for this pony, and send you 1500 free pony votes and full particulars about the pony as soon as I hear from you. Write me today.

Dealers write for prices.

"I used Fly-Fuma on 50 cows in dairy with perfect success. Flies with sprayer will go over the legs in ten minutes. I use on horses with fine results. It is fine for more shoulders and harness galls. I used Fly-Fuma on dogs for fleas and on chickens for lice, with perfect results." F. McAVOKE, Nashville, Tenn.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

A SUMMARY of business conditions of the country by Bradstreet's follows:

Quiet. Holiday preparations and shutdowns lessen wholesale trade and industrial activities. Retail trade irregularly affected by cool, rainy weather and vacation purchases. Crop reports more uniformly favorable than for years past. Winter wheat movement enlarging. Money moving to country earlier than usual. Wool active. Lumber shows more life in the Pacific northwest. Tinplate industry running full. Wheat exports large. Clearings slightly behind last year for six months. Failures increase.

Since our last report the area affected by serious drought has extended and complaints are being received of damage to corn and other summer crops. On the strength of such reports the speculative price of corn for the December option advanced 2 cents on July 9. The dry weather over a large part of the country has, however, been favorable to caring for the wheat and threshing. Excessive rains have fallen in the northwest, but they can not be said to be but favorable for the wheat crop on the whole. Cotton has gained in condition, but the weather in much of the south has been too dry for truck crops. Tobacco has experienced perhaps the most handicaps, with the result that the acreage is reduced and the condition very low, being given at only 66 per cent on July 1 (government report) against 82.8 per cent a year before. The government crop report of July 1 gives the wheat estimate another boost.

It now stands at 930,000,000 bushels. The winter wheat crop is made, but the final figures on spring wheat may change these preliminary ones either to more or less. That we will have a crop that will surpass all former yields is certain. But, as we said before, take the world over, the crop will not be more than a normal one. The Department of Agriculture in a statement sent out from Washington on July 9 also holds to this view. This statement says: "The world's crops of wheat and competing grains do not promise more than the average in recent years. Besides this, more than the usual diversion of wheat from its use as food to the use of feed for live stock may be expected because of the relatively short supply of corn in sections where there is an abundance of wheat." Corn is worth 7 cents a bushel more in Kansas than the market price for wheat. It is natural, then, that millions of bushels of wheat will be fed or held because of this disparity of prices. If we count what we may conservatively estimate will be fed, unless the price goes much higher very soon, this country will not have more than a normal exportable surplus, while the foreign demand promises to be excessive.

The July 1 government report places the acreage in corn at 105,067,000 acres, which is 753,000 acres less than last year, while the general expectation was the acreage would be larger. The condition of corn July 1 indicates a crop of 2,868,000,000 bushels, compared with 2,446,988,000 bushels in 1913 and 3,124,000,000 bushels in 1912, the largest crop ever raised.

The oats acreage is 38,383,000, compared with 38,399,000 last year. The condition indicates a yield of 1,216,000,000 bushels, compared with 1,131,000,000 bushels in 1913 and 1,418,000,000 bushels in 1912, the greatest crop.

The potato acreage is given at 3,708,000, compared with 3,668,000 in 1913. The July condition indicates a yield of 356,000,000 bushels, compared with 332,000,000 bushels for 1913 and 420,647,000 bushels in 1912, the greatest crop.

We call particular attention to the great decrease in the visible supply of wheat, over 8,000,000 bushels, compared with a decrease of 3,000,000 bushels in the same period last year. Considering the enormous yields in the southwest and the fact that the harvest was a week to ten days

earlier than usual, this decrease in the visible appears to indicate that farmers are not marketing freely. The cash price is 1@1½¢ lower than two weeks before and about 10¢ lower than a year before. The tables tell the balance of the market story.

Advice

WHEAT—Hold it for higher prices. Ways to hold: Stack it, or thresh and store in granary, or ship to central market and store. See advice and help about storing in this number. **CORN**—Sell corn and buy oats and wheat to feed. **OATS**—We advise holding new oats. **COTTON**—Market gradually.

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on June 27, 1914, with comparisons, are shown in the following table: (The sign — before figures means decrease; X means increase.)

	June 27, 1914	Change from two weeks before	Change same period last yr.	Change from 2 years before
WHEAT	16,911,000	—8,354,000	—3,172,000	—15,213,000
CORN	9,354,000	X 76,000	X 3,198,000	—4,192,000
OATS	8,891,000	—481,000	X 3,362,000	—7,887,000
BARLEY	2,181,000	—21,000	X 429,000	—723,000

The visible supply of wheat in Canada on the same date was 16,086,000 bushels. This is 5,109,000 bushels less than two weeks before and is 1,798,000 bushels less than a year before. The visible supply of oats was 6,516,000 bushels on the same date, which is 3,024,000 bushels less than two weeks before and is 477,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on July 9, 1914, two weeks before and a year before as follows:

	July 9, 1914	Two weeks before	A year before
WHEAT, No. 2 RED			
Chicago	81½@83	84½@84½	89 @91
St. Louis	78½@79½	80	85½@87
Kansas City	75	81 @82	84 @87
Cincinnati	81 @82	85 @87	89 @92
New York			96½@98
Minneapolis—Spring wheat: No. 1 hard, 94½¢; No. 1 northern, 88@90½¢. Two weeks before, 90½¢ and 87½¢ respectively. A year before, 92½¢ and 91¼@92¼¢ respectively.			
CORN, No. 2 WHITE			
Chicago	70¼@70½	74 @75	63 @63½
St. Louis	77	74	64 @64½
Kansas City	75 @75½	73 @73½	61 @61½
Cincinnati	76½@77	78 @79½	66 @66½
New York			68½
OATS, No. 2 WHITE			
Chicago	37¼@38	39¼@39½	42¼@42½
St. Louis	40¼	40¼	42¼@43
Kansas City	40	39¼@39½	41
Cincinnati	37¼@38	40¼@42¼	45¼@46
New York			48

Future Grain Prices

Chicago grain futures closed on July 9, 1914, and two weeks before as follows: Wheat—July, 79½¢; September, 78½¢; December, 81¼¢. Two weeks before, 79½¢ and 78½¢ respectively. Corn—July, 68½¢; September, 68½¢; December, 57½¢. Two weeks before, 68½¢ and 67½¢ respectively. Oats—July, 37½¢; September, 35½¢; December, 37½¢. Two weeks before, 38½¢ and 37½¢ respectively. Winnipeg, Canada—Spring wheat: July, 90½¢; October, 82¼¢. Two weeks before, 89½¢ and 81½¢ respectively.

Cotton

New York, July 9, 1914

Cash cotton closed as follows: Middling upland, 13.25¢; middling gulf, 13.50¢. Two weeks before the price was the same. A year before the price was 12.25¢ and 12.50¢ respectively.

Chicago Produce Market

Chicago, July 7, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Market was a shade easier and barreled Cobblers sold 5@10¢ lower. Receipts were liberal, while buyers took hold less freely than on Monday. Sales were made at \$4.50@4.60 per barrel for car load lots of nice Virginia Cobblers and up to \$4.65@4.85 for wagon loads of plain marks and fancy brands. Receipts were placed at 110 cars, which included white stock from California.

Sales reported were: Per bushel—Sacked Texas Triumphs, 1 car at \$1.40, 1 car at \$1.45; Oklahomas, 1 car at \$1.50, 1 car at \$1.60; California, white, 1 car at \$1.50 and 1 car at \$1.60. Virginia Cobblers, per barrel, 2 cars at \$4.50, 5 cars at \$4.55, 10 cars at \$4.60, 1 car fancy early at \$4.65.

Per bushel, sacks, Arkansas and Oklahoma, red, 120@1.60. Texas, show more or less decay, 1.00@1.60. California, white, 1.40@1.60. Per barrel, Virginia Cobblers, 4.50@4.65. Virginia Cobblers in load lots, 4.65@4.85. OLD POTATOES—Season about ended. Only few short cars now coming. They are mostly direct to dealers. Few small lots offered on open market sell at \$1.35 to \$1.40 per bushel.

BEANS—No open market trading. Dealers are having a light trade in Pea Beans. Nothing to speak of in other kinds.

Pea Beans—Hand-picked, choice, \$2.10@2.15. Common, 1.95@2.00. Red Kidneys, common to fair, 2.65@3.15. Fancy, 3.20@3.25. Brown Swedish, long, 1.80@2.10. Round, 2.00@2.25.

The price of hand-picked choice pea beans is 5¢ a bushel lower than two weeks before. Other varieties are unchanged from two weeks before. A year before the price of choice hand-picked pea beans was \$1.15 to \$2.20 a bushel.

HAY—Receipts, 539 tons. Demand continues good for the better grades of timothy hay and offerings light. Market firm. Other descriptions steady. Demand fair and arrivals only moderate. Prairie hay quiet.

Choice Timothy Hay, \$17.50@18.50. No. 1 Timothy, 15.00@16.00.

Read Wheat Prices at Right, Corn and Oats at Left

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago for the period, 1909 to June, 1914, inclusive. The lowest figures in June, 1914, were: Wheat, 78½¢, on June 30; Corn, 67½¢, on June 26, and Oats, 37½¢, on June 30.

	Change same period last yr.	Change from 2 years before	Change from 3 years before
WHEAT	—3,172,000	—15,213,000	—8,810,000
CORN	X 3,198,000	—4,192,000	—477,000
OATS	X 3,362,000	—7,887,000	X 4,411,000
BARLEY	X 429,000	—723,000	X 1,435,000

No. 2 Timothy..... 12.50@13.00
Iowa and Nebraska Prairie..... 15.00@17.00
Illinois and Wisconsin Prairie..... 8.00@11.00
Timothy hay is 50¢ a ton higher than two weeks before. Iowa and Nebraska prairie hay is \$2 a ton lower than two weeks before. Other prairie hay is unchanged from two weeks before. A year before the price of choice timothy hay was \$14.50 to \$15 per ton.

STRAW—Rye straw quotable at \$3@3.50. Oat straw at \$6.50@7. Wheat straw at \$6.50.
Rye straw is 50¢ a ton lower, oats straw 50¢ to \$1 a ton lower and wheat straw 50¢ a ton lower than two weeks before.

BROOM CORN—The market remains quiet. Per ton, Illinois corn..... \$115@135
Oklahoma..... 60@130
Damp and damaged less.

The price of broom corn is the same as two weeks before. The price of broom corn a year before was \$100@120 a ton for Illinois and \$50@80 a ton for Oklahoma.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week	Last week	Last year
Monday	17,557	13,002	19,219
Tuesday	17,772	12,926	16,087
Totals	35,329	25,928	35,256

The market is ruling steady for fine stock, while for the poorer lots and ungraded stock there was an easy, irregular market.

Fresh, Firsts..... 18 @19
Ordinary, Firsts..... 17 @17½
Checks, good sound..... 13
Musty and moldy..... 9 @10
Dirties, good..... 14½
Heated, showing heavy loss..... 11 @12
Miscellaneous, cases included..... 15 @18¼
Cases returned..... 14½@17¼
The price of eggs is ¼¢ to 1¢ higher than two weeks before.

Fruits

APPLES—State of this market continues about as lately noted. Old are cleaning up in a quiet, slow way and they rule easy.

Of new there are fair arrivals. They are selling at irregular prices. Difference in prices is due to size, quality, condition and packing. There is considerable difference. Common, very small, gnarly or speckled stock not wanted. No regular quotation for such goods.

CHERRIES—Choice sour are fair sale. Sweet also are saleable in really choice, sound and good size.

CURRENTS—Sell very well and rule steady if large and nice, but are rather slow when ordinary and small.

LEMONS—Were having a fair trade, but are by no means active. Supply is ample.

ORANGES—Remain in ample supply and a moderate, steady trade exists.

PINEAPPLES—Are in very moderate supply and are saleable.

PEARS—Some bushel baskets of LaConte from Indiana received. They were very ordinary.

PLUMS—Are coming forward in small lots. They are saleable if good size and sound. If soft or very small there is no regular demand. Such goods have to be let go at what peddlers will pay.

PEACHES—Were in good supply. Demand only moderate. No one taking many. A quiet, easy market quoted.

Berries

BLACKBERRIES—Were in ample supply. The Indianas came late. A good many of these are yet unsold.

BLACK RASPBERRIES—Demand was very good. Supply not so large as it has been. Still, there were all that were needed. Market steady.

BLUEBERRIES—Steady for good, dry. Receipts moderate. Supply ample. Quality uneven; prices range accordingly. Southern are mainly wet and bruised.

GOOSEBERRIES—There was only a tame demand. Supply ample. Some came marked Downings that are nothing of the kind.

RED RASPBERRIES—Choice, bright berries very good sale. Small or dark slow. There was a very good supply. Quotations vary with quality.

Melons

CANTALOUPE AND GEMS—Market fairly firm for California. Stocks have been reduced and arrivals are on the decrease. The heavy run appears to be over. Georgias are largely in soft order. Some too poor to sell and not taken from cars. Illinois in baskets are not generally cared for so long as the others are offered.

WATERMELONS—There were reported 100 to 125 cars of old stock on hand. They are dull and have no regular value.

Vegetables

ASPARAGUS—Trade quiet. Home-grown is in ample supply and meets most requirements. Outside stock is slow. When it comes late and has to be carried over it becomes heated and has scarcely any value.

BEETS—There is a liberal supply of home-grown. Trade quiet.

CARROTS—Home-grown are plentiful and easy. Demand moderate.

CABBAGE—Fair trade in home-grown cabbage, which is plentiful. Outside stock slow.

CAULIFLOWER—Saleable when fancy, good size, clean and fresh. There is ample supply of home-grown.

CELERY—Receipts of Michigan liberal today. Trade only fair and market easier. Supply probably will not clean up.

CUCUMBERS—Fair sale, but in good supply. Stock that is poor, small or yellow is hard to move.

EGGPLANT—Demand is tame. There is an ample supply and market is easy.

GARLIC—Trade quiet. New quoted at 12¢ per pound. GREEN ONIONS—Home-grown supply the market.

GREEN PEAS—Saleable and steady when fine, green and fresh. Supply is moderate.

LETTUCE—Demand is quiet and market easy. There is an ample supply, including eastern Michigan and home-grown.

MUSHROOMS—Trade is slow. Receipts do not clear readily and market is weak.

ONIONS—Saleable in a moderate way when fresh, sound and clean. The Texas remaining and many of the Californias include many soft and showing decay. They have to be sold. Home-grown are coming on the market.

OKRA—Demand tame. General quality is poor and buyers do not take hold.

PEPPERS—Slow sale and lower. There is an ample supply and buyers take only the most desirable.

PIE PLANT—Home-grown has fair sale. It is in ample supply.

PARSLEY—Market is supplied with home-grown. Demand quiet and prices easy.

RADISHES—Quiet. Supply is moderate and market steady.

SQUASH—Moderate sale and easy. Supply is good.

SWEET CORN—Sells fairly when fine, green and fresh. Poor, dry stock not wanted.

SPINACH—Supply moderate and demand limited. Market steady.

STRING BEANS—Home-grown supply the trade. There is little shipping demand and market is quiet and lower. A car of Baltimore beans in today. The stock was heated and badly nested and had to sell at low prices.

TOMATOES—There is a good demand for fancy, sound, ripe tomatoes. They sell well at recently reduced prices. Poor, soft, blemished or green stock is dull. There is a good deal of that kind and it does not clean up.

TURNIPS—Home-grown supply requirements. Market quiet and easy.

SUPPLY AND DEMAND

The demand for wheat comes over a whole year, but you get your crop all at once. It follows, then, that the demand must be fed as it appears. This means that farmers must control their marketing. That's easy. Just fix ONE DOLLAR in your mind and ask it. Don't sell when it won't be paid. Sell when it is paid. Quit selling the minute it won't be paid. Only this and nothing more.

THE MEETING

Referring to the matter of a meeting or convention in the interest of Dollar Wheat and Prosperity, as referred to in our July 1 number, this is to say that the call will be made before the August 1 number of this paper, reaches its readers.

The responses to the question were numerous and unanimously in favor of the meeting. We are now waiting on word from our directors and some of the people who are expected to join in the call, as to the date and scope of the objects as well as to whether it shall be for a few states or national.

The Mercantile Club of Kansas City, KANSAS, has extended an invitation to hold the meeting in that city. The invitation will very likely be accepted. The date will probably be the fore part of August.

SMALL CHANGE IDEAS FOR THE WOMAN ON THE FARM

Raspberry Culture—These berries do not require a specially fertile soil. They grow best against a wall, along the edge of a wood or any semi-protected spot. The red varieties are less susceptible to scale in this section.

Plant the canes in the fall, protect as climate requires. Propagate by dividing the roots. Keep the vines clean and dead canes pulled out. Cut the tips of the longest canes back to where the buds begin.

There is always a market for the ripe berries and orders can be secured for jelly or jam if too far from market to sell the ripe berries. These are a clean, easy to handle berry and many waste farm spots will grow two quarts of berries where none are growing if the plants are once set. Even the wild plants, set and cultivated, yield well.

Pumpkins—One enterprising friend made a pumpkin patch pay for a pretty winter outfit in this way: Before Thanksgiving she phoned her friends and acquaintances that she would furnish ready-cooked pumpkin for the national pie at 25 cents a quart. As fuel is an item to the city housewife she received plenty of orders. The pumpkin was delivered in quart Mason jars, which were returned later. The pumpkin was carefully cooked and stewed low, so that one did not buy

juice. The grocer took several gallons in bulk at a less figure and repeated his order several times after Thanksgiving, as many customers did.

Apple Butter—Apple butter, if well made, is always salable. Restaurants and hotels and some groceries buy in the bulk. Make nice and clean. Make your price known and the time you will have it for sale. From the clean peelings and cores jelly or vinegar can be made.

Horseradish Sauce—This is a vegetable that can be prepared in the winter season. Grind your radish fine. Use good vinegar, bottle and seal, label neatly and it is ready for sale.

The culture of the root is very easy. It is a hardy plant. When digging reset the hard upper crown for new growth.

Squab Raising—Many an old farm building can be made a cat-proof pigeon loft. Also wire in an open space for airing. Squabs sell readily for 50 cents a pair when old enough to dress.

A good book on pigeon culture should be carefully studied.

Tomato Catsup—If you have never tried this recipe do so once: Grand fresh ripe prepared tomatoes in your food chopper. Also grind the required amount of onion. These are the proportions I use: One gallon of ground tomato, one cup of ground onion, one cup strong vinegar, one cup sugar, two tablespoons salt, spices to taste. Stir and boil for one-half hour. Have bottles clean and warm. Soak new corks in hot water for fifteen minutes. Fill and seal hot. This sells well. Have uniform bottles and neat labels.

The grinding and quick cooking preserves the bright color and lessens the work of making. Where the onion is disliked one cup of horseradish may be used. This may be made with profit where a quantity of tomatoes are grown. Furnish a sample and prices to hotels, groceries and such places. One farm girl took a sample to her college housekeeper and paid half her tuition with this product. The sale of canned tomatoes greatly helped to pay brother's way in his school, too.

It often pays to arrange with a nearby college to enter on such terms. Perhaps father could easily furnish kindling for the furnace.—Mrs. C. C. Moser, Virginia.

AN EMERGENCY SHELF

Every farmer's wife, and possibly others, know what a problem confronts us many times to have unexpected company arrive.

Under the guise of hospitality we are in deep meditation over "What shall I have to eat?" A plain meal served with genuine hospitality our friends enjoy, but really we like to serve a little extra on these occasions to save our reputations. What better plan can be devised to meet this emergency than an emergency shelf? Stock this well with the canned goods now so temptingly prepared, baked beans, salmon, sliced pineapple, peas, corn, tomatoes, salad dressing, olives and canned fruits, providing last year's stock of home preserves is depleted. There are always great possibilities with plenty of milk, cream and eggs in combination with these articles of diet.

This shelf can be furnished more elaborately or just a few things kept for this purpose will help out of an embarrassing situation oftentimes. Serve in connection a large amount of good cheer, minus formality, and pleasant memories will linger with hostess and guests.

I once called on an old schoolmate and had but two hours to stay between trains. She received me with open arms, but in a short time, excusing herself, she disappeared in the kitchen. She hurried in and out, her mind engrossed in several preparations cooking on the gas range, then the table was hauled out under the trees—an hour had elapsed. The feast was now ready, beautiful to behold and taste. We hurried through the meal, had a hurried conversation and hurried to the train.

It had been ten years since we had met. How much I would have enjoyed her with a cup of tea and a slice of bread and butter rather than her lovely solicitous feast. Sometimes our friends relish our companionship more than they relish our cookery.—Mrs. F. Swancutt, Iowa.

THE BABY

A leading magazine comes out with the startling accusation that 316,000 babies die every year in the United States from causes that women could almost entirely control. The most objectionable feature of the accusation is that it is true. Many mothers who know the value of fresh air and cleanliness in the upbringing of healthy children entirely ignore a thing of even greater importance—the child's diet. The baby is brought to the table with the rest of the family and given portions of all the food the table affords. I have seen several babies as young as five months given gravy and cornstarch and pie; have seen many

"RUBY GORDON Or Back From The Grave" GIVEN

By Libble Sprague Phillips.

Here is a thrilling story of love, mystery and adventure that will grip your attention from the first word to the last! It is one of the greatest novels this famous writer has ever produced. Ruby Gordon, a poor orphan girl, becomes engaged to one of the young men in the town, who is the adopted son of a wealthy recluse. The old gentleman took a great dislike to Ruby Gordon because she reminded him of his wife who had left him years before and had been lost at sea in crossing the ocean; he felt that she was his wife's spirit reincarnated, and forbade Lawrence, his adopted son, to marry her, and made so much trouble that the young man finally broke his engagement and married another, but it is not their fate to so easily evade Ruby Gordon, as you will discover when you get your free copy of this great book and read the story yourself! Ruby Gordon will surely find a warm place in your heart—she is one of those sweet pure characters every reader admires. We purchased a large edition and will send the book free and postpaid to all who send 10c to pay for a 3 months' subscription to our big home and family magazine. Send today. Address **The Household, Book Dept. 160, Topeka, Kansas**

OLD FOLKS What 15c Will Do!

You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world, and that tells the truth and only the truth. The **Pathfinder** is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its 21st year of increasing success. The paper fills the bill without emptying the purse; it costs but \$1 a year, and the least expense of time or money this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address: **THE PATHFINDER, Box 7 WASHINGTON, D. C.**

Sent by Parcel Post the day we hear from you

Louise over 2 ft. tall and Susie and Jimmie

Pay no attention to other offers. My offer is the best

Louise can wear a real live baby's clothes

Over 2 feet tall

3 big dolls given away

Girls, if you want 3 of the cutest dolls you ever saw send for this doll family. Louise is over 2 ft. tall, very like a real youngster in size. She can wear a real baby's clothes. She will sit or stand. Brother Jimmie is a husky fellow and Sister Susie is too cute for anything. **JIMMIE AND SUSIE ARE FULLY DRESSED** and you will be delighted with all three dolls. I want to give this doll family to a little girl or boy in each home. The only condition is that you secure a new 6-months subscriber at 25c to Up-to-Date Farming. It is published twice a month, 12 issues in 6 months. I will also tell you how to get Princess, the big talking doll sensation from Germany. She says "Papa" and "Mama" like a real child. Send 25 cents and new subscriber and dolls will be sent by parcel post, prepaid. Miss Gertrude Allerton, Dept. A, Indianapolis, Ind.

children under one year eat pickles and bananas. Strangely enough, some of these babies were born of parents quite well informed along certain lines.

All of these babies, in the course of time, had sudden and severe illnesses, vomiting and purging, acute gastritis or infectious diarrhoea. If a calf gets the "scours" we know there is something wrong with its food supply, but if the baby has digestive disturbances we say: "It is only natural; his teeth are coming." Heaven speed the day when every parent will know that providence does not afflict teething babies.

In a certain western town there grew a baby whose mother realized that her child's success in life depended far more on his physical welfare than on any other advantage she could give him. She searched the magazines for helpful articles on the care of the baby. She consulted the best educated physician the place afforded in regard to the baby's food and she followed the advice he gave her. Until the baby was fourteen months old he had no taste of anything but milk and water. Neighbors remonstrated—of course they did! They said it was a shame and an outrage and that babies got hungry for "other things" same as grown folks. One woman, who told how she always fed her babies "everything" from the time they were six weeks old, said "she thought she ought to know something about raising children, as she had had nine." I took the trouble to find out about her nine. Two of them had died of "teething disturbances" before the eighth month. Another had succumbed to the dreadful "second summer" ills. One reached manhood and died with cancer of the stomach. Five are living. Two have serious stomach trouble, a third lives the year around on a "diet" and the usefulness of the other two is greatly impaired by their diseased bodies.

But to return to the baby. All food that contained starch was excluded from his diet until after his second birthday. After his fourteenth month new foods were gradually added to his diet so that by the end of the second year he was taking juices of peaches, prunes and oranges, beef juice, scraped rare beef, long-cooked oatmeal, graham crackers, soft egg yolks, non-starchy breakfast foods with cream and sugar, baked apples and an abundance of whole milk.

This baby cut his teeth somewhat earlier than the average baby does. The process was perfectly natural and caused him not one moment's sickness or pain. He is a strong and sturdy boy and has never known a physical pain except those occasioned by the usual number of bumps and tumbles.—**Pearl Chenoweth, Jennings, Kas.**

APRONS FOR MILKING

Much of the work on a farm soils the clothes—plowing, hauling manure, cleaning cows, horses and so on. A farmer, even if tired, should never milk the cows in these clothes unless they are protected and covered with an apron of some stout cloth and of good size. To keep the cows clean is not difficult or expensive if the stalls are all right. Let the milker also be clean. Be sure the hands are clean as well as the clothing.

Appetizing Dishes

(From the Mother's Magazine)

Shield Sandwiches—Cut thin slices of bread, trimming off all the crust, and shape them like shields. Chop chicken meat very fine. Take one-fourth pound butter to two pounds chicken, rubbing in a pinch of mustard and a tablespoonful milk. Stir the chicken into this and fill the sandwiches. Frost the sandwiches at the top with fancy frosting to form the top of the shield. This should be done in red, white and blue.

Drum Cakes—Take four eggs, the weight of the eggs in sugar and half their weight in flour. Flavor with vanilla. Beat the yolks very light, add sugar, beat whites very light, sift flour three times, then sift into the mixture, stirring very gently. Bake in round tins. When cold, frost and ornament with tiny candies in imitation of a drum. On top of these have little paper drums filled with small candies.

What is Now the Fashion

6769—LADIES' WAIST. The upper end of the sleeve is continued to the neck edge, forming a yoke in appearance. Front and back are plain where joined to yoke. Closing is in front. The neck is open, trimmed with a flat collar and small revers. Sleeves long or of elbow length. Sizes 34 to 44 inches bust measure. Medium size requires 2 1/4 yards of 36-inch material, with five-eighths yard of 36-inch contrasting goods to trim.

6806—LADIES' SKIRT. This may be made with two gores or with three, according to the width of the material used in making it. There is just a suspicion of fullness across the top in the back and none whatever in front. At the waist is a fancy girdle, known as the "subway" belt, provided with a small change pocket and cut on the lines of a mannish vest. Sizes 22 to 32 inches waist measure. Medium size requires for three-gore skirt 2 1/4 yards of 44-inch material and 1 yard of 6-inch ribbon for girdle.

6789—WORK APRON. Cut in one piece and closes in the back. The neck is slightly open and the arm hole is extremely large, really an opening and not an arm hole at all. Sizes 36, 40 and 44 inches bust measure. Medium size requires 4 1/2 yards of 27-inch material.

6773—CHILD'S OUTFIT. This consists of a blouse and skirt. The blouse is made to slip on over the head and is quite long, while the little skirt is attached to it by means of large buttons and button holes which are made to show through on the right side. There are also suspender straps and these may be used or omitted as preferred. Sizes 2, 4, 6 and 8 years. Medium size requires, with suspenders, 1 1/2 yards of 36-inch light material and 1 1/4 yards of 36-inch dark goods. In one material 2 yards of 36-inch material will be required.

6779—GIRLS' DRESS. This has the front in one piece, but there is a diagonal line in front which simulates a closing. The skirt is straight and may be pleated or gathered as preferred. Such a design is excellent for embroidered flouncing or other bordered material. Sizes 6, 8, 10, 12 and 14 years. Medium size requires, as on figure, 1 1/2 yards of 36-inch material, with 2 yards of edging and 2 1/4 yards of ribbon for sash.

6783—BOYS' SUIT. This suit has straight or bloomer trousers joined to an underwaist. The coat fastens in front and is trimmed with a wide collar. Sizes 2, 4 and 6 years. Medium size requires 2 1/4 yards of 36-inch material.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

DANCE!

Then the music starts and the time-counting continues.

That's the way the special

COLUMBIA

one-step dance instruction record goes.

It will easily teach you in an hour how to get that graceful, gliding movement of the one-step.

You can learn the hesitation, maxixe and tango too—for our instruction records at 75 cents each (playable on your Columbia or Victor), together with G. Hepburn Wilson's FREE book, give you all the steps and movements you should know.

With the book and the records you have the most successful teacher in the country right in your home. The instructions in the book are clarified in the spoken directions you hear on the record; the music is played for you with emphatic and faultless rhythm, and the tempo is counted for you before the music and with the music.

You simply have to dance.

If you do not easily locate a dealer who can supply you with these records, write us.

Dealers Everywhere

Department of Buying Helps

We will be glad to assist subscribers in purchasing anything from a farm tractor or a diamond engagement ring to a churn or a mouse trap. Whatever you want, that is not advertised in UP-TO-DATE FARMING, write to us about it. We will help you buy to your advantage. UP-TO-DATE FARMING, Indianapolis, Ind.

Regarding Renewals

A great deal of unnecessary labor in our subscription department, and time and postage on the part of subscribers, will be saved if everybody will remember that credit for renewals can not always appear on the next paper received. Do not expect expiration date to be changed until the second paper you receive. If credit does not appear on your address label on the second paper you receive after paying it will be time enough to start an investigation.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

DOLLAR WHEAT! Every farmer knows that wheat ought to bring the growers a dollar per bushel, and they could get it if they would try in spite of all the plans and schemes of the market combines. The future of the country and the world depends upon the young people—the Cadet writers and others like them. It is not our purpose to make consumers pay more for bread. We are inaugurating a different method of marketing, a method that will divide the combined speculators' profits between the growers and the users. Everybody knows this can be done, but so many wait for others to do it. That makes it slow. We want our bright, active young friends to help us to get people to read.

UP-TO-DATE is needed in Montana, and everywhere else for that matter:

DEAR CADETS—I have been a reader of this paper for two years and find it valuable and interesting. It is what we need here in Montana and we specially need some one strong enough to organize and keep up the Equity System. We have a meeting arranged to organize a local here, and we all hope it will be a help toward the goal UP-TO-DATE is striving for, and that it will help us farmers. I would like to hear from all the Cadets and will answer all I receive.—H. J. Gardo, Lake Basin, Mont.

Constant renewals show that our paper is appreciated in the south. In proof we quote this five-year subscriber:

DEAR CADETS—I am a Win Parish girl and live in a town. I have read UP-TO-DATE FARMING about five years and think it is a splendid paper, and I wish to become a Cadet of Equity. I would be glad to hear from the Cadet boys and girls and will answer all letters and cards I receive from them.—Millie Weems, Hinton, La.

I would be glad to call special attention to each letter, but we must save space. It is quite a step from Louisiana to Oregon, isn't it? But UP-TO-DATE goes everywhere:

DEAR CADETS—I am a reader of UP-

TO-DATE FARMING and I enjoy it, especially the page for boys and girls. I live on a farm twelve miles from Portland and about one mile from the Clackamas river. Every summer my friends and I go to the river for an outing. I am 15 years old and attend a country school about a quarter of a mile from home. There is a rifle range near here, where soldiers from Vancouver and Portland come to practice shooting. The chief occupation in East Clackamas is farming. I have two sisters and one brother, but I am the only one at home. I would like very much to receive letters from the boys and girls and I will answer all.—Arlene Haworth, Clackamas, Ore.

DEAR CADETS—I am a South Carolina girl, 13 years of age, and I stay at home with my father and mother. We live on a 91-acre farm on a rural route, four miles from Walhalla, our nearest town. I go to Blue Ridge school, two and a half miles from home. I think UP-TO-DATE is the finest paper a farmer can read. I would like to hear from the Cadet boys and girls and I promise to answer all.—Annie Lynch, Walhalla, S. C.

DEAR CADETS—I read UP-TO-DATE and would like to join you. I read many papers and books. I like to read. I finished public school at 15. I went to Vanceburg, the county seat, and took the examination. The only thing I came near failing in was arithmetic, but I passed. Last winter my cousin and I studied literature, German and ancient history to improve our minds. I also reviewed Ray's third part arithmetic. I live on a good hill farm. The scenery is fine—much like the scenery of the Cumberland and Allegheny mountains. I have heard people who had seen the Rocky mountains say though the Rockies are larger, more magnificent, the Allegheny and Cumberland mountains are more beautiful. The principal crops here are corn, oats, tobacco, fruit and garden truck. My younger sister and I raise the chickens. She also helps papa with the horses and cows and I help mama in the house. Most of my outdoor work is among the chickens and flowers. I like to ride horseback. I ride a pony horse that wants to buck. He threw my sister once. I do most of our sewing, though I can't say I like to sew. I am 18 years old now and would like to hear the guesses you make as to my looks when you see my name. So far as I know, my father's family is the only one of the name in the United States. I want to hear from the Cadet boys and girls and will answer all I have time to.—Gertrude Regensteln, Cove Dale, Lewis Co., Ky.

DEAR CADETS—Since we have been taking UP-TO-DATE FARMING I have been

reading the Cadet page. I enjoy it very much and would like to become a Cadet of Equity. I am a North Dakota girl, 17 years old, and live on a 320-acre farm seven and one-half miles from Des Lacs. I would like to hear from some of the boys and girls of the different states and I will try to answer all letters and cards I receive.—Nora Hicks, Des Lacs, N. D.

Blanche Pratt, 17 years old, of Lone Tree, N. D., writes with the above, but we can not print both letters.

DEAR CADETS—An Alabama girl, 14 years old, who lives on a farm of 440 acres, would like to join you. Our principal crops are cotton, corn, peanuts, peas, potatoes and sugar cane. We have all kinds of entertainments and amusements, and I enjoy them very much. I would like to correspond with the Cadet girls and boys and will answer all I receive.—Evelyn Frank, Gainestown, Ala.

DEAR CADETS—I am a girl of 15 years and live on a 200-acre farm. My father owns twenty-three head of cattle and eight horses. I milk three cows every night and morning and also attend to 150 chickens. I like horseback riding and almost all kinds of outdoor sports. We have been taking UP-TO-DATE for quite awhile and like it very much. I would like to exchange letters and post cards with the Cadet boys and girls and will answer all I receive.—Shirley Yandell, Mildred, Mo.

DEAR CADETS—I am a Golden State girl who wishes to become a Cadet of Equity. I live on a farm of 160 acres in the noted Palo Verde valley, that extends for forty miles along the Colorado river. The valley is noted for its prize cotton, corn and alfalfa crops. I am nearly 14 and would like to exchange letters and cards with the girls and boys.—Virgie J. Fitz, Palo Verde, Cal.

DEAR CADETS—I am 15 years old and live on a large farm three and one-half miles from town. We moved here from Indianapolis last November. I love Indianapolis very much and am not satisfied here. I have been a reader of UP-TO-DATE FARMING for sometime and I love to read it. I would like to join the Cadets and hear from all the boys and girls. I will answer all letters I receive.—Audrey A. Reese, Whiteland, Ind.

DEAR CADETS—I read UP-TO-DATE and enjoy the Cadet page greatly. I live on a farm of 340 acres. It is rainy weather now (June 14), which is fine for the crops. We grow hay, oats, barley and wheat. My sister and I each have a riding horse and ride a good deal. We live three miles from town and one mile from the dam, which makes it handy for fishing and skating. A fish was caught this spring that weighed ten and one-half pounds. I am 15 years of age and would like to become a Cadet of Equity, and promise to answer all cards or letters I receive.—Eunice Clark, Mackay, Idaho.

DEAR CADETS—I am a boy just 20 years old and live on a farm of 420 acres, of which about 130 acres are timber land. The place is located thirteen miles east of Chariton and about four miles northwest of Melrose on the State road. My father and I farm for another person. We have in 56 acres of corn, 90 acres of meadow and a few acres in oats. I graduated from the Chariton high school this spring, from the business course, with four credits more than I needed. I think I will attend college at Indianapolis this fall. It is a Methodist college and I am a member of the First M. E. Church, having been received into membership in 1908. I have a No. 2A Eastman camera. I do my own developing and printing by the daylight method, which gives better results than the dark room method. I think UP-TO-DATE FARMING is a fine paper. I have taken it for quite a long time. I also like the cartoons on the front page. They certainly deserve credit. I do not wish to crowd any one out, so I will close by asking any one Cadets to exchange letters and postals with me. I will answer all I receive.—Ralph McCoy, Melrose, Ia.

DEAR CADETS—I am a Missouri girl and would like to join the Cadets. I am a reader of UP-TO-DATE and think it a fine paper. I am 17 years old and live on a farm of 200 acres eight miles from Appleton City. I live a mile from church and only a few steps from school. I would like to exchange cards or letters from the Cadet boys and girls.—Stella Ginter, Appleton City, Mo.

DEAR CADETS—I am a country girl, 14 years old, and like country life best of all. We live in the Mississippi Delta, three miles from the beautiful town of Clarksdale, and I think this is the prettiest country I have ever seen. We raise almost everything here and we have fine roads, and the autos sure do make good use of them. I would like to receive letters and cards from all the Cadet girls and boys. I will answer all and tell them of this beautiful country.—Lillie Sparks, Lyon, Miss.

DEAR CADETS—Here comes a South Carolina girl. I am 12 years old and I like farm life fine. I have three sisters and two brothers. I am the baby. We raise cotton and corn more than anything else. We always have a very nice garden, but it is so dry it does not look very well now. We had lots of strawberries this spring and we have a few yet (June 3). I have lots of pets—rabbits, cats and pigs. I would like very much to hear from some of the girls and boys and will answer all who write.—Ollie Clark, Chapin, S. C.

We are glad we can print so many nice letters, but still there are many not printed.

This PONY GIVEN

Boys! Girls! Do you want this beautiful Shetland Pony for your own? Write today—Quick! You can get him Free—but Hurry!

Carriage and Harness, Too, Come With Me All Given

Who Wants Me? QUICK!

My name is "JOE"

I am 42 inches high and three years old. I am a pet, too. My color is black, and I have the silkiest, fluffiest mane and tail in the world. I am considered a very handsome pony. I am well trained. You can either drive or ride me and I am just as gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy.

I WILL GO ANYWHERE to find a kind little boy or girl as my owner. I am ready and waiting. I'll make you happy because that is what I was made for, and it's what I like to do. If you want me, and I know you do, just send your name and address to Uncle Billy, and I'll do my best to come to you in a hurry. I am going to some boy or girl, so be quick. Send your name this very day.

Send Me Your Name Today

I have already given away 34 real, live Shetland ponies. Do you want "JOE"? Of course you do. Write me at once and I will send you 2,000 Pony Votes Free for your promptness. I will also show you how to get more pony votes. So easy to get a pony if you do as I say. I will also send pony pictures; tell you how to get "JOE" and his outfit free, and prove that what I say is absolutely true. But you must hurry. So write while you think of it—at once—don't put it off. Just say that you want "JOE."

A Postal Will Do Address **Uncle Billy, Pony Man, 142 W. Ohio St., Chicago, Ill.**

A CartLoad of Fun For 10 Cts

Stories Suitable for Church, School or Home Entertainments

Do you enjoy a funny story—good and wholesome? Then send for our 64-page double-column book of fun. It's just crowded full of anecdotes and stories that will make you laugh till the tears come. Read "The Gold Fish Trick," "Mrs. Jones' Burglar," "Those Wicked Women," "Cured as if by Magic," and 160 others. Then if not satisfied we will return your money on request. Made to sell at 25c. Special Edition in attractive paper covers, 10c each—3 for 25c postpaid.

State Officials Test Cream Separators

Foreign Machine Proves Wonderful Skimmer

Recent tests by state agricultural officials emphasize the remarkable improvement in the manufacture of cream separators during the past few years.

These tests were made by Prof. J. S. Moore, of the Department of Dairy Husbandry of the Mississippi Agricultural and Mechanical College, and by the Hon. W. A. Graham, Commissioner of Agriculture of the State of South Carolina.

Both these tests were made on the cream separating efficiency of the wonderful European Separator—the Melotte. It is pretty generally recognized that the Melotte, which has won over 180 international prizes, represents the greatest achievement in the manufacture of cream separators; at least its constant winning in every test would seem to indicate this.

Tremendous Interest Aroused.

The Melotte's recent appearance on the American market, due to the removal of patent restrictions followed by removal also of all duty, has created quite a sensation in the cream separator industry in the United States. Winning grand prize after grand prize in Europe the Melotte has long been recognized by foreign dairy experts as absolutely first.

American experts are rapidly reaching the same decision.

In the tests made by Prof. Moore and Commissioner Graham it was shown that only 1-100 of 1 per cent of fat remained in the milk which was run through the Melotte.

Only 1-100 of 1 per cent in this state official's test! The state officials were pleased at the most remarkable showing. And yet it was an ordinary showing for the Melotte—the same showing it had been making in hundreds of tests—the kind of showing it made in its great international contests.

In reporting tests on samples of cream and milk to Mr. W. B. Helm, of Brookville, Miss., the purchaser of a Melotte, Prof. J. S. Moore, writes:

"Dear Sir: We have tested the samples of cream and milk and find that the cream tests 40 per cent butter fat and the skimmed milk less than 1-100 of 1 per cent fat. This indicates that your separator is doing first-class work. The cream is rich, but there is no objection to that as long as your separator is taking the fat out as thoroughly as it is now."

Yours very truly,
"Signed" J. S. MOORE."

When the grand prize-winning Melotte was first introduced into the United States Commissioner Graham was one of the first purchasers. In a letter to Mr. Henry B. Babson, of Chicago, the Melotte American representative, he says:

"Yours of recent date at hand. The separator is O. K. The State Dairyman tested the skim milk. It was 1-100 of 1 per cent."

A Short Description.

All gears and pinions of this machine are mounted in the head. All Melotte gears are cut out of solid blocks of metal and are mounted on short, vertical, hardened steel arbors. Gears and arbors run on steel balls. Thus, there is practically no friction on these vertical bearings.

Points of Superiority.

The bowl bearing of the Melotte is a simple ball and cone. This is the secret of its wonderful skimming efficiency. This feature also eliminates any vibration of the bowl.

The turbine distributor of the Melotte is a single hollow cylindrical piece placed inside of the discs. It gives an unobstructed cream space in the center of the bowl, which averages about 100% larger than the ordinary space devoted to this purpose. Small openings and cream ducts have been eliminated. Thus the thickest, heaviest cream can be skimmed without any stoppage or clogging.

Self-Balancing Bowl.

The bowl chamber of the Melotte is strictly sanitary in that it is not only nicely rounded on the inside, but is covered with a white enamel, as smooth as glass and the easiest known substance to clean. This chamber may be opened and cleaned, and it may be left open to air. It is thus always fresh, clean and sweet.

The frictionless bowl of the Melotte is something which can be found on no other cream separator. It is a positively self-balancing bowl, a bowl which simply cannot get out of balance. The bowl hangs down instead of being supported from below. It is held in suspension by a single bearing from above.

An Ultra Liberal Offer.

A remarkable offer is being made on this separator to every responsible American farmer. So uniformly perfect is this machine that the farmer is invited to have one of these separators sent direct to the farm without paying a cent down. He is invited to make a thorough test and decide its great efficiency before buying.

The shipments to the United States are limited, but Mr. Babson says, "First come—first served."

Self-balancing overhead bowl, with steel ball-bearing. Cannot vibrate. Cast iron bowl chamber, lined with white bath-tub enamel. Greatest skimming efficiency. Easiest to clean and wonderfully easy to operate.

Greatest Cream Separator Offer

The Melotte—the wonderful Melotte—the great French-Belgian Separator—the prize winner all over Europe—now to be shipped anywhere in the U. S. and on the most sweeping introductory offer. The best of all Separators in Europe or America—yours on this rock-bottom free trial offer. You pay the same price you would pay in Belgium, plus only \$1.75 for water freight.

This is positively the first bona fide, no-money-down offer ever made on any cream separator. No manufacturer of any cream separator ever dared make such a startling proposition before. All others who have ever pretended to offer you a free trial or to send their separators without any money down have taken care to get something out of you first. But we don't want anything.

Free Duty—Save \$15.25

The tariff has been cut right off! You get the full benefit. Save \$15.25. The wonderful imported French-Belgian Cream Separator—the prize winner all over Europe—now offered at an unheard-of price in America. You get the world's greatest machine at the price of an ordinary separator—at the same price you would pay in Belgium, plus only \$1.75 for water freight.

30 Days' Free Trial Shipped Without a Penny Down

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We don't want a cent of your money. We give you a free trial that is a free trial in every sense of the word. No C. O. D.—no lease, nor mortgage. Watch your profits go up. Watch the increase in the amount of cream, then if you do not believe that you ought to have a cream separator just send it back at our expense. If you decide that you want the Melotte, keep it on easy monthly payments.

Monthly Payments These monthly payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't need to be without a cream separator when you can have one right in your own dairy house while you are paying for it. In reality it pays for itself.

Valuable FREE Book

"Profitable Dairying"

Place your name on the coupon above, cut it out and mail it at once. Then we will send you our great free book, "Profitable Dairying," telling you everything about cows and dairying, butter and cream—how to feed and care for cattle, how to make them more valuable than they are now, how to make more money than ever before out of your cows. This book is written by two of the best known dairy scientists in the country—Prof. B. H. Benkenhoff, Wisconsin Dairy School Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago County Agricultural School, Winnebago, Wis. It does not contain a word of advertising.

Send coupon for this book today. It contains not a single word of advertising.

**Send
This Coupon
Today Sure**

It brings you the Free Book "Profitable Dairying," and full details of wonderfully liberal offer on the great "Melotte". Don't delay. Send the coupon now.

Reo the Fifth

Fall Series
\$1,175 Equipped
F. O. B. Lansing

It Took Courage
To Build This Car

When R. E. Olds built Reo the Fifth men called him an extremist. The factory cost was \$200 more than if built by other standards. Some men felt that such a car meant ruin for the maker.

But he gave this car the best he knew after 27 years of car building. He built it to mark his limit. He gave it vast over-capacity.

He built it to endure—to run year after year as well as it runs when new. He built it to save the average user hundreds of dollars in upkeep. All because he believed that men were tired of troubles, and they wanted an honest car.

You will find gears tested in a 50-ton crushing machine. You will find vast over-capacity—big margins of safety. You will find 15 roller bearings—190 drop forgings. You will find the most careful, most costly construction.

But all this saves you trouble. It saves you upkeep and repairs. It makes the car enduring. Reo the Fifth, with proper care, should keep its newness for years and years.

Any man who investigates—any man who compares—will want his car built like this.

And They Did

The demand for this car, from the very first, has exceeded the factory output. At times five buyers waited for every car we built.

Now tens of thousands are in use. Legions of men know from experience how this car stays new. These men have told others. And now—in midsummer—we have on hand 3,000 urgent orders. To meet the demand we are adding to our factory three enormous buildings.

Mr. Olds was right. Men wanted a well-built car. Many a rival has met with disaster because the cars were skimpy. The Reo Company has grown to be one of the greatest concerns in the industry.

Look Inside

When you buy a car, look at the hidden parts. There lies the value of a car. In Reo the Fifth you will find steel made to formula.

Reo Motor Car Company, Lansing, Mich.
Canadian Factory, St. Catharines, Ont. Canadian Price, \$1575

Reo Features

- Streamline Body
- Electric starter and lights
- Electric horn
- One-rod control
- 35 horsepower
- Tires 34 x 4
- 15 roller bearings
- 190 drop forgings
- Dimming searchlights
- Mohair top and curtains
- Clear vision windshield
- Speedometer—extra rim—improved tire bracket—tool and tire outfit—foot and robe rail, etc.
- 5-passenger touring car
- 2-passenger roadster

What We Want You to Know and Why

Being a Few Words on Particular Matters

Troubles that are World Wide

The United States is not the only country grappling with a high-cost-of-living problem, according to Mr. Otto Krah, a corporation lawyer of Dresden, Germany, who is touring the United States for study and pleasure. Mr. Krah places the blame for the increased cost of many things at the door of the workingmen, who demand continual increases in wages, which in turn increases the expense of producing articles which they must buy. Then, finding the cost of such articles increasing, they demand still higher wages and thus it continues, like a dog trying to catch its tail. Taxes are a heavy burden in Germany, which Mr. Krah says is caused by the necessity for a powerful army and navy.

Uncle Sam's Money to Move Crops

Secretary of the Treasury McAdoo has announced that the United States treasury is ready to supply the country with money to "move the crops" again this year, and dispatches say the demand for the money is large. Mr. McAdoo plans to loan the banks of the country "every cent they need for this purpose," say the dispatches from Washington. Last year he deposited \$37,000,000 and more will be required this year. The farmers' opportunity is at hand. By storing their wheat for a dollar they can have the United States treasury behind them. Indirectly, it is true, but if the treasury is to supply the money needed to move the crops, and the farmers store for one dollar per bushel, the need for money will be increased to that extent and we are told the need will be supplied.

Farmers Losing \$50,000 Daily in Kansas City Alone

There is much unrest among the Kansas farmers, who are growing very much dissatisfied with the manipulations of grain speculators on the Kansas City Board of Trade. Wheat has been bringing the farmers 63 cents at the local elevators and at the prices at which it is resold in Kansas City the Kansas farmers are losing \$50,000 a day, a loss of 5 cents on every bushel sold. Congressman Doolittle of Kansas has asked for a Congressional investigation of the grain market and transactions at Kansas City. Mr. Doolittle means well, but his plan will do little to save the farmers' losses on the present crop. When the farmers get together in the Dollar Wheat convention, across the river at Kansas City, Kansas, August 17, 18 and 19, we imagine something is going to be done, with a sureness and swiftness that will take the breath away from the grain operators and give Congress a much needed lesson in the way of getting things done.

Climbing Into the Band Wagon

Listen now to words of wisdom from an attache of the Minnesota Agricultural College: "Co-operation in marketing and in buying is, we believe, essential to the economical distribution of products. Large quantities of uniformly good products can be sold much more advantageously than can smaller quantities of products, each sample of which may be good in itself, but which when brought together are not uniform. When every farm was manufacturing its own butter, and each of the hundred or more farmers in the community was trying to sell butter of a different quality, the price of butter was comparatively low. Where the manager of the creamery has at his disposal large quantities of a uniform product he can sell at the best possible price. The products of a community, such as grain, potatoes and live stock, can be made uniform by co-operation among the members of the community in production, and then these larger quantities of uniform products can be sold by one man. Thus great advantages can be secured in enterprises on the farm." Farmers can not get away from this great issue, for it is a necessary factor in the progress of our nation and its people. Get about the business of organizing and remember a national marketing system alone can be effective.

Extravagance and the Thrift Society

One Simon Straus, whose habitat is in the great mart on the shores of Lake Michigan, is the president of a queer organization calling itself the American Society for Thrift. Mr. Straus is himself no doubt a thrifty body, for he has but recently returned from a visit to the capitals of European countries, possibly to study more thrift from the past masters of the art—the European peasantry. Anyhow, he now declares that America wastes more than France requires to live upon, that we are flying too high and living too fast and some of these days we are destined to "loop the loop" in living affairs and in doing so lose our rudders and crash to the earth. Which, of course, some may do, as many have done before and are doing today. But Mr. Straus says it is not the workaday men, who must struggle to support their families, that need lessons in thrift, but it is those who are making from \$1,500 a year upwards. "The man who makes fifteen hundred a year tries to live like the twenty-five hundred dollar man, who in turn tries to keep up with his five-thousand-dollar neighbor, who apes the ten-thousand set, and so on, ad infinitum," is the way Mr. Straus puts it, and doubtless it is true. Coming from one high up in those classes, the opinion should be authoritative. But so long as the common people, who are the ballast and mainstay of our national life, are thrifty, we need have no fears for our national safety, except for one thing: We must see to it that the common people are not the victims of the classes who are criticised by Mr. Straus. Whether or not those classes save what they obtain is not so important to the nation as the methods by which they obtain wealth to waste. So long as it is filched from producers to whom it should belong a condition is maintained which is dangerous and deplorable.

If the Society for Thrift will show the wealth producers how to keep the wealth they create it need concern itself but little over the waste in high circles, so far as the welfare of the nation and its most important body of citizens are concerned.

KILL THE BUGS AND SAVE THE PLANTS

FARMERS AND GARDENERS—It is easy to kill the bugs and worms that kill your plants. Ferto-Insecto is an inexpensive and easily applied powder that will do the work. It is harmless to man and beast.

FERTO-INSECTO POSITIVELY KILLS

Potato Bugs, Squash Bugs, Pumpkin Bugs, Melon Bugs, Currant Worms, Cabbage Worms, etc. Kills all creeping things that eat the leaves. It is a perfect insecticide. Ferto-Insecto is especially valuable in dry season, as it attracts moisture. Easily applied.

PRICE

5 lbs. 25c 50 lbs. \$1.75 500 lbs. \$12.50
10 lbs. 40c 100 lbs. \$3.00 1,000 lbs. \$22.50

Made by O. K. SEED STORE, Indianapolis, Indiana

Ferto-Insecto is certainly great. It saved me a fine crop of cucumbers from the ravages of the insects, and cabbage from the green worms.

Balanced Rations

A clear brain never has a brain storm.

Hold your wheat for the dollar. It is worth it.

Poor farming is sometimes evidence of a need for better tools.

Lime is a friend of the farmer, but on many farms needs to be introduced.

A gas engine is a treat to the boy on the farm with mechanical turn of mind.

The American farmers pay over fifteen million dollars annually for binder twine.

This is the time of year when the water supply is important. Keep it fresh and clean.

There should be great things done at the Dollar Wheat convention in Kansas City August 17, 18 and 19.

A common mistake humanity makes is to overestimate the worth of a dollar and underestimate the worth of a man.

Keep up courage. There is much that you don't know and you have chances galore to learn. Success lies ahead. Keep trying.

Be neighborly. If your neighbor has no watermelons and you have, send or take one to him now and then. It pays to do such things.

Conserving the power of the soil to produce continuously of good crops is your problem, brother farmer. Consider it well and be wise.

If there was such a thing as one best way for everybody, it would have been discovered long ago. Circumstances alter cases. That is what makes brains useful.

Can you teach your boy the fine points in picking out good animals for breeding purposes? How to buy a horse or a cow, and know what you are getting for your money? If not, send him to the agricultural college, and when he returns he may be able to teach you.

A \$200 machinery shed will house all the expensive farm implements on a 160-acre farm and provide a good work shop besides. It will save its cost in less than ten years and is worth the price as a convenience. What do we make money for but to add to the pleasures of living?

Mr. Everitt's article, "Whom Does Farming Pay," published in the July 15th issue, is making business men as well as farmers see things as they never saw them before. It is unanswerable and a great educator. Copies can be supplied in circular form. Obtain a number of them and convert your community.

Five counties in Illinois produce more corn than Argentina has shipped into this country in the last three years. Yet the very news of a ship load of corn coming from Argentina breaks the price in Chicago, where corn prices are made. The one great trouble with speculation is that it always overdoes it.

What Others Say and What We Think of It

"After a vacation one is glad to get back home and is more satisfied with his environment."—Indiana Farmer. Usually better satisfied with the environment than with the vacation.

"We point with pride to our agricultural committee," declares the Tennessee Bankers' Association. And we presume that the said committee "views with alarm" the fact that farmers do not produce more abundantly.

"Farming," says J. Russell Smith, "is the business in which a man of brains has the least competition." That puts it strong, but probably it is true. When farmers use more brains there will be still less competition. Co-operation will replace it.

"Scientific agriculture is the most important question now before the American people."—Fred Collins, banker and president of the Tennessee Bankers' Association. Yet the most of us are far more interested in the news from Mexico than we are in bulletins from the Department of Agriculture.

"I am convinced that to afford every reasonable facility for making this country a nation of home owners, and keeping it such, is the supreme duty and supreme opportunity of government."—Congressman Halton W. Summers. It is the man with a home who considers himself a man with a country. Homes make the best foundation for patriotism, and a government which helps a man obtain a home, and then protects his rights in it, is a country worth having.

"It is somewhat premature to raise hopes to the expectancy point on the crop outturn. So far the winter wheat crop is very helpful, but the price takes off a great deal of profit from the producers."—Price-Current Grain Reporter. The winter wheat is helpful—to the speculator, to the transportation companies, to the millers and other handlers. But the money the farmers should have, and are not getting, will not be helpful to merchants or manufacturers who sell goods to farmers. This is something business men should think more about.

"Some national and state legislators have tried to exempt farm and labor organizations from the application of anti-trust legislation. Such exemption would, we believe, be unconstitutional. Farmers do not ask for favoritism, but for a square deal. The real remedy seems to lie in modifying the Sherman law so as to permit co-operation in all lines of business, where such co-operation is for the public welfare. This will make farmers' co-operative movements lawful without exemption, and labor organizations will be free to co-operate in all legitimate ways."—Michigan Farmer. We commend this view to both the farmers and the legislators of this country.

Europe's Co-operative Message to America

VERY FEW opportunities slip away from the American people, as a nation, and we have made progress in which we can justly take pride in nearly every line of endeavor. But in co-operation, particularly in rural industry, we have not met with the success that should be ours, and there is a reason for it, not at all difficult to find. We can see practical examples of what successful co-operation can do for agriculture if we turn to some of the countries across the Atlantic. Co-operative enterprise has revolutionized agricultural Europe. It has made Belgium a land of efficient farmers. It has developed to a remarkable degree the agricultural possibilities of Germany, until her supply of home-grown food is nearly sufficient for her people. It has brought the dairy exports of Denmark up to over six millions of dollars' worth of products. It has given to Ireland a hope and faith in itself and its future that has put new life and vigor into agriculture, and the Erin farmers are more prosperous and happier.

Belgium has 2,300 rural organizations representing a membership of 500,000 people. At Luvaine alone is a federation of farmers' co-operative associations representing a membership of 50,000 farmers and doing an annual business amounting into millions. Germany has over 30,000 rural co-operative societies, of various kinds, and every one of these, with the true German thoroughness and thriftiness, have associated, affiliated and feder-

ated together until they are a solidified industrial unit with a membership of over five millions. In Ireland co-operation and the opportunities it creates for the individuals who use it has practically regenerated and reshaped Irish rural life and Denmark is one mass of affiliated rural organizations.

Right here let us again emphatically declare, as we have done consistently for many years, that the great need of the hour of rural co-operation in America is for the federation of the thousands of local rural co-operative associations and the larger general organizations into a national body for the purpose of establishing at once a national co-operative system of marketing, giving our producers the power, as they have always had the right, to demand and receive a profitable price for their products. This is the keystone in the arch that can bridge over the quicksands of agriculture in this country, and it is lacking; and until it is put properly in place, as this paper has repeatedly urged, and done so much to bring about, we shall continue to bear unnecessary burdens which hinder the progress our agriculture should make.

It is evident that those foreign countries have learned practically all the basic principles of successful co-operation. Their societies and organizations are not alike in detail, yet they all have points in common and these points usually have to do with fundamentals. It is apparent, therefore, that European co-operators have found

(Continued on Page 5)

EDITORIAL

Official View of Farming

SO FAR as eulogy is concerned the farmers have nothing of which to complain. Speakers, lecturers, writers, politicians, statesmen, officials all are profuse in lauding the farmers, and freely concede that as a class they are the people the world most needs. But when it comes to specific action for farmers' benefit the weight is put in the other side of the scale. We have so often referred to such adverse action on the part of the Department of Agriculture that some seem to think we are averse to the government's having a Department of Agriculture at all. But not so. No American industry or interest deserves a special department more than does farming, and none offers greater opportunities for the helpful work of such a department. Hence we favor such a department to the utmost, and we care not how wide a range it takes, but we want its work to be for the benefit of agriculture, to help the farmers not only to farm better and produce more, but to get more for their stuff—to make farming more profitable as well as more efficient. Farm profits for the farmers seem to be entirely ignored by our department and this part of its work is directed to the benefit of other classes. We have often called attention to the price and marketing effect of the department's crop reports, and it is admitted now by the department itself that its weather reports are in other interests more than the interests of farming. In a recent publication the department says "the weather bureau has been for some time past disseminating from day to day reports of weather conditions in the cotton re-

gion, the corn and wheat belts, in the citrus regions of California and Florida, in the rice and sugar regions of Texas and Louisiana," and in the cattle regions of the west. We have contended that these and similar reports are more in the interest of the buyers of farm products than of the producers of them. The department itself comes to our relief and confirms this opinion. In its weekly news letter for July 15 it says "the publication of these data is not only of immediate value to cattlemen, but also to BANKERS and others interested in the handling of commercial paper." "The banker has to know," continues the department, "conditions on the range in order to judiciously make loans, increase or decrease them, extend time and determine the ratio of interest or discount on the same." Thus instead of making easier the trials of the farmers their misfortunes are intensified. If natural conditions happen to be unfavorable the artificial conditions must be made so too by warning the bankers and speculators that they must be on their guard—charge higher interest and make heavier discounts, or put higher prices on stored products.

Now, reader, do you blame us for calling the farmers' attention to these things? The educational world seems to have turned to the classes instead of the masses. What is done ostensibly for the farmers must be done with the approval and for the benefit of those whose business it is to absorb the profits of agriculture. If the farmers did business as other people do the reverse of this would be true, and that is the only way they can hope to make these things otherwise.

Farmers Wide Awake

ONE of the most encouraging facts concerning the present agricultural situation is the proof we have that the farmers are rapidly becoming awake to the business situation. This is proven by the letters we publish from time to time, written by farmers in all parts of the country. Farmers are realizing fully that they are laboring under a great business disadvantage; that when others work, no matter at what, they have reasonable assurance of what the product of that work will be worth to them, while in their own case they have no assurance of that whatever; that others control both the output of their stuff and the selling price, while the farmers do neither; that all who would teach them or claim to assist them to higher life or greater success only propose a greater and still greater output with no attempt at increased demand or greater certainty of price.

We are glad the farmers are getting their eyes open to these things, for it means an undreamed of advance in

agriculture and far better conditions for the whole country—a stable prosperity such as the wisest have seldom dreamed of. When farmers know what the matter is they will remedy it, and it is clear that this knowledge is rapidly coming to them. We have devoted years to its teaching, sometimes with hope and sometimes with discouragement, but now we are encouraged as we never were before. As those who were waiting for a Divine Savior rejoiced when they saw his star in the east, so do we rejoice when such cheering words come to us from almost everywhere. We know the farmers can if they will, and we know that when they understand the advantages that are taken of them in a business way by all other classes they will strengthen the weak places in their calling, step up to the position nature arranged for them and without impairing anything that is a benefit to the world give us a system of production and marketing that will revolutionize rural life. Let everybody help in so great a cause.

Tyrannical Rule Against the Farmer

JEFFERSON CITY, Mo., has passed an ordinance requiring official inspection of all dairies and cows from which milk or butter is sold in the city. This provides for a horde of inspectors, involving an additional heavy expense. The claim is that according to advanced scientific ideas inspection is necessary to the public health.

Practically every farmer within a radius of several miles of Jefferson City keeps from two to six cows, and it has been the custom for years for them to market their butter and milk among the families of the city, delivering in most cases to customers under

contract. This arrangement has been mutually satisfactory, and in many instances trade relations of this kind date back for a generation. Farmers admit that cleanliness is important in the handling of both milk and butter, and assert that they have and do rigidly observe such cleanliness; that there are now no infectious bacteria or other disease germs that did not exist centuries ago, and that no disease or physical ailment has ever been or can be traced to the use of the butter or milk furnished by them. With this argument to sustain them the farmers that have supplied Jefferson City say they are in the milk and butter business only in an incidental way

as a part of their occupation and that they can not afford to continue it under these additional and entirely unnecessary expenses. Therefore they will not only cease to bring butter and milk to their customers in Jefferson City, but that they will divert their trade to the nearby towns and thus neither buy nor sell in the city. What they can not obtain in the smaller towns they will obtain by means of the parcel post from the larger and more distant cities. The Jefferson City people are already alarmed not only at their prospective loss of trade, but at the loss of their heretofore satisfactory supply of fresh milk and butter. But the farmers can not be blamed. Tyrannical laws and ordinances are becoming altogether too common. Restless scientists are doing more harm than good. There is more disease, and disease of a more fatal character, more resorting to the surgeon's knife, than there ever was before, and there will have to be a return to the common sense that prevailed a few years ago. Nearly all these fads operate against the farmers, either directly or indirectly, and the farmers will be compelled to do as those near Jefferson City have done—assert their independence and act accordingly.

Don't Want Better Prices for Farmers

IN ITS LEADING EDITORIAL for July 11 the National Stockman and Farmer says: "We refuse to aid the combination of theorists, agitators and producers who have inaugurated a campaign to hold wheat for a dollar a bushel." "Farmers have no more right," says the paper quoted, "to combine for the purpose of fixing an artificial price on their products than miners or manufacturers have." To which we say of course not, but do miners and manufacturers ever sell their products at prices made by anybody but themselves? When they don't get their price they don't sell, and that is all there is to it. "The wheat must come to the market sometime," that writer tells his readers. Of course it must, because the world will need every grain of it, but it is not all needed now, and when the needs are all supplied and more is offered down goes the price. Then we would have the farmers do as the miners and manufacturers do—stop selling. There will soon be another call at the required price. Read Mr. Everitt's article on "Whom Does Farming Pay" in our issue for July 15.

Though some of the wheat may be held there need be no flood later. Do not hold for an extravagant price. A dollar a bushel is not an extravagant price. The world will use it all at that price and the users need not pay a cent more for bread. Sell only to meet the demand and then there can be no "flood" or glutted markets, no matter how great the crop. But even the stockman and Farmer admits that "the farmers of this country will market their wheat with judgment, holding when they consider prices too low and selling when they find them attractive." That is all we ask them to do. We do not favor artificial prices, but we want prices and a system of selling that will divide the profits with the farmers and make farming more attractive than it is now under the dumping and glutted market system. We want a dollar a bushel for wheat, and farmers can have it if they will market to supply demand instead of pouring too much at once into the hoppers of speculation to be afterwards doled out at extravagant profits, not to the farmers, but to those who "toil not, neither do they spin."

He Was Liberal

He was not feeling well and went to the doctor. "You do look bad," said the physician, "and I'll examine you for \$20." All right, go ahead," said the patient. "I don't believe you'll find it, but if you do I'll give you half."

Don't Work Much, but Don't Adjourn

CONGRESS has its own way of doing things. One of the greatest troubles is that those who are in wish to stay in and those who are out wish to get in. The parties thus oppose each other whether there is any reason for it or not. Each party wants to make the people believe the other party is wrong. It is seldom that a Republican will say anything good of a Democrat or of a Democratic measure, and it is the same way with the Democrats. If there must be political parties, the party strife should end with the election and after that the public welfare should be the rule of all.

Just now we have a fair illustration of party work in Congress. The party in power refuses to adjourn because, we suppose, they want to stay at the head as long as possible. The minority party wants to quit so as to put an end, for the present at least, to the dominant party's opportunities.

Being unable to accomplish that, they seem to quit work and loaf around. A dispatch from Washington tells us that in several recent sessions of the Senate only a very few members were present while debates were going on and frequent calls made it necessary for the sergeant-at-arms to do some vigorous scouting in order to bring in enough absentees to make a quorum. And the same condition prevails in the House. That body was recently forced to adjourn for a day for lack of a quorum. Is that the way real statesmen, patriotic servants of the people, workers for the public good, ought to do? Are they setting a proper example for their constituents at home? Those placed in authority, though it may have been done by party votes, should serve the people rather than the party.

Smile Awhile

The Lightest Part of Him

"Yes, I fell in the river," said the young man to the lady he was trying to entertain, "but I kept my head afloat."
"How lucky!" exclaimed the girl. "I suppose that is what kept you afloat."

Bad Meat

Customer—I think this meat is spoiled.
Butcher—I expect it is. It was a pet lamb and it was so gentle I think the children spoiled it.

Spelling and Sound

Customer—What kind of soup is this?
Waiter—It's bean soup, sir.
Customer—I thought it had been soup, but what is it now?

He Can Talk

"So your baby brother can talk, can he?"
"Yes, indeed, he's a great talker."
"What does he say?"
"I don't know. I never heard such words before."

Gave Too Much

Farmer (to the new hired hand)—How is it you come back with an empty bucket? Didn't the cow give anything?
Hand—Yep, she gave about seven quarts and a kick.

Wisely Said

"What would you say," asked the man who was always busy prophesying evil.—
"What would you say if I were to tell you in a very few years the rivers of this country will all dry up?"
"I would say," said the man quietly, "Go thou and do likewise."

No Telling of Tales

The class was studying Roman history and the teacher had given an extended account of the tyrannies of Caesar. He then asked the class to tell what they knew about Caesar. No one responded. "Willie," said he, addressing the head of the class, "tell us what you can about the tyrannical government of Caesar."
"Excuse me, teacher," replied Willie, "but you have always taught us not to say bad things about other people."

Next Thing to It

"Does your aunt you are visiting make you feel at home, Willie?"
"No, but she makes me wish I was there."

Canning the Surplus Products

Home-Canning Outfits and Demonstrators

THE SCIENCE of preserving edible fruits and vegetables in their natural state after cooking is a century-old science. There were unearthed from the buried city of Pompeii jars of figs which had preserved their natural appearance and flavor for centuries. From this circumstance a Frenchman gained the idea of preserving food indefinitely by means of canning, a secret which he carefully guarded. In 1825, however, it became known to Thomas Kennsett of New York and Ezra Daggett of Maine, who obtained patents on the idea, which they controlled until the civil war. Then the need for preserved food was so great that the canning industry gained great impetus and since then canning has grown apace. Today nearly every housewife puts up fresh vegetables and fruits in summer for winter use.

Perfect results in canning is a science. Certain conditions must be complied with to exactness. A lack of thorough understanding of the principles which govern the preservation of the true color, flavor and freshness of the canned product prevents many a household from having as wide a variety of delicious fruits and vegetables for out-of-season use as they might easily prepare.

In recent years the art of home canning has been given a great deal of attention, the practice reduced to an exact science and this is being taught and practiced in an ever-increasing number of communities by means of the organization of canning clubs. What the corn club is doing for the boys the garden and canning club does for the girls.

Of surpassing interest to housekeepers are demonstrations of methods of home canning of all kinds of fruits, vegetables, greens, sweet corn (on and off the cob), fish, meats, meat juices, etc., using home-made canning outfits or distinct types of commercial outfits, all of which are portable and available for use in the back yard. No "canning compounds" are used. It is a lamentable fact that many women, especially in small towns and rural districts, are using dangerous, illegal chemical preservatives in their home-made canned goods. No chemical compound is necessary in canning. The selection of good materials and complete sterilization, with careful sealing, are all that is necessary.

The method is so simple a child can learn it. The form, color and texture of fruits and vegetables should and can be preserved. By placing them in the cans in a fresh state volatile oils

are retained and the fresh, dainty flavor is not lost.

Beans need not be left on the vines to become tough, nor carrots and beets to become fibrous and woody. They may be canned when they are sweet, tender and juicy and saved for the winter table.

Windfall apples, thousands of bushels of which are wasted every year in our state, may be preserved so that they will be fully as delectable as though they came from the corner fruit stand at 5 cents apiece.

The average cost of producing and putting up a No. 2 can of tomatoes is a trifle less than 4 cents. The average girl with one of the modern labor-saving devices in home canning can put up almost 300 cans a day.

The canning of surplus products can be made very profitable. There are two things which must be provided. One is the quality of the product canned and the other is a means of marketing that will reach the consumer by as direct a route as possible. Profits can be made by establishing a reputation for goods of excellent quality, generous measure and irreproachable pack. This must be the first care of the producer. After this is properly cared for the matter of marketing is all important. There are limited opportunities for direct marketing—that is, the canned product can be delivered to the consumer by the producer himself. But this field is limited and only a few will ever undertake to cultivate it. What is needed is a means of reaching customers beyond the range of personal delivery. UP-TO-DATE FARMING supports the Equity system of marketing because it provides just the facilities needed for the successful marketing of this and all other classes of products. Local clearing houses of the Farmers Society of Equity should be organized in every community. Through the national organization, and this paper, its official organ, markets can be readily found for all such products. Any community that desires to undertake the production of high-grade home-grown and home-canned products should organize and take up the work as a community affair. The national officials of the society and the editors of this paper will gladly give all the assistance possible. Manufacturers of home canning outfits will also be glad to offer suggestions and advice. And the market that would be difficult and expensive for the individual or local organization to find can be readily found through the national organization.

In case individuals prefer to establish their own brands, back them up

by their own guarantee and do their own marketing, they should secure a home canning outfit and then exercise the greatest care to see that the customers can find no fault with the product when it reaches their tables.

There are great opportunities for work of this kind in a national organization. Farmers in one section of the country desire the products of farmers of other sections. Thousands of farmers live in sections where fruits or vegetables of certain kinds are not grown. They buy them in cans. They could, should and would buy direct if they had the opportunity. This opportunity is offered them by the F. S. E. and UP-TO-DATE FARMING.

The following figures will interest the renter or owner of any modern, up-to-date farm:

THREE ACRES OF SWEET CORN

Preparing soil, seeding and cultivating	\$ 15.00
Rent of land (\$5 per acre)	15.00
5,304 No. 2 cans (\$14 per 1,000)	74.25
Solder, labels, cases, etc.	38.40

Total cost	\$142.65
442 dozen cans of corn (85c per dozen)	\$375.70
Less total expense	142.65

Net gain

The following shows what may be realized on two and one-half acres of tomatoes:

Preparing soil, seeding, cultivating and gathering	\$ 45.00
--	----------

Rent of land (\$5 per acre)	12.50
10,644 No. 3 cans (\$18.50 per 1,000)	196.90
Extra labor	48.00
Solder, labels, cases, etc.	36.90

Total cost	\$342.00
887 dozen cans of tomatoes (95c per dozen)	\$842.65
Less total expense	342.00

Net gain

In the south the "boll-weevil" plays havoc with the cotton crop. With mighty good land and careful cultivation an acre of ground will produce about one bale, worth perhaps \$50. Two and one-half acres in tomatoes and okra canned would bring:

250 dozen No. 3 cans okra and tomatoes, at \$1.10	\$275.00
110 dozen No. 3 cans tomatoes, at 95c per dozen	104.50
50 dozen No. 2 cans of okra, at 80c per dozen	40.00

Total

Less for—	
4,320 No. 3 cans, at 2c each	\$86.40
600 No. 2 cans, at 1½c each	9.00

Total cost

Balance

The figures given are very satisfactory, yet they are readily attainable by any farmer or group of farmers who will go about the work with the determination to do it as it should be done, from the planning of the crop to the placing of the finished product on the market. The services of this paper may be had for the asking to any and all persons interested.

Europe's Co-operative Message to America

(Continued From Page 3)

which principles are necessary to success, and these principles should be of the utmost interest and value to farmers in America, because co-operation is coming to us, coming quickly we believe, and the sooner we are prepared to fully utilize its possibilities the better for us.

The average American farmer looks upon a co-operative enterprise either as a visionary scheme of an impractical enthusiast or else, if to be successful, of a joint stock corporation paying profits and dividends. True co-operation is impossible with the dividend idea the controlling factor. Not in dividends, but in better prices, must the successful co-operative society depend for its benefits. The better prices received for farm products must go, without waste, into the producer's pocket, where it belongs.

In Ireland nearly all the effective societies are affiliated with the National Irish Agricultural Organization Society, which has been the power that has made co-operation a success on the Emerald Isle, and it is a strict rule of this society that no local society belonging to it can, under any circumstances, pay interest to exceed 5 per cent per annum on its shares of stock, because it has found that the moment stockholders look upon their co-operative society as a machine to grind out dividends, that moment its success is in jeopardy, and its usefulness at an end. After many bitter experiences it has been found absolutely necessary to allow but one vote to each stockholder, regardless of the number of shares he may hold, or the amount of his financial investment in the co-operative society.

In America, as soon as a co-operative concern is organized, private capitalistic interests attempt to undermine them by outbidding them. And the American farmer, so firm in his belief that a bird in the hand is worth two in the bush, and so eager to get any advantage in sight, plays into the hands of the capitalistic interests by selling to them, outside the association. If his neighbors and fellow co-operators do the same the end of the co-operative concern is swift and sure. Then an event always happens which could easily have been foreseen, but which was absolutely disregarded. With the co-operative concern out of the way the capitalistic interests have their own sweet way, and turn the profits that for a short time they turned into the

pockets of the farmers back into their own money bags. In Europe they formerly had the same trouble, but they have learned that loyalty pays far better than to grasp a bait that has a hook in it.

A feature that is closely watched in marketing associations abroad is the quality of the product. Grades are established and the produce handled by the association is rigidly inspected. They have a care for the consumers, a sense of their own responsibilities and a pride in establishing and maintaining a reputation.

Years of experience, during which the co-operative business has attained a stupendous magnitude, have demonstrated the utter futility of trying to get the best results without a FEDERATION OF INTERESTS AND ACTION. No local co-operative concern has been able to succeed permanently by standing alone. As a result it is found necessary in Europe to federate the local co-operative concerns with a common headquarters, giving a central office to direct the movement of the products of all the local associations. The necessity of federation was long ago recognized. Without it co-operation could not have succeeded in Europe as it has, and there can be no question as to the necessity of FEDERATION to bring success to rural co-operative efforts in America.

There are certain principles upon which all co-operative Europe is in perfect accord. Those principles, therefore, must be essential to co-operative success wherever it is to be attempted. It is flying in the face of good judgment to neglect or ignore them. They are as follows:

1. Co-operative societies can not pay profits as dividends on capital stock. The profits must go to producers as additional price for goods delivered.
2. Co-operative government must be by one vote for each member on each question, regardless of the number of shares held or amount invested.
3. Every member must make and religiously abide by a contract to do his business solely through his association, refusing to take any temporary advantage offered by competitive forces.
4. Standard, acceptable grades of products must be rigidly adhered to, and all members must strive together to produce products of high quality.
5. Local associations must join with a national federated body for thorough efficiency and adequate self-protection.
6. The business managers must be men of high business qualifications and ability, and as such men need not and will not give their time and talent for small re-

muneration they must be paid as well as other business institutions pay men of like ability.

We have done much along the line of co-operation in America, but much of what has been done is of no credit to our intelligence or sagacity.

The reason is not difficult to find. We have not operated in accord with the principles which have been proven to underlie success. Without adherence to those principles success is impossible. We should lose no further time in misguided effort, but at once take steps to do what European farmers have done, and base our organization plans for co-operative success upon successful principles, the most important one of all being the uniting of all in one national federation.

THE VALUE OF A WORK SHOP ON THE FARM

By W. Clement Moore

ONE of the greatest conveniences on a farm is a work shop. It is not only a luxury when breakages of various kinds are to be hastily repaired, but it is one of the most hopeful farm adjuncts to keep boys from getting the blues on rainy days. We visited a farm the other day where a building 12 by 14 feet had been erected. It was sided with shiplap, with a shingled roof and joists of sufficient strength to support various devices for use in delving in both wood and iron. A work-bench with a vise and a kit of tools and a supply of well-seasoned lumber that was safely stored on the joists overhead afforded an equipment that was always in readiness. In addition to these things were a forge and anvil and the usual collection of odds and ends in iron. No one who has never tried it can imagine how many trips to town were avoided when breakdowns occurred because of the facilities afforded for making repairs right at home.

There is always some repairing to be done and as a rule every farm has about it a man who is exceptionally handy with tools. That's why the work shop immediately becomes a valuable asset. No matter what is broken about the house, the barn or the farm in general, the conveniences and appliances which are easily brought together in the work shop will enable you to make such repairs and save in many instances considerable money.

The forge is a very great aid on most farms, but as it costs a trifle more to install it than some of the other equipment which is absolutely necessary it may be left out for a time—that is, if you desire to economize in fitting up your shop.

For the ordinary farm a shop 10 by 12 feet in size will be large enough for most purposes. It will cost but a small sum to build it in odd times and you will find it a joy forever. There should be a strong work bench built along one side and racks arranged along the wall over the bench for the accommodation of chisels, screw drivers, wrenches, files, etc. Under one end—or the whole length of the bench, as you prefer—drawers should be arranged in which the finer and better tools should be kept, such as brace and bits, grooving planes, etc. Some of these drawers may be used for nails, screws and various other necessities. Of course you should have a system in your shop and try to keep things in their places.

In regard to the shop mentioned at the opening of this article, however, we soon found that the utilitarian side of the question is of little moment compared with the use the boys made of the shop. On rainy days or when there was a short respite from activities in the fields, or from doing the chores, the boys would be busy contriving some toy, making boxes for the pigeons or for the birds to nest in, making nests for the hens or troughs for the pig-pens and in evolving pieces of furniture for their rooms or making

a bench for mother in the kitchen or flower stands for the front yard. The presence of the tools suggested many things in the active minds of the farm lads and gave them practical instruction and knowledge in the use of tools which in after years will be of untold value to them. No greater misfortune can befall a boy than to be forbidden the use of tools by a stern father who is fearful lest a saw or a plane or chisel be struck against a nail. Such an attitude toward the boys deprives them of getting any knowledge of the use of tools at the formative period when such practice would have been of great value to them.

But the best thing about the farm shop is that it makes a place of entertainment for the boys. It affords them a place to get busy. It gives them a chance to learn the use of tools. It enables them to develop inventive skill and to formulate various designs. It conserves time that would otherwise be frittered away, perhaps where the influences are not the best, and it makes for contentment and for tranquillity of mind.

Getting Next

Barber—So you want me to cut your hair, my little man. How shall I cut it? Six-Year-Old—Just like papa's, with a round hole on top.

Dollars in Advertisements

If your UP-TO-DATE FARMING is read for the editorials and department matter only, you are losing much of value. The advertisements contain dollar suggestions and ideas. New machines, new seeds, new materials—all these help to make more money and the farm life pleasanter and happier.

You can deal with advertisers in UTDF, knowing we have selected them and approved them. Our guarantee protects you.

Our Advertisers—Guarantee

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Which Tire Would You Prefer?

30 x 3½ or 31 x 4
32 x 3½ or 33 x 4
34 x 4 or 35 x 4½

Either will fit the same rim. And the larger tire—if you get the Goodyear—will cost you less than the smaller tire of many other makes.

That is because 16 makes of tires now sell above Goodyear prices.

So, for this extra price—or less—you can buy a half-inch wider Goodyear. It will have much larger capacity, an extra ply of fabric and a thicker tread. That means far less trouble, far more mileage.

Or you can buy four Goodyears for what some ask for three tires.

Save This

Save this extra price, or else get something for it. It is utterly impossible—at any price—to get a better tire than Goodyear. That is proved by Goodyear sales—the largest in the world.

In four ways they

are better than any other tires, for these four features are found in Goodyears only:

The No-Rim-Cut feature.

The exclusive "On-Air" cure which ends the chief cause of blow-outs.

The rubber rivets formed in each tire to combat tread separation.

The All-Weather tread—the tough, double-thick, smooth-running anti-skid.

These features—used by us alone—save tire users millions of dollars.

Mammoth output has brought Goodyear prices down. Other prices have not dropped so far. Why pay these extras without reason when any dealer will supply you Goodyears?

Bear in mind that Goodyear prices buy the utmost in a tire. They buy the tire which outsells any other. They buy the only tire which embodies

the four greatest features in tire making.

CAN FARMING BE MADE TO PAY?

A WRITER in an exchange wrote this in answer to the question:

The question is a very old one and I suppose will continue for some time to be asked. My answer has always been the same, "Yes," but it must be remembered that farming as a business is subject to the same general principles which govern any other business.

The writer recommended bookkeeping by each farmer. "Keep an account of your receipts and expenditures; cost of various crops in money, seed and labor; cost of machinery, fertilizers, etc. If the farmer will do this the same as the man who operates a cotton mill does, then farming can be made to pay," he said.

But is farming subject to the same general principles which govern other business? Or is it affected by some special conditions that do not affect any other business?

Suppose the farmer would keep an accurate account of all his operations and know just what it cost to produce each crop, and would credit to the crop all the cash and benefits it returns to him. This would be valuable for that crop only. The fact that he made a profit on such a crop, or even netted a loss, could not be used as a guide to figure his profits or losses on future crops. In this respect the farmer's business is peculiarly different from any other. Suppose the farmers, by keeping books, and by the valuable lessons of costs and receipts they could show, were able to reduce the cost of production to the minimum and raise the amount of products materially or to the maximum, their success would operate to defeat the object, to make farming pay, because every considerable success in quantity operates to depress the price.

While we recommend farmers to keep books so they may know the condition of their business, yet that will not insure success under present methods of marketing. If, however, marketing were controlled, and definite prices established, then, and only then, would farming be "subject to the same general principles which govern any other business." Then farming could be conducted with as much certainty as merchandising, manufacturing or banking.

If there is any system of bookkeeping in existence that will tell the farmer when he breaks ground for a crop, or when he puts a bunch of cattle in the stalls to feed, that he will realize 50 cents a bushel or any other fair price for the corn produced, or fed to them, we would like to know of it.

The advantage of bookkeeping by farmers has been stated to be in knowing "where he is at in each and every department." How can he possibly know when the matter of price is entirely beyond his control? It seems to us that there is something more important now than bookkeeping. It is control of the crops when produced, and marketing that feeds the demand as it comes over 365 days of the year. Accomplish this through the right kind of organization and co-operation, then bookkeeping will be worth while. When the marketing side of the farmers' business has as much attention as is given to the producing side, uncertainty of prices will be at an end. Then there will be more inducement to farm intensively, to keep books, and "farming as a business" will undoubtedly pay, and pay THE MEN WHO OWN THE LAND.

The Way of Business

One of two partners in business got religion and joined the church, and frequently urged the other partner to do the same. At last the other partner replied: "Now see here, Sam; it's all right for one of us to be religious, but if we both were who would weigh the coal and things?"

Too Great a Change

"Oh, what shall I do? My little Willie is lost!"
"Don't worry," said the kindly neighbor. "He'll be found. Everybody knows Willie."
"Not now they won't. I washed his face just awhile ago."

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

IMPROVING CONDITIONS OF FARM LIFE FOR THE CHILDREN

(Awarded First Prize of \$3)

We bought and moved to a farm about three-fourths of a mile from town. It is a delightful spot, having several acres of woodland, yet the farm needed much improvement. My husband is an able manager and with ample hired help attends to the farming with little assistance from me. I was not in the best state of health, so my duties were limited to the house-keeping and care of my children. Having had experience of city life in my girlhood, I keenly realized the advantages my children lacked living on a quiet farm in spite of the most important advantage they had there, developing physically. They, like myself, were not the most robust and for that reason our minds turned to farm life.

A few years showed great strides in the improvement of our farm and the children and our next thought was the social life of these growing children. My husband and I talked it over often, knowing the bringing up of our children was a far more serious problem than the rearing of our barnyard stock or the raising of vast crops. He allowed me as much of his profits as he could spare for their welfare, which I put into bank, deciding to first teach them the earning of a dollar before they enjoyed its pleasure. Our two girls were then 15 and 9, our two boys 12 and 6 years old. I suggested to them starting a recreation fund to which all had access who earned. They readily agreed. We began our efforts

in the fall in the woods. Hunting up all the empty burlap bags, we went to spots where trees had been felled and filled twenty bags with chips. The boys drove to town with them, selling all at 10 cents a bag. The next week we gathered five bushels of chestnuts and sold at 10 cents a quart to father's milk customers. We then stripped fallen pine branches of their needles, filled several bags and in the evenings the girls and I made and filled fifteen cushions of various designs. These we kept until Christmas week, when we got ready our wreaths of holly, laurel, spruce and vines for sale. Our cushions sold at 30 cents each, our wreaths at two for 25 cents. We sold 200 wreaths, supplying the whole town. We had gathered some birch bark and cut it into curious shapes for book markers. The children sold forty of these at school at 5 cents each. In February I purchased a lot of fifty flower pots for \$2. These we filled with stump soil and planted in them choice young pine trees or selected ferns. By Easter they were ready for sale and sold at various prices (according to size), bringing in \$15. Thus we had earned over \$40. We took recreation together as we earned. Every two weeks father drove us to town to a play or entertainment.

I became a member of the circulating library club, getting books weekly to suit the taste and age of the children. I subscribed for a set of children's magazines, the puzzles of which greatly attracted them, having correctly solved one, receiving a \$1 prize.

All got skates and the youngest boy a "Flexible Flyer." We bought a canoe, the ice pond near the woods being a splendid place for rowing. The girls insisted on a camera, the boys on a fine fishing outfit.

The next year we advanced in our sales, adding hotbed plants, berries, popcorn, rhubarb, horseradish, dandelion, lettuce, etc.

The children had grown so fond of the woods that "camp" next entered their minds. After considerable calculating and planning we decided to spend \$50 for an outfit. We put up two good-sized tents, furnished with cots, chairs, table, gasoline stove and outfit of tin dishes and cooking utensils. We pitched the tents on the edge of the woods, near the ice pond. We camped a whole week, then thought of renting the camp. After making known our offer to the town folks we soon had applicants for three months' usage, different parties coming for a week or two weeks. We rented at \$7 per week, including the use of canoe, fishing tackle and a part of a vacant field for golf, croquet and tennis. We also allowed free use of our telephone.

The campers all bought their farm products from us, which netted us a fine gain, and the children had agreeable and profitable companionship all summer. We bought a piano and violin that fall. We are now adding turkey and duck raising to our attempts and, if we succeed, plan to spend a week at the seashore next summer, as none of our children have ever seen the sea.—Mrs. D. M. M., Pennsylvania.

ALFALFA FOR HOGS

(Awarded Second Prize of \$2)

One of our most profitable crops is alfalfa. As pasture it has proved best suited for hogs. The hog is not supposed to be naturally constructed so that it can make an economical use of forage feed as a rule. Alfalfa, however, proves the one exception to the rule. All hogs relish this feed, fatten and thrive prodigiously on alfalfa pasture, even with little additional feed. As a pasture for young growing hogs alfalfa has no equal. And if there is a better pasture for brood sows it has never been discovered.

Such a remarkable success has been had with fattening hogs on alfalfa pasture that in spite of the injury to the fields growers follow this practice to a considerable extent. Experience has shown that fifteen to twenty-five head of pigs can be supported on an acre of vigorous alfalfa, that on the average pigs weighing thirty to sixty pounds in the spring will make a gain of about 100 pounds each during the season, that although pigs may be grown and fattened on alfalfa alone it is best to combine the alfalfa with some kind of grain ration, that where pigs are pastured on alfalfa alone they may be prepared for market by feeding for a few weeks on wheat chop or corn.—Elbert Stoecher, Washington.

TOMATOES A SPECIAL CROP

(Awarded Third Prize of \$1)

What was realized above flood losses and crop shortage during the year 1913 was as follows:

Tomatoes	\$ 787.33
Cabbage	223.88
Cucumbers	46.84

Cost of labor.....\$225.00

Cost of baskets, crates and hampers..... 145.00

370.00

Total above expenses.....\$ 688.05

From a field of sixteen acres of corn only 150 bushels was harvested that was not damaged by the flood in July. This corn was fed to the stock and about \$50 spent for mill feed to winter this stock. No feed was sold.

But the garden crops, however, paid, as the above figures show. Without this paying crop another farmer would have gone into bankruptcy.

Cuts silage evenly

Packs better—lasts better—makes better feed

The knives of the Blizzard make a clean, shear cut and the silage is cut slick as a whistle, in even lengths, from 1/4 to 1 1/4 inches. Silage cut by a

BLIZZARD Ensilage Cutter

packs better, keeps better, and, according to our customers, makes better feed, increasing milk yield and butter fat.

OTHER GOOD POINTS

of the Blizzard are: Light running—any farm engine runs it. Eats up silage fast as you can feed. Easily fills highest silos. Simple, safe and durable. Self-feed table. New catalog tells whole construction. Write for it now, before you forget.

Lowest Prices Ever Made on World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing Lasts as Long as Building Stands

Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end. Its cost per square is the lowest ever made. It has no upkeep cost. Always beautiful in appearance. Reducing cost of fire insurance.

EDWARDS Exclusive Tightcote Process

Makes Rust-Proof Roofing. The king seller because practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingle, Grip-Lock Roofing, Pressed Standing Seam or Roll Roofing, Ceiling, Siding, etc., is dipped in a bath of molten zinc, one at a time after the metal has been stamped and required. The edges are galvanized as heavily as the sides. Not the space of a pin-point on the steel is exposed to the weather.

How To Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with your finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking, Protects Nail Holes. Roof never warps, buckles or breaks—no are driven through the under layer not exposed to weather—cannot rust. No special tools or experience needed to lay EDWARDS Galvanized Steel Roofing. Not the space of a pin-point on the old shingles if you wish.

Reo Steel Shingles

Cost Less, Outwear 3 Ordinary Roofs and are your joy and pride forever. No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Roofing exactly suited to your needs.

This year there are some 12,000 tomatoes staked, ready to pick from this week; 14,000 cabbage, cutting at present, and two acres in cucumbers in full blossom, promising a paying crop. Last year the cucumbers were totally destroyed by the flood. If nothing happens this season the cucumbers ought to net almost as much as the tomatoes, which, after all, was considered as the paying crop last year.—Elizabeth Marie Spies, Ohio.

KEEPING UP FERTILITY OF THE SOIL

It is a crime to allow land to run down when it is so easy to keep it up when rightly managed. I purchased a piece of land that had been allowed to run down until it was considered practically worthless. I broke the land carefully and sowed it to cowpeas of the whipporwill variety. The season was fairly good and the peas grew rapidly. When matured I plowed them under. The land was allowed to rest until the next year. I then planted kafir corn, making the rows wide enough apart to allow a row of peas between.

I made a fairly good crop of kafir. Later the peas covered the ground. As soon as the peas matured they were turned under and the land left until the next spring. Corn was planted this year, with peas sowed broadcast just before the last plowing.

The peas matured before frost. I again turned the peas under. By this time I had my land where I could realize a profit from it. I made it a point to arrange my crops so as to continually improve the land. My secret was peas, clover and deep, thorough plowing.—John B. Polk, Hood River, Ore.

Live Stock and Dairy

WHAT MAKES MILK AND BUTTER YELLOW?

THE RICH YELLOW COLOR demanded by the public in dairy products is primarily due to the character of the cow's feed. For some years dairy experts have been studying this question. Their conclusion is that, although to some extent a breed characteristic, the intensity of this yellow color may, within certain limits, be increased or diminished at will by changing the animal's rations.

Chemical tests made by the United States Department of Agriculture, in co-operation with the Missouri State Experiment Station, show that the yellow pigment in milk consists of several well-known pigments found in green plants. Of these the principal one is carotin, so called because it constitutes a large part of the coloring matter of carrots. The other yellow pigments in the milk, known as xanthophylls, are found in a number of plants, including grass.

These pigments pass directly from the feed into the milk. This explains the well-known fact that fresh green grass and carrots increase the yellowness of butter, the only standard by which the average person judges its richness. On the other hand, a large proportion of these pigments is deposited in the body fat and elsewhere in the cow. When the ration is changed to one containing fewer coloring constituents this hoarded store is gradually drawn upon and in consequence the yellowness of the milk does not diminish so rapidly as it otherwise would. This yellowness increases, however, the instant the necessary plant pigments are restored to the ration.

Green grass is probably richer in carotin than any other dairy feed. Cows fed on it will therefore produce the highest colored butter. Green

corn, in which xanthophylls constitute the chief pigment, will also produce a highly colored product. On the other hand a ration of bleached clover hay and yellow corn is practically devoid of yellow pigments and the milk from cows fed upon it will gradually lose its color. It is, of course, indisputably true that the breed does influence the color of the milk fat, but vary the ration and there will be a corresponding variation in the color of the milk fat in each breed.

In cows of the Jersey and Guernsey breeds the body fat is frequently of such a deep yellow color that some butchers and consumers look with disfavor upon beef from these breeds. For this prejudice there is absolutely no justification. The yellowness of the fat springs from the same causes as the yellowness of the milk fat and there is no sense in objecting in one case to the very thing that is prized in the other.

CARE OF THE COW

Below are given a few rules concerning the care of the milk cow which are worthy of thoughtful attention:

(a) Kindness. No other animal responds more readily to kindness than does the cow. Loud, abusive language, kicking, or being chased by a dog will decrease the flow of the milk. (b) Housing. No animal should be unprotected during the winter months. Especially is this true of the cow. She should have a warm, clean and well-lighted stable. On warm days she should be free to exercise in a clean yard. (c) Regularity. Feeding, milking, watering and caring for the stable should be done by the same person at a stated time each day and should be done in the same way. (d) Pasture. A good pasture is one that supplies a sufficient amount of green food during the pasturing months. It should be supplied with an abundance of fresh water and sufficient shade. (e) Flies. When the stable is cleaned and manure properly handled, flies are usually not troublesome. A falling off of milk in summer is due more to a lack of food than to flies. (f) Disease. The farmer should be so thoroughly acquainted with his cows that he will notice the first symptoms of disease. A falling off of milk will be such an indication. Such a cow should be separated from the herd, placed on a diet and the cause determined if possible.

FEEDING A DAIRY COW

THE AMOUNT of food, kinds of food and care are directly responsible for the amount of milk given. How to obtain the largest amount of milk and butter at the least expense is an important consideration. When a cow is on good pasture little or no grain is needed. When the pasture becomes short and dry the amount of grain should be increased if the quantity of milk is to be kept up during this period. The following rule will apply to the feeding of grain in the summer. If the cow is giving twenty-five pounds of milk daily she should receive four pounds of grain and for each extra five pounds of milk one pound of grain. The question of winter feeding is more difficult. Grass in summer takes the place of a balanced ration in winter. A balanced ration is the amount of food which contains the proper proportion of the elements necessary to maintain body heat and produce milk. These food elements are classified as follows: Protein, carbohydrates, fats and mineral matter. The following rations have been worked out which contain the right proportions of these various elements:

Ration No. 1

	Per Day
Corn silage.....	25 lbs.
Clover hay.....	10 lbs.
Corn.....	4 lbs.
Wheat bran.....	4 lbs.

Ration No. 2

	Per Day
Clover hay.....	20 lbs.
Ground barley.....	4 lbs.
Ground corn.....	4.5 lbs.
Ground oats.....	1.2 lbs.

Ration No. 3

	Per Day
Timothy.....	10 lbs.
Clover.....	10 lbs.
Ground corn.....	2 lbs.
Ground barley.....	2 lbs.
Wheat middlings.....	2 lbs.

When it is not possible to weigh rations the following general rules will apply: For every three pounds of milk feed one pound of grain. Never feed more hay and silage than the cow will eat at any one time. Feed to produce milk. Feed twice a day at regular times. Divide the ration into two parts. Feed the grain mixture while you are milking and the roughage, including silage and roots, after milking.

Polarine

FRICITION REDUCING MOTOR OIL

5,918,098 gallons sold last year
1,536,232 gallons more than 1912

The constantly increasing use of POLARINE by thousands of motorists is indisputable evidence of its lubricating efficiency.

It affords perfect lubrication to all makes and types of motor cars, motor trucks, motorcycles and motor boats.

POLARINE maintains the correct lubricating body at any motor speed or temperature.

POLARINE remains liquid at zero. POLARINE differs from all other motor oils, in that it lubricates perfectly at extremes of temperature.

We want to see the farmers in an organization that will measure a crop when produced. Then we want a price put on it equitable to all, and that price prevail for the first bushel and the last one, until the next crop is raised. We want the organization to have ways and means to store the temporary surplus and meet the money needs of every financially weak grower. Under such conditions the sting of government reports will be removed as far as the farmer is concerned and they will cease to be a factor for pure gambling.

We want farmers to learn that they are amenable to the same rules in business as other people are.

Frequently this headquarters is requested to investigate alleged wrongs in handling produce. We occasionally find that mistakes have been made and easily secure corrections and occasionally something comes up that looks worse than a mistake. But in a big majority of the cases the investigation reveals that the trouble was with the shippers themselves.

For instance, there are still some growers and secretaries of locals who think they can load a second or third grade stock and get first grade prices. Or they can load in an ordinary car when a refrigerator car is necessary to carry the stuff safely, and then they howl when the receiver reports it in bad condition. Late this last spring a Michigan local shipped a car load of potatoes to Indianapolis in a tight car without any ventilation. The weather was very warm and the potatoes were rotting, burning up, when they arrived. Prompt handling saved all but fifty bushels, but the balance were damaged and the price realized was 75 cents a bushel. A few days later another car came from the same shipper in a ventilated car and they sold on sight at \$1 a bushel.

Too much importance can not be attached to grading stock, and when everything is right great care should be exercised that the car is in the right condition. If a refrigerator car is the proper kind, demand it of the railroad. If it is to be precooled, or iced, enter into such a contract with the railroad agent. If you want to hold the railroad and receiver to the number of packages or pounds in a car have the railroad agent count the packages or see the weighing. The letters "S. C. & W." written on a bill of lading mean shipper's count and weight. It is a waiver of responsibility on the part of the railroad company to deliver the weight or number of packages written in the bill of lading.

Don't forget the Kansas City, Kas., meeting August 17, 18 and 19. Let's make it a bigger meeting, in attendance, than any of the many meetings ever held by other people, FOR FARMERS as they claimed.

One thing the farmer who goes to this meeting can rely upon—it is going to be a meeting by farmers for farmers. There have been many meetings held by college professors, bankers, boards of trade people, merchants, editors, grain dealers, railroad men, etc., for farmers, but they will not be at this meeting. It is going to be a meeting of farmers. The farmers will get together by themselves and we will then see what they can do. One thing is clear—all that the other people promised to do they have failed in, and the farmer's plight is as bad this year as it ever was. Others have tried, or pretended to try, and failed. Now let the farmers try what they are in a meeting all by themselves and see if they don't find a way to solve their marketing problem.

We want the farmers to take this whole matter of their business in their own hands. We believe they understand their problems and we believe they are wise enough to solve them, if they are left alone. This will be their opportunity.

How the Bell System Spends its Money

Every subscriber's telephone represents an actual investment averaging \$153, and the gross average revenue is \$41.75. The total revenue is distributed as follows:

Employees—\$100,000,000

Nearly half the total—\$100,000,000—paid in wages to more than one hundred thousand employees engaged in giving to the public the best and the cheapest telephone service in the world.

For Supplies—\$45,000,000

Paid to merchants, supply dealers and others for materials and apparatus, and for rent, light, heat, traveling, etc.

Tax Collector—\$11,000,000

Taxes of more than \$11,000,000 are paid to the Federal, state and local authorities. The people derive the benefit in better highways, schools and the like.

Bondholders—\$17,000,000

Paid in interest to thousands of men and women, savings banks, insurance companies and other institutions owning bonds and notes.

Stockholders—\$30,000,000

70,000 stockholders, about half of whom are women, receive \$30,000,000.

(These payments to stockholders and bondholders who have put their savings into the telephone business represent 6.05% on the investment.)

Surplus—\$12,000,000

This is invested in telephone plant and equipment, to furnish and keep telephone service always up to the Bell standard.

OUR COMPLETE DINNER SET CONTAINS: 6 Dinner Plates, 6 Butter Plates, 6 Fruit or Cereal Dishes, 6 Cups, 6 Saucers, 1 Meat Platter, 1 Vegetable Dish and 1 Cake Plate—33 pieces in all, and full size for family use.

It is impossible to show the beauty of this wonderful set of china on a printed page. The beautifully embossed, scrolled borders, with their delicate pure gold tracings and the pretty clusters of roses in their natural, life-like colors, have to be seen as they really are to be appreciated. Our "Queen's Favorite" Complete Dinner Set is too gorgeously pretty and beautifully decorated to be described. The decorations are burned into the ware and stand out as in real life—making it the prettiest and richest of all Dinner Sets.

You are bound to be delighted, for this is the biggest and most extraordinary offer we have ever made. Write us a letter, enclosing 4 cents (to help pay postage and packing), and we will send you cards and at the same time we will tell you how, for just a little of your time pleasantly spent, you can secure this 33-piece Complete Dinner Set, with 50 other presents, together with a very extra Surprise Gift. The needles alone would sell for 25 cents in the stores.

Our Plan and let us send you a photograph of the dishes and testimonials from many of the hundreds of our friends who have received one of our Dinner Sets. You will be surprised at how quickly you will be using one of our 33-piece Dinner Sets on your own table. We have studied a long time trying to figure out the easiest plan by which all of our friends could own one of our "Queen's Favorite" Dinner Sets and we believe you will agree with us that this is the very easiest of any.

Farm Life, Dept. J. L., Sepnecr, Ind.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

REGARDING the general condition of business in the country Bradstreet's says, under date of July 25:

Irregular. Cross currents in crop and trade reports. Spring wheat and corn prospects shaded. Improved employment conditions in iron and steel. Hand-to-mouth buying in merchandise. Immense buying of wheat for export. Shipments largest for years. More idle cars despite wheat movement. Western trade best. Collections helped by crop movement. Dullness east and south. Bank clearings increase over 1913 and 1912.

Large sections of Indiana, Illinois, Ohio and Kentucky are suffering the severest drought of years. At Indianapolis no good rain has fallen for two months. Under such conditions a writer would be inclined to be pessimistic. But we must take a broad view of the crop condition. Such a view shows that the crops, while not near up to two weeks ago, still average good. The absence of excessive rains in the winter wheat sections have permitted saving the wheat crop in excellent condition. Complaints of rust in the spring wheat district have been persistent, one of the results of a very wet season. It is too early to accurately estimate the spring wheat crop, but some impairment has resulted. The winter wheat crop was evidently overestimated in Ohio, Indiana, Illinois, Missouri and Kentucky. In other states the government estimate has been verified by threshing returns. Taking all things into consideration at this time the total yield of wheat will be well under 900,000,000 bushels. Exports of wheat are extremely large, which shows that European buyers know a good thing when they see it and have taken all the wheat they could get at the low, first-delivery prices, to help out their short crops. Notwithstanding the immense winter wheat yield, more growers are holding this year than ever before. Inquiry at country places discloses that only from 35 to 50 per cent of as many farmers are marketing from the machine as usually do. Another thing to indicate the holding of wheat is the fact that there are more idle cars than usual at this time of the year. Speaking of the wheat situation, Bradstreet's, which we consider a reliable authority, says: "The advances in prices of cereals this week, especially for wheat, are not based so much on domestic crop damage as to enlarged foreign buying of American wheat, because of realization by Europe that its own crops are going to be short. The United States, in fact, possesses the only bumper crop this year, and the key to the immediate supply and demand situation rests largely with the American farmer." This confirms what this paper has said many times.

The visible supply of winter wheat increased five and a half million bushels since our last report, against a nominal decrease a year before. The price at Chicago is unchanged to 2 cents higher. Other markets show a greater advance. With known damage to spring wheat, the tendency of farmers to hold winter wheat, the short European crops and the active demand for wheat all point to higher prices.

A very large part of the corn area is now subject to drought. Over a considerable area damage has already occurred that rains, even if they come soon, can not remedy. But, as a whole, general rains coming very soon will insure a bountiful yield. The price fluctuated much in the two weeks period, and is 2 to 4 cents higher now in the various markets.

Attention is called to the small oats visible and the fact that it decreased nearly two million bushels in two weeks. It seems to be the utmost folly to pile up a big oats visible at current prices, particularly when compared with the price of corn. And it looks as though the farmers realize this too. The cash price of oats is about 1 cent lower than two weeks before.

The cotton crop conditions are excellent to poor, with most of the territory reporting good conditions.

Potato prospects in the northern states are excellent.

The tables tell the balance of the market story.

Advice

WHEAT—Hold it for higher prices. **CORN**—Market corn. If you have corn and need feed, sell the former and buy wheat and oats. **OATS**—The price must be higher. **COTTON**—Market gradually. **HAY**—Hold the new crop for more money.

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on July 18, 1914, with comparisons, are shown in the following table:

	July 18, 1914	Change from two weeks before
	Bushels	Bushels
WHEAT	22,676,000	X 5,775,000
CORN	5,853,000	-3,501,000
OATS	6,892,000	-1,999,000
BARLEY	1,609,000	-472,000

The visible supply of wheat in Canada on the same date was 14,382,000 bushels. This is 1,701,000 bushels

less than two weeks before and is 2,026,000 bushels less than a year before. The visible supply of oats was 5,665,000 bushels on the same date, which is 2,621,000 bushels more than two weeks before and is 2,278,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on July 24, 1914, two weeks before and a year before as follows:

	July 24, 1914	Two weeks before	A year before
WHEAT, No. 2 RED			
Chicago	81 1/2 @ 83 1/4	81 1/2 @ 83	87 1/2 @ 85

New York			46

Future Grain Prices

Chicago grain futures closed on July 24, 1914, and two weeks before as follows:

Wheat—July, 82 1/4c; September, 81 1/4c; December, 83 1/4c. Two weeks before, 79 1/4c, 78 1/4c and 81 1/4c respectively.

Corn—July, 72c; September, 68 1/4c; December, 58 1/4c. Two weeks before, 68 1/4c, 68 1/4c and 57 1/4c respectively.

Oats—July, 37c; September, 25 1/4c; December, 37 1/4c. Two weeks before, 37 1/4c, 35 1/4c and 37 1/4c respectively.

Winnipeg, Canada—Spring wheat: July, 91 1/4c; October, 85 1/4c. Two weeks before, 90 1/4c and 82 1/4c respectively.

Chicago Produce Market

Chicago, July 23, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Market was firmer, about 25c higher for Virginia barreled Cobblers, but practically unchanged for Early Ohio from various points. Most of the Kansas and Missouri Ohio were poor, dirty and included a lot of second growth. They did not suit buyers and were hard to move even at the low prices quoted. Home-grown Ohio were a shade easier. Total receipts were reported at 90 cars.

Sales reported were: Per barrel—Virginia Cobblers, 1 car at \$2.35, 1 car at \$2.40, 8 cars at \$2.50. Per bushel—Kansas and Missouri Early Ohio, 3 cars at 55c. Per bushel, sacks, California white, \$.90 @ 1.00. Per bushel, Kansas, Early Ohio, .50 @ .60. Per barrel, Virginia Cobblers, 2.25 @ 2.50. Per sack, 90 lbs., home-grown, Early Ohio, 1.00 @ 1.15.

The price is about 30c a bushel and 50c a barrel lower than last year.

BEANS—Were quoted as quiet, with prices unchanged. Stocks are ample. Few are coming forward. Crop advice is variable. Southern Michigan reports some blight and northern part has had too much rain. In the middle section the outlook is good.

Pea Beans—Hand-picked, choice, \$2.10 @ 2.15. Common, 1.95 @ 2.00. Red Kidneys, common to fair, 2.65 @ 3.15. Fancy, 3.20 @ 3.25. Brown Swedish, long, 1.80 @ 2.10. Round, 2.00 @ 2.25.

Prices are without change from two weeks before. A year before the price of choice hand-picked pea beans was \$2 to \$2.05.

HAY—Receipts, 274 tons. Arrivals light and market very firm. Demand good and all consignments sell readily.

New Timothy, \$10.00 @ 14.00. Choice old Timothy Hay, 19.00 @ 20.00. No. 1 Timothy, 17.00 @ 18.00. No. 2 Timothy, 14.00 @ 15.00. Kansas, Iowa and Nebraska Prairie, 14.00 @ 17.00. Illinois and Wisconsin Prairie, 8.00 @ 11.00.

Old timothy hay is \$1.50 a ton higher than two weeks before. Iowa, Kansas and Nebraska prairie hay is from unchanged to \$1 a ton lower than two weeks before. A year before choice old timothy hay was quoted \$15.50 to \$16 a ton.

STRAW—Rye straw quotable at \$8 @ 8.50. Oat straw at \$6.50 @ 7. Wheat straw, \$6 @ 6.50. There is no change in the price of straw from two weeks before.

BROOM CORN—Holds about steady. Demand still tame, and only for good corn.

Per ton, Illinois corn, \$115 @ 135. Oklahoma, 90 @ 130. Damp and damaged less. There is no change in broom corn from two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week.	Last week.	Last year.
	Cases.	Cases.	Cases.
Monday	13,741	10,731	13,552
Tuesday	13,006	15,354	11,617
Wednesday	13,481	13,373	10,440
Thursday	7,681	14,088	10,061
Totals	47,909	53,546	45,670

There is a firm feeling, with quotations about the same.

There is a good demand, especially for fine stock. All eggs free from heated conditions are moving satisfactorily. For that matter all stock will sell unless it is very poor and shows heavy losses. Most of the stock is rather ordinary and needs rehandling to meet the requirements of the best trade, and in doing this there is sometimes a large loss. The general receipts, even when passing as Firsts, are not necessarily good enough for a particular class of trade.

Fresh Firsts, 18 1/2 @ 19. Ordinary Firsts, 17 1/2 @ 18.

	Change same period last yr.	Change from a year before	Change from 2 years before
	Bushels	Bushels	Bushels
WHEAT	-7,262,000	-10,219,000	X 1,804,000
CORN	X 305,000	-5,521,000	-332,000
OATS	X 842,000	-13,490,000	X 4,064,000
BARLEY	-240,000	-1,181,000	X 1,183,000

Storage packed Extras, 19 1/2 @ 20 1/4. Miscellaneous, cases included, 15 @ 18 1/4.

Cases returned, 14 1/2 @ 18 1/4. Checks, general receipts, 8 @ 12. Good sound, 14 @ 14 1/4. Canned higher. Ditties, good, 15 @ 15 1/2. Canned stock bring higher prices.

Heated, showing heavy loss, 10 @ 12. Refrigerator Eggs—For April Extras 22c was obtainable today, with charges to follow. The price of eggs is from unchanged to 1/2c a dozen higher than two weeks before. They are about 4c a dozen higher than a year before.

THE CALL

For a National Convention of Farmers to Meet at Kansas City, Kansas, August 17, 18 and 19, 1914

TO WHEAT GROWERS IN THE WINTER AND SPRING WHEAT STATES, FARMERS' ELEVATOR ASSOCIATIONS, LOCAL AND OTHER FARMERS' ORGANIZATIONS WHICH HAVE FOR ONE OF THEIR OBJECTS THE MARKETING OF CROPS, AND THE FARMERS WHO ARE NOT MEMBERS OF ASSOCIATIONS, BUT WHO DESIRE BETTER MARKETING CONDITIONS:

Our country has been blessed with a magnificent crop of winter wheat of a quality that is rarely equaled, and the prospects for a spring wheat crop, proportionately as abundant and of as fine quality, are excellent.

If the present prospects continue and the predictions are realized in the spring wheat crop, the production of wheat in our country this year will be nearly 200,000,000 bushels greater than was ever raised before in one crop. In contrast with this the winter wheat crop in some European countries is short of a normal one. From reliable sources we conclude that the shortage in Europe is greater than the longage in our country. In other words, the world's crop of wheat, at best, will be only an average one.

Sadly in contrast with the farmers' success in producing is the extremely low price at which the crop has started to market. If present prices continue for the whole crop, this great crop will bring the farmers \$188,000,000 less than the 1909 crop, which was 20 per cent smaller, and will sell for less than several recent crops that were two to three hundred million bushels less.

Realizing these things, a campaign for DOLLAR WHEAT was started sometime ago. It has already assumed large proportions and has enlisted the support of a great many farmers and business men throughout the country. Recognizing the equity of it and what it will mean to the farmers and business men and the nation at large, if successful, a demand grew out of it for a NATIONAL CONVENTION OF GROWERS. The convention is now called to meet at Kansas City, Kas., August 17, 18 and 19, 1914.

Another purpose of the meeting is to consider the matter of federating all present farmers' associations for the one object of marketing.

Of the many farmers' organizations that exist now, none of them is satisfied with what is being accomplished. They now realize that, working alone, they can exert very little power. They also begin to see that on the vital matter of marketing they should be and can be a unit without sacrificing a single prized feature of any organization. So a condition favorable for a grand national federation has developed and this meeting will undertake to accomplish a real getting together. If the idea is favored at the meeting a national federation movement will be started, a constitution and by-laws adopted, officers elected and thus the foundation laid for such a broad and comprehensive co-operative movement as American agriculture must have before the present chaotic condition in marketing will be ended.

Signed by J. A. EVERITT, president Farmers Society of Equity, Indianapolis, Ind.; C. HAYES TAYLOR, secretary-treasurer Farmers Society of Equity, Indianapolis, Ind.; C. D. HESLER, secretary-treasurer Federation of Farmers' Produce Associations, Chanute, Kas.; B. F. WALTON, state organizer, Farmers Society of Equity, Geneva, Neb.; SKORDEMANNEN PUB. CO., Minneapolis, Minn.; J. HARRIS LENKER, Sunbury, Pa.; C. B. LOZIER, business manager Gulf Coast Section Clearing House, F. S. E., Mobile, Ala.; A. E. WEBBER, Geneva, Neb.; C. W. PECKHAM, secretary the Commercial Club, Haven, Kas.

A Response to the Call

(Special to UP-TO-DATE FARMING)

Kansas City, Kas., July 18.—W. S. Hannah, secretary of the Mercantile Club in Kansas City, Kas., is making elaborate plans to entertain representatives of all organizations of farmers, who will hold an annual convention here August 17, 18 and 19. The announcement from J. A. Everitt, president of the Farmers Society of Equity, that this city had been selected as the place for the convention, is arousing the city commissioners, the people and the Kansas farmers as well as the Mercantile Club.

Mr. Hannah has made arrangements for the use of the big open air pavilion at the City Park for the convention. It will seat hundreds of delegates and the big park, with its broad acreage, covered with forest trees and rolling knolls, makes it the most attractive place in Kansas City, Kas., or any other city, for such a meeting.

If rainy weather should in any way interfere with the plans for the splendid outdoor convention the City Hall auditorium will be in reserve for the exclusive use of the farmers. Both the auditorium and pavilion will be held for that purpose on the three dates, that by no chance shall the farmers who congregate in the metropolis of the great wheat-producing state be inconvenienced.

Mayor C. W. Green and the city commissioners will co-operate in entertaining this great gathering of producers. This city, city of the middle classes, home owners and working men,

being almost free from the aristocratic classes—more so, probably, than any other city of its size in the United States—is vitally interested in reducing the cost of eatables to the consumer. The people here want to see the farmer get a good price for his products. They are willing to split half and half the profits the middlemen are making in transporting farm products from the farm to their homes. They believe this centralization of farming organizations, with a view to marketing scientifically, means, while a big increase to the farmer, a like big reduction in price of the products they buy.

The farmers could not, by scientifically planning, have found a more responsive city in which to hold their convention. The city itself is working out the problem of reducing the cost of living to its citizens. The city owns and operates its own water and electric light plants.

In connection with its electric light plant, which has reduced the cost of electricity almost half, the city is operating a municipal store, the first of its kind ever opened in the United States. This is supplying globes and such articles to the consumers of the plant, thus eliminating the exorbitant profit heretofore demanded and received by the dealers, who set up a mighty howl when the store first opened.

So Kansas City, Kas., is making every preparation to entertain the several hundred farmers that are expected here in August.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

25c Corset Cover only 10c
Postpaid

A remarkable bargain. Just think of it! This embroidery trimmed muslin corset cover is one of the most wonderful bargains ever offered. Made of excellent quality muslin. Has a 2-inch beautiful blind and open work embroidery yoke as illustrated. Edged entirely around neck and armholes with tuxedo lace. Pearl buttons, draw string. Usually sells for 25c. White only. \$2 to 44 in. bust measure. Order direct from this ad. Order by No. 327UA. Postage prepaid. Be sure to state size 10c when ordering. Special price only.

Send for Bargain Book
of wearing apparel in newest styles. Mailed free. Write for it. SEND SURE TODAY. Satisfaction guaranteed or money back. **W. & H. WALKER PITTSBURGH, PA.**

DAISY FLY KILLER

placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent prepaid for \$1.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

Big Surprise Package 2c

We have made up one thousand surprise packages which we are going to distribute among the first one thousand readers of this paper who answer this advertisement.

Each package will contain at least three articles and one of these will be a book. The other two or more articles will constitute the surprise and will be something which we believe you will appreciate very much. We have a large assortment of miscellaneous goods and can not say here just what will go in the package you receive, but we are quite sure you will say the three articles are EACH worth MORE than 10 cents. If you answer at once, sending 10 cents for a three-months subscription to our paper and 2 cents additional—just 12 cents in all—you will be receiving one of the big surprise packages for only 2 cents. Send 12 cents today. Address

Household Surprise, Dept. 30, Topeka, Kansas

"Blunders of a Bashful Man"

You will laugh, you will yell, you will scream at THE BLUNDERS OF A BASHFUL MAN, as told in the world's champion funny book. In this screamingly funny volume the reader follows with hilarious delight the mishaps, mortifications and confusions of a self-conscious, sensitive, bashful young man, in a succession of astounding accidents and ludicrous predicaments, that convince the reader with laughter. This funniest of all funny books will be sent you absolutely free, by mail, postpaid, upon receipt of only 25 cents to pay for one new, renewal or extension one-year subscription to our big home, story and fancy work magazine. Address at once

Household Magazine, Dept. F. B210, Topeka, Kan.

PARKER'S HAIR BALM
Cleanses and beautifies the hair. Promotes a luxuriant growth. Never Fails to Restore Gray Hair to its Youthful Color. Prevents hair falling. 50c. and \$1.00 at Druggists.

This Stem Wind WATCH AND RING GIVEN

Genuine American Watch, fine timekeeper, guaranteed 5 years, solid Composition Gold. Metal Case, looks and wears like gold. Also handsome embossed ring, BOTH FREE for selling 24 packages BLUINE at 10c each. Write for Blaine today. **BLUINE MFG. CO.** 219 Mill St., Concord, Jct., Mass.

What 15c Will Do

The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its 21st year of increasing success. The paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a path to your home which is sincere, reliable, entertaining, wholehearted, the Pathfinder is yours. If you would appreciate a path that puts everything clearly, fairly, briefly—here it is at only 15c to show that you might like such a paper. We'll send the Pathfinder on probation 13 weeks. The 15c does not prepay us, but we are glad to invest in New Friends. Address The Pathfinder, Box 7 Washington, D. C.

Woman's Work and Welfare
Helpful Hints for Homefolks

SUGGESTIONS FOR ECONOMY—LEFTOVERS

It is wise when fruits and jellies come in little glass jars and tumblers, especially when these have covers, to save up some of them, turned upside down on a shelf out of the way for the icebox season. Then, when food is left over and is to be saved for entrees or puddings, put it in these little glasses, cover it and set it away and you will find your refrigerator holding about twice as much as it would if the ordinary vegetable dishes and bowls were used. Moreover, these dishes are washed at the proper time and all ready for use at the next meal. Still more important, the very act of putting these leftovers into fresh dishes often directs the attention to them so that they are used, when otherwise they might be forgotten. Vegetables that are to be used in the same soup can be put into the same dish; extra yolks or whites of eggs can be kept till needed in one of the little jars beef extract comes in, with a butter plate over the top; a cupful of soup or vegetable gravy can be kept till next day and used for soup, and still there is room for fruit, milk, butter, eggs and other things that belong in the icebox, and the glass jars and tumblers can be closely covered so that their contents will not taint anything else. That is one way of making the well-trained icebox earn its ice bill.

A box of gelatin might be called first aid to the icebox in getting up hot weather dishes. When clearing the table it is often possible to begin the salad for luncheon or dinner. Take what is left of the fruit, or the green peas or tomatoes, melt some gelatin and stew it up with them according to the directions on the package, pour it into molds and set it away in the refrigerator and there you will have salad for luncheon with the addition of a little lettuce or endive and dressing. There are jellied fish also and meat pie.

Economizing space by saving leftovers in jars means having room for fruit, fresh vegetables, bottles of cold drinks and things that really must have space. This room is what the masculine half of the family will appreciate. No man ever saw the economy of an icebox filled up with vegetable dishes and part of a roast so that there was no room for the watermelon. And the reason is a good one—because there was no economy about it. Cut the roast off the bone and stew the bone down into stock and wash the platter; pour that half jar of peaches out into a jam jar and, most important of all, empty the milk bottle and wash it thoroughly.

An ice box may not have typhoid fever itself if it is filled with germs, but the family will, and that is expensive.—JMrs. J. J. O'Connell.

COTTAGE CHEESE

Cottage cheese contains all the proteids of milk and part of the fat. It is made either by heating the curd slightly and straining or by straining it without heating. If any heat is used it should be very gentle or the curd will become hard and unpalatable. A safe way of heating is to pour boiling water into the curd. This is a good way also for those who do not care for the taste of lactic acid, for the hot water serves to remove part of this.

Cottage cheese would probably be a more popular dish if it were served in a greater variety of ways, says the

Mother's Magazine. For many palates it needs to be enriched with a little butter or cream. The French variety, to which reference was made, is commonly served with sugar and cream, and a similar dish, sometimes seasoned with a little ground nutmeg, is eaten in the United States.

Cottage cheese is always a suitable addition to or accompaniment of salads. A good luncheon which can be served in one course consists of cottage cheese in which the first portions are eaten with dressed lettuce or water cress and the last portion with a little of some rather sweet fruit preserve, such as strawberry or raspberry jam or preserved quinces. Served with bread and butter and tea, this makes a well-balanced meal.

Cottage cheese flavored in different ways may be used for sandwiches. Caraway seeds, chopped stuffed olives of different sorts and chives (a vegetable which may be easily grown in the kitchen window) make palatable flavors.

PHYSICIAN TO THE NURSERY

When the parents' knowledge is insufficient, the co-operation of the physician should be secured; indeed, he ought to play a much more prominent part in educational effort than is usually accorded him. An ounce of prevention is better than a pound of cure. The physician ought to appear in the role of a counsel and advisor before disease has a chance to develop rather than in that of a child-healer of neglected trouble. In order to understand child development and to recognize diseases in their incipient stages, one finds frequent examinations and measurements of the children helpful and necessary.

The hygiene of the nursery is a fruitful field of study for parents. Proper nutrition and clothing, ventilation and lighting, proper seating, exercise, sense training and mental regimen—all these things require careful attention.

Disease, as we have already pointed out, is often responsible for mental and physical aberrations and defects.

Household Helps

A rimless coffee can will bake a round loaf of bread beautifully. To time the baking set the hands of a broken clock.

Clean the nickel work on the range with kerosene oil, wipe with a clean dry cloth. Give the iron parts a dry rubbing and let the blacking wear off. I fail to see any

beauty in a blackened stove when it takes all one's strength to keep it polished.

Tack fly paper to the side of the house, beside the kitchen door, and if the resin should run down turn up the lower edge. To make sticky fly paper: Melt together equal parts of resin and castor oil over a slow fire, stir thoroughly and apply to the printed side of a paper flour sack with an old paint brush or shaving brush. Cut the papers as desired, leaving an inch margin to turn up. To remove any sticky spots use lard.

Save some of your reserve strength today, save some of it for tomorrow. Does it pay if you work until you are dead tired? If you do nobody is to blame for it except yourself. If you do not feel like doing a washing on Monday, don't do it. Ease up on Monday. Wash Tuesday. Do the ironing on Wednesday while the bread is baking, thus saving fuel. The Ladies' Aid meets Thursday afternoon. Go. The basket of darning and mending may wait until Friday. Your outlook will seem brighter if you only would practice the fine art of shirking the minor duties which enslave. Just rest for a little while every day and so regain what strength you have lost when you were foolish and couldn't go to sleep because Tom's socks weren't darned or the dust wiped off the mantel, in mortal fear of company coming in unexpectedly and the house would not be quite spotless. There isn't anybody going to notice the dust, so close your eyes so that you shall not see it and go to sleep. It is a sad mistake to try to tone up on tonic drugs when all you need is sleep.—Elizabeth Marie Spies, Ohio.

Yes, only 10c for this 25c quality Brassiere.
And this is only one of many unheard-of bargains shown in our new Bargain Book—now ready. Write for it today—now. Enclose 10c if you want one of these brassieres. Your money back if you want it. \$60 a WEEK and Expenses

That's the money you should get this year. I mean it. I want County Sales Managers quick, men or women who believe in the square deal, who will go into partnership with me. No experience needed. My folding Bath Tub has taken the country by storm. Solves the bathing problem. No plumbing, no water works required. Full length bath in any room. Folds in small roll, handy as an umbrella. I tell you it's great! GREAT! Rivals \$100 bath room. Now listen! I want YOU to handle your county. I'll furnish demonstrating tub on liberal plan. I'm positive—absolutely certain—you can get bigger money in a week with me than you ever made in a month before—I KNOW IT!

Two Sales a Day—\$300 a Month

That's what you should get—every month. Needed in every home, badly wanted, eagerly bought. Modern bathing facilities for all the people. Take the orders right and left. Quick sales. Immense profits. Look at these men. Smith, Ohio, got 18 orders first week; Meyers, Wisc., \$250 profit first month; Newton, California, \$60 in three days. You should do as well. TWO SALES A DAY MEANS \$300 A MONTH. The work is very easy, pleasant, permanent, fascinating. It means a business of your own.

How To PITCH the "Fade-away" by Christy Mathewson of the New York Giants

FREE

Boys, it's FREE! Complete, personal instructions from the great Mathewson, himself, showing you how to pitch his famous "fade-away" so the best batter in your town can't hit it safe. Send no money—simply write and ask for Mathewson's complete instructions—he will show you plain as day how to throw this baffling, puzzling, unhittable "fade-away" the curve that the best batsmen leave that pennant for the New York Giants three consecutive years. Boys, with this curve you can make all the other boys in your town look like monkeys—you can simply play horse with them—you can be as much feared by batters, and cheered by the fans as Mathewson is in the National League. For "Mat" shows it all to you. **All Absolutely FREE** He explains every secret of his pitching to you—how to stand, how to grip the ball, how to "wind-up," how to let it go. Photographs of every move make it all plain as A-B-C, so anybody can master this great curve at once and become the pitching hero of his town, the boy whose team is bound to win. It doesn't cost you a penny—the complete instruction is free, just for selling a few papers. Don't wait a day to learn how to throw the "fade-away," get it and put one over on the other boys. Send no money—simply write and say "send on the papers to sell and give me Mathewson's complete instructions." Address: W. D. Boyce, Dept. 420 Chicago.

FREE to every boy who writes. No money needed.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

L ENORE METTLER, Blairstown, Iowa, wishes to know the real meaning of Cadet of Equity.

A cadet is a young pupil or learner, a student, most commonly applied to students of military science. Cadets of Equity, therefore, would mean learners or students of Equity, and that is the sense in which we applied the name to our young writers. Equity means fairness or impartiality, equal justice, and that is what we claim for the farmers of the country and of the world as compared with other classes. The Cadets of Equity are studying these principles and preparing themselves for nobler careers as the responsibilities of manhood and womanhood devolve upon them. We have high hopes of their future, and as they are almost everywhere, the world will be better for their influence.

DEAR CADETS: I am a lad of 17 and live in the extreme west, on a farm of 160 acres. There is much beautiful scenery around here and the land is hilly, but it is very fertile. The principal crops are fruit, hops and potatoes. We have taken UP-TO-DATE about eighteen months and like it very well. The farmers have started an Equity union in our town and it has helped them very much. I would like all the Cadet boys and girls to exchange cards and letters, and I will try to answer all I get.—Charlie Garland, Rex, Ore.

DEAR CADETS: I am a Virginia girl, 13 years old, and live on a 160-acre farm. My father has been taking UP-TO-DATE for several years. I enjoy reading the letters very much. We raise most all kinds of grain and vegetables. I would like to hear from the Cadet girls and boys.—Verna Bowman, Boone Mill, Va.

DEAR CADETS—We take UP-TO-DATE and enjoy reading it very much. I am 20 years old and live on a farm with my parents and two brothers and three sisters. We live two miles from Hardinsburg. We raise corn, wheat, tobacco, rye, oats and cane, and most all kinds of vegetables. I think farm life is the happiest life one can live. I would like to hear from all the Cadet girls and boys and will answer all letters and cards I receive.—Eula Harsley, Hardinsburg, Ky.

DEAR CADETS—I am 19 and have lived in Oklahoma on a 160-acre farm most of my life. My brother takes UP-TO-DATE and we like it fine. Our main crops are corn, kafir corn and maize. We have ten horses, five cattle and about forty hogs. I would be glad to exchange cards with the boys and girls.—Minnie Link, Fountain, Okla.

DEAR CADETS—I am a Kansas girl, 13 years of age, and would like to become a Cadet of Equity. My father has taken UP-TO-DATE FARMING for several years and we like it fine. We live on a farm of 240 acres, four miles from South Haven. I like music and am taking lessons. We have an organ and my sister plays also. I go to Sunday school. We have lived here twelve years. I would like to exchange post cards with the Cadets and will answer all I receive.—Edith E. Foote, South Haven, Kas.

DEAR CADETS—I think UP-TO-DATE FARMING is a grand paper. I live on a farm and like farm life, but it is very hot and dry here now (June 20). I like all country amusements, but I like horseback riding best of all. I would be pleased to correspond with all the Cadets and will answer all I receive.—Hannah Kuykendall, Campbell, Ark.

DEAR CADETS—I am an Iowa girl, 15 years old, and live near town on eight acres, which is nearly all in pasture. We have nine horses, two cows, two pigs and some chickens. We have a farm of 125 acres which we rent. We do not farm any. My father and brother haul for the county most of the time. I can ride a bicycle and play the piano, and when we put up hay I rake, mow and lead the horse. I like to mow the best. I am a member of the M. E. church and attend Sunday school almost every Sunday. I will be glad to answer cards and letters from the Cadet boys and girls.—Alma Augspurger, Pulaski, Iowa.

DEAR CADETS—I am a Mississippi boy, 17 years of age, and live on a 20-acre farm a mile east of Lucedale. I have been living on the farm a little more than a year and I think it much nicer than living in a dusty, crowded town. I am not much of a farmer, but I know quite a bit about carpenter work. My father is a carpenter and I have learned by helping him. I intend to be a live stock farmer when I am

a man if I am able. I would like to correspond with any of the boys and girls that care to write.—Lester Solomon, Lucedale, Miss.

DEAR CADETS—I passed my last four years in Colorado, but I now live in Iowa. I will give my impressions of Colorado in the following lines: Hurrah for Colorado, the land of the free, The home of the grasshopper, bedbug and flea.

Our mansion was built of the natural soil; The walls were erected according to Hoyle. The roof had no pitch, but was level and plain, And we always got wet when it happened to rain.

Now go to that country, there's a home there for all, Where the wind never ceases and the rains never fail.

Where the sun never sets, but hotly remains Till it burns up the crops on the government claims. Farewell, Colorado! Farewell to the west! We traveled back east to the place we loved best.

I would like to exchange post cards and letters with all the Cadet boys and girls.—Marie Simkins, Bussey, Ia.

DEAR CADETS—I live in the woods of northern Minnesota. We do not farm on a very large scale. Lumbering is the chief industry. My father has a homestead of about 100 acres. We are five miles from Spring Lake and the Indians are not uncommon in this region. I would like to hear from other Cadets.—Clifford Hooper, Spring Lake, Minn.

DEAR CADETS—Here comes a farmer girl from North Carolina and I wish to join the Cadets. I will be 18 August 25. I attend a country school and will pass the eighth grade next winter. I live near Singletary's Lake. It is a beautiful lake, and we go boating and fishing in summer. I enjoy fishing, but I never have much luck. I like to read the Cadet letters and would be pleased to hear from all the boys and girls. I will gladly answer all letters and cards I receive.—Tassie Amelia Edge, Cedar Creek, N. C.

DEAR CADETS—I am a Canadian boy, 19 years old, and live in Ontario, in the Grimsby fruit district, about thirty miles from Niagara Falls. I live on a farm of 135 acres and have taken UP-TO-DATE since January 1 and I think it very useful whether the reader lives on a farm or not. I have not always lived in Canada. During December, January and February I traveled through all the states south and east of Michigan and spent two months in Florida. I have also been along the east coast from New York to Jacksonville. I subscribed for UP-TO-DATE while I was in Orlando, Fla., and have read every copy thoroughly ever since, and find it O. K. I would like to hear from all the Cadet boys and girls and will answer all.—Milbourn Hiscott, Smithville, Ontario, Canada.

DEAR CADETS—I am a Tennessee boy, 16 years old, and I live on a farm about seven miles from town. My father takes UP-TO-DATE and thinks it a grand paper. I enjoy reading the Cadet letters and can hardly wait for the paper to come. Papa likes it fine. He likes to read about farming and it is a help to him in his work. All farmers like to learn all they can about farming and I don't think this paper could be beat. I would like to exchange letters and cards with the boys and girls; will answer all.—Wade Dunlap, McKenzie, Tenn.

VIOLIN GIVEN

100 Bushels From One
I think my Marvelous wheat will make 100 bushels from the one bushel I sowed.—W. E. Goldsmith, Preble County, Ohio.

500 Bushels From 8 Acres
I have a fine crop of Marvelous wheat. I have 8 acres and I believe it will thresh out 500 bushels.—H. B. A., Warrick County, Ind.

96 Heads From One Grain
Marvelous wheat is taller than other kinds. It stood up well and the heads were better filled. I think Marvelous will make 40 bushels to the acre, and the other 15 bushels per acre. I counted 96 heads from one grain of the Marvelous wheat. This wheat is a great wonder to every one. I will sow all Marvelous this fall.—J. R. McLeod, Stewart County, Tenn.

Ahead of Any Other Kind I Ever Saw

Marvelous is ahead of any other kind I ever saw grow. It is a strong grower. We have wheat that stands five feet four

inches, with stiff straw, long heads, more grains to the head and prettiest head I ever saw. Old varieties will yield about 14 bushels to the acre. This looks like 28 bushels to me. We never will believe this wheat has not been doped and doctored until we grow another crop. It seems so different from the other kinds.—Chas. L. Palm, Richland County, Ohio.

Neighbors Want It

It was sown October 15, which is very late, on stalk ground and pastured until April. It made four to five grains to the mesh, with large straw and long heads. It is harder than any other wheat. Marvelous is the wheat and my neighbors are all wanting a start of it this fall.—C. P. Swobber, Owen County, Ind.

Just What You Claim

Marvelous wheat is just what you claim for it.—Allen Scales, Warrick County, Ind.

The Stuff for Sure

Marvelous is the stuff for sure. You don't advertise it half strong

enough.—Thos. O. Smart, Jefferson County, Ind.

Beats Them All by Far

Marvelous is the wheat for me. It beats them all by far.—C. J. Moster, Newton County, Mo.

Best I Ever Raised

Marvelous is far better than other wheat. Has longer heads and more grains to the head. I think it will yield twice as much per acre. Marvelous is the best wheat I ever raised. I found from 40 to 60 heads to the grain.—David Wile, Montgomery County, Pa.

More Than Fulfilled Expectations

Marvelous has more than fulfilled our expectations and your advertisement of it. The heads are large, well filled and we estimate the yield at 35 bushels to the acre.—Mrs. Annie L. McBeth, Champaign County, Ohio.

Heads Have 70 Grains

Marvelous wheat is more vigorous in growth, stiffer straw and heads longer than Pool grown in the same field. Many heads have

70 grains in them.—Joseph M. Smith, Washington County, Pa.

Far Ahead of All Others

Marvelous is far ahead of all other varieties. It made 25 bushels on upland without fertilizer. The best others did with fertilizer was 20 to 25 bushels, and only one field made.—R. J. Hasty, Washington County, Okla.

Crop Engaged at \$5 a Bushel

The new wheat was sown on two acres of ground on September 25, 1912. It was not winter-killed in the least. No other wheat grew any better in the spring. I estimate the yield at 50 bushels per acre, which is much better than any other variety around here. All that I will have to sell is already engaged at \$5 per bushel. I think it is the greatest variety of wheat ever introduced into this country. Dozens of my neighbors have seen my wheat and pronounce it wonderful.—J. H. M., Atchison Co., Kans.

Marvelous Wheat is All Right

The Marvelous wheat is all right. I sowed it on the 6th of

October and it came up and grew very fast. It has fine, large heads and is a fine-looking wheat. I think it can easily be made to produce 40 or 50 bushels or more to the acre. I will sow only the Marvelous.—Chas. McClelland, Wayne County, O.

Will Sow My Whole Crop of Marvelous

I got my Marvelous sowed very late, but it is going to do better than my other wheat. I think it will make about two times as much as the other. I sold all of mine for seed and I am going to sow my whole crop with it this fall.—John S. Harmon, Carroll County, Md.

40 Bushels to the Acre

My Marvelous is fine. Will make 40 bushels to the acre.—J. A. Zimmerman, Tazewell County, Ill.

50 Bushels to the Acre

Marvelous wheat is as fine as I ever saw grow. Some of my neighbors say it will yield 50 bushels to the acre. Six of my

neighbors have spoken for 285 bushels.—W. M. Peak, Scott County, Ky.

Selling Seed at \$4 a Bushel

I wish to say my Marvelous wheat is all you claim for it. It stood all the heavy wind and rain. Many visited the field with much surprise. Some went so far as to say if they did not know me to be straight they wouldn't believe it. I must say it is properly named. It is certainly Marvelous. Judges say it will make 40 bushels or more per acre. Several have spoken for seed at \$4 per bushel.—G. W. Parker, Franklin County, Kentucky.

One Acre Equal to Three

I sowed one acre of the new wheat in October. It made a good growth in the fall and stood the winter as well, if not better than the others. In the spring it soon took the lead of other wheat sown in the same field. The one acre of the new wheat will make as much grain as three acres of other varieties.—W. J. Willis and Son, Kittyton, Tenn.

Every letter printed above should appeal to you just as though it was addressed to you personally. Because it is the report of a farmer who, under average conditions, has found the Marvelous Wheat a big money maker. You can do no better than be guided by the testimony of these farmers. Learn more about this wonderful new wheat by sending the coupon below:

The Top Bushels Are Profit

The expense is so much for producing an acre of wheat. It is very little more whether the yield is large or small. But a big yield means a profit, even though the price is low. The top bushels are profit.

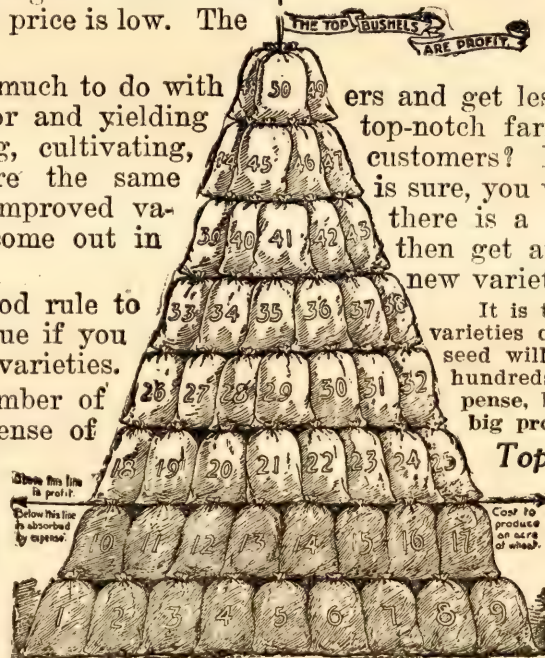

No other one thing seems to have so much to do with the resulting crop as the hardiness, vigor and yielding propensities bred in the seed. Plowing, cultivating, seeding, harvesting, threshing, etc., are the same whether you use common seed or our improved varieties. What isn't in the seed can't come out in the crop.

Every farmer knows that it is a good rule to change seed wheat. Especially is this true if you select one of our vigorous, heavy yielding varieties.

The illustration shows about the number of bushels you must raise to meet the expense of an acre of wheat. Did you produce 17 bushels per acre? Or 25, or 30, or 35?

What Does Your Wheat Yield

It is an established fact that 60 bushels of wheat have been raised on an acre of ground. Our customers have reported

63 bushels, 55 bushels, 50 bushels, 45 bushels, 40 bushels, etc., per acre; that our improved varieties exceed old kinds by a half, two to one, three to one, etc.

What yields do you get? Are you an AVERAGE farmer and get yields of 15 to 18 bushels, or below the average of farmers and get less than the average yields? Or are you a top-notch farmer and get yields like reported by our customers? If you are not in this class now, one thing is sure, you will never get in it until you recognize that there is a vast difference in varieties of wheat and then get and grow the vigorous, hardy, productive, new varieties we offer.

It is the poorest kind of economy to continue "run-out" varieties of wheat. An occasional small investment in new seed will keep any farmer right up-to-date and make him hundreds of extra dollars. Our seed wheat is not an expense, but an investment that will soon be returned with big profits.

Top Bushels are Profit—Strive for Top Bushels

Every winter wheat grower who reads this can save money on the seeding of this fall's crop and at the same time get a start of the finest variety ever introduced. It means money saved right now and more money made next year. Don't take our word for it. Read the reports of other farmers. You can't go wrong in the face of the evidence. Let us "show you." Send the coupon below.

O. K. SEED STORE, Dept. 6, Indianapolis, Indiana

The evidence in this advertisement should set you thinking about making more money from your 1915 wheat crop. It will cost a 2c stamp to send our proposition and photographs and more letters—or a penny for a post card. Every Up-to-Date farmer owes it to himself to investigate. If you grow wheat you should sow a field of Marvelous this fall. Sign, clip and mail the coupon and you'll be glad you did.

55 Bushels per Acre

I sowed one acre of the new wheat according to instructions, on the 10th of October, 1912. It stood the winter well and in the spring soon led all others. The straw grew 4½ feet tall, stood up well and when threshed it yielded 55 bushels. This yield has beat any wheat ever raised in our section of the country. Its fame spread all around and people came a long distance to see it. I can not furnish seed for all who want it.—Charlie Houser, Lincoln County, N. C.

It is "Marvelous"

I sowed four acres of the new wheat according to instructions, on October 5, 1912. This was late to sow, but it stood the winter as well as the best. As to its growth in the spring, I know of no other word to express it better than "Marvelous." I estimate the yield at 25 bushels per acre.—H. H. Flint, Decatur Co., Ind.

50 to 60 Bushels per Acre

I sowed one-half acre of the new wheat. The yield is estimated at 50 to 60 bushels per acre. Compared with other varieties it beats them all. It is the purest wheat of all and there

will be a demand for seed. I just want to say that it is the finest wheat ever raised in this neighborhood. My neighbors say it is the finest they ever saw.—Larry Sowash, Miami Co., Ind.

At Rate of 63½ Bushels per Acre

I sowed only six-tenths of an acre with the new wheat, the first week in October. It made a good growth and far exceeded other varieties in standing the winter. It grew five feet high, stood up extra well and the yield was at the rate of 63½ bushels per acre, which is fully three times more than other varieties of wheat yield through this section. The wheat is perfectly pure. There will be a demand for seed of this wheat through this section.—H. B. Austill, Warrick County, Ind.

Will Yield Double Any Other

The yield is estimated at 40 bushels per acre and it will yield double any other variety about here. I regard the new wheat as the best I have ever sown.—Hugh S. Espey, Ohio County, Ind.

Will Produce Double as Much

I sowed the new wheat obtained from you on seven-eighths of an acre, on October 3, 1912.

It started out with an extra growth in the fall and stood the winter 40 per cent better than other varieties. It excelled all others in growth in the spring. Average height, 4½ feet. It stood up extra well and will produce double as much as other varieties in this section. I sowed the wheat on thin land and the test is very pleasing to me.—Sumner Flippin, Tippecanoe Co., Ind.

It Easily Doubles My Other Wheat

Marvelous heads are larger and more grains to the head than other wheat. I did not give it a fair chance, but it easily doubles my other wheat in yield.—J. E. Holt, Augusta County, Va. U. B. minister of 50 years standing.

Neighbors Taking Notice

Marvelous simply can't be beat for hardiness. The winter did not affect it in the least. I sowed my wheat the first week in October. It was no time until it was ahead of other wheat sowed in September. The heads run from three to five inches in length and three to four grains in a mesh. I think it is the greatest wheat I ever saw. I have been canvassing some this summer and have seen some fine

fields of wheat, but the heads look very small in the best of them beside the Marvelous, which were about twice their length. The neighbors are sitting up and taking notice.—Mrs. G. O. Castleman, Polk County, Mo.

About Doubles Other Varieties in Yield

Marvelous beats my other wheat for hardiness and is far ahead in growth. Marvelous heads are four to six inches long, with 50 to 75 grains in a head. It will yield about 30 bushels. Other varieties run from 15 to 18 bushels.—U. S. Nave, Carter County, Tenn.

Best of Any Wheat

Marvelous was sown on poor, stony land. It is looking the best of any wheat now, and we had a lot of dry, hot, windy weather and other wheat nearly died out. Marvelous will double the yield of other kinds.—Joseph D. Batty, Toga County, N. Y.

Heads Are Six Inches Long

I have not seen any wheat in the neighborhood that could compare with Marvelous. I counted fifteen stalks from one grain. Heads are six inches long. It will thresh more wheat to the acre than any other wheat in

this neighborhood.—J. N. Early, Washington County, Ohio.

72 Grains to the Head

Marvelous is very vigorous, good straw, with fine, large heads. We counted one head that had 72 grains. Found one mesh that had five grains and nearly all of them had four. The seed we got of you was as fine wheat as I ever saw.—Geo. Stauffer, Bond County, Ill.

85 to 100 Grains to the Head—Others 25 to 30

Marvelous wheat is a very vigorous grower, straw very stiff. The heads run from five to six inches. Marvelous had eighty-five to one hundred grains to the head, other kinds from twenty-five to thirty.—John W. Surface, Highland County, Ohio.

Heads 5½ Inches Long, With Five Grains to Mesh

Marvelous grew as tall as five feet eight inches. It was the strongest straw I ever had. Heads as long as 5½ inches and five grains to mesh.—J. D. Eikin, Daviess County, Indiana.

—R. M. Forringer, New Bethlehem, Pa.

UP-TO-DATE FARMING

17th Year

August Fifteenth, 1914

Number 16

By the Sweat of His Brow—

Thousands of Farmers in all the winter wheat states unite in praising the Marvelous Wheat.

Save money on your seed; increase the yield and make more money from the harvest by sowing Marvelous

(An advertisement largely written by our customers—read the extraordinary letters from growers of the Marvelous Wheat)

Sell 10 bu. of your common wheat at market price, say 75c, making \$7.50. For this sum, \$7.50, we will send you enough of the wonderful Marvelous wheat to sow 10 acres. Yes, we mean **TEN** acres.

All we ask is that you read the reports written by our customers. We need not add another word. In this business for 34 years we have never received such wonderful reports on any wheat, for the very good reason there never was such a wheat before. We could print hundreds of letters, but give a few only to prove beyond a doubt that Marvelous wheat is just what we said it was.

Every up-to-date farmer is on the lookout for improved machinery and live stock. Why not get the best in grain, too? At an actual saving in cost of seed you can sow part or all of your crop with Marvelous wheat. It will cost much more to sow common wheat from your granary.

You're skeptical, and we don't blame you a bit. But we have the proofs to "show you." You need not take our word for it. Read some reports of farmers from all the winter wheat states. Write to us for still other reports, photographs and our whole proposition. All you need risk is a 2-cent stamp for letter—or send a post card.

If you grow winter wheat you owe it to yourself to get our proposition and the proof. It's money saved right now in your seeding and more bushels of wheat and more money for you next harvest. Whether you sow one acre or more this advertisement should interest you more than anything else printed in this paper.

The top bushels are profit. It requires so many bushels to pay your expense; all over that is clear gain. Don't be satisfied with 10 to 15 bu. an acre! Strong, vigorous, heavy-yielding varieties will produce 30 to 50 bu. per acre at the same expense. Strive for the top bushels—the extra profit.

All you need to do now is to send your order or send for further proof and our proposition. Better write before you lay this paper aside.

Change Your Seed Wheat

Get new blood, life and vigor. Increase hardiness, productiveness and quality. Save money.

55 Bu. per Acre
I sowed 1 acre of the new wheat according to instructions, on the 10th of October. In the spring it soon led all others. When threshed it yielded 55 bu. This yield has beat any wheat ever raised in our section of the country. Its fame spread all around. I can not furnish seed for all who want it.—C. H. Lincoln Co., N. C.

500 Bu. From 8 Acres
I have a fine crop of Marvelous wheat. I have 8 acres and I believe it will thresh out 500 bu.—H. B. A., Warrick Co., Ind.

Doubles Other Wheat
Marvelous heads are larger and more grains to the head than other wheat. I did not give it a fair chance, but it easily doubles my other wheat in yield.—J. E. H., Augusta Co., Va. U. B. minister of 50 years standing.

50 to 60 Bu. per Acre
I sowed $\frac{1}{2}$ acre of the new wheat. The yield is estimated at 50 to 60 bu. per acre. It is the finest wheat ever raised in this neighborhood.—L. S., Miami Co., Ind.

63½ Bu. per Acre
I sowed only six-tenths of an acre with the new wheat, the first week in October. It grew 5 ft. high, stood up extra well and the yield was at the rate of 63½ bu. per acre, which is fully 3 times more than any other varieties of wheat yield through this section.—H. B. A., Warrick Co., Ind.

85 to 100 Grains to the Head—Others 25 to 30
The heads run from 5 to 6 in. Marvelous had 85 to 100 grains to the head, other kinds from 25 to 30.—J. W. S., Highland Co., Ohio.

100 Bu. From One
I think my Marvelous wheat will make 100 bu. from the 1 bu. I sowed.—W. E. G., Preble Co., Ohio.

96 Heads From One Grain
I think Marvelous will make 40 bu. to the acre and the other 15 bu. per acre. I counted 96 heads from one grain of the Marvelous wheat! This wheat is a great wonder to every one.—J. R. McH., Stewart Co., Tenn.

50 Bu. to the Acre
Marvelous wheat is as fine as I ever saw grow. Some of my neighbors say it will yield 50 bu. to the acre. Six of my neighbors have spoken for seed.—W. M. P., Scott Co., Ky.

Crop Engaged at \$5 a Bu.
The new wheat was sown on 2 acres of ground on Sept. 25. I estimate the yield at 50 bu. per acre, which is much better than any other variety around here. All that I will have to sell is already engaged at \$5 per bu. I think it is the greatest variety of wheat ever introduced into this country. Dozens of my neighbors have seen my wheat and pronounce it wonderful.—J. H. M., Atchison Co., Kas.

Beats Them All by Far
Marvelous is the wheat for me. It beats them all by far.—C. J. M., Newton Co., Mo.

Best I Ever Raised
Marvelous is far better than other wheat. Has longer heads and more grains to the head. I think it will yield twice as much per acre. Marvelous is the best wheat I ever raised. I found from 40 to 60 heads to the grain.—D. W., Montgomery Co., Pa.

The Stuff for Sure
Marvelous is the stuff for sure. You don't advertise it half strong enough.—T. O. S., Jefferson Co., Ind.

What We Want You to Know and Why

Being a Few Words on Particular Matters

When is it Profitable to Feed Wheat?

Corn and wheat have very nearly the same feeding value, pound for pound, as they are much the same in chemical composition. Corn is richer in digestible fat, while wheat is superior to corn in proteid constituents. Protein being a more expensive element than fat, it is more valuable, and this fact probably makes wheat preferable to corn at the same price per pound. In our next issue will be found an article treating this matter in detail. The relative prices of wheat, corn and live stock govern the question and the farmer with both corn and wheat, or with plenty of wheat and little corn, should carefully consider the situation before he decides to feed or not to feed part or all of his wheat crop.

The Convention in Kansas City

When this paper is being delivered to our hundreds of thousands of readers a representative gathering of farmers will be in session in Kansas City, Kansas. These farmers will meet to make a practical study of how nation-wide co-operation can be brought about to establish a system of marketing to be controlled by organized farmers. The primary object is to control the marketing of our magnificent crop of wheat to give the producers thereof a fair and just price, based upon the world's supply and the world's demand. It is believed by those who have studied the situation with care that the farmers are entitled to one dollar per bushel, and we concur in this belief. It is to be hoped that practical steps will be taken to bring about a federation of the many farmers' associations, with profitable prices for this year's wheat crop as the immediate object, and a nation-wide marketing system for all farmers and all crops as the ultimate goal. The farmers have their opportunity at hand. Let them make the most of it.

Finding the Blame for the High Cost of Beef

Farm folks who can not leave home to attend the agricultural colleges are to have the advantages of college training notwithstanding. The United States Department of Agriculture will co-operate with state agricultural colleges to that end. Short courses will be given in poultry raising, fruit growing, dairying, farm bookkeeping and household economy. These courses will consist of fifteen or twenty lectures written out and accompanied, where desired, with lantern slides for illustrative purposes. Text-books and laboratory equipment will also be available to these classes. Ten or more farmers, with their families, may organize a class. When application is made an agent is sent to the community who organizes the class, gives the first few lessons, demonstrates the work and then leaves to organize other classes elsewhere, first appointing a local leader to take charge of the class and complete the course. Class meetings are held at farmers' homes and are to consume about three hours to the session. These classes will serve the double purpose of awakening an interest in the science of agriculture and of bringing farmers together. Those interested should write their state college to learn if provision has been made for the establishment of such classes in their state.

Home Study Classes in Agriculture

Newspapers, particularly the country press and that of small cities, have been doing much talking about the high price of beef, yet, after summing up their talk, one is compelled to admit they have said very little in spite of the great array of words. The information one gains from them is merely that beef is high, very much higher than it was formerly, and that farmers ought to raise more of it. Some of the papers lambast the packers, the wholesalers and the retailers, as well as the farmers, but none shows why cattle are scarce and beef high, or points out a remedy that would bring relief.

As we have often said in this paper, it requires a readjustment of farming operations, which necessarily entails more or less expense, before the average farmer can increase his output of beef cattle or before those farmers who have not been raising beef can undertake it. With the passing of the great cattle ranges there is no other way to increase the beef stock of the country except by inducing its production on more farms, and on the farms where cattle are now being grown. But before such farmers can be induced to prepare to take this risk, for risk it is, they must be convinced that it will be profitable. Merely pointing out the prices paid by packers for beef cattle at the present time is not convincing. In the first place farmers know that at the present prices paid for hay and corn there is very little profit in feeding cattle at present prices, under ordinary farm conditions. In the second place every community in the cattle belt has more than one example, of recent occurrence, where feeding cattle lost the feeder money. In the third place it is within the range of memory of all farmers when prices were but half the present figures, and there's no adequate assurance that if the production was increased prices would not resume former low levels. There is nothing upon which to base an expectation of cheaper beef unless the costs of distribution are lessened, and unless something is done to give farmers a fair guarantee that prices to them will be profitable enough to justify the expense of increasing the production not only of cattle, but of other crops as well, the situation will grow worse, beef will become less plentiful and consequently higher in price.

Prices should be neither too high nor too low. They should be high enough to insure adequate production and low enough to insure adequate consumption, but above all they should be stable. The marketing system is at fault, not farmers or dealers. Give the nation the Equity system of co-operative marketing and the solution to these problems will be readily solved.

The Original Letters from Growers, extracts of which we have printed, are on file in our office for the inspection of any one interested. We refer to the Continental National Bank and any bank or business house in Indianapolis.

Balanced Rations

Top-dressing is entirely proper for a naked soil.

A Holland dairyman ought to be able to make dutch cheese.

Watch our next for a report of the Dollar Wheat and Federation Convention.

The co-operative creamery at Baldwin, Wis., is said to be the largest of its kind in the world.

Agitation for good roads keeps increasing. Suppose we try agitating the roads with road drags.

Have a time for every chore and then do it in its time. Regularity is a big factor in winning success.

If co-operators are to co-operate, why don't the leading farmer organizations get together? Those who are real co-operators will.

Try hogging down a part of the corn crop this year. But do it by the most approved method. One can do the right thing in a wrong way.

Labor-saving machinery for the farm wife is life-saving machinery. Don't wait until it is too late to learn the truth of this statement, brother farmer.

The American packers are doing all they can to promote the swine-raising industry in Argentina. Very few hogs are raised in that republic at the present time.

Some folks raise a terrific howl because the farmer wants a dollar a bushel for his wheat, but can any of them show why he shouldn't have it if he can get it?

When a bachelor farmer writes letters to the home department of a farm paper, bragging on the soil, climate and scenery of his locality, it's ten to one he's advertising for a better half.

The way our subscribers are manifesting their delight over the latest numbers of UP-TO-DATE FARMING shows we have but voiced the sentiment of the farmers and pointed a way out of a dilemma.

In Germany the farmers are organizing co-operative electric plants for power, heat and light. The Kaiser's kingdom has a national organization of farmers called the "National Federation of German Agricultural Co-operative Societies."

Ohio University students are drinking 100 gallons of buttermilk each week, obtained from the college dairy. Secretary Bryan's grape juice must look to its popularity or ex-Vice-President Fairbanks' buttermilk beverage will put it in eclipse.

A check of \$137,632 was recently given to a Washington farmer for his single crop of Turkey Red and Blue-stem wheat by the Jones-Scott Co. of Tacoma, Wash. This, it is stated, is the largest check known for single grain crop in the northwest.—Ex.

Now that Austria is in the public eye it is of interest to know that agriculture in that empire is thoroughly organized in co-operative societies, with efficient rural credit institutions. The Austrian government has a post-office savings bank system that is highly developed.

Warming Up the Wheat Trade

Buyer—"If that price thermometer goes any higher it will suffocate us. We can't stand it."

Producer—"If it goes any lower it will freeze us out. We intend to put it up to \$1, where it ought to stay. Once you get used to it you will like it better yourself."

Conspiracy to Lower Prices

A RECENT news dispatch from Washington alleges a conspiracy among dealers and exporters of wheat at Kansas City, Mo., to depress prices to farmers, and a resolution introduced in Congress by Representative Doolittle has been favorably reported by the Interstate Commerce Commission. Mr. Doolittle told the House that for a 150,000,000-bushel wheat crop in Kansas the farmers were getting 63 cents a bushel at loading elevators in that state, while large quantities were being sold at Kansas City for export at 85 cents a bushel. The charge is under investigation, but, as in most other cases, the so-called conspirators have the advantage. They know all the ins and outs of such transactions, while the farmers do not look much beyond their farms and are very seldom taught anything but how to produce. Production accomplished, then comes the reaping time for the home speculators and those who buy to send abroad. Sixty-three cents at the markets where the farmers deliver and 85 cents only a few miles away where the buyers sell to exporters is a difference that must attract attention.

But why do not the farmers sell direct to the exporters? That is the very point we wish considered. Why don't they? And why don't they sell direct to the home demand? The farmers are not connected with the trade centers. Each is on his farm and is busy with the work that devolves upon him there. The advice and instruction he gets is to work a little harder, pull a little stronger and raise a little more stuff every year—a great deal more, as much more as possible. This he tries his best to do and meanwhile the buyers are kept informed of his every movement, his every success and every failure. This information is given by the farmers' own institutions and enables the buyers to always be ready to take advantage of him in price and in every other possible way. Sixty-three cents where the farmer sells and 85 cents where the buyer sells is too great a difference, considering the distance. But why call it a conspiracy? It is but a sample of the way products are bought and sold all over the country. Farmers must organize and do their own selling—must themselves supply the demand for the stuff they produce. That is the way everybody else does.

What Others Say and What We Think of It

"Getting mad never won a battle."—Co-operative Manager and Farmer. It has started a lot of them, however.

"There is abundant room for hard common sense," remarks the National Stockman and Farmer. But the supply is never equal to the demand.

"The Interstate Commerce Commission appears to regard itself as somewhat of a public conservator."—Price-Current Grain Reporter. Well, that is about what the public employs it for.

"The agricultural college is beginning to place men where they belong," says the Breeders Gazette. Here's hoping they may soon get around to the grain and cotton gamblers and the crooked middlemen.

"Talk about the water wagon—what's the matter with the milk wagon?"—The Milk News. Well, if anything is the matter it is probably because the milk wagon resembles too closely the water wagon.

"Every human being born upon the earth has a natural right to a sufficient portion of the earth's surface to maintain existence."—Farmer and Stockman. There are plenty who are willing to sell their birthright for a mess of pottage.

"It now seems quite certain that the wheat crop of the northern hemisphere is not larger than it was a year ago. There is no good reason why the price should be lower. If gradual marketing is substituted for dumping, wheat prices are almost certain soon to be restored. Hang on.—The Nebraska Farmer. One by one other papers come to the early viewpoint of UP-TO-DATE FARMING.

"Cheaper methods of production which are being continually worked on will increase profits faster than any possible depression of prices will reduce them."—Journal of Agriculture and Star Farmer. It takes years to work out cheaper production. It takes a year to produce the cheaper product. But it only takes ten days or less for market conditions to rob the producers of their prospective profits on their years of endeavor. We can't agree with the above. The editor of that publication is steering his ship by the wrong star.

"The wheat crop now is a bumper one. So soon as prices are beaten down because it is so large and the farmer has sold cheap, then it will be found that something is the matter with it and prices will go up because of scarcity of wheat. In other words, the newspapers that are talking of the big wheat crop are helping to bunco you. But they have done it every year for generations and you are too green to catch on and rebuke them by your votes, so why should they worry?"—Appeal to Reason. We don't need votes to remedy this matter. We need farmer control of marketing and price. Farmers can control the crops on the farms. It is not so easy to control man once in office.

EDITORIAL

How Farmers are to be Organized and Taught

IS MISSOURI taking the lead? We scarcely know, for the "interests" everywhere seem so determined to get control of the agriculture of the country that it is difficult to determine who is in the lead. But Missouri is not a bit backward. One hundred and fourteen bankers were named a few days ago to take the lead in organizing the farmers of the state so that they may more readily be brought in the line marked out by people that are not farmers. This action was taken by the Missouri Bankers' Association, and the plan is to have an organization committee in each county, to be headed by one of the bankers thus named, who will call to his aid as the second committeeman a business man of the county and then these two are to name a farmer to complete the committee. The purpose, say the association authorities, is to have the farmers adopt the newest styles of farm management. For instance, "neighborhoods best suited to raising hens and spring chickens will be visited by college-trained poultry experts and the people will be taught how to raise chickens." And the same course is to be pursued in regard to other products.

Bankers and business men may imagine such a course may result in benefits to farming, but farmers themselves surely know better. Banking methods do not apply to farming, and neither do the methods employed by business. Farmers must work the

ground, plant the seed, cultivate the crops and harvest the production. Then comes the most important part, the marketing. What do the bankers know of marketing a crop? It is their business to study securities, discount notes, loan money and collect interest and discounts. The only point where they are interested in the crops is as to whether they will increase the money movement and add to the banks' income. It is much the same with the business men. When the farmers sell their crops the money flows to the stores and there is an increase of business. These are fair statements, aren't they? But where is the benefit to the farmers? Other people are allowed to attend to their own affairs. Why not the farmers? They have proven themselves capable by what they have accomplished. They have made the country what it is. They have created the wealth on which the banks are based, and they have built up the business and made it what it is. There is much for them to learn, and they may accomplish more than they have done, but their business is their own. It is distinct from all other businesses and it remains to be carried out by the farmers themselves. They know how to produce and they do that abundantly. They are rapidly learning to market profitably and when they succeed in that increased production will follow as naturally as growing plants respond to rich soil and moisture and sunshine, and they will need no special teaching by bankers and business men.

Speculation and Price Making

FROM a market editorial in a recent issue of a prominent city daily we quote the following:

The sensational advance in corn futures on Thursday, 3 cents a bushel for the December option, was due more to a concentrated drive against shorts by the "crowd" in the Chicago pit than to crop damage. On that day it was just about as hot and dry in Chicago as in any part of the corn belt and that fact inclined sentiment to the buying side and gave the manipulators an opportunity to close in on an oversold market.

That is a fair sample of how prices not only of corn but of other crops are made. These were not prices paid for corn. These people were not buying corn at all. They were only bidding to pay so much for corn should it be delivered next December—they could take it then at that price or let it alone. If corn happened to be lower then the buyer could pay the seller the difference and if it happened to be higher the seller could pay the buyer the difference, and not a grain of corn need be delivered. In fact, neither buyer nor seller expected to handle corn. It was simply a game of chance as to what the price would be in December and each had from the date

of the transaction to December to manipulate the market. So the sentiment that day favored the buying side and the manipulators closed in on an oversold market—that is, more corn had been sold than was for sale, or more than could be expected at that market, a thing that very often takes place.

Now, farmers, listen. Every bushel of corn you have for sale is priced in a way similar to that. Your labor and land investment is up against the risk speculators are willing to take as to how much corn may come to a certain market at some future time. The more that is expected the less the price is. Extravagant crop reports make them believe great quantities will be offered and down go the prices. Bring in a little scare, as on the day referred to above, and up jump the prices, but only for a time, generally not long enough to help the farmers any. But that is the way the marketing of the leading farm crops is, and on just such as that the farmer's success depends—his ambition and hope of reward, his dependence for the support of his family and the prosperity of his business. How much longer will he accept such methods?

Give Farming a Boom

EVERYBODY is saying that now. The demonstration trains that almost network the most productive sections of the country urge great production and show how it can be done to "boom" farming, hoping, of course, to increase the freight haul on their lines. The monopolistic trade concerns spend large sums of money in every effort to "boom" farming by increased production so as to multiply their business in the rural districts. "Boom farming" says the Lever bill, which appropriates astonishing millions from the United States treasury and in effect

from the state treasuries to furnish high-salaried jobs to thousands of "experts" who know, as a rule, more about politics and manipulation than they do about farming, to "boom" farming by teaching the farmers how to farm. "Boom farming," say the market manipulators, whose devilish tentacles extend all over the country with their suckers fastened upon every crop that grows from the soil—"boom farming" that we may have richer pastures in which to feed, but be careful not to boom any prices, and of all things don't suggest any different ways of marketing. "Farming is boomed," declare national and state agricultural

officials as their extravagant reports of great crops go out to the boards of trade to justify their scare headlines in the public press to induce farmers to accept lower and lower prices for their stuff. "Boom farming," says the secretary of the national treasury as millions of dollars are placed at the disposal of the banks for the use of the buyers of farm produce, to help to "move the crops" and encourage rapid selling to glut the farmers' markets and make prices lower, all getting a profit therefrom except the farmers who worked a year to grow the crops.

We have no apology for the above ironical article. It only brings out the real facts of the situation. The methods employed to boom farming invariably boom something else. Consumers are at sea and absolutely refuse to be brought to land. They know they pay high prices for the necessities of life and they know their provisions in some form or other originally came from the farms. They look away across the fields and see the waving grain, the whitening cotton, the meadows rich and rare and the cattle and sheep among the hills, and they conclude there is not enough of any of these or the prices would be lower. Hence the universal cry for more and more. They refuse to look in the secret chambers where the surplus is held from season to season that the retailers in the consumers' markets may not be overstocked. They will not investigate the market manipulations that add extravagant and unearned profits every step of the way from the fields to the kitchens. They won't consider these things, but look only to the source of production.

Close the toll gates, eliminate the suckers that draw from both directions, assure to the farmers fair and steady prices, prices that can be relied upon from one season to another, from planting time to harvest, and then farming will boom itself. Then consumption will increase and production will keep pace with it. The users of the stuff will find plenty of it on the market and the prices charged consumers will be less than they are now. If the farm boomers would work to this end how immediate and satisfactory would be the result!

Right for Business

EVERY succeeding day newly emphasizes the need for an efficient farm organization. The world efforts that are effective, no matter in what line, are combined efforts. Nothing is now attempted single handed and alone, and those who attempt to accomplish things by themselves have practically all the other people against them. Organization for mutual defense and protection is the rule. Organization of the different interests have come to stay, because those people, companies and corporations must co-operate to guard their interests or they would fail.

But the greatest business of all is still unprotected by a sound organization. Much is being done ostensibly for the farmers, but it is done by somebody else, at the dictation of somebody else and for the benefit of somebody else. The farmer is not consulted, because, individually, he has no power and in the small, separate units or organization that many of them are in they can exert no power that need be feared or respected. He lacks the right kind of organization, therefore there can be no mutual protection and the interests do not regard him as a force to reckon with.

But farmers can combine like others have done so that the voice of one is the voice of many and so that what one does the many do. As soon as farmers become fully alive to the possibilities through a sound organization that secures national co-operation, then the organized farmers will be the greatest force in our national life, and the voice they would then speak in all would listen to.

That is the position in which farmers can place themselves, and they can do it by a very simple form of organization. The simplest form, and at the same time the only practical one available, is what is called the Equity form. It is founded on the great principles and needs of agriculture that are so apparent in the pricing and marketing of farm crops. By the Equity plan we do not need to wait until the farmers of the country have been gathered into a single society. But while organizing where no local organization now, it also provides for federating present organizations, and by increasing the benefits, through broadened organization and its simple but successful business plans, it stimulates the growth of all organizations. It is as practical for all farmers' organizations to federate and work together by the Equity plan as it is for the townships to constitute a county or the counties a state and the states a nation.

Naval Construction and War Expenses

THERE is certainly a recklessness of expenditure on the part of Congress. Statesmen seem to have forgotten the value of money as it circulates among the people and are more inclined to draw it away from them than to let it go out to them and remain with them. We know that there must be public expenses and that these expenses must be paid by the people, but there is such a constant addition of things to spend public money for that people naturally wonder what there may be in the future. Scientific people, too, are unusually active and are making almost daily discoveries of things to be exterminated or combated at heavy expense—things that have existed always and in the midst of which the human family has been more healthy, stronger and longer lived than they are now.

But when we commenced this article we were thinking specially of our tremendous war expenses in this time of peace—this period when it is claimed we are approaching the time when the nations shall learn war no more. The naval appropriation bill recently adopted by Congress authorizes the construction of two super-dreadnoughts, fourteen auxiliary war vessels and a third great battleship. As an offset, however, it is but fair to mention that the government has sold, or proposes to sell, two battleships, the Idaho and the Mississippi, to Greece for \$12,000,000. But why sell these if more are needed? They are first-class vessels, but the authorities seem to consider them "misfits" in our navy—undersized, though of 13,000 tons displacement, and too slow for these fast-going times. In addition to this ship building heavy army expenditures on shore are provided for.

Among miscellaneous expenditures at the request of modern scientists we note the appropriation of \$200,000 to be used in hiring people to kill squirrels, rats, mice and other rodents in the Pacific coast states!

Not Spilt Milk

"Never mind, little boy," said the visitor to the boy who had spilt a bottle of ink on the carpet, "it is no use to cry over spilt milk."
"I know all that," replied the boy, "but this ain't milk. If it was I'd call the cat and she'd lick it up. But this is ink and mama'll do the lickin', and she'll not lick the carpet either."

Ins and Outs of Silo Filling

By John Underwood

HAVE had considerable experience in feeding silage and have two silos on my farm. I think there is no safer investment than a lot of green corn stored in the silo. It is not so likely to burn as is hay and if properly stored and cared for it will keep for years without deteriorating. In fact, the older it becomes the better it is for feeding purposes, for in its aging it undergoes a ripening process. But it must be carefully preserved. In filling the silo there is sometimes a great temptation to use corn that is too green. Sometimes one feels that he can take advantage of changes in the weather to do work that would naturally be done at another time. But we must by all means wait till the corn is at its best for silage. The best time is when the corn kernels are out of the milk stage and are glazed and quite hard. This is my practice, though I find that some farmers put their corn in when the kernels are just a little out of the milk. I like the corn at that stage of ripeness at which it will keep out the air. That is the difficult thing about it when it is a little too ripe at cutting time. It does not pack well and the air gets in and that produces mold. The corn should be cut when the lower leaves are still green, but are beginning to show the effects of the summer heat. If I have corn that is a little too ripe and some that is not so much I put in the ripest first so that it will come at the bottom of the silo. The result is that the enormous pressure above it keeps it packed tightly and keeps out the air while if it were on top much air would work into it for some feet in the middle and for a long distance down the sides. In the filling of a silo a man can easily lose a lot of money. He must plan his work so that the men who are running the silage cutter will not be standing idle, but will be able to keep things moving. This will have to be regulated according to the distance the corn field is from the silo, for there will be more lost time if the corn field is half a mile from the silo than if it is close by. If the hauling is a slow job then it is better to put the binder in early and let the hauling get a good start of the silage cutter. When the silo is being filled there must be a thorough mixing of the silage, grain leaves, stalks and light stuff or there will be bad spots and an occasional moldy "chunk" in the silage when forked out. In the days of the old slat carrier the best plan I found of equalizing the falling silage was to suspend three four-bushel bags full of hay closely tied about the tops to a single rope so suspended that the trio of bags was exactly under the stream of falling silage and the three-way motions of the bags pretty nearly distributed it and gave the two men in the silo more time to "chase the wall" and see that the sides were best tramped and kept highest along the wall. The big weight of the silage falls in the center and so settles faster there, so the outside tramping was in reality to keep the sides settling as fast as in the center and later on, after the heating, not pull away from the staves and let in a thin supply of air. "Whirlwind" filling has about superseded the old plan of storing silage and the old chain bucket slat carrier has given way to the "blower" that rains down a ton of silage in five minutes on the head of the man in the silo. Old ways of distributing the silage in the silo are inoperative here. With the big blower the man alone in the silo is helpless if he is expected to scatter and tramp. He does well to keep from being buried alive and there seems to be but one thing to do, provide a distributor of some kind, either of heavy canvas tube that can be rolled up as the depth of the silage increases or a jointed flexible sheet iron affair that a section can be quickly dispatched and the operator conducts

it around the outside or center as the needs may require and then any number of men can be kept in safety treading down, but after all a ton of fresh silage every five minutes is a pressure that more than equals the weight of many men, however large their feet. Their only value is to help expel a little more air and possibly get in one more load of silage that day. Where an iron distributor can not be had a pretty good one can be made out of a ten-foot board sixteen inches wide with a six-inch board nailed on each side so as to make a flat trough. Suspend this under the blower, attach a rope long enough to its lower end so that two men can "lead" and "drive" it about the silo. This does good work and the silage gets side tramping besides, and when the device is too long it can be sawed in two and the walk-around continued. The best cover for silage in a silo is very wet sawdust, the next best dry dirt, but they all cost in labor to get a very little better result than to hoist up 150 gallons of water, sprinkle over evenly, tread down and come away until the silage is wanted. Keep the silo shut up in cold weather. Shut the air out of the top in some way and replace the side door in the silo as fast as a new one is opened. There is a lot of warmth that can be

W. H. Tyler and His Remarkable Mules

kept in a silo from its own escaping heat that helps protect it from freezing. In localities where there are many silos they can be filled more cheaply than where there are few. The isolated farmer who has a silo has to have more money invested in silage machinery of various kinds than does the farmer in a community where silos are numerous. In such a community the planting of the seed for silage corn can be so timed that the silage crop of one farmer will be suitable for the silo at a time a little earlier or later than that of another farmer. This makes it possible to use the same machinery on more than one farm and expense is reduced.

Roofing Problems

By G. C. Sevey

HAVE USED ready roofing material on all sorts of buildings, including hog pens, hen houses, ice houses, dairy stables, maple sugar houses, wood sheds, etc., and always with satisfaction. This conclusion follows years of experience and observation and is based on cost, durability and service. Covering a roof is a business proposition and subject to the same fundamental questions of "what will it cost, whether it will render the desired service and the length of time it will serve that purpose economically."

I have used tarred and asphalt roof-

ings costing from \$1.50 to \$3.25 per roll of 108 square feet. The extra eight feet, of course, is for lap or waste. I have used tin roofing and saw lots of it and it gave me fair satisfaction. I have always felt that I secured my money's worth. The farmer can buy a brand and grade to suit his needs and pocketbook without much danger of being robbed, but he should not expect as much from a \$1.50 roofing as from a \$3.25 grade. Poor judgment in determining the hardships to which the roofing will be subjected must not be blamed to the manufacturer or dealer.

The matter of cost must include the material and labor. At the time of writing good red cedar shingles were worth \$4.65 per square. It is usually figured that 1,000 will cover 100 square feet, the same area as an ordinary roll of roofing will cover. This figures shingles laying five inches to the weather and sixteen inches long. White cedar shingles cost 15 cents less and the cheapest possible grade is \$3.

Experienced carpenters tell me it takes a mighty good man to lay 2,000 shingles daily. This is on a new roof and straight work. Carpenters work eight hours a day and I believe the union price is \$3.55 daily. It is usually figured that it will require four pounds of nails to lay 1,000 shingles. These will cost better than 5 cents per pound in small lots. Hence for a

have given trouble within five years after being placed. Judging from my own experience and rather extensive observation, I am free to say I would just as soon chance a good ready roofing, well laid, as one of the best grades of shingles. Others may disagree, but I am telling you what I think, from experience.

The next consideration is service. The purpose of a roof is to keep out rain, snow and, to a greater or less extent, heat and cold. A good roofing will never fail to meet these requirements. It will do the work better than shingles, since it is reasonably fire resistant, as the roofing is an excellent nonconductor of heat. This is a consideration of importance to any farmer.

Two Remarkable Mules

THE most remarkable record of a team of mules gaining the same amount in weight has been reported by William H. Tyler, a prominent mule farmer near Fulton, Mo., who has two mules whose weights were exactly the same thirteen months ago and since that time have each gained the same amount of weight to a pound.

Mr. Tyler, in June, 1913, drove to the home of a neighbor, Charles Sartor, with the mules and while there a discussion arose among a number of farmers as to which mule would weigh the heaviest. They were put on the scales and each of the mules weighed 1,295 pounds. Believing that something was wrong with the scales, as none of the men could be convinced that they would weigh that near alike, the mules were taken off and the scales balanced. The mules were then put on the scales together and tipped the beam at 2,590 pounds, exactly a total of their individual weights.

Last month Mr. Tyler had occasion to go to the home of Mr. Sartor again with the mules and the incident of the previous year was recalled and it was decided to weigh the mules again. Each balanced the scales at 1,435 pounds, showing that they had gained exactly 140 pounds apiece in the thirteen months that intervened. The men present were much interested and the mules were again put on the scales together and weighed 2,870 pounds, a total of their individual weights.

"It is the most remarkable record that has been brought to my attention during the years that I have been feeding mules," said Mr. Tyler in discussing the incident, and other farmers voiced approval.

"I have taken no special pains in feeding these mules and never would have known of their remarkable record but for the discussion that arose as to which one would weigh the heaviest. The mules are not up in flesh because they have been used in farm work this summer and could be made to weigh 1,500 or 1,600 pounds. Their weight is not so unusual, but the remarkable similarity in gains they made is surely a record.

"They are both mare mules and I bought one as a two-year-old and the other as a three-year-old. I consider them among the best of my mules and naturally will watch them now to see if they will continue their wonderful record. I recently refused an offer of \$600 for the mules."

Price at the Drug Store

Early Struggles

"I suppose you had many struggles in early life. Tell me about them."
"There is not much to tell. The more I struggled the harder dad put it on to me."

What the Grain Grower Sells in a Bushel of Grain and What It Costs Him

GRAIN is not made from nothing. There are certain materials in the soil, in the air and in rainfall that go to make the grain. Before grain can be made straw must first be produced. It takes time, the labor of man and beast, the use of machinery and many things besides mere land and water to produce grain.

The farmer who sells grain, therefore, should understand fully what he has taken from his soil, from his labor, from his team, from his machinery and from his pocketbook to put in each bushel of grain he sells. Then he will know what his grain is worth to him.

In this article we shall not endeavor to work out the costs of producing grain. We could not do so except in a very general way and one that would be of little value to farmers except as a guide. The varying costs of land, of labor and of other material make the problem a different one in each locality, if not on nearly every farm. No one can work out his cost problem for him so well as the farmer himself. But we shall take up a part of the cost not often considered by farmers, yet a very important factor to be reckoned with, for the day of reckoning is sure to come sooner or later. We refer to the elements taken from the soil in each and every crop.

The average soil possesses plant food of all kinds necessary to produce crops, in greatest abundance, with the exception of the three elements, nitrogen, phosphorus and potash. True, some soils lack lime, some are deficient in magnesia, but as a rule soils have everything in abundance needed for untold crops with the above exceptions. The supplies of nitrogen, phosphorus and potash being limited, they may be and will be exhausted to the point where good yields are no longer possible unless the farmer replaces them. Replace them he must, in some shape or form, and to replace them will cost him something in both labor and money. It is clearly seen that when a farmer sells grain he is selling some valuable soil ingredients which must some day be replaced. He should know the value of what he is thus selling and the cost of replacing, it.

The most competent authorities place values on the three elements of plant food as follows: Nitrogen, 15 cents a pound; potash, 6 cents a pound, and phosphorus at from 4 cents a pound in form of raw phosphate rock to 10 cents a pound in bone meal and 12 cents a pound in acid phosphate.

A crop of corn yielding 40 bushels to the acre removes a total of 59 pounds of nitrogen, 40 pounds in the grain and 19 pounds in the stalks. The nitrogen in the grain is worth \$6 and in the stalks \$2.85, a total of \$8.85 for the crop. This crop removes 7 pounds of phosphorus in the grain and 2 pounds in the stalks, 9 pounds in all, worth 36 cents at 4 cents a pound, the cheapest cost price. The crop will also take 28 pounds of potash from the soil, 8 pounds in the grain and 20 pounds in the stalks, worth \$1.68.

The total amount of fertility removed in a crop of corn giving 40 bushels to the acre is 96 pounds, at a cost of \$10.89 at the lowest, or 27 cents a bushel. Therefore, when the farmer sells corn he sells soil elements to the value of 27 cents for each bushel sold, soil elements which must some day be replaced.

A crop of oats yielding 40 bushels per acre removes 72 pounds of fertility in form of nitrogen, phosphorus and potash, 37 pounds in the grain and 35 pounds in the straw, worth \$6, or 15 cents worth for each bushel sold.

A crop of wheat yielding 25 bushels removes \$10 worth of plant food, \$6.50 worth in the grain and \$3.50 worth in the straw, or 40 cents for each bushel sold.

These figures are based upon the

cheapest form in which the plant food materials may be replaced.

In plant food alone, then, a bushel of wheat costs the farmer 40 cents, a bushel of corn costs 27 cents and a bushel of oats costs 15 cents. Profitable agriculture, to be permanently profitable, will be compelled to take these cost prices into consideration. The value of the soil fertility must be returned in the price, together with other costs, before real profits can be counted.

Again would the writer urge the grain grower to give heed to this factor in the grain growers' problems. Once the realization of what it entails is grasped, the necessity for some means of controlling marketing and price will be made clear and emphatic. If production is to be maintained, saying nothing of an increase, the farmer must not be deprived of means to maintain his soil fertility and he must get back, in the prices he receives for his crops, the costs of their production with a fair profit added. The only way to insure such a condition is for farmers to organize, maintain and conduct their own marketing system.

GRAIN SMUTS—CAUSE AND TREATMENT

THE SMUTS among our grains are the causes of heavy losses throughout the country, declares the New Jersey Agricultural Experiment Station. The

most important of the grain smuts are the loose smut of oats, the loose smut of wheat, the stinking smut or bunt of wheat and the smut of corn. These diseases are all due to fungi which are very similar in general appearance and behavior, but which require different treatments to insure their control.

Loose Smut of Oats—This well-known disease occurs on the growing oats at the time of heading, causing the destruction of the grains and the formation of a powdery black mass. This black powder is composed of the spores of the fungus, by which it is carried from year to year. It is carried by the wind and more or less of it catches on the grains of the healthy plants. The loss due to this disease is very large, frequently amounting to 10 per cent or more of the crop. The loss for the entire United States has been estimated at \$20,000,000 per year.

Treatment—The fact that the spores of the fungus are carried on the outside of the healthy grains makes it possible to use a treatment which will kill the spores without injuring the grains. The most convenient treatment is with formalin, which can be purchased from the druggist at 75 to 90 cents per pound, or in large quantities much cheaper. One pound in fifty gallons of water will be sufficient for fifty bushels of grain. Spread the grain on a clean floor and sprinkle or spray thoroughly with the solution. Shovel the grain into a pile and cover with canvas or burlap for from six to twelve hours and then spread out to dry. The drying process may be hastened by mixing with air-slaked

lime, which may be removed by the fanning mill. There are other treatments, but none more satisfactory, convenient or economical than the formalin. The fumes of the formalin are irritating to the nose and eyes, but not injurious.

Loose Smut of Wheat—This disease of the wheat is very similar in general appearance to that of the oats, but its life history is somewhat different. It spreads from diseased to healthy plants at time of flowering and penetrates the young grains.

Treatment—The fact that it is carried within the grain instead of on the outside and that it is impossible to distinguish the healthy from the diseased grains, makes the formalin treatment unsatisfactory. By far the most satisfactory and economical method of preventing the disease is to secure seed from uninfected fields, but when it is desirable to maintain a particular strain of seed a modification of the Jensen hot water treatment can be used. Clean the seed thoroughly and soak for five to seven hours in water at 63° to 72° Fahrenheit. Put the grain in loose bags or wire baskets holding about one-half peck for further treatment. Use two galvanized iron tubs, holding from 20 to 40 gallons, filled with water. Tub No. 1 should be kept at a temperature ranging from 110° to 120° Fahrenheit, and tub No. 2 at about 126° to 129° Fahrenheit. Plunge each bag or basket into tub No. 1 for one minute and then into tub No. 2 for ten minutes, keeping the grain well stirred during the entire time. Two men can treat about one bushel of grain per hour. The seed can be dried on a barn floor, but if the weather is cool it should be protected from frost.

The slowness of the hot water treatment makes it impracticable to treat any considerable amount of grain. However, the grower will find it practicable to treat a small amount of seed, which can be sown in a separate field and the crop used for seed a second year. Such a field should be at a considerable distance from wheat known to be infected, or should be separated by a woodland or other wind break to prevent infection by means of spores carried by the wind.

Stinking Smut or Bunt of Wheat—This disease is quite different in appearance from the loose smut. It fruits in the grain only and therefore is frequently not noticed until threshing time. The diseased grains are frequently shriveled, greenish in color and when broken are found to be filled with a mass of black spores which have a peculiar, disagreeable color. The fungus not only destroys the grain of the diseased plants, but the diseased grains are mixed with the healthy, thus making the entire crop worthless for milling and frequently for stock feed.

Treatment—The spores of the fungus are carried on the outside of the grain and attack the young plants. This makes it possible to treat the seed with formaldehyde in exactly the same manner as recommended for the treatment of oats for loose smut.

Corn Smut—This very common disease is well known by the black masses of spores on the ears, tassels and frequently on stalks and leaves. It occasionally causes heavy losses in field corn and is frequently very destructive on sweet corn. The spores of the fungus are carried from season to season in the old stalks, in the manure from live stock fed on the diseased plants and possibly on the grain.

Treatment—Do not use manure from animals fed on diseased plants on corn land. Burn the refuse from fields where the disease is prevalent. Practice crop rotation.

Animals in Heaven

"No, Billy dear, animals don't go to heaven when they die."

"Then I'd like to know where they keep the horses that were hitched to the chariot that took Elijah up to heaven!"

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

HOW I MADE A POOR FARM PAY

(Awarded First Prize of \$3)

TEN YEARS AGO I bought a 50-acre farm in a run-down condition, everything poor except the spring water, which was excellent, and there was plenty of it. When I took possession the prospects were certainly not alluring. I paid cash and had \$200 left. The question was how to put the farm in condition to start paying profits with \$200. My new neighbors, who knew the farm better than I did, said it couldn't be done, but I disagreed with them, because I felt that they didn't know me. They put too much faith in past performances and too little in future possibilities. The neighbors pointed out that horses, a wagon, implements and other sundries must be bought and when I explained that I had no intention of buying anything of that kind at the time they left me in disgust to my foolish ideas, as they considered them.

I knew that it was useless to attempt to raise profitable crops on that poor ground without fertilizer, so I decided to plant only one field, the best piece of land on the farm. I hired a horse, plow and harrow from a neighbor for \$10 and put the field in good shape. I then bought \$10 worth of alfalfa seed and sowed it. "Crazy as a loon! Reckon he's going to live on alfalfa this winter," was the sarcastic remark of one neighbor.

The next thing was to gather up some old lumber around the place and build a large hog pen next to the barn. I made a long-run and enclosed a spring in it. I then went on a pig buying tour. In three days I had fifty-three runty, disreputable looking little fellows in my pen. They represented an investment of \$85. I bought \$15 worth of mill feed and started feeding them on it along with weeds which I pulled fresh for them every day.

Next I bought five day-old calves from a dairyman who lived near for \$2 each. I bought \$5 worth of calf feed, which I fed them in place of milk. After two weeks I turned them loose to get what grass they could find on the old fields. Within a few weeks my pigs had grown in size and appetite quite wonderfully and needed more to eat. Apples were now ripening and one Sunday I took a walk through the neighboring orchards. The next day I walked into one of the orchards where the owner was picking apples. "What are you going to do with all those half rotten and knotty apples?" I asked. "Nothing; they're of no use," he replied. "I'll give you \$5 for them," I offered. He wouldn't accept the offer at first, but looked at me curiously and asked what I wanted with them. When I explained that I was going to feed them to pigs he accepted.

I hired a horse and wagon and for the next few days went around buying refuse apples and storing them in my barn. I sorted them and fed the worst

ones first and fed them generously. I bought \$30 worth and was surprised myself when I saw what a large quantity I had really accumulated.

And then I went bankrupt. I had spent \$150 for pigs, calves and supplies and \$50 for living expenses. My \$200 was gone, so I sold two of those calves. They were two months old now and had grown considerably. I received \$20 for the two. This money I spent carefully and cautiously, but I finally went bankrupt again and sold another calf for \$15. My apples were exhausted, weeds had given out and I had nothing left to feed the pigs, which were now fair-sized hogs, so I sold thirty of them at an average of \$17. The total returns were \$510. I then bought a ton of hay for \$20 to winter my calves and \$25 worth of corn for my hogs. By December I had ten hogs left, which I kept for breeders. The rest I had sold for \$67.30, except two which I butchered and two that died. I had kept a book and below are the figures as contained in it:

—Expenses—	
Fifty-three hogs.....	\$85.00
Mill feed.....	15.00
Five calves.....	10.00
Calf feed.....	5.00
Apples.....	30.00
Living expenses.....	50.00
Hire of horse, etc.....	20.00
Ton of hay.....	20.00
Corn.....	25.00

Total expenses.....\$260.00

—Receipts—	
Three calves.....	\$35.00
Thirty-eight hogs.....	577.30

Total receipts.....\$612.30

Total expenses.....260.00

Net profits.....\$352.30

So I cleared \$352.30 that first year. The next few years I followed the same system, always on a larger scale, and at the end of four years had practically rebuilt my farm with manure and built a new house and barn and had a bank account of \$2,000.—H. E. R., Ohio.

ATTENDING THE COUNTY FAIR

(Awarded Second Prize of \$2)

WE LOOK FORWARD with pleasure to the few days of the county fair as a good thing not only for enjoyment, but for study and for obtaining information relative to the best growth and the handling of different crops and different animals on the farm. At the county fair we see a collection of superior products from the farm and the home. These products are placed there not for sale, of course, but for public inspection and for careful examination by experts as to their respective qualities. At the county fair we obtain practical ideas and form ideas along our lines of work such as can not be obtained at any other meeting or gathering of people elsewhere. It is at the county fair when farmers and others create personal pride in the person who exhibits the best product of his toil. Every exhibitor contributes something toward the enlightenment of the spectator, commands respect for himself and his vocation, because of his ability to produce an article which is unexcelled. One often hears it said among farmers, "I haven't anything good enough to show at the fair." Should all farmers do likewise and refrain from exhibiting the best products of their toil there would be no progress and no need of holding county fairs and we would retrograde in the business of farming. The exhibits at a county fair show what can be grown and done in the development of plant and animal life in the county through the guidance and direction of man. The county fair becomes quite an advertising medium for the farmer and his vocation. Every farmer should make an effort to take and exhibit at the fair what he considers to be his best contribution. Let it be only a peck of wheat, oats, rye, peas, beans, potatoes, clover seed, corn, etc. It may be vegetables of different kinds or fruits such as apples, pears, etc.

On the Harvest Party

WHEN everyone is merrymaking amid the hay, or golden grain, THERMOS adds to the delight of the occasion because THERMOS keeps tea, coffee, soup, lemonade or any fluid icy cold 72 hours or piping hot 24 hours. In countless ways in the field and farmhouse, THERMOS is the Farmer's Friend. Ideal for hunting, fishing, picnic or automobile luncheons.

THERMOS

Learn Its Value At Our Risk To quickly introduce Thermos into American Farm Homes near which no dealer sells Thermos, we will send prepaid, a pint, full nickel plated, Thermos Bottle for only \$1.50—Guaranteed Satisfactory or Money Back. This bottle is regularly sold in England for \$5. It costs you but \$1.50. Order now. Price, in Canada, \$2.00. AMERICAN THERMOS BOTTLE CO. Norwich, Conn. Toronto, Canada. Send for Free Thermos Picture Cut-out for Children.

Fixing Wet Land To Grow a Big Crop

Here's the picture of a Daviess County, Ky., farmer preparing his wet land for big crop yields with the combined Martin Farm Ditcher and Road Grader which, with only one team and one man, does as much work in one day as 50 to 100 men with shovels or ten teams with plows, etc. Only one-fifth the price of big costly ones; can be used where they can't. Fool proof. Every farm and road section needs one. Ten days free trial. Money back guarantee. Write now for free descriptive booklet, testimonials and prices.

OWENSBORO DITCHER & GRADER CO., Inc. 131 Allen Street, Owensboro, Ky.

HAVANA FARM TRUCKS.

Both Steel or Wood Wheel.

Especially adapted for farm purposes and coming into more general use every day on the roads, because of the wide tire. You will appreciate our free catalog.

HAVANA METAL WHEEL CO., Box 82 HAVANA, ILL.

THE PROOF OF THE HAY PRESS

Is its Capacity—Earning Power.

SPENCER HAY PRESS Catalogues make great and definite claims proven by the press in action or no sale. Nature of contract protects you. Covers every claim by actual figures. More tons per hour guaranteed than by any other horse press, same size bale. Write Right NOW. Send for new Catalogue 6.

J. A. SPENCER Dwight, Illinois

THE CLIPPER

There are three things that destroy your lawn—Dandelion, Buck Plantain and Crab Grass. In one season the Clipper will drive them all out.

Your dealer should have them. If he has not, send us a line and we will send circulars and prices. Clipper Lawn Mower Co. Box 5, Dixon, Ill.

BINDER

ATTACHMENT with corn harvester cuts and throws in piles on harvester or in windrows. Man and horse cut and shock equal with a corn binder. Sold in every state. Price only \$20.00 with fodder binder. J. D. Borne, Haswell, Colo., writes: "Your corn harvester is all you claim for it; cut, tied and shocked 65 acres molo, cane and corn last year." Testimonials and catalog free, showing pictures of harvester. Address PROCESS MANUFACTURING CO., Salina, Kansas.

Alfalfa Seed

Our choice American grown seed should be sown during August and September.

Crimson Clover

Great soil improver, early green food, hay and grazing.

Winter Vetch

Genuine "Vicia Villosa," the only reliable vetch for fall sowing. Excellent cover crop, hay and green manure.

M. RUTHSTEIN, Steel Shoe Man, Dept 39, Racine, Wis.

Let it be horses, cattle, sheep, hogs or poultry. In short, let it be products of the farm or handiwork of man or woman, boy or girl. Women can exhibit some of the best things they have grown in their garden during the summer. Let them show their pets, such as rabbits, ponies, etc. Let them show what they have done in the school and what they have found in the field, meadow and woods. Farmers from every community should make up exhibits for the fair of products grown on the farms of the county. The grangers individually should exhibit their personal pride by their presence at the fair. The farmers' clubs, literary circles, commercial clubs of cities and women's societies all should lend their assistance in the most consistent manner. Every small and large farmer and every person living in the county has a right to exhibit his product or products and to claim recognition over his fellow men if he is capable of producing articles superior to those of his neighbors. Today the county fair is abundantly tempered with wholesome and respectable features which make it stand out as a most inviting place of meeting annually by fathers, mothers, their daughters and sons. Real contests in agricultural matters cost but little money and teach something worth while. A girls' canning contest, a boys' seed corn tying contest, a corn judging contest, a driving contest to see who can drive the most skillfully and the most gracefully, a baby show to see what mother has produced and best cared for the most valuable thing in the world, a perfect baby—these are of vital interest and have just enough of novelty in them to make the people want to come out to see them. Those interested in contests for the county fair should send to the United States Department of Agriculture bureau of plant industry for circular No. 104. Every parent should plan his work so that he can attend the county fair every season with his family without much inconvenience to himself and his family when the fair begins. It is a fine place for recreation and rest from the hard work of summer and every farmer should spend at least a couple of days there.—John Underwood, Illinois.

THE GOLD IN GOLDEN SEAL

(Awarded Third Prize of \$1)

BELIEVE it would be of interest to other readers of the paper than myself if you would give them some information concerning one of the most paying and least troublesome things in which a farmer can get money. I refer to what is commonly known as yellow root and more generally known as golden seal. Every person who has a bit of unused woodland or cuttings or underbrush should raise golden seal. The roots of this plant sold fifteen years since at 30 cents per pound. The price has steadily advanced and the root is now worth \$5.50 per pound. The dried leaves and stems now sell for 20 cents per pound. It is the most used and the most valuable drug known to the modern pharmacopia. It was brought to the attention of civilized men by the Indians with the Lewis and Clark expedition. It is a very hardy plant, has a delicate white flower, yellow fibrous root, furry stock and large leaf. Its natural home is in the woods. Being antiseptic, it is not subject to plant diseases. It can be transplanted successfully when in full blossom. It reproduces itself from seed and from the root. It matures in three years, but is not harmed if not dug at the end of the three-year period. It can be raised under artificial shade, but that method is expensive. It can be planted in any woodland that has tree shade and will take care of itself and multiply, and all that the owner has to do is to let it be and gather the leaves and stems every fall and lay them out to dry without any washing or wetting in any airy place, but not under a direct sunlight. At the end of three years

the mature roots can be sorted out from the young roots and the mature roots washed and dried for sale while the others can be put back in the ground for future growth. At the end of three years the raiser has a yearly crop of roots, and beginning with the first year he has a yearly crop of leaves and stems. This is one crop on which you have an absolute certainty that you have a market that will run after you as soon as any golden seal buyer knows you have the goods to sell. Go and ask your druggist or your doctor about the value of golden seal. The supply has been wild stock mainly, but as the stock has become more in demand and the price has advanced, the hunters have been more active and the wild stock is so scarce that little of it is being offered for sale. The planted roots lack so much of supplying the demand that big manufacturers of drugs have been driven to the necessity of using substitutes. Go to raising golden seal.—George D. Beroth, Indiana.

Live Stock and Dairy

CO-OPERATION IN DAIRYING

BOARD'S DAIRYMAN tells an interesting story of how co-operative creameries can be established and managed at a good profit to dairy farmers in those localities or districts where the cheese factory has taken the place of the creamery entirely. From May 1 until late in the fall the cheese factories utilize all the milk in cheese manufacture. There being no creameries to make up the whey cream into butter, the cream must either be fed to hogs or shipped out of the cheese-making territory to a butter factory. (The cheese whey contains about .7 per cent butterfat, roughly about one-fifth of the butterfat in the milk.)

Whey cream, when properly handled, is capable of making first-class butter, and the amount of cream aggregated by several cheese factories is quite considerable. After much discussion, study and some experimenting one district established a co-operative creamery to handle the whey cream products of a number of cheese factories and the new system is now in operation with every assurance of being a success. Whey cream is merely a by-product of cheese making. Before this new experiment became operative this butterfat, worth 30 cents a pound, was being fed to hogs and in form of pork did not bring the farmers over 8 cents, if that much.

Co-operation of the right kind pays well and when farmers as a class are properly organized and taught the most successful business principles of co-operation they will not only be able to turn many a farm by-product into a good cash profit, but will be able, because of a more efficient marketing system, to realize greater profits on all standard crops.

SUCCESS WITH AN OHIO DAIRY

DAIRY FARMER in Ohio owns a herd of forty first-class Jersey cows and produces a special grade of milk. He has a covered manure shed and takes the utmost care to utilize every bit of the

fertility-producing power of the manure. He uses acid phosphate in conjunction with barnyard manure and finds the practice not only profitable each year, but that he is building additional fertility into his soil rather than depleting it. His farm consists of sixty acres of land devoted to field crops and 140 acres of clay hills which he uses for pasturage. The manure saved from the herd of forty cows amounts to from 150 to 200 tons a year, which is applied to the cultivated area only, together with 600 pounds of acid phosphate per acre. Of course there are silos and it is not unusual to cut twenty-five tons of silage from a single acre of ground. There is also a field of alfalfa and six tons to the acre is not an unusual yield. Cement is used for floors in the dairy barn and for floor and walls of the manure shed. The silos are of cement blocks. The farm ships between sixty-five and seventy gallons of milk daily to Columbus, twenty miles away. Every cow is sold before she has outlived her usefulness as a producer, and an average price of \$150 is obtained for them, reflecting no little credit upon the owner as a skillful breeder. This man is ready at any time to give practical demonstration of how good farming methods are made to pay handsomely.

SOUR SKIM MILK FOR CALVES

HAT in summer time calves do as well on sour skim milk as they do on sweet will be interesting news to many farmers who have hitherto been kept from raising calves by the expense of keeping the milk sweet in hot weather. This expense is said to be quite unnecessary. The calves will make as rapid gains on sour skim milk. In winter, it is true, this is not satisfactory. It chills the calves and some of them drink it with great reluctance and many times refuse it altogether. On the other hand, of course, it is much easier to keep the milk sweet in winter.

In calling the attention of farmers to these facts, however, the Department of Agriculture at the same time emphasizes an important precaution. Unless the milk is produced and kept under cleanly conditions it may become contaminated with disease-producing bacteria. Farmers should therefore allow the milk to sour quickly and then feed it without delay.

In a course of experiments sour skim milk was fed to twenty-two calves, Holsteins, Jerseys and Guernseys, at different seasons of the year. In no case did it cause digestive disturbances, even when the change from sweet to sour milk was made abruptly when the calves were only a few days old. Moreover, no evil results followed the alternate use of sweet and sour. It seems, therefore, that the common idea that sourness in milk leads to scours is quite unfounded.

The calves did not like the sour milk as well as the sweet, but in the majority of cases soon became accustomed to it. The aversion, however, increased when the milk was fed them at a cool temperature.

He Wouldn't

Mother—Billy, I'm sorry Tommy Smith tied a can to that poor dog's tail. You wouldn't do so wicked a thing as that, would you?

Billy—No, I wouldn't, mother.

Mother—Why didn't you keep him from doing it?

Billy—I couldn't. It was all I could do to hold the dog.

A regular work eater

"I never saw such a hungry thing as the Blizzard," writes a user. "I tried to clog it and couldn't," writes another. The corn will be put in the silo, fast as you can get it to the cutter, if you use a

BLIZZARD Ensilage Cutter

Makes big capacity possible with your regular farm engine (15 to 25 h. p.). No silos too high. Self-feed table. Absolutely safe. Simple, strong, durable. Cuts evenly. Lasts for many years. Write for Blizzard catalog and get all the facts.

LEWIS "VI"

Monarch of the Sixes

FARM owners often feel the call of the big city. Women on the farm often feel that they are so far from the big cities that they are almost lost to the world. You can change all this. You can make your farm the best place on earth to live if you own a Lewis Six. Don't think of an ordinary automobile when you think of the Lewis Six, but read the specifications; read about this great, big, six passenger beauty and you will join the throng in calling it

The Greatest Car Ever Built

16 to 18 miles per gallon of gasoline. Far greater economy than any similar sized car that has ever been built in America.

135 inch wheel base; larger than any similar car for even twice the price. The long wheel base prevents jarring on rough roads and gives true enjoyment to country riding.

Big, roomy interior so that no cramped positions are necessary. Large 22 inch doors make it easy to get in and out. Electric self starter. Electric generator. Electric lights. 56 inch underslung springs in rear. Full floating rear axle. Over-size tires. Silk mohair top with jiffy curtains. Stewart speedometer. True streamline body.

All operation controlled on dash—an arm's length away. So simple to operate that women and children drive the Lewis Six.

Small bore, long stroke, monobloc motor (3½ x 6). Generates more power than any similar sized motor made. Climbs any hill ever climbed by an automobile of any size.

Vacuum gasoline feed. Auxiliary supply which can only be used by turning safety valve. Left hand drive. Rain vision windshield. Demountable rims. Speed without shift—2 to 60 miles per hour. Deep, luxurious upholstery—hand buffed leather. Perfect distribution of weight, giving smallest tire expense possible.

Was there ever such a car for the money? We defy you to find one. Listen—We guarantee this car absolutely and send you a written guarantee with it.

L. P. C. MOTOR COMPANY, 202 Petard St., Racine, Wis.

So we appeal once more and for the last time to go to the meeting. Every county in the country ought to be represented. There is one man, or more than one, in each community where this paper circulates whose personal interests, in raising crops and marketing, are so great that the expense of attending the meeting will be a mere bagatelle compared with the benefits he will get in better prices as soon as a federation is effected. He may not have thought of it, but he is paying now for marketing a staggering sum, because farmers have no market plan and system of their own.

This paper, more than any other, is responsible for the Kansas City meeting. Naturally we want to see it a great success in attendance and in accomplishments. We feel that the meeting must be recruited largely from our readers is the reason we make this strong appeal. We would like to see this meeting a fitting climax to our twelve years of hard, consistent labors for farmers' industrial freedom, which it will be if a GREAT NATIONAL FARMERS' FEDERATION IS LAUNCHED.

The opportunity that this meeting presents should fill every farmer with a zeal that knows no curb, and the honor of enrolling his name as one of the chief actors in so stupendous a movement should fill him with unbounded enthusiasm.

Two of the most sublime acts in the history of our country and of the world were the Declaration of Independence and the Emancipation Proclamation that freed the negro slaves. The time has now arrived for a new declaration of independence and for the emancipation of our farmers from industrial slavery. That man is not free who has not the power to place the value on his own labor or the result of it.

The writer wants to meet YOU at the meeting.

Kansas City, Kansas, August 17, 18 and 19, 1914.

The Council of Grain Exchanges met in midsummer convention at Buffalo, N. Y., on June 15 and 16.

The council is composed of the following boards of trade, exchanges and chambers: Chicago Board of Trade, St. Louis Merchants Exchange, Minneapolis Chamber of Commerce, Duluth Board of Trade, Omaha Grain Exchange, Baltimore Chamber of Commerce, Milwaukee Chamber of Commerce, New York Produce Exchange, Cincinnati Chamber of Commerce, Toledo Produce Exchange, Buffalo Corn Exchange, San Francisco Chamber of Commerce, Wichita Board of Trade, Peoria Board of Trade and Memphis Merchants Exchange.

The council publishes a paper called The Country Agent. The mission of the paper is "for the investigation and dissemination of information regarding scientific agriculture and community development, and the uniting of all agricultural, commercial, industrial, social, educational and transportation interests to co-operate with the United States government, state agricultural extension departments and all others in establishing farm bureaus and kindred organizations in every county of the United States."

The secretary's report showed that the affiliated organizations paid, since January, 1914, \$10,500 toward crop improvement, except the San Francisco Chamber of Commerce paid \$5,000 alone, making a grand total of \$15,500, with more to hear from.

This money, understand, was paid for increasing the crops and not 1 cent for marketing. Also vast sums, millions of dollars, are appropriated by the Congress and state legislatures for better and greater production, but not any part of it is used along practical lines for marketing. We mention these things to impress upon farmers themselves the fact that if they want to improve their marketing system, or have a new one, it is useless for them to look to the government or business institutions for it. BUT THEY MUST SUPPLY IT THEMSELVES.

For instance, is it reasonable to expect the boards of trade or grain dealers to appropriate any money or give any time to changing the present marketing system, without which the boards, chambers and exchanges could not exist for a day? And the County Agent says its mission is to unite "all agricultural, commercial, industrial, social, educational and transportation interests to co-operate with the United States government and state agricultural extension departments in establishing farm bureaus," etc.

Now we want the reader to understand this matter. The boards of trade, grain and produce exchanges and chambers dare not do anything to improve the marketing system for farm crops, because their very existence depends upon it continuing as it is. And more, none of the interests named, or the government, or the agricultural colleges, dare do anything to change the marketing system, or can be expected to do anything, while they are CO-OPERATING with the speculating and gambling boards of trade, exchanges and chambers.

What have we come to? Witness the institutions organized and maintained, ostensibly for the best interests of farmers, in league with the worst enemies of American agriculture. If any person has any doubt about this let him attend one of the many meetings that are held every year in the name of agriculture and listen to speakers from every calling but agriculture, and then consider that in the many years that this has been going on farmers' marketing has not improved, but is becoming more complex, and more unbearable every year.

The meeting at Kansas City, Kas., will be the first great meeting ever held exclusively by farmers and for the interests of farmers as they themselves see them. And the speakers will not be from other classes, but they will be real farmers or known co-workers with farmers for their uplift.

Thus this meeting will be unique. There will be no chance of it being sidetracked. So the farmer who has attended the old-line farmers' meetings and went away disgusted should go to this meeting convinced that there will be genuine opportunities to consider HIS problems and act on them as best becomes HIS interests.

Let's meet at Kansas City August 17, 18 and 19.

Probably 200,000 bushels of wheat of the 1914 crop was marketed at an average of 70 cents a bushel before the declaration of war in Europe.

The price of cash wheat is as certain to go to \$1 or more as anything in human events and we believe it will not be long delayed. If the farmers, then, would have taken the advice of this paper at the beginning of harvest and held for \$1 and asked it, it would have been paid and all wheat would have sold for \$1. But regardless of the war our wheat was worth \$1 on the basis of world's supply and demand, although the grower would have had to hold longer.

But this is the point: The people who sold the 200,000,000 bushels of wheat have 30 cents a bushel less than they might have had and would have had if the organization we have been working to establish would have been completed. That is \$60,000,000 less.

Probably 150,000,000 bushels of the wheat is still held by the buyers in this country in small and great elevators. The advance on this wheat at 30 cents a bushel has made them \$45,000,000. A fraction of this sum would provide enough storage bins on farms, and elevators, to store the temporary surplus of wheat and make farmers independent in marketing for many years to come.

So farmers have missed their opportunity another time simply because they did not have the storage facilities and possibly the knowledge of how to finance their crop. These are things that will come before the Kansas City meeting. No gathering of farmers, or any other class of people ever held, or to be held, has had such tremendous possibilities for accomplishment as this meeting has.

Opportunities equally as great present themselves in some crops nearly every year, so the thing to do is to get in a position now so they may be embraced whenever they come.

We've got this thing to do, so let's do it at the Kansas City meeting and begin to get the benefits at once.

Equity Meets at Lo Lo, Montana

The F. S. E. county clearing house for Missoula County, Montana, held its first quarterly meeting at Lo Lo on July 25. Thirty-five delegates were present from the eleven locals. Two business sessions were held and one of those feasts for which the ladies of the Bitterroot valley are far famed was spread betimes. F. M. Lawrence, secretary of the Western Montana Fair, was present and addressed the delegates on the importance of the fair.

Doing Fine Work in Montana

After our very satisfactory experience this year in buying binder twine and doing other business, we don't know where our business will end. The town council of Ekalaka has voted us the free use of the city hall for our meetings. The cashier of the Ekalaka bank, who is also a large farmer, is one of our most enthusiastic members. Our prestige is good. It is now my intention to take up work as organizer and give it my entire time for a month or more.—A. L. Shaw, Ekalaka, Mont.

This \$950 Overland Automobile Given

Do you want to own this automobile? Here is your opportunity. It won't cost you one cent. We are going to give it away free of charge on October 24th. Read all this announcement carefully and then mail coupon. It is absolutely free. Our plan is fully explained to you below.

We will give away this fine Overland Automobile in our great subscription contest, October 24th, as a means of introducing our well known farm paper, Missouri Valley Farmer. In addition to the automobile we will give twenty-nine other prizes including a \$240 motorcycle, \$100 in gold, gold watches, cameras, silver set, dinner set, etc. These thirty prizes will be awarded to the thirty most industrious workers in this contest. All of the prizes are given absolutely free and freight or express charges will be prepaid, so that the winners will not have one cent to pay. In case anyone should work in the contest and not win a prize he will be paid a liberal commission. There are no losers in this contest. Any one is eligible to enter this contest and compete for the prizes.

How Subscriptions Count

The prizes in this contest will be awarded to the persons having the highest number of points. Each subscription sent in will count a specified number of points, and the candidate that has the highest number of points at the close of the contest will be awarded the automobile. The one having the next

highest number of points the motorcycle, and so on until the thirty prizes have been awarded.

The regular scale of points in force during the contest is as follows:

One year subscription 25 cents, 500 points; three year subscription, 50 cents, 2,000 points; six year subscription, \$1.00, 4,000 points. No subscriptions will be accepted for a period of longer than six years.

In case of a tie for a prize, a prize exactly like the one in question will be awarded to each tying contestant.

Seventeen Automobiles Given Away

We have given away during the past few years seventeen automobiles, as many motorcycles and many other valuable prizes. None of the winners of these prizes had any more experience in taking subscriptions than you have had. Our last automobile was won by a little boy twelve years old who lives at Nolan, Tex., his name is R. F. Oakley. You may write him about our contests if you wish. He received an \$885 Studebaker automobile for his work. Surely you can do as well.

MAIL THIS COUPON

Do not lay aside this paper until you clip out the coupon and mail it to us with your name and address. It will not cost you one cent to find out about this great offer of prizes and you will not be obligated in any way. We will send full information about the contest and tell you just what you have to do to win the Automobile. If after you have received this information you decide not to work in the contest you are at liberty to withdraw your name. Just remember one thing, some one is going to receive this Automobile and it may just as well be you as any one else.

MISSOURI VALLEY FARMER,
853 Jackson Street, Topeka, Kansas.

A CASE OF NERVE

OUR HOST of long-time readers will read the following item, clipped from the official organ of the Gleaners, amusing in its assumption of leadership in the clearing house idea for farmers. The "Gleaner" says:

Help Yourself, Gentlemen, We Lead

Imitation is said to be the most sincere form of flattery. And so as Gleaners we are offering no objections to the fellows who follow, but it really does seem that they ought to have originality enough to at least select a name if they do find it necessary to boldly run off with the plans. But help yourselves, gentlemen, there's enough to go round and we are marching right along, willing to map the country and blaze the trails, so long as the problem is solved. The Society of Equity has recently adopted the clearing house idea and they have gobbled the name as well. The Gleaner Clearing House Association was duly organized eight years ago and has been doing business as a going concern all these years.

At the last meeting of the stockholders of the association the directors were, by resolution, given authority to establish a profit-sharing plan and enlarge the scope of service performed for the organized farmers marching under the Gleaner banner. We are pleased to state that the plans have been completed, the details all worked out and on and after August 1 the association will be working under the new system. The officers of the association have felt for some time that the business could be better handled on a direct profit-sharing business and in the future all regular organized co-operators will share in the profits of the business.

The new plans provide for the establishing of branch clearing houses. Plans have also been perfected whereby the Local Arbors may organize a voluntary association and operate a local receiving and shipping station, coal sheds or any other co-operative enterprise. An official Gleaner Co-operators stamp has been adopted, official shipping tags provided and everything is ready for co-operation with the Gleaner, by the Gleaners and for the Gleaners.

We are sorry Brother Slocum of the Gleaner guild had not learned more of the Society of Equity's past history before he made such a statement. Why, even before the original Equity movement before the Gleaner Clearing House was established, the clearing house idea was promulgated by Mr. Everitt, the founder of the Equity system of marketing. It is true that the name "clearing house" was not used until recently, but what is in a name? The national union was a clearing house in fact if not in name.

Moreover, for twelve years we have been teaching and practicing the system of marketing which Mr. Slocum boasts of having but just recently put in operation in the Gleaner organization. For years the Equity system has been operating on that precise plan, with improvements to which the Gleaners have not yet attained. Moreover, UP-TO-DATE FARMING and the Farmers Society of Equity have taught from the first that not until the farmers of this country are organized or federated in one national body can they hope to have a fully satisfactory system of marketing whereby the producers of the necessities of life can have sufficient control of the markets and the system of distribution to obtain the full measure of profit to which their land and labor entitles them. We have also taught the unassailable fact that with such a federation no other form of rural organization is necessary or even desirable, but all the good things which could possibly be brought forth from the co-operative principle would be readily realized by such a national organization.

Have the Gleaners even today reached a point along the line of co-operative progress where they teach the same truths? If so, where is the evidence and why do they not practice what they preach and work with us for such a federation?

If Mr. Slocum will get out of the woods, where he can see what is going on ahead of him, he will see that he has quite a distance yet to go before he leads.

PAPERS THAT OPPOSE THE F. S. E.

Rural New Yorker, New York, N. Y. Farmers' Review, Chicago, Ill. National Stockman and Farmer, Pittsburg, Pa.

The president of a great manufacturing concern, in the second largest city in the country, wrote to UP-TO-DATE FARMING under date of July 28, 1914, in part, as follows:

I am anxious to do what I can to help the farmers of our country. I believe they have a great deal to learn, and a paper like yours, that is putting forth every effort to educate them, is deserving of every credit. Not to be thinking out methods for improvements, not only in farming, but in every other line, demonstrates that we are not going ahead, but are standing still. I assure you of my personal support at any and all times.

This is from a man who does not profess to be a teacher of farmers, but his business interests are directly or indirectly dependent on farmers and agriculture, as nearly every business in our country is. He knows that the degree of prosperity enjoyed by the farmers will be reflected in his business. Therefore he recognizes the important place filled by this paper and he is fair enough to give it credit for doing a good work. Compare what he says with the following, sent us by subscriber W. C. Jackson of Jetersville, Virginia, clipped from National Stockman and Farmer:

We refuse to aid the combination of theorists, agitators and producers who have inaugurated a campaign to hold wheat for one dollar. This, not because we are unconcerned about the welfare of the producers, but because we are sure that such a campaign would ultimately be a great detriment to them. Farmers have no more moral or legal right to combine for the fixing of an artificial price on their products than miners or manufacturers have.

We will not attempt to prove that miners and manufacturers do co-operate to make and maintain equitable prices, because everybody but seemingly this editor know they do, but we will print the following letter from subscriber George J. Sowers, Spring Hill, Kas., to show where the real farmer stands on the proposition:

Spring Hill, Kas., July 28, 1914.

DEAR EDITOR UP-TO-DATE FARMING: I enclose \$1 to cover renewal for three years. We rent out considerable land for wheat raising and we appreciate your efforts to get a better price for wheat. We have binned our wheat and will probably hold it over till May. I think you are right in considering the marketing problem the biggest question for the farmers. If farmers can get right prices for their products there will be very little trouble to keep the boys on the farm. But when the work is so hard and the money returns so little they want to leave it.

We will say again that the three words, "Stop my paper," sent to the publishers of the papers that oppose is the most effective way to end their opposition.

Dollar Wheat Is Drawing Nigh
(Selected from Songs of Equity, published by Farmers Society of Equity)

There are signs about us telling
Dollar wheat is drawing nigh,
And the sentiment is dwelling
Dollar wheat is drawing nigh;
And the buyers rub their eyes
In a sudden sore surprise.

95 cents

5 YEAR GUARANTEE

98 cents

5 YEAR GUARANTEE

BALE TIES

Writing about a car load of bale ties obtained through the National Clearing House, delivered to Humboldt, Kas., Mr. A. R. Baxley, secretary, says: "Must say the ties are first class in every respect and give complete satisfaction. These ties cost us 80 cents, while the best we could do here was 90 cents, with quality not so good."

If you and your neighbors have not bought your baling wire you can hear of something to your advantage by writing

The Equity System Indianapolis, Ind.

For the price is bound to rise—
Dollar wheat is drawing nigh.

Yes, the farmers they are waking,
Dollar wheat is drawing nigh;
And a plea for justice making,
Dollar wheat is drawing nigh.
'Tis but right and just that they,
Who have toiled from day to day,
Set the price the dealers pay—
Dollar wheat is drawing nigh.

There's no time for idle dreaming,
Dollar wheat is drawing nigh;
City smarters are rife with scheming,
Dollar wheat is drawing nigh.
Be not slow to seek the right,
Just co-operate and fight;
Wrong and power put to flight—
Dollar wheat is drawing nigh.

CHORUS
Drawing nigh, drawing nigh,
Drawing nigh, drawing nigh;
'Tis but Equity we seek,
So may dollar wheat draw nigh.

Satisfaction guaranteed or money refunded.

ARNOLD WATCH CO., DEPT. 834 CHICAGO, ILL.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

THE general business conditions are summarized by Bradstreet's as follows:

War's disturbance world wide. First shocks passing measures of precaution and relief at work. Government and banks co-operate. Emergency currency. Clearing house certificates. Cool-headed management minimizes ill effects. Shipping at standstill. Foreign trade worst affected. Commodity prices rise. Export trade in staples checked. Imports halted. Domestic trade goes on despite unsettlement. Crops show deterioration. Embargo on grain shipment.

Unusual market conditions have resulted since our last report because of the European war. Also the adverse weather conditions of July, while to a considerable extent lost sight of, must have their influence in ultimate prices. The only thing, we believe, that stands in the way of much higher levels of prices for numerous farm commodities is the present inability to export freely and the uncertainty when the foreign demand can be filled with our products. That that time will come, however, there can be no doubt of. War times are times of extravagance and waste, with decreased production in the affected countries. As the war now in progress is the greatest the world ever knew, it is only reasonable to expect that the demand for our surplus products will be unprecedented as well as imperative and the price, perhaps, beyond anything ever known before. While this unexpected thing has happened and helped to advance the price of wheat, we are as firm in our opinion as ever that the price would have gone to a dollar or above purely on the basis of world's supply and demand.

In looking up the past prices of wheat we find that in 1877 and 1878 the Russo-Turkish war was fought. The lowest price of wheat in 1877 was \$1.01½ and the highest was \$1.76½. In 1898 was the Spanish-American war and wheat sold at 62c, the lowest, up to \$1.85, the highest. How much of the high prices was due to the wars we will not attempt to say, neither do we recommend farmers to hold for such extraordinary prices now.

The July weather wrought serious damage to crops in many parts of the United States. The government estimate of wheat as of August 1 is 911,000,000 bushels, against 927,000,000 July 1. Our advice is—

As the people in the cities think the country is.

dicates that this must be cut still farther because of deterioration, too wet and rust in the spring wheat states. Corn is estimated about 300,000,000 bushels lower, oats 44,000,000 lower and barley 8,000,000 lower. The condition of the potato crop has improved and 9,000,000 bushels have been added to the estimate. Likewise tobacco looked 34,000,000 pounds better on August 1 than on July 1. Hay is not a bumper crop, but is above the average. Cotton outlook is on the whole good for above an average crop.

The visible supply of wheat shows a heavy increase since our last report to August 1, nearly 13,000,000 bushels. Since that time vast volumes of wheat have piled up in central markets because of difficulties in exporting it. The price of cash winter wheat advanced at Chicago 5c to 8c, while cash spring advanced about 20c a bushel at Minneapolis and is about 20c a bushel higher than cash winter wheat at Chicago, while distant futures advanced about 16c a bushel.

The visible supply of corn decreased almost one and a half million bushels and the price is 8c to 9c higher. The oats visible increased a little more than a million bushels and the price raised but a fraction of a cent till the date of this report, August 7. Late potato prospects in the northern states excellent. Early potatoes are selling too low, considering prices of other things.

Advice

WHEAT—Hold for \$1 at your selling point. There is a special reason, also, for

holding now because of the congestion of markets. If you can sell for \$1 before our next issue market gradually. CORN—Market what can be spared. OATS—We said before the price must be higher. Hold if you can. COTTON—Market gradually. HAY—Market gradually.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, August 1, 1914, with comparisons are shown in the following table:

	August 1, 1914	Change from two weeks before
	Bushels	Bushels
WHEAT	35,429,000	X 12,751,000
CORN	4,402,000	- 1,151,000
OATS	8,062,000	X 1,170,000
BARLEY	1,538,000	- 71,000

The visible supply of wheat in Canada on the same date was 11,498,000 bushels. This is 2,894,000 bushels less than two weeks before and is 3,449,000 bushels more than a year before. The visible supply of oats was 3,883,000 bushels on the same date, which is 1,782,000 bushels more than two weeks before and is 3,926,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on August 7, 1914, two weeks before and a year before as follows:

	August 7, 1914	Two weeks before	A year before
Chicago	88½ @ 91½	83½ @ 83½	86 @ 80½
St. Louis	90 @ 91½	81½ @ 82½	85½ @ 88

Cincinnati	88½ @ 89½	83 @ 83½	87½ @ 89½
New York	94½	93½ @ 93½	93½ @ 93½
Minneapolis—Spring wheat:			
No. 1 hard	\$1.12½		
No. 1 northern	\$1.08 @ 1.11½		
Two weeks before			
91½ @ 95½c		90½c and 88½ @ 88½c	
respectively.			
CORN, NO. 2 WHITE			
Chicago	82½ @ 83½	74 @ 74½	70½ @ 71½
St. Louis	85	79½ @ 80	73 @ 73½
Kansas City	80	79½	77½
Cincinnati	81 @ 81½	81 @ 81½	71 @ 74½
New York	91		78
OATS, NO. 2 WHITE			
Chicago	36½ @ 38	36½ @ 37½	42 @ 42½
St. Louis	39	38 @ 39	42½ @ 43
Kansas City	38	38	43½
Cincinnati	36½ @ 37	41 @ 41½	43 @ 43½
New York	46½ @ 47		48½

Future Grain Prices

Chicago grain futures closed on August 7, 1914, and two weeks before as follows:

Wheat—September, 92½c; December, 97c; May, \$1.05½. Two weeks before, 81½c and 83½c respectively.

Corn—September, 75c; December, 68c; May, 71c. Two weeks before, 68c and 58c respectively.

Oats—September, 39½c; December, 43c; May, 45c. Two weeks before, 35c and 37c respectively.

Winnipeg, Canada—Spring wheat: October, \$1.10; December, \$1.08½. Two weeks before, 85c.

Chicago Produce Market

Chicago, August 7, 1914

Chicago quotations are used in these reports for the sake of uniform comparison, issue after issue, and this year with former years. For quotations from other markets and advice about marketing address Farmers Society of Equity, Indianapolis, Ind., or any of the representatives of the Society in its directory of "Where to Sell."

POTATOES—Market steady for barrels, which were in moderate supply and easy to a shade lower for bulk and sacked potatoes. Receipts were reported at 35 cars and the trade was fairly active at the prices.

Sales reported were: Per barrel—Virginia Cobblers, 1 car at \$2.30, 3 cars at \$2.35. Per bushel—Sacked Jersey Cobblers, 1 car at 85c; 2 cars Giants at 80c; Minnesota Ohio, 1 car at 77c.

Per bushel, Kansas, Early Ohio, sacked...\$.68 @ .73
Home-grown... .70 @ .75
Minnesota... .75 @ .77
Jersey Cobblers... .85
Jersey Cobblers, bulk... .75 @ .80
Per barrel, Virginia Cobblers... 2.15 @ 2.35

The price of Kansas Ohio is about 20c a bushel lower than two weeks before and Virginia Cobblers about 15c a barrel lower than two weeks before. Home-grown are from 30c to 35c a bushel lower than two weeks before.

SWEET POTATOES—Are quiet as yet. It is early for them and the weather has been too warm. Feeling easy.

Barrels, North Carolina...\$4.75 @ 5.00
Large hampers, Alabama... 1.50
Small hampers, Alabama... 1.00

BEANS—A boom has come to the bean market. Pea beans have advanced 50¢ to 60¢. There are said to be a few old. Buyers have started after them. It is said that if there is any way to ship some will go abroad. The other kinds also are firm, but there is no excitement in these.

Pea Beans—Hand-picked, choice...\$2.45 @ 2.70
Common... 2.50 @ 2.60
Red Kidneys, common to good... 3.00 @ 3.50
Brown Swedish, long... 2.00 @ 2.25
Round... 2.25 @ 2.40

The price of hand-picked choice pea beans is 45c to 55c a bushel higher than two weeks before. Red Kidneys 35c a bushel higher. Brown Swedish 20c a bushel higher than two weeks before.

HAY—Receipts, 937 tons. Arrivals of prairie hay increasing and market easy. Demand fair, timothy hay firm. Demand good and market firm.

New Timothy...\$14.00 @ 17.00
Choice old Timothy Hay... 20.00 @ 20.50
No. 1 Timothy... 17.50 @ 18.50
No. 2 Timothy... 15.00 @ 16.00
Kansas, Iowa and Nebraska Prairie... 12.00 @ 13.50
Illinois and Wisconsin Prairie... 7.00 @ 8.00

The price of new timothy hay is \$3 to \$4 a ton higher than two weeks before; of choice old timothy hay 50c to \$1 a ton higher than two weeks before. Kansas, Iowa and Nebraska prairie hay is \$2 a ton lower than two weeks before and Illinois and Wisconsin prairie hay is \$1 to \$2 a ton lower than two weeks before.

STRAW—Rye straw quotable at \$7 @ 8, oat straw at \$6.50 @ 7.50, wheat straw at \$6 @ 7.

Rye straw is 50c a ton lower. Oat straw and wheat straw are unchanged to 50c a ton lower than two weeks before.

BROOM CORN—There is not much doing. Just a quiet trade and no change.

Per ton, Illinois Corn...\$115 @ 135
Oklahoma... 90 @ 130
Damp and damaged less.
The price of broom corn is unchanged from two weeks before and for quite awhile.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week.	Last week.	Last year.
	Cases.	Cases.	Cases.
Monday	12,750	12,293	10,693
Tuesday	14,374	11,579	12,207
Wednesday	13,280	11,374	10,593
Thursday	9,338	8,064	8,317
Friday	9,235	9,495	9,123
Totals	58,977	52,805	51,293

The market is ruling firm and prices again higher. The demand continues good for eggs, especially for fine stock, which is being sought for by local interests and to fill shipping orders.

Fresh Firsts	20 @ 21
Ordinary Firsts	18 @ 19
Storage-packed Firsts	21½ @ 22
Storage-packed Extras	22½
Miscellaneous, cases included	15 @ 20½

Change same period last yr.	Change from a year before	Change from 2 years before
	Bushels	Bushels
X 5,349,000	- 6,979,000	X13,071,000
- 1,255,300	- 4,041,000	X 958,000
X 2,565,000	- 11,590,000	X 6,490,000
- 181,000	- 577,000	X 1,188,000

Cases returned... 14½ @ 20
Checks, good sound... 14 @ 14½
Candied higher.

Ordinary, heated and poor... 8 @ 12
Dirties, good... 15 @ 15½
Candied stock bring higher prices.

Heated, showing heavy loss... 10 @ 12
Refrigerator Eggs—For April extras, 23½ @ 24c was obtainable today, with sales of Firsts at 23½c.

The price of eggs is 2c a dozen higher than two weeks before.

Melons

CANTELOUPE AND GEMS—Were in brisk demand. Buyers took few yesterday and with tomorrow, Saturday, there was a good demand.

OSAGE—Were selling very well. Of course buyers want them nice.

WATERMELONS—Were easier. Receipts today, 72 cars. Some Illinois and Indiana received. The market was easier, prices a little lower.

Fruit

APPLES—Arrivals and offerings are moderate, not large. Demand very good for nice stock and a good market exists. Stock small, common or soft rules easy.

CURRENTS—Are quiet. The few nice cherry currants coming are fair sale, but small or soft in small demand. Black, if genuine and nice, are going very well.

CHERRIES—In small supply. Sour, if fine, good sale and firm. A few common around were dull. Sweet also scarce and demand for these was tame.

GRAPES—Small lots noticed are common, small and red mixed, not a kind that any one cares for. Late dry weather has been bad for grapes.

LEMONS—Are firm. They have advanced. Prospects that no foreign can come has firmed up the market. ORANGES—Market firm. They sell fairly.

PACIFIC SLOPE GREEN FRUITS—Were having a brisk trade and ruling firm.

PLUMS—Nice Wild Goose are good sale and fairly firm. A few Damsons coming sell very well. Michigan Red Abundance or Japan (they are called by different names) rule quiet.

PEARS—Offerings just fair. Nice Clapp's Favorite sell fairly and rule steady. Small pears not so good sale, but all will go at a price.

PEACHES—Market showed little change. Receipts were moderate—about 3½ cars. Supply not large enough for any pressure. Good demand for nice, sound yellow fruit. As usual, common, small stock was dull and easy. The Illinois peaches are beginning to show improvement in quality.

Read Wheat Prices at Right, Corn and Oats at Left

This chart shows the highest monthly cash prices for the three varieties of grain at Chicago for the period, 1909 to July, 1914, inclusive. The lowest figures in July, 1914, were: Wheat 78c, on July 14; Corn, 68c, on July 7, and Oats, 37c, on July 16.

WHEAT

All countries involved in the

European War

are Fall Wheat countries. They can't plant much wheat and fight at the same time.

Big Prices

are reasonably assured for both our present and next year's crop. Every farmer owes it to humanity to put in the biggest acreage of wheat possible. He owes it to himself to get big yields and good quality. The logical way is by using good animal matter fertilizer.

Darling's Animal Matter Fertilizers give the biggest yields and the best quality. Darling's Animal Matter Fertilizers are the best

Crop Insurance

a farmer can buy. We have a very large supply of bone and are in a position to make prompt shipments on all grades of fertilizers.

Every farmer in the Middle West should write us today for our book "The Soil Builders." It contains facts every wheat grower should know. Mailed free.

OLD FOLKS

What 15c Will Do!

You have wished for a paper that is printed in type that you can read without strain on the eyes; a paper that gives all the news of the world, and that tells the truth and only the truth. The **Pathfinder** is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its 21st year of increasing success. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. Address: THE PATHFINDER, Box 7 WASHINGTON, D. C.

WALL MAP GIVEN AWAY

For the purpose of quickly securing new and renewal subscriptions to the great home magazine, the Household, we have made arrangements to give away 5,000 official wall maps of western states and United States with the 1910 census complete.

This home or office library wall map is 28x30 inches in size, splendidly colored with beautiful halftones on the heaviest enamel paper. It shows the railroads and every postoffice and contains a complete index of the population of every city or town in the state selected. On one side is the latest map of your state, on the other side is the latest map of the United States.

We can supply these special maps for any of the following states: Kansas, Oklahoma, Missouri, Nebraska, Colorado, Texas, South Dakota, Illinois, Iowa, Minnesota, Wisconsin, North Dakota, Oregon, Washington, California, Utah, Arkansas, Indiana, Michigan, Montana, Ohio, Wyoming.

There are, in addition to the maps and census, many other valuable features included in this chart.

OUR OFFER

We are making a special offer on this wonderful wall map, as follows: Send 25 cents for one year's subscription, new or renewal, to our popular family journal, the Household, and one of the valuable wall maps is yours, sent free and prepaid. Be sure and give name of state map you desire. Address at once Department WM 20, Household Magazine, Topeka, Kas.

Subscription Representatives Wanted

to devote all or part of time to soliciting new and renewal subscriptions for UP-TO-DATE. Liberal proposition to man or lady to secure subscriptions. Write us.

Woman's Work and Welfare

Helpful Hints for Homefolks

CONVENIENCES AND ATTRACTIONS FOR THE FARM HOME

By Sara McKenzie

IT IS SURPRISING to note the large per cent of boys and girls that are leaving the country yearly for the city.

Now, farmers, here is a problem quite equal to the dollar-a-bushel wheat, and ask yourself the question: Why? Because your home has little or no attraction or conveniences. Your children are becoming too wise to remain on the old farm, following in your footsteps, drudging and worrying their lives out, when they see the city beckoning to them with its attractions and conveniences. They are going to it. And who could blame them?

One of the greatest problems of our day is how to keep the bright, ambitious, merry and thoughtful child on the farm. How is it going to be done? Not every one is wealthy enough to have a costly home, but as long as God allows the beautiful flowers and grass and trees and vines to grow we all, with a little care, can have a tastefully decorated and cozy home. God sent the plants, it seems, to try and cover some barren place where man has attempted to make a living.

A beautiful, well-kept lawn adds greatly to the pleasure and attractiveness of a home. Show me the man, woman or child that does not love a convenient and attractive home. Teach your children to show ambition and pride in beautifying the home by beginning training them at an early period of life. Invest a few dollars and give Mary a pleasing enjoyment. Get your boy to dig the hardened dirt around the front porch where you have spent Sunday after Sunday in the broiling sun trying to get a little rest and when Mary thinks of a cool, shady place instead she will gladly plant some seed there and, full of hope and anticipation, she will watch them grow. Among the best climbers are honeysuckle, cypress, English ivy and morning glory.

In one corner of your porch have ferns. Get several horse muzzles. First line them with thick, heavy, healthy moss gathered from the rocks in your woods. Next, fill with rich black dirt—better if you can obtain some undecayed matter such as leaf mold or partly decayed sods and mix with the dirt. Now lay a piece of moss on top. Next take healthy ferns obtained from the greenhouse or woods and in each opening of the wire make a deep place with your finger and gently pack the fern in. Fill the basket with ferns in this way, put them in a cool place from two to three days before bringing them out. Attach a wire to the handle and suspend it from the ceiling of the porch about five or six feet from the floor. Water them daily. Here you may place several comfortable chairs and a porch swing made by the handy boy of the house and you have an attractive and comfortable porch with very little care, where the family, after the day's work, can gather to talk, read and sew.

In this day of literature you can, by selling a few chickens, fill your home with journals the whole year around and you will be feeding hungry minds as well as hungry bodies.

Let your children go to school, where they learn to do things right. One farmer sent three of his children four and one-half miles to high school by giving them a horse and buggy, paying a dollar a month livery bill and furnishing the horse's food.

A girl, after returning from college, said with a wondering air: "I was told this morning that father was one of the wealthiest farmers of this county, and dear old mother hasn't even a sink in the kitchen. I see my finish if I marry a country boy." So consequently she became a city boy's wife and there she lives. Didn't she do right? Farmer, is your slop barrel 100 yards from the kitchen, right by the hog pen? Is your summer kitchen, such as it is, in one corner of the yard and there your wife and daughter crack their skulls over a burning fire getting dinner, and from there carry it to the dining room so you can have a cool place to eat your dinner? Or will you let your children rattle cans in your back yard or gather flowers? Think the matter over and resolve to do better next year or from now on.

THE SCHOOL LUNCH

To the mother who must fill one or more lunch boxes every morning the school year seems a long one. But if mother grows weary of putting the lunch up, how infinitely more weary must the child grow of eating the cold and often unattractive dinner that the mother has hurriedly put together. Remember that the lunch is to be eaten in the middle of the day when the child's system needs food that makes fuel, and the body must be properly nourished or the effect soon shows in a lagged little brain. This necessary nourishment can not be supplied by cake, pie or pickles and these are an important factor in too many lunches. When you are planning your own dinner, plan some wholesome dish for the lunch of tomorrow—only simple things should be considered and these of such ingredients as we know will meet the needs of the body. Children should be given only the most easily digested meats, preferably well cooked beef, lamb or chicken. For the sandwiches the meat should be finely minced. It is a simple matter to put it through the meat chopper, and this prevents its being bolted down in large pieces. If a couple of small jelly glasses are kept on hand, desserts of cup custard, rice custard and fruit gelatines are easily prepared and give a welcome variety to the lunch. Stewed fruit, salad, beans and other healthful foods will prove the little glasses indispensable. Fresh fruit is something the children never tire of and the system always needs, so include it in the lunch in some form whenever possible.

The child craves sugar, and when we remember that the system converts sugar into the fuel which supplies our energy, we know it is only a natural desire. But it may be satisfied in so many healthier ways than by rich food—for a delicious sweet sandwich filling that may also be spread on crackers or given as a substitute for cake, use the following: Run through the chopper one pound each of raisins, dates, dried prunes, figs or any other dried fruit desired, and half a pound each of English walnuts and hickory nuts. Blend together with orange juice and pack in baking powder tins. When wanted, turn out and slice.

It costs such a trifle in money and certainly cannot cost us much time to pack a lunch daintily, and surely the result ought to repay us for the trouble. Wrap each article separately in oiled paper and provide the plain white Japanese napkins, which are very inexpensive. If you plan to keep a drawer in the kitchen devoted to all the lunch supplies, as napkins, oiled paper,

rubber bands and string, you will find that the packing of an attractive lunch is a matter of but a few moments.

Cream Cheese and Coconut Balls—Roll cream cheese into the shape of cannon balls. Dip it into shredded coconut and ornament with flags.

United States Cookies—Take one pound sugar, one-half pound butter and a cake of chocolate. Dissolve in a pint of warm water. Add three beaten eggs, two even teaspoonfuls soda and just enough flour to roll out. Bake on a tin in rounds. Then place two together in the form of a sandwich with chocolate filling. Frost with white, making a border around the top and "U. S." in the center.

Cake Baskets with Charlotte Russe—Make a sponge cake of one pound of sugar, six tablespoonfuls of water, four eggs and one-half pound flour. Cover the sugar with water and let it boil five minutes. Pour into this the eggs, which have been beaten separately, and beat all well together. When cool add flour and flavoring. Bake in deep gem pans. Hollow out the inside and fill with charlotte russe. Ornament with whipped cream. Bake strips of sponge cake and fold them over to make the handle on the basket.

He Read It All

Pat had received a letter from his boss telling him he was discharged and his job had been given to another, but on the morning of the sixth day he was bright and early at his old place.

"What are you doing there?" asked the boss. "Didn't you get my letter?" "Yes, sir, I got it," said Pat. "Couldn't you read it?" asked the boss. "Indeed I could," said Pat. "I read it inside and out. On the inside it said I was fired, but on the outside it said 'Return in five days to Baldwin's Locomotive Works,' and here I be."

More Absorbing Than Eating

"Mama, when your company is here for dinner tomorrow you'll talk about suffrage, won't you?"

"I expect we will, dear, but what is that to you?"

"There's always more cake left when the women talk about voting."

But They Won't

Wife—In a battle of tongues a woman can always hold her own.

Hubby—Perhaps so, but I never knew one that did.

Sent by Parcel Post the day we hear from you

Louise over 2 ft. tall and Susie and Jimmie

Pay no attention to other offers. My offer is the best

Louise can wear a real live baby's clothes

Over 2 feet tall

3 big dolls given away

Girls, if you want 3 of the cutest dolls you ever saw send for this doll family. Louise is over 2 ft. tall, very like a real youngster in size. She can wear a real baby's clothes. She will sit or stand. Brother Jimmie is a husky fellow and Sister Susie is too cute for anything. JIMMIE AND SUSIE ARE FULLY DRESSED and you will be delighted with all three dollies. I want to give this doll family to a little girl or boy in each home. The only condition is that you secure a new 6-months subscriber at 25c to Up-to-Date Farming. It is published twice a month, 12 issues in 6 months. Big Surprise Free I will also tell you how to get Princess, the big talking doll sensation from Germany. She says "Papa" and "Mama" like a real child. Send 25 cents and new subscriber and dolls will be sent by parcel post, prepaid. Miss Gertrude Allerton, Dept. A, Indianapolis, Ind.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a New subscriber for one year—50 cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

PERSEVERANCE is what succeeds—the everlasting stick-to-it-iveness. Scarcely anything can be undertaken but that somewhere reaches a discouraging point. To yield to that discouragement and jump to something that may seem better leads from the road to success. Don't undertake things too hastily. Know what you are doing. Be certain the accomplishment will justify the effort and then work on to the accomplishment. Had any other rule governed UP-TO-DATE FARMING our great purpose for the independence and just reward of farming and for the benefit of the whole world would long since have been given up. But now we clearly see the great accomplishment just ahead and we say these things to encourage our young friends in whatever they undertake.

DEAR CADETS—I live on a farm of 110 acres in the north central part of Wisconsin. The principal crops raised around here are hay, oats, wheat and corn. Some fruit is raised also. We have been having more rain this summer and spring than we have had for the two past seasons. Flat land contains a great deal of moisture and has to be ditched if crops grow on it this year, but in a dry season this land does well. This year the rolling land is the best, because the "water seeks its level." The floods took the dam and 200 feet of embankment out at Greenwood. Black river used to flow on the west side of the power house, but now it flows on the east side. There are three picnic grounds along Black river within three miles of us. I am 18 years old and am a senior in high school. I am taking the English and German courses. I will be glad to answer any Cadet letters I receive and would like to hear from a Minnesota Cadet whose country borders on Wisconsin.—Dorothea Baeschlin, Greenwood, Wis.

DEAR CADETS—I have long wished to be a Cadet of Equity and I hope this letter will make me one. I am a country girl, 16 years old, and I enjoy reading your letters in UP-TO-DATE FARMING. I would like to correspond with the Cadet boys and girls.—Bernice McCabe, Indian Lake, N. Y.

DEAR CADETS—I am a 17-year-old girl of the farming district of Idaho and I love to read your interesting letters about other

parts of the country. I would certainly appreciate a card or letter from any or all of the Cadets. I will answer immediately and tell you many interesting things about Idaho.—Emma Thomas, Malad City, Idaho.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and I enjoy reading it each issue. I think it is a very nice paper and all farmers should take it, as it is a great benefit to them. I am 17 years old and live on a farm of 40 acres. Our farm is about eight miles from Hamilton. There is a creek near our farm where we get water to irrigate our crops and we catch trout out of it. I wish to become a Cadet and would like to hear from all the girls and boys.—Frank A. Neilsen, Hamilton, Mont.

DEAR CADETS—Having taken an interest in the letters of the Cadets, I thought I would like to join. I am 17 years of age and have been working in a department store for a short time. I like the work very well. I live in the copper mining district of the upper peninsula of Michigan, where the great strike was only a few months ago called off. That strike certainly did leave its mark in the copper district. I wish the Cadets would write me. All will be welcomed and answered.—Hilma Sihtola, Kearsarge, Mich., Box 330.

DEAR CADETS—I am a Colorado farmer boy, 18 years old, and live in the dry farming section of eastern Colorado. We have taken UP-TO-DATE for several years and think it is the best of farm papers. We raise corn, potatoes, beans and small grain. We came here in 1907 from Missouri and homesteaded 160 acres. I would like to hear from all the Cadets.—Milford C. Brookshire, Mattison, Colo.

DEAR CADETS—I am a country girl, 19 years old, and live on a small farm of 88 acres in Carroll county in the southwestern part of Virginia, two miles west of Hillsville, our county seat. We raise all kinds of fruit, vegetables, grain and poultry. I like the farm much better than the city, though I enjoy a visit to the city. Papa has been taking UP-TO-DATE several years and thinks it one of the best farm papers published. I always read the Cadet letters. They certainly are interesting. I like farm animals and enjoy one or two hours every day petting and caring for them. I also like school and society work. There are two high schools near my home. I would like to get a card, letter or photo from every girl or boy reader of UP-TO-DATE, especially those near my age. Will answer all I receive.—M. E. King, Hillsville, Va.

DEAR CADETS—I do not live in the country now, but I did until two years ago,

and I like country life very much. Spartanburg is in the northern part of South Carolina and has a population of about 19,000. I am 20 years of age and am a student in a business school, but am taking a vacation now, but expect to enter again soon. I enjoy reading the Cadet page very much and would be glad to hear from all the Cadet boys and girls.—Ruth Ledbetter, 372 Vernon street, Spartanburg, S. C.

DEAR CADETS—I am a little girl, 12 years old, and live on a farm of 325 acres. Our main crops are corn and potatoes, but we raise tomatoes, cabbage, beets and other garden vegetables. I have had four sisters and three brothers, but two of them are dead and so is my mother. We live with my stepmother and father. I walked two miles to school last winter. We have thirty head of cattle, three horses and five hogs, besides chickens and turkeys. We did have ducks, but we had to sell them on account of the dry weather. I take UP-TO-DATE FARMING and think it is a grand paper.—Von Walker, Bridgeport, W. Va.

DEAR CADETS—I am a farmer's daughter, 14 years old, and live in Hernando county, Florida, with my parents on a 38-acre farm. We take UP-TO-DATE and think it a fine paper. Our main crops are corn, oats, field peas, sweet and Irish potatoes, cucumbers, beans and peanuts. I have a small garden containing collards, cabbage and pepper. We raise fruit such as figs, peaches, grapes and plums. I live a mile and a half from school. I wish to become a Cadet of Equity and would like to correspond with the boys and girls of my age. Will answer all.—Clifford Bishop, Istachatta, Fla.

DEAR CADETS—I have been a Cadet of Equity for a number of years and I enjoy reading the Cadet page very much. I hardly ever miss a copy. I am a girl of 17 and my home is in the upper peninsula of Michigan not far from Lake Superior. The summer here has not been very warm and we've had plenty of rain, but for all that I like summer better than winter. I would be pleased to receive letters from all the Cadets and will answer all.—Senia M. Wanyaya, Kearsarge, Mich.

The following letter we publish as a special request:

TO THE PUBLISHERS—I am a bad cripple for life. March 1, 1909, I had an attack of measles, which seemed to settle in my spine, which is curved three ways and paralyzed so that I am unable to handle myself and am confined to my bed, and must be handled daily by two strong nurses. I am now 18 years old and live on a farm. My parents are very poor. I have two brothers and two sisters. Both sisters and one brother are afflicted as I am, but not so bad. My friends say if I had a wheel chair it would be of great help to me, but my parents are not able to get it for me and I have taken this plan to get help from the Cadets of Equity. I will kindly thank all Cadets and readers of UP-TO-DATE FARMING who will send me any sum, however small, until I have enough to buy a wheel chair. I would also like to be able to pay a year's subscription to UP-TO-DATE FARMING in the same way.—George Craig, Jasonville, Ind. (References if desired.)

DEAR CADETS—I am 18 years old and have been married two years, but I have never regretted marrying young, for I got a good Christian husband who is faithful and devoted to me. What more could I wish? My mother died when I was a little girl and I have never known a mother's love except when I was very small. How I enjoy a girl with a mother, and how proud they should be of her. We began to take UP-TO-DATE FARMING last winter and I think it a fine paper, especially the department for the Cadets of Equity. My father is a farmer, but my husband is a miner. We live in a small ore camp that has about thirty people. It is called Fridman and is two miles from Woodstock, two miles from Giles and two miles from Bibbsville. We are also two miles from the Eight Acre Rock, noted for its beautiful scenery. Cotton and corn are the chief crops, but cucumbers, Irish potatoes, beans, cane and watermelons are grown also. We are a sociable crowd in this county and have entertainments and many other amusements. Fridman has a soiree club which meets once a week, and which gives some kind of entertainment two or three times a month. There are four different churches all near enough to attend. I would like to exchange cards and letters with the Cadets.—Mrs. T. M. Shamblin, Woodstock, Ala.

DEAR CADETS—I am a girl 18 years old and live on a farm of 160 acres. My father takes UP-TO-DATE and we think it is a fine paper. I like the country better than the city. We have four horses and six head of cattle. I like to ride horseback and am also fond of music. I would like to correspond with the Cadet boys and girls and will answer all.—Jennie Gans, Parkers Landing, Pa.

DEAR CADETS—I have been thinking of writing for some time. I am a constant reader of UP-TO-DATE FARMING and think it an interesting paper. The country in which we live is principally a cattle country, though many people farm and raise milo maize and kafir corn, also some wheat and oats. The rolling plains are very pretty. When fresh in early spring they look like they are covered with green carpets. I play the piano and a little on the guitar. I would like to correspond with some of the readers.—Ruth VanHouten, Tulsa, Tex.

We thank our young friends for their good words of UP-TO-DATE, and must close for this time.

ASTOUNDING BARGAIN!

We will send prepaid this high-grade compass, warranted to be accurate, for the ridiculous price of 10c. Compasses sell everywhere for 25c. It measures 1 1/2" in diameter, glass cover, nickel plated band, dial in two colors. This PONY GIVEN Who Wants Me? QUICK!

Boys! Girls! Do you want this beautiful Shetland Pony for your own? Write today—Quick! You can get him free—but hurry!

My name is "JOE"

I am 42 inches high and three years old. I am a pet, too. My color is black, and I have the silkiest, fluffiest mane and tail in the world. I am considered a very handsome pony. I am well trained. You can either drive or ride me and I am just as gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy.

I WILL GO ANYWHERE to find a kind little boy or girl as my owner. I am ready and waiting. I'll make you happy because that is what I was made for and it's what I like to do. If you want me, and I know you do, just send your name and address to Uncle Billy and I'll do my best to come to you in a hurry. I am going to some boy or girl, so be quick. Send your name this very day.

I have already given away 34 real, live Shetland ponies. Do you want "JOE"? Of course you do.

Carriage and Harness, Too, Come With Me All Given

Send Me Your Name Today

Write me at once and I will send you 2,000 Pony Votes Free for your promptness. I will also show you how to get more pony votes. So easy to get a pony if you do as I say. I will also send pony pictures; tell you how to get "JOE" and his outfit free, and prove that what I say is absolutely true. But you must hurry. So write while you think of it—at once—don't put it off. Just say that you want "JOE."

Lowest Prices Ever Made On World's Best Roofing

Lightning-proof, Fire-proof, Rust-proof, Rot-proof, Galvanized Steel Roofing— Lasts as Long as the Building Stands

That's the kind of roof you want to invest your money in, isn't it? All roofing you have ever bought heretofore had three cost prices—the first cost per square laid on the roof—the cost per year for up-keep—the cost of property damage by leaks. Here then, is *real* roofing economy.

Once you have purchased and laid Edwards Tightcote Galvanized Steel Roofing your roofing expense for that building is at an end for all time.

Its cost per square is the lowest ever made. It has *no* up-keep cost. Its property protection is absolute. Its years of service, as long as the building stands. Always beautiful in appearance. *Guaranteed Fire-proof, and Lightning-Proof. Reducing the cost of your fire insurance.*

EDWARDS Exclusive Tightcote Process Makes Rust-Proof Roofing

The Edwards process of galvanizing makes the zinc spelter practically one piece with the steel. No ordinary galvanizing can compare with it. Each and every Edwards Metal Shingle, Metal Spanish Tile, each sheet of Edwards Reo Steel Shingles, Grip Lock Roofing, Pressed Standing Seam or Roll Roofing is dipped in a bath of molten zinc, one at a time after the metal has been stamped and resquared. This insures a uniformity. The edges are galvanized as heavily as the sides. Not the space of a pin-point on the steel is exposed to the rain, snow, frost, acids or anything that eats or destroys a steel roof.

How to Test Galvanizing

Take a piece of any other galvanized steel, bend it back and forth several times, hammering it down each time. You will then be able to flake off great scales of the galvanizing with the finger nail. Apply this test to a piece of Edwards Tightcote Galvanized Steel Roofing—you'll find no flaking—not a space on the metal the size of a pin-point exposed to rust.

EDWARDS Patent Interlocking Device

Prevents Warping, Buckling or Breaking—Protects Nail Holes—They Can't Leak or Rust

This device not only takes care of expansion and contraction so that an EDWARDS Steel Roof never warps, buckles or breaks, but it is so designed that nails are driven through the *under* layer of metal only—nail holes are protected from exposure—cannot rust. No special tools or experience needed to lay it—anyone can do the work—lay over old shingles if you wish.

Reo Steel Shingles

cost less—outwears three ordinary roofs and are your joy and pride forever. A most beautiful roof.

No matter what kind of a building you have in mind there is a style of EDWARDS Tightcote Galvanized Roofing exactly suited to your needs. We manufacture and sell all of the many patterns of Edwards Reo Steel Shingles, V-Crimped, Corrugated, Standing Seam Roofing, Siding, Ceiling, etc., painted or galvanized, and all other kinds of the best grade of sheet metal building material.

Freight Paid Factory Prices

This is positively the greatest roofing proposition ever made. You can't afford to neglect investigation. All we ask is a chance to prove to you that we do indeed offer the lowest prices ever made on the world's best steel roofing. Won't you write today for our freight prepaid price and be convinced. We

are the largest manufacturers of Iron and Steel Roofing in the world. We sell direct to you from the largest, most modern sheet metal plant in existence. We save you *all in-between middlemen's profits*. Because of our immense purchasing power of raw materials—our wonderful manufacturing facilities and enormous output, our prices are rock bottom. We prepay freight and give you a binding guarantee against lightning losses.

FREE—Our Big Roofing Book—FREE

No matter whether your building is a corn-crib, barn, shed or mansion, Don't for an instant consider investing your money in roofing of any kind until you have received our Roofing Book, illustrating and describing every conceivable kind of Sheet Metal Roofing and Building Material—special offer and free samples of Steel Roofing. Postal or coupon brings FREE copy of Roofing Book No. 691

The Edwards Manufacturing Co.,

"Up-to-Date Farming is our best paper. It goes to the bottom of things and tells the truth."—Mrs. L. M. Underwood, Tunnel Hill, Ill.

UP-TO-DATE FARMING

17th Year

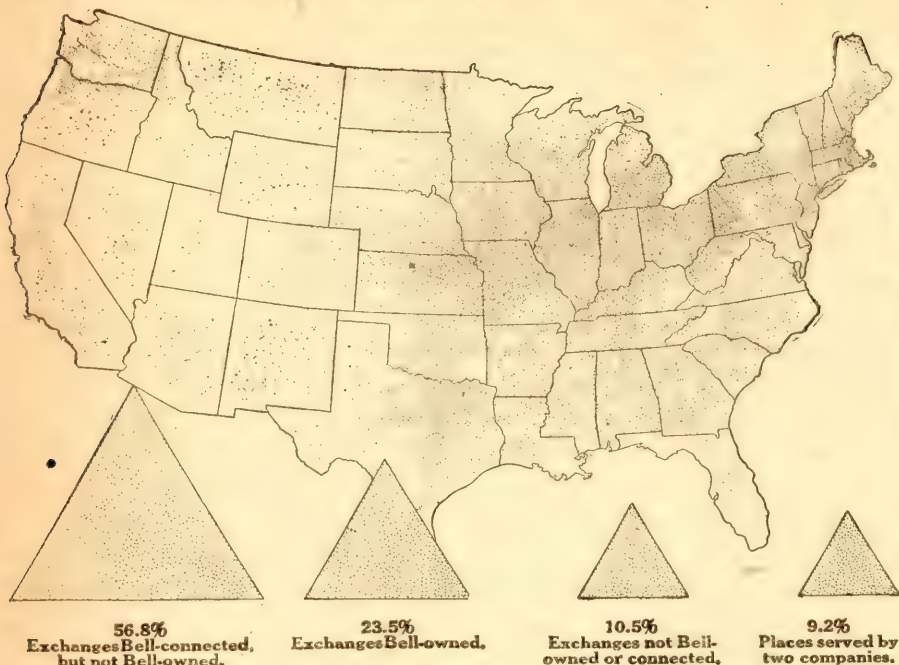

September First, 1914

Number 17

Every farmer must know of this movement to federate all the interests of all the farmers in one great machine. Read the report of the Kansas City convention on pages 10, 11 and 12.

What the Telephone Map Shows

EVERY dot on the map marks a town where there is a telephone exchange, the same sized dot being used for a large city as for a small village. Some of these exchanges are owned by the Associated Bell companies and some by independent companies. Where joined together in one system they meet the needs of each community and, with their suburban lines, reach 70,000 places and over 8,000,000 subscribers.

The pyramids show that only a minority of the exchanges are Bell-owned, and that the greater majority of the exchanges are owned by independent companies and connected with the Bell System.

At comparatively few points are there two telephone companies, and there are comparatively few exchanges, chiefly rural, which do not have outside connections.

The recent agreement between the Attorney General of the United States and the Bell System will facilitate connections between all telephone subscribers regardless of who owns the exchanges.

Over 8,000 different telephone companies have already connected their exchanges to provide universal service for the whole country.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

AND ASSOCIATED COMPANIES

One Policy One System Universal Service

What We Want You to Know and Why

Being a Few Words on Particular Matters

The Farmers Who Are Really to Blame

A Texas newspaper makes some editorial observations on the high-cost-of-living problem that are well worth considering. This paper declares that it is not the much abused middleman who has caused the ills which make life a burden to the poor consumer, but the independent, unorganized farmer—the man who has not and will not ally himself with his neighbors in a co-operative marketing movement to get better prices for himself and give better service to the consumers. This is the man who falls easy prey to dishonest dealers and keeps alive the present unsystematic, unsatisfactory, expensive and chaotic condition of marketing. He it is who feeds the present system with means to perpetuate itself and to control prices paid to consumers. Upon his shoulders rests the final responsibility for waste in field, orchard and market place, including the wilful permitting of foodstuffs to rot rather than to break prices to the trade. If the independent producer, the man outside of organization, would but come to his senses, see things in their true light and unite with his neighbors, organized production would be able to put an end to the conditions of which consumers complain and for which they cuss the middleman. This view is worth considering by organized and unorganized farmers and by the dealers who are being scorched between two fires. And there's but one way out.

The Farmer's Opportunity in Ten-Cent Beef

An eastern daily paper makes the following editorial comment: "The farmer who does not see his opportunity in beef cattle at 10 cents a pound is as shortsighted as he is blind to his own and the public interest." The farmers upon whom the public depends for its beef have not seen 10-cent beef, in the first place. Those sales are being made in Chicago and the farmer fails to realize that price by several cents. If the writer of the editorial had in mind that there are great money-making opportunities for farmers in cattle at 10 cents at terminal markets he evidently knows little of what it costs to produce beef on the farm. With feedstuffs high in price, labor scarce and high, feeding cattle higher than ever, and risks of serious nature to take, the farmer does not see a rosy opportunity in beef production, particularly when he has recently lost money himself or seen his fellow farmer lose it feeding cattle. He can not be blamed for preferring to sell his grain and hay at the attractive prices offered. The real shortsightedness lies in not taking steps to make stock raising permanently profitable, for live stock is the keystone to the fertility problems of the country. Successful grain farming in the future will depend much upon stock raising. This is the real opportunity the farmer should be able to see. By careful management the farmer who can raise his own stock, and feed, can market his grain in form of beef at present prices and make money, as well as to maintain and increase the fertility of his farm. The great need is to give the farmers a marketing system that will assure them a profitable return. Once that is done they can engage in beef raising without taking too great a risk.

War on the High Cost of Living

About the middle of August, after it became a certainty that Europe was to be one vast theater of war, and sea commerce between eastern and western hemispheres was paralyzed, prices of foodstuffs in America began to advance. The arch enemy of our times, General High-Cost-of-Living, began an assault on the financial strongholds of the consumer and demanded war indemnity in form of higher prices for all kinds of meats and staple groceries. Then the housewives' leagues, city aldermen, states' attorneys and even members of Congress declared war against High-Cost-of-Living and all his allies, represented by retailers, wholesalers, packers of meat products and speculators in the necessities of life. In Chicago particularly the people, and friends and defenders of the people, were stirred to action. The United States district attorney announced that he was going to start an unrelenting investigation into the factors controlling food prices and that any illegal operations would be prosecuted with great vigor. The chairman of the municipal markets commission of Chicago proposed an injunction to make dealers tell why prices are being advanced. Club women appealed to city aldermen and the latter, taking up cudgels in the defense of the ladies, went to the city corporation lawyer and urged him to act to the limit of his powers. Even President Wilson entered the fight and advised a congressional investigation.

The European war gave cause to the rise in prices, undoubtedly. Dealers, brokers, wholesalers, warehousemen and storage operators know that Europe will be in the market for foodstuffs and, to insure a supply, will contract wherever they can for large quantities at high prices. Consequently these people do not feel disposed to sell the supplies they control for less money than they believe they can get for them. Speculation for profit is the real cause of the advanced prices, from the groceryman to the giant wholesale corporations. The war merely superinduced the speculative advances. Speculators have merely taken advantage of a situation they had no part in producing. The way to relief for the consumers is to form purchasing clubs and deal direct with producers wherever practical and as nearly direct as possible in all other cases. The producers can aid in this, and to their own material advantage, by being organized into marketing associations for direct dealing. While such operations would not prevent juggling in prices in critical war periods, yet they would be effective in preventing speculation from overdoing the thing and demanding extortionate prices. The remedy for all marketing ills lies through organized production.

Balanced Rations

Silas will soon be filling his silo.

Hot winds are a severe blow to agriculture.

The spell is broken. What spell? The dry spell.

Europe is the logical place for the army worm these days.

Education merely helps a man to be more of what he actually is.

Threshing now being about finished, time for silo filling approaches.

Mule colts will provide a fine market for hay, straw, fodder and a little grain.

The man who makes a real start in life is usually equipped with a self-starter.

A good manager and capable secretary is the best guarantee of success for a co-operative association.

European nations are busy counting their men and dollars. The job will not be so arduous after the war is over.

The European war will be another reason why the new tariff will not be able to prove its real position in our economies.

A preacher's idea of a good road is the straight and narrow path, beginning at conversion and ending at the gate where St. Peter takes the toll.

Argentine corn to the extent of 200,000 bushels reached Montreal, Canada, on June 20, the ocean freight rate being 8.7 cents per 56-pound bushel.

Honesty, integrity, ability and enthusiasm are the principal ingredients of success, but unless they are leavened with common sense they will spoil in the making.

The fellow who knows the right thing to do is a valuable man, particularly if he also knows the right way to do it. (This applies to others as well as county agents.)

The superiority of dairy farming over grain farming lies in the fact that the dairy farmer sells only the cream from the milk, while the grain farmer sells the cream from the soil.

The Housewives League Magazine is engaged in a campaign for cleaner flour, demanding that all flour be put up in special sanitary bags. That will not tend to lower the high cost of living any.

It is said on very good authority that the railroads of this country reap earnings each year amounting to \$30,000,000 from the fertilizer industry, in freights on fertilizers shipped to farmers, and on the increased crops hauled to market. The railroads have good reason, then, to boost the fertilizer business amongst the farmers.

The old-style farmhouse bookcase was filled with the novels of E. P. Rowe and Mary Jane Holmes, Samantha Allen and Will Carleton's poems. The up-to-date farmer's bookcase contains books by such men as Prof. Henry, L. H. Bailey, Joe Wing, H. B. Gurler, F. D. Coburn, Thomas Shaw, William Dietrich and Miller Purvis. By their books ye shall know them.

The Farmer Holds the Key

The Crops of 1914

THE Department of Agriculture persists in the contention that the crop prospects of 1914 indicate a better crop than was produced last year. It is difficult for the farmers in large sections of the country to realize that that can be true, for in many places where the worst crops grew last year an almost entire failure is promised this year. In such regions there was comparatively no rain in May, June and July and in August up to the time we are writing, and the heat during most of that time has been almost alarmingly extreme. Occasional local rains have been reported, but the effect of these has been meager, as the heat and dryness of the atmosphere and of the earth itself very quickly dried up all the moisture. The Department admits, however, that crops deteriorated during July. The decline throughout the entire country was 3.4 per cent. The New England states made gains, as did also New York, New Jersey, Pennsylvania, Delaware, Maryland and Virginia, but West Virginia lost nearly 2 per cent. Going farther south, North Carolina gained nearly 4 per cent, but South Carolina lost nearly 3 per cent. Georgia and Florida made small gains, but the other southern states lost heavily, the losses ranging

from 2½ per cent in Mississippi to 8 per cent in Arkansas. The heaviest losses are in the central and north-western states. South Dakota suffered most, its loss in July being nearly 19 per cent. Nebraska's loss was over 10 per cent, Indiana's nearly 11 and that of Illinois 12½ per cent. Montana and Wyoming were also heavy losers, but other western states made light gains, though Oregon and California were losers. Iowa lost 5½ per cent and Missouri 4½ per cent.

It is easy to see that whether conditions in July were very unusual and that unfavorable conditions were widely extended and more or less affected all parts of the country and in some places seem to have been almost fatal. The loss of 10 and 12 per cent in crop conditions in a single month, the month of July, not likely to be followed by gains in August, is something serious and means much not only to the people of the United States, but of the world. Our advice to farmers is to save everything they can in the shape of foodstuffs and feed for domestic animals. Conditions in the Old World will increase the demand for American products and our farmers should have the benefit of it. Do not be fanatical or stubborn in disposing of your stuff, but exercise business judgment in selling.

What Others Say and What We Think of It

"Today women are again going to market."—Housewives League Magazine. Yes, and in automobiles, too.

"The man or the business worth while is the one that can deliver the goods."—Ohio Farmer. Yet delivering goods is said to add very materially to the high cost of living.

"There is just one way to keep the boy on the farm and that is to keep the girl there."—The Iowa Homestead. But when the boys says to the girl "Fly with me" what is to be done then?

"What are you going to show at the county fair this year?" asks one of our farm papers. The very least you should do is to show your face and the full size of your family. Do more if you can.

"Manufacturers can see no promise of trade revival as long as industry is the object of local, state and federal legislative attack."—American Industries. What kind of industry is thus attacked, brother?

"The cost of bad roads in this country is almost inestimable."—Farmer and Stockman. The cost of good roads will reach to about the same amount, but at the same price we greatly prefer the good to the bad.

"The motor car to the farmer is a necessity, not a luxury."—Advertisement. Ten to one the farmer who has one considers it a luxury and enjoys it as such. Farmers like luxuries the same as others, and they are proud to have them.

"Many a pioneer knows that if it had not been for the cow and the hen he would not have been able to keep the wolf from the door."—Nebraska Farmer. We suspect that is true, but it sorter tickles our funny bone to think of a cow and a hen fighting away a wolf.

"We must come to the time when there will be an official weigher and grader in every town big enough to be called a market."—The Progressive Farmer. Very true, and he should be solely in the employ of the organized and co-operating farmers of the community, employed by them, paid by them and responsible only to them and to law.

"What a combination it would be if the western rancher, with his cheap pasture, and the eastern farmer with his abundance of corn and roughage, could get together and eliminate two or three commissions and cut the freight charges in half."—Nebraska Farmer. They can get together, if they will, and once they do there's no question about the elimination of commissions.

"The Kentucky tobacco growers' pool is unconstitutional."—Orange Judd Farmer. Now where did you get that idea? It isn't anything of the kind—never was—never can be. A Kentucky law which affected pooling was declared unconstitutional, because of a defect as to its terms. But pooling by farmers of their own products is not illegal. Keep on solid ground, you who would lead the farmers.

EDITORIAL

Ignorance of Marketing Methods

IN A LEADING PUBLICATION, one that is supposed to be an educator and director of public sentiment, we find the following strangely positive declaration as to price and marketing:

The laws of supply and demand are inexorable. They can not be changed by legislation or mob law. The price of all things, labor, votes or wheat, is determined by the relative eagerness of buyer and seller.

Parenthetically we must say we regret that a paper claiming to represent advanced civilization would mention votes as an article subject to price and marketing, to the law of supply and demand, to be sold and bought, the same as labor and wheat. If votes are sold and bought on the market as labor and wheat are it is a sad commentary on our independence, on the people's right to rule, on the sacredness of the ballot. There are no doubt depraved cases where votes are bought for a consideration of money or special favors, but the respectable press of the country should be slow to teach that they are marketable like labor or wheat.

But to the subject before us. A year's supply of farm products are grown in a season and they are harvested and may be marketed in a very brief period after maturity, but the demand, limited to the requirements for use, extends through the entire year. Therefore the year's supply butts up against the demand for a few days or weeks at most. Hence if the supply of food products compared with the demand at the time of sale determines the price, there can be but a meager price on the oversupply and no price at all on the surplus that will be needed during the year, but that nobody needs now. Consumers rarely buy more at a time than enough to supply immediate needs or from one trip to town to another.

It is evident, therefore, no matter what may be said of the law of supply and demand, that if farm crops all be sold at once, or within the period of harvesting, they must be sold in an oversupplied market, or indeed not sold at all, for there can not be demand in a week or a month for the supplies of a year. It is evident, then, that if farm crops are sold at prices determined by supply and demand the quantity offered for sale must be ad-

justed to the demand so as to secure equitable prices—prices that will remunerate the producers and also enable the users to supply their needs. This can only be done by holding back the surplus and having it ready whenever the demand calls for it at the agreed equitable price. If the farmers can not do that, or will not, then there must be a double market. There must be at least two sales before the supply reaches the demand. The surplus must be bought by those who do not need it, not for the mere benefit of those who will need it later, but for the profit they may derive from thus holding and selling again. These purchasers buy from the farmers, or from buyers between them and the farmers, at a time when immediate needs are supplied and prices are necessarily low. Having obtained the supply and stored it, they can wait until the demand becomes imperative and then they can make the price high enough to satisfy their greed.

Those who are at all informed as to how farm products supply demand know that this is the marketing system which rules prices paid the producers and also those charged the consumers. Those prices are not fixed or governed by any law except the ever varying law of greed, and it is to change this miserable system that we are so earnestly working. If food products could come from the soil every day in the year then each day's demand would take care of itself and the supply would adapt itself to the demand on an equitable basis. But as that can not be, the surplus should be held by the producers themselves, who could then supply the daily demand the same as if it had come directly from the fields, and free from the greed that now extorts from all classes.

We may add to the above that farmers do not favor high prices to the consumers, because high prices, unreasonably high prices, make it so that much demand can not satisfy itself and thus consumption is reduced. The greater the consumption the better it is for the producers. What the farmers want, therefore, and what they propose to establish, is a marketing system that will supply demand at or near farm prices, so that the greatest possible amount may be used and the farmers may increase production with no fear of oversupply and glutted markets—the EQUITY SYSTEM.

Farmers Doing Well

WE ADMIT that, so far as trade conditions are concerned, farmers are doing fairly well. In the main prices are reasonable and there is a general demand for the products of the farm, not only of the fields, but of the pastures and feed lots. For these reasons many think it an inauspicious time to talk so much about marketing and price, and for contending as we do that farmers are at a great disadvantage in both the labor and business world. But we are not contending for high prices, nor do we pretend that there have not been periods when farmers had harder times than they have now. We are working for a principle, for the correction of a long prevailing and strangely ignored injustice. We are laboring for the greatest reform that was ever brought to the attention of the business world.

Farming has never been an independent business in any part of this great world, and in the United States, in spite of our boasted freedom, intelligence and equality, the farmers are farther from business equality (equity) and independence than any other class on earth. Every other productive industry controls its output

and sells only when it gets its price. The farmers do neither. Each produces all he possibly can and those who are not farmers urge him to do so without any regard to possible supply or probable demand, and then each sells at a price fixed by the buyers themselves. Nobody else does that—nobody else could do it and maintain an existence.

Why should the business that supports the world, the calling without whose products people could not exist, the labor and the only labor that actually creates wealth—why should such a calling as that be subject to the whims of all other callings and meekly submissive to the greed of those who, in the language of scripture, "toil not, neither do they spin?"

It is not a question as to whether farmers are doing well just now, or even better than they have done in the past. It is a question of right or wrong, of justice or injustice, of equality or inequality, of business independence as other classes exercise it or of timidly looking to others as to how or when they shall dispose of the products of their toil and what they shall receive for them.

Human slavery was a great wrong.

That is everywhere conceded now, yet not humanity merely, but civilization tolerated it for centuries. But there came a time when it must be wiped out, and it was. It was not a question as to whether the slaves were being treated better or worse than they had been in other years. It was a question of humanity, of a higher civilization, of nobler thought and higher ideals, of progress of fairness and justice one toward another. Slavery disappeared because it was right that it should. And similar reasons have marked every advance the human race has made. We are now on the eve of another. Agriculture, production from the soil, comes to us from the Garden of Eden, and yet those who have engaged in it have always labored under the doubtful conditions of the seasons and the still greater doubt as to the price they shall receive for what they produce for others. We appeal for a system of marketing that will supply the needs at the time of the needs, that will bring prices that will assure fair reward to the producers, that will command those prices at the harvest as well as when the harvest is over, and yet supply every need at fair and reasonable cost. What a revolution this will be compared with the rush to "move the crops" and what a saving it will be to those who must buy to eat and to feed their stock. And what a step upward it will be for agriculture. Farmers will then know how much of their stuff will be needed and when and where. The world will be better supplied and much greater quantities will be consumed. Production will be increased, for the assurance of steady and fair prices will stimulate every phase of farm labor and every demand will be promptly and generously supplied. Farmers will then take their place beside those of other callings and the human family will dwell more nearly side by side. That is what we are working for, and there could be no better time to accomplish it than now.

American Farmers and Production

AMERICAN crops can and must move to Europe," recently declared Secretary Redfield of the national department of commerce. The exclamation grew out of the shipping impediments that resulted from the inauguration of the European war. "Europe must have our wheat or starve," he declared.

But we are taught, and persistently taught, and taught little else, that the farmers of the United States do not produce enough, that the home markets are not well supplied, and as a consequence thereof prices to users are extortionately high and actual want is felt in some portions of this country. But now the government is greatly concerned about shipments abroad, not shipments abroad by farmers, but by those who have bought from the farmers. And there is national concern also about shipments from the farms to the market centers. The secretary of the national treasury is afraid the buyers have not money enough to buy the stuff at glutted market low prices and thus rush it in to the centers where it is not needed now. Hence millions of government money is placed at the disposal of the banks to be used by the buyers in "moving the crops." At these times there are nearly always reports of big crops, but we never hear of any proposition to place government money within reach of the farmers to enable them to hold their crops until they are needed for use or consumption. True, there has been a great deal of talk about farm credits, but all those plans involve the homes and lands of the farmers. It is not so with those who wish to "move" the crops and get them hoarded in the market centers, whence they may be doled out to the users at scarcity prices or shipped to foreign countries.

This year there is the biggest wheat

crop ever grown, we are told, and the farmers must accept low prices for it, but "Europe must have our wheat or starve." Then Europe will pay a good price for it, surely. But not to the farmers. They have sold in the glutted markets created by the rapid "moving of the crops" and now Europe must buy from those who bought in our glutted markets and the government proposes to see to it that these buyers shall have a chance to sell. And that is all right, but why not aid and encourage the farmer to care for and hold his surplus, that he may share in the better prices and may even sell much lower to consumers than the glutted market buyers do?

We are greatly in favor of increased production, and increased production will come fast when the farmers are assured of steady and remunerative prices. Then why not help the farmers to hold their surplus until consumption needs it as well as to help the speculators move it out before it is needed, thus forcing farm prices down and consumption prices up? Farmers who read this ought to be confident of dollar wheat if they have not already sold at speculator-made prices.

Smile Awhile

Failed to Find Any

The little city girl was visiting her grandma in the country and was told she might go to the henhouse and get some eggs. She soon returned without any, when her grandma asked: "Didn't you get any eggs?" "No," was the disappointed reply, "the hens were scratching all around as hard as they could, but they couldn't find a single egg!"

Attended the Sale

"Your wife looks rather put out today. What is the matter?" "She was at the rummage sale yesterday and became so interested she took off her new spring hat and laid it on the counter. By mistake one of the clerks picked it up and sold it for 35 cents, which was all she could get for it."

Still Rising

Naturalist—It is clear to be seen that the sun is getting higher and higher every day.
Practicalist—So is everything else except what the farmer has to sell, and most of that is higher than it used to be.

Unpopular

"I have traveled much on the railroads, but there is one thing connected with it I never could learn to enjoy, though it is prominent in my experiences."
"What is that?"
"A cinder in the eye."

The Supernatural

"There are still imps in this world, even among civilized people, and there is one I like to see around."
"An imp! What imp?"
"Imp-rovement."

Nothing of That Kind

A German stepped into the store and was eagerly looking around.
"Are you looking for something in men's clothing?" asked a polite clerk.
"No," declared the German emphatically, "I am not looking for anything in men's clothing, but in women's clothing. I'm hunting for my wife."

An Unpleasant Business

"Doctors must know very little of the kindly feelings and good nature of people, and life to them must be hardly worth living."
"How is that?"
"Their customers are all ill."

No Time for Explanation

"If you kiss me again I'll tell my father," declared the girl, who was entertaining her company in the parlor.
"That is too old a story to scare me," said the young man as he boldly kissed her again. The girl immediately arose, stepped out of the parlor and went to her father's room. "Papa, Mr. Acton wants to see your new gun," she said. "All right, daughter, I'll take it in and show it to him," replied the father. As he entered the parlor with the gun in his hand there was a noise as of breaking glass, a dark object went out at the window and a streak was observable in the atmosphere extending toward the railroad station. There was nobody to show the gun to.

Our Farm in the Hills---How We Paid For It

By Henry Smith

MY PLEASANT HOME, which is dignified by the name of Rural Hill Farm, was a sorry waste when I came in possession of it. It is a ridge land, and, having been consecutively planted to corn for years, was worn out and badly washed. The eighty acres, when I bought it ten years ago, was valued at \$25 per acre. Wife and I needed a home and, being young and full of hope and plenty of strength and health, we paid \$500 (all we possessed) down on the place and got time on the balance at a fair rate of interest. Neighbors shook their heads, saying "Smith, you can never do it," but I went right ahead, keeping one eye sharply on present matters and the other in the far future.

The first year I had only one horse, so I did not try to crop, excepting to tend the garden and truck patches for the next winter's supply of provisions. When I was not otherwise occupied I cleaned out the fence corners, hauling the brush and all other rubbish to fill up ditches. Most of the time I hired out to a neighbor, who owned a large nursery. In pruning, thinning out and resetting rows of young fruit trees and other plants there were often plants and sprouts that were thrown aside. These were just as good as any, so I was allowed to save them for myself and at the end of the season we had a forty-acre orchard of choice fruit trees started. I also set three acres of blackberries. My wife raised a good start of poultry for the next year and I had earned enough clean cash to buy a plug horse and pay the interest for the first year.

The next year or two the poultry and my meager earnings bought our clothing, paid off the interest, bought us a milk cow and two gilts. Between times I had filled up a few ditches and planted the pasture land in grass, but the fourth year we had a bumper crop of blackberries, selling 1,500 gallons from our three acres. We sold them at a nearby mining town at 30 cents per gallon, realizing a net profit of \$450. I paid the interest, fenced in the pasture, bought two more milk

Mrs. Smith Ready for a Drive

Our Home as It Is Today

cows, a few implements and a little fertilizer.

Ten years ago, when I contracted for this eighty-acre tract, it was in a very crude state, but today we can boast that we have a farm as pleasant, as profitable and as large as we wish. There have been two or three

Where We Keep Our Cows

"good fruit years" since our young orchard has been bearing, netting us a handsome income of many hundred dollars on our sales of apples, peaches, pears, cherries, grapes and blackberries. We have a herd of fifteen head of thoroughbred Holstein cows that pay their way a dozen times each year in the production of pure-bred calves, milk and butter. We save a thousand White Plymouth Rock hens to raise from every spring, and have 500 colonies of bees. The orchard has been covered and recovered with stable manure and prepared fertilizer, cultivated and treated to rotation crops. There is now a splendid set of bluegrass on the pasture lands, and the little cabin and log stalls have been replaced by structures that are larger and more comfortable. Of course in the first years we had to deny ourselves every luxury in life, but we enjoy them the more now. We have not only paid for our home, but we have actually produced flesh and fatness from a tract that was surely "skin and bone."

Profit From Dairy Cows

We were always possessed with a mania for pure-bred cattle as well as fowls and other things, so we gave the great sum (to us) of \$100 for a single Holstein heifer. A few months afterward she brought forth a calf that has proved herself even better than her mother. Later we purchased other calves and year after year we have been building up our herd.

Our cow barn, which is the only barn we have (as we keep only two horses) is warm and dry, well lighted and ventilated. The stalls are bedded

regularly with fresh, clean straw and we take special care to keep all noise and excitement away from these quarters, as we are firm believers in the saying that "kindness and silence increase the milk flow." Our milking is done by hand, using small top, seamless milk pails. Immediately the product is run through the separator. The cream is later converted into butter, molded in one-pound prints and sold direct to the consumers at never less than 30 cents per pound, but often more than this amount. The separated milk, warm from the separator, we feed to the fowls and hogs. From May 1, 1913, until May 1, 1914, we have marketed almost 2,000 pounds of butter besides what we used for home consumption. Our calves, most of which have been sold for the breed instead of for pounds, have regularly brought us a pleasing income, and last, but not least, the skim milk has meant dollars to us in the saving of corn and other grain that would otherwise have been consumed by the hogs and fowls.

Bees in the Orchard

Bee culture is an important industry in our mixed farming. We consider this occupation a very pleasant as well as a profitable one for the farm woman, and if the business is carried on extensively she can not only earn the so-called "pin money," but may also deposit a fat little sum to earn her an annual interest.

The story of our beginning in the honey-growing business is a very commonplace one. One evening in the beginning of our first days on the farm, as I was returning from work, I discovered a large swarm of bees like a huge knot on a branch of a tree. I wanted that swarm for a start, so when I reached the house I nailed up a rude hive for them. We placed the hive on the ground, sawed off the limb and placed it (with the swarm still adhering) in front of the hive. Then with dishpans, tin pails and an

old cow bell wife and I gave them a tune, to which they meekly marched into the hive. This method is not considered necessary now, but it worked that time. From that one hive we produced other swarms. Since then we have bought a great many more swarms and now our apiary consists of an orchardful of busy workers.

In the last year (we have never kept a strict record) we have sold many hundred pounds of honey, extracted and in the comb, also much beeswax. We have averaged 25 cents a pound for all the honey we have disposed of. According to our views no farm is complete without enough bees to at least keep the table supplied with this wholesome product.

THE FARMER OF THE FUTURE

THE farmer of the past whom we have seen pictured on the stage and whom we now see on the "movie" screen occasionally, is passing into oblivion as a reality, although it will be many years before some people will come to the conclusion that the farmer is a business man as much as the merchant or druggist. In ancient times the man who tilled the soil was a boor or peasant, a dull, slow-witted churl, whose idea of life was to eat, sleep and work.

The increasing population, the advent of modern machinery and the modern methods of agriculture have changed the farmer. Today the many agricultural colleges are turning out young men who intend to take up agriculture (the modern word for farming) as a life work.

They are versed in the structure of modern farm implements; they know how to combat insect pests, and how to manage the farm. By means of their study they have found farming to be a vocation worthy of the best that is in them.

The farmer of yesterday will tell you that the college teaches a boy how to manage but not to work. That is not so, for the students of our agricultural colleges are compelled to do a certain amount of work on the school farm before their course is completed. Another objection the farmer has to sending his boy to an agricultural college is that he will become educated above the farm. That this is not true can be shown by the fact that of the graduating class of the Kansas Agricultural College for 1914, sixty-eight per cent of the students returned to the farms, refusing state and federal positions, some of which offered salaries of \$1,000 to \$1,200 per year. My advice to the farmer of today is to let his son attend some agricultural college that he may be one of the men who are raising, and who will continue to raise farming to a higher plane.

The farmer's son can do no better than to become a scientific, practical farmer—for the time is coming when to be a farmer will be considered by all an honor and not a disgrace.—Charles Hicks, Rushville, N. Y.

I Find the Auto a Necessity

The Feeding Value of Wheat

PRIOR to the European war the chances for selling wheat at a figure profitable to farmers were not highly encouraging, though the movement for farmer control was growing everywhere. A strong factor in that movement is the relatively high price of corn and the comparative feeding values of corn and wheat. If these two grains keep their present relative positions in the market the feeding value of wheat will continue to be a factor, and an important one, in the disposition of the crop. While it is very probable that wheat prices will reach a point where the farmers will prefer to sell the grain, it is nevertheless well for them to know beforehand what their wheat can be made to bring them if fed to cattle or hogs.

In this computation we give the market values of wheat, corn, cattle and hogs, on the farm, as follows:

Wheat, 65 cents per bushel.
Corn, 60 cents.
Cattle, \$7 per hundredweight.
Hogs, \$8.

The market values per hundred pounds of wheat and corn, on this basis, are: Wheat, \$1.08; corn, \$1.07.

In steer feeding numerous experiments have been made of the comparative values of corn and wheat, and as nearly as the experimenters can figure it requires 10.9 pounds of wheat to produce 1.84 pounds live weight on a steer. At this rate 100 pounds of wheat would produce 16.8 pounds at a cost of \$1.08 for feed, or 6.4 cents per pound. If cattle are bringing 7 cents the farmer would receive \$1.17½ per hundred pounds for his wheat fed to cattle, or slightly over 70 cents per bushel, showing a profit of over 9 cents per hundred pounds, or 5 cents per bushel in feeding.

The same experiments gave corn as making 2.04 pounds of meat for each 10.1 pounds of grain fed. Therefore 100 pounds of corn would produce 20.19 pounds of beef, which at 7 cents is worth \$1.41 1-3. Thus \$1.07 worth of corn (at 60 cents per bushel) will make \$1.41 1-3 worth of beef at 7 cents per pound, making the corn bring him 79 cents per bushel. This gives a profit (in feeding the grain) of 34 cents per hundred pounds of corn or 19 cents per bushel.

At above prices for corn, wheat and beef it pays to feed wheat at 65 cents to 7-cent cattle, and it pays even better to feed 60-cent corn to 7-cent cattle.

Will it pay to sell wheat at 65 cents and buy corn at 60 cents to feed 7-cent cattle? Let us see: Suppose a man has 1,000 bushels of wheat. Fed to steers this would yield a return of \$705. Sold at 65 cents per bushel it would bring the farmer \$650, with which at 60 cents per bushel, he could buy 1,083 1-3 bushels of corn. We have seen that a bushel of corn fed to steers brings the feeder 79 cents. His wheat crop, turned into corn and then into beef, would yield him a total of \$855.73, an advance of \$150.73 over feeding the wheat and \$205.73 more than if sold on the market and the money put into the bank rather than into corn.

We will now consider feeding hogs. One hundred pounds of corn fed to hogs will make 21 pounds of pork, which at 8 cents per pound is worth \$1.68, as against \$1.07 value at 60 cents per bushel. One hundred pounds of wheat will make 21½ pounds of pork, which at 8 cents per pound is worth \$1.72 as against \$1.08 value at 65 cents per bushel. Pound for pound, with wheat at 65 cents and corn at 60 cents, the feeding value is the same. With corn as high as wheat, or higher, wheat is the more profitable feed. But if wheat is more than 10 per cent higher in price than corn, then corn becomes the cheapest feed.

With the figures given here any farmer can compute the profits in feeding or selling his corn and wheat,

on the basis of the prices offered him at his home markets.

In hog feeding a mixture of wheat and corn produces better results than either wheat or corn alone, and it has been determined conclusively that

greater gains still can be made by feeding a mixture of middlings and corn, half and half. For instance, in one series of experiments 100 pounds of wheat made 19 pounds of pork, while 100 pounds of middlings and corn made 22¼ pounds of pork.

Another fact which must not be lost sight of is that when the grain is sold

valuable elements of soil fertility are lost, as we pointed out in an article last issue. When the grain is fed this can be saved in a large measure and will more than pay for all the labor entailed in feeding and caring for the stock.

The real business farmer, who watches every opportunity to turn his labor and products to greatest profit, will keep a close watch on the feeding values and market values of the crops he grows. He should have Professor Henry's famous authoritative work on "Feeds and Feeding" and the many bulletins from the various experiment stations on the subject. It is as much his province to work with a pencil and paper as it is the bankers' or the merchants'. Success in largest degree lies along the path of knowledge.

If I Were a Farmer

By Town D. Weller

[EDITOR'S NOTE—We are much pleased to introduce Mr. Weller to our readers. It will do us all much good to "see ourselves as others see us," especially when the observant one looks from a fair point of view and to a purpose. These articles will appear in several succeeding numbers.]

No. 1

YOU may think that my point of view is purely theoretical, but those of us who live in the larger communities have a right to our opinions none the less. We not only see things from a different angle than the farmer, but quite often things appeal to us in a different way because we are on the buying instead of the selling end. For instance, if I ran a dairy farm and sold my milk direct to customers I wouldn't go about peddling it dressed in dirty old overalls. Nor would I permit my help to go out on a milk route dressed in anything short of the cleanest and whitest of suits. I would have absolute cleanliness not only in the handling and bottling of the milk, but also in the distribution of it. My horses, wagon and helpers would be so immaculate that people would think I came from "Spotless Town."

The majority of farmers as yet do not appreciate how the idea of cleanliness appeals to the average city dweller of the better class. They do not fully understand that the demand for absolute cleanliness in food products is growing at a surprisingly rapid rate. A comparatively few years ago the bottling of milk was the exception, but the old-fashioned milk can and the unsanitary quart measure had to go. It wasn't clean enough to suit the city man or the board of health. The farmer grumbled—said it was all a fad—but he soon came to realize its advantages and the fact that if he intended to keep his trade he must adopt it.

The same thing is going to come in the matter of which I am speaking. It is an antiseptic age and the city man is not going to be fooled simply because his milk is delivered in a bottle, especially when that bottle is brought into his kitchen by a man who smells as though he needed a bath and whose overalls look as though he'd slept with the cows. The trade of the discriminating town and city family is going to go more and more to the dairyman who carries with him the impression of absolute cleanliness. When it has come to the pass that such great business corporations as the railroads provide patrons on their dining cars with toothpicks put up in sealed, antiseptic envelopes it shows what the better class of trade demands when it comes to anything directly or indirectly connected with foodstuffs.

These War Times

Customer—I like this red, white and blue gingham, but I am afraid the colors will run.

Clerk—Red, white and blue run? Never in this country, especially with war raging in Europe!

Customer—I hadn't thought of that. Give me forty yards.

Equity is Active in the Bitter Root Valley of Montana

Since June 14, at which date we put our county clearing house in running order, we have purchased and distributed a car load of flour, one of sugar and one of twine. We have another car of flour on the road and also a car of sacks.

During the same period we have shipped out and sold all the berries and garden truck of our members, amounting to a very large sum. While outsiders were selling raspberries for \$1.25 the Equity procured for its members not less than \$2 for the same berry, and we have been doing as well on all other small fruits. At the present time we are shipping early potatoes, corn and early apples by the car load. We have more orders than we can fill. Orders for oats are now beginning to come in. Retailers and dealers are looking us up and placing their orders with us. (This is another conclusive bit of evidence that what this paper has always claimed is true—that when the supply ceases to chase after the demand, the demand will seek the supply.—Ed.)

Equity is a big thing for this valley. We will not sell less than 100 cars of potatoes, from 30 to 75 cars of apples, one to five cars of cabbage, 50 to 100 cars of grain and great quantities of winter vegetables.

We are doing a great educational work and in a year's time will be running as smoothly as any old, established business.

C. M. PARR, Business Manager
Hamilton, Mont.

Confidence in Advertising

The advertising that comes to you in UP-TO-DATE FARMING is insured advertising. Thousands of dollars worth of advertising is yearly barred from UTDF. That remaining is guaranteed. Send for further information and deal with the advertisers in this paper freely.

Our Advertisers—Guarantee

The U. S. Postoffice Department exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers. Should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

OUR COUNTRY CONTRIBUTORS

This department is for our readers to contribute their ideas and experiences. Write on any topic of interest to the farmer and his family. Articles on "My Most Profitable Crop," "How I Made Farming Pay," "Community Co-operation," "Improving Conditions of Life on the Farm," "How I Paid for My Farm," "Conveniences for the Farm Home," etc., accompanied by facts and figures, are desired. Cash will be paid for all articles used.

CONSERVING THE SMALL WASTES ON THE FARM

(Awarded First Prize of \$3)

ON the average farm there are many hundred dollars worth of fruits and vegetables that go to waste every season. There seems to be little improvement for this condition of affairs, since the local marketing system is oftentimes poor. In our home where every possible economy is necessarily practiced, this state of affairs proved very annoying for years.

There was practically no market in the small towns of our neighborhood for fruits and vegetables in their season, as the town's folk as well as the farmers endeavored to raise their vegetables. We might have found ready sale at a larger place for our products, but our supply was not so large that there would be any gain in marketing one gathering of fruit or vegetables.

In the fall of 1912 we bought a canning outfit that cost us the small amount of ten dollars. With it we canned enough vegetables and fruit the first year for a bountiful home supply. Toward spring we found that we had more of the canned products in store than we would make use of. Accordingly, we went to work, trying to dispose of the surplus among friends in our home town, and we were so successful in this undertaking that we had more calls for our goods than we were able to supply.

This year I think we have gleaned the most profitable crop that we have ever garnered, because it was from material that otherwise would have been lost. First came the rhubarb and strawberries. We had much more of both these small fruits than was required for home consumption, but scarcely enough to take to town endeavoring to find a fair price for same in the already glutted market. There were cherries, summer apples, then later the winter apples, peaches, pears, gooseberries, blackberries, raspberries, grapes, different sorts of plums, tomatoes, garden peas, string beans and sweet corn (canned in the form of roasting ears). We filled can after can as long as there was an edi-

ble to save until the frosts came. After the heavy frosts we canned up pumpkins, pickled our peppers, made catsups, and the first of March we canned half a barrel of sauer kraut, took our cucumbers out of the brine and pickled them in bottles. Not an atom do we waste now. When making hominy, the surplus over and above our home supply is put under seal for future use, or, perhaps, sent out to bring us pin money. Our economy enables us to save the good half of a rotten apple, converting its juice into wholesome and ever salable vinegar, and many other savings are made in a like manner.

Our net profit on saving the wastes for the 1913 season was \$302.65. We kept strict account of every sale and balanced up at the end of the year (May 1, 1913, to April 30, 1914). This year we are planning to enlarge our business, extending it beyond mere wastes, but we hope our first experience will prove a practical economy to readers in like circumstances. Watch the advertising columns of most any newspapers for advertisements of canning outfits. Write to two or three of the concerns and select from their circulars an outfit that best suits your means. The factory will be glad to furnish you any information on canning, pickling, etc. that you desire, and I am sure you will find the undertaking a satisfactory one if you are an economist. —Mrs. John A. Smith, McLeansboro, Ill.

EXPERIMENTAL TALK

(Awarded Second Prize of \$2)

IF those on the small farm, the medium farm or the large farm knew the money-making possibilities of poultry raising, they would be enriched each year beyond their imagination. Of course artificial incubation is the main object in this line, and all who are interested artificially in poultry raising catch at each and every factor pertaining to such. A good machine is first necessary, and the rest depends upon the eggs and the operator.

Successful incubation always means good eggs. The use of eggs of low vitality has proved one of the greatest causes of failure in incubation. Eggs in storage should not be exposed to either extreme heat or cold. Storage temperature should not be lower than 40 degrees or higher than 60 degrees.

The eggs must be carefully rolled and turned each day the same as when in incubation. After the first week of storage eggs rapidly deteriorate, and those more than ten days old are risky. When the incubator has been running three days, cooling and turning is very beneficial. Morning and evening the eggs should—must—go through this operation. A side table in the incubator room is convenient. Remove part of the eggs from the tray and roll them gently from back to front. The more they are rolled the better for them. Hundreds of persons are crying today, "Why do chicks die in the shell when ready to hatch?" We are thankful that we have found at last a remedy for the cause. Some, of course, are naturally too weak to hatch, but it has broken our hearts, has it not, to throw from the machine forty or fifty nicely developed chicks in the shell? The greatest cause of this is lack of moisture. When the first chicks are hatched, as many as thirty or forty, remove them to the brooders. If a brooder is not convenient, a box with a stone jug of hot water placed in the center, wrapped in a soft, dry cloth, will be a good substitute. Then get all the eggs together quickly that are piped and place a soft cloth—a piece of cotton blanket doubled and wrung out of hot water—over them. Keep up the temperature of everything will be a failure. This hot cloth application should be repeated, but don't keep the machine open any longer than necessary. This is to supply the necessary moisture, which is very important. It tends to steam and soften the shell,

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

You Can't Beat Galloway Prices Anywhere

You can't get Galloway quality at any other place. I get one small manufacturing profit, the rest of your dollar buys what you need. The other way your dollar pays the profit of the manufacturer, the jobber and the dealer. You have tried the old way. Now try my way, and see what you save.

A WONDER.

For nearly 50 years I have led in inventing and selling farm scales at a saving to the buyer. Now, I have a new "WONDER" scale which is the last word in economy and utility. My price includes freight and lumber. Send a postal for facts to "JONES, He Pays the Freight," Binghamton, N. Y.

ROOFING

Our twenty-five years' experience in the manufacture of Steel Roofing has enabled us to produce a superior grade Roofing at surprisingly low prices. We guarantee absolutely that every sheet of Roofing is made from the best Open Hearth Steel sheets, evenly coated and full weight. There is absolutely no way to test Steel or Iron Roofing and know how long it will last. The life of a roof depends on the quality of the material and the locality in which it is used. Your best protection is the reputation and responsibility of the manufacturer. Write for samples and prices.

Merry War Powdered Lye Compared with Other Lye for Hogs

"I will tell you my experience with MERRY WAR POWDERED LYE compared with other lye for hogs. I fed MERRY WAR POWDERED LYE last winter when the hogs were dying all around me, and my hogs were as thrifty as I ever had, so when I moved last spring and was unable to get it here, I fed other brands of lye that were recommended to me, and my shoats got blind staggers, or something like it, so when one of our merchants, got MERRY WAR POWDERED LYE, one can put my shoats right again. I would have written sooner, but I wanted to wait until I was sure that MERRY WAR POWDERED LYE had cured my hogs. I am satisfied it is all right now, and never expect to be without it as long as I raise hogs."

(Original letter on file in our office. Name and address will be furnished upon application to us. E. Myers Lye Co.)

Merry War Powdered Lye

Costs Only 5c per Hog, per Month, To Feed Regularly Twice Each Day A 10c can of Merry War POWDERED Lye Contains 120 Feeds—enough to keep a hog well conditioned for 2 months. For sale at most druggists, grocers and feed dealers. It is convenient to buy in case lots, 4 dozen cans, \$1.20, at which price we will ship to you direct, prepaid, if your dealers won't supply you. When ordering send us your dealers' names.

Don't Take Chances Putting Anything Claimed To Be "Just as Good" In Your Hogs' Stomachs

Don't make doubtful and perhaps dangerous experiments with "any old lye." Merry War POWDERED Lye has been proven—its use is not an experiment—it is safe to use according to simple directions. Let us send you free our valuable booklet "How to Get the Biggest Profits from Hog Raising."

"I am a Merry War Lye Hog" "There Are No Substitutes"

DWARF ESSEX RAPE AS GREEN FOOD FOR ALL STOCK AND POULTRY

(Awarded Third Prize of \$1)

FROM five or six years of experience I find rape to be one of the very best green feeds I can grow, for either stock or poultry. In the first place it is very much relished by all stock and poultry. Second, it is always ready for feeding if sown with that end in view. Third, it is the least expensive green feed I have been able to find, for one sowing will last three-fourths of a year, generally, as it puts out new leaves and grows just as fast as it is cut or grazed down. The seed is not expensive, only costing ten cents or less a pound, and from three to five pounds sown in drills is all required per acre, with eight or ten pounds if sown broadcast. I find it best sown in drills just far enough apart to cultivate. It can be very successfully grown sown broadcast after the land has been put in fair order and will thus furnish the best of grazing for hogs and sheep, especially, as well as poultry of all kinds. It is most excellent for turkeys. I don't know anything they relish more or thrive on better. I used quantities of it last year very successfully for a pen of my young ducks. These I fed entirely on rape (with the exception of a little lettuce), cut fine and mixed with wheat bran. Occasionally they had a dash of meal added, but not often. I raised every duck, thirty-six, and finer, faster-growing fellows it would be hard to find. Rape, for fall, winter and early spring feeding and grazing, should be sown broadcast or in drills during July, August or September. Thus, if sown early in August, by the tenth of September it should be from twelve to fifteen inches high and ready to turn your hogs or sheep on. It makes a large-yielding, nutritious, succulent green pasturage all through the fall, winter and early spring. It makes a first-class

crop either sown alone or sown with crimson crown. Rape can be successfully sown in both the fall and spring, but as a general rule does not thrive as long if sown in early spring as if sown in the fall, though I have a piece now that was sown in early spring from which I have continually cut to feed penned stock and poultry and it is as vigorous as can be, so much so that instead of recultivating the ground and sowing, as I fully intended, I am giving it a coat of manure and a good working and letting it stand for fall and winter, and am still cutting it as I need it. You remember this plot was sown in drills early in the spring and now in the middle of August it is healthy and thrifty, notwithstanding we are having a long, tedious dry spell.

I have another lot just coming up and more I expect to sow later. Eggs promise to be high this winter, and as I can have plenty of rape and some turnips to keep my flock in green feed all winter, I am looking forward to a successful and profitable year in poultry. I am planning for a lot of late fall chickens to sell in the late winter, also a lot of early spring broilers. I remember well the first year I went into the poultry business on rather a large scale for a beginner. I had no green feed except a very few potatoes and I had very indifferent chicks, too, though they had all the grain they could eat, and my profits were—you could easily have carried them on the point of a cambric needle.

I neglected to say that I sold enough dishes of rape to my neighbors at ten cents a dish to pay the expenses of my crop and I didn't miss the rape either. It makes excellent greens.—Mrs. R. W. B., Heathsville, Va.

LATE SOWING OF WINTER WHEAT TO COMBAT HESSIAN FLY

THE SEEDING of winter wheat should be delayed as much as possible to combat the Hessian fly whenever this pest is present. Co-operative late sowing by all the wheat growers in the community, accompanied by systematic destruction of stubble and other breeding places

for the fly, seems to be the best means to reduce its devastation.

Wheat should, however, be sown early enough to allow the plants to become well established before winter sets in, yet not so early as to allow them to become jointed. If the first frost is unusually delayed there is still danger of injury from the fly, for otherwise his losses may be greater from the failure of young, poorly rooted plants to survive the winter.

The best time for sowing winter wheat is about the first week in September in the latitude of northern Ohio. In the latitude of southern Ohio the last week of September is best. Proceeding still farther south, the best date is still later, being about the middle of October for central Tennessee and central Oklahoma and about the first of November for northern Georgia. In such districts as the Piedmont section of Virginia allowance must be made for elevation. In the northern part of this state the middle of September seems the best date for sowing, while in the southern part the last week in September is preferable. There is usually, however, a period of several weeks in all the winter wheat area where sowing may take place with about equal results. This period is longer as one proceeds to the southward.

The quantity of seed that should be sown under ordinary conditions in the humid winter wheat areas is six pecks per acre. This may be varied according to the size of kernel of the variety used, the condition of the seed bed, the fertility and character of the soil and the date of seeding. When the grains are small, the seed bed in good condition, the soil rich, warm and well drained and the seeding early, five or even four pecks per acre are often sufficient. Where opposite conditions exist seven, eight or even ten pecks may give more profitable results.

Practical Results

"Mama, ain't bay rum good for the hair?"
"Yes, my dear."
"Ain't that bay rum in the little bottle on your table?"
"No, dear, that's muclage."
"Muclage is sticky, ain't it?"
"Of course it is."
"Is that why I can't get my hat off?"

I'll Stop Your Losses
From Worms - I'll Prove it or No Pay

If you will fill out the coupon below—tell me how many head of stock you have, I'll ship you enough **Sal-Vet** to last all your stock 60 days, without asking a single penny of pay in advance. All I ask is the privilege of proving to you right in your own barnyard what I have proved to thousands of other farmers. I want to show you how to rid your stock of worms—how to make all your farm animals grow faster, thrive better, keep healthier, put on more flesh on no more feed—make you more money.

The Great WORM Destroyer **SALOVET** **The Great LIVE STOCK Conditioner**

is a wonderful medicated salt which rids farm animals of their greatest enemies—the deadly stomach and intestinal worms. It kills and expels these blood-sucking, life-sapping parasites and greatly lessens the danger from hog cholera and many other diseases.

I'll Feed Your Stock 60 Days Before You Pay

Send no money—just tear off the coupon below, mark down the number of hogs, sheep, horses and cattle and mules you own, give your name and address and shipping station and I'll send you enough **Sal-Vet** to last all your stock 60 days. You simply pay the moderate freight charge when it arrives and at the end of 60 days report results. If it doesn't do what I claim—if it fails to rid your stock of the dangerous stomach and intestinal worms I'll cancel the charge—you won't owe me a penny.

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO., Dept. UPF Cleveland, O.

I wish to tell you that the piano we purchased from you about a year ago, we have used continually and it has given the best of satisfaction. The tuner who tuned the piano said it was a very fine piano and well made and the music teacher that gave our girl's lessons, says we have a beauty of a piano. JOSIAH FERRIN, R. 5, Atlanta, Ia.

We are very much pleased with our piano, would not part with it at anywhere near the price. Think there will be two or more bought from you before long in this community as this one has proved so nice. You may use this letter in any way you want because the piano can't be beat in quality or price. WILL A. DAVIS, Sulphur Springs, Texas.

As far as our opinion is concerned, my wife and I both agree that it is the prettiest piano we have ever seen and it is as fine in tone and appearance as the \$500.00 pianos sold around here. The instructor was here again the other day and after playing on the instrument for a while she said, "I am getting more pleased with this piano all the time and I'm going to recommend it to my new students instead of the pianos they are buying here at \$350.00 and up." She told my wife not to let the piano go back because it was a big bargain. GEORGE A. HILL, Jr., Anna, Illinois.

Our piano arrived all O.K. a week ago. We have tried it out thoroughly and are well pleased with it and some of our friends have also played on it and say it couldn't be beaten at anywhere near that price. We thank you for your promptness in shipping and you may be sure we'll recommend the piano to our friends. F. KINLEY, Federal Dam, Minn.

As the free trial on my piano is nearly up, I feel it my duty to write you regarding the payments. You'll find enclosed draft for the full amount. I am simply delighted with the instrument and shall always be ready to speak a good word for you and your pianos. J. MORAVEK, Canton, Neb.

This new Thiery Piano style "E" is a full size instrument. It is just one of the new 1914 Thiery Pianos that are beautifully illustrated in colors in my new Style Book. It is so good that I'll ship it anywhere on thirty days trial and guarantee it against any defect in material or workmanship with my written unlimited guarantee.

1914 STYLE E—Puritan Design

The piano arrived Tuesday. It was brought to our home yesterday and it is simply beyond all our expectations. I can hardly explain our satisfaction. One of my neighbors was sorry when she saw the instrument when she figured how much they had paid for theirs. I won't even need the thirty days trial because I can see in a minute just how good the piano is. TESSIE OXLEY, R. 2, Arrowsmith, Illinois.

The longer we have the piano, the more pleased we are with it. One of our neighbors bought a piano at about the same time we got ours. They paid \$100.00 more for their piano, but I wouldn't think of trading with them and there are so many others who have made the same remark and add that our piano is so much nicer in tone and finish. CHARLES HERRMANN, Veblen, So. Dakota.

I find that the Thiery Piano is up to everything you claimed for it and am entirely satisfied with it. Everyone that sees and plays on it claims that it is better than the pianos sold here at \$75.00 to \$150.00 more money. Even some who have purchased these other pianos have visited at my home and admitted that altho my piano costs considerable less money, it is much better than theirs. CLYDE WILLIAMSON, Cannelville, Ohio.

We have the Thiery Piano at home now and there isn't a piano in our neighborhood that can come up to it in either tone, style or finish. The piano reached here without a scratch and we have already decided to keep it. I want to state again to you that we have the finest piano in this county. FRANK ROMBACH, Box 35, Rock Lake, N. Dakota.

when you buy a Thiery Piano

Will you accept a Thiery Piano in your home and play on it for 30 days *at my expense?* Just to prove that a Thiery Piano means more quality for less money—more for *your* money inside and out! I know of no better way to prove this to you than to invite you to accept my offer. The publishers of this paper know that I will do just as I say. And I'll pay all the freight going to you—and all the freight coming back to me, but there's small likelihood of you returning it. You'll probably decide to keep it before six days have passed—and then you can take two or three years time to complete payment if you do not wish to pay cash.

1914 Style Book Free

My new piano Style Book is the finest printed book of pianos that you have ever seen. It is printed in seven colors, showing all Thiery Pianos in Mahogany, Walnut and Oak cabinets. It is interesting from cover to cover and if you are at all interested in pianos, you'll be glad to receive this book. I'll send it free, postpaid, with trial order blanks, special prices, etc., immediately upon receipt of the coupon below.

Just Send Coupon Below

MY OFFER:—Any reliable reader of this paper desiring to try and test a Thiery Piano for a period of thirty days at my entire expense, can do so without any advance money and no obligation of any kind except to merely ship back the instrument at my expense if it isn't just as represented in every way. It is a real thirty days free trial. It gives you the opportunity of proving to your own satisfaction that dealing with me means a saving of from \$75.00 to \$150.00 and that a Thiery Piano is better in tone, easier in action and prettier in design than the vast majority of pianos sold now-days at an average of \$100.00 more money. This invitation is open to any reliable reader of this paper. Fill out and mail to me the coupon shown below.

Thiery Pianos are "Quality Pianos." They are made for homes that know it doesn't pay to buy cheap pianos. Thiery Pianos are so good that they are guaranteed against any defect in material or workmanship as long as the purchaser keeps them. **No instrument at any price can be guaranteed any stronger.** They are made in Genuine Mahogany—Genuine Walnut—and finest English Oak. The cabinets are double veneered both inside and out. They have Empire Grand Tops. Brass pedals and trimmings and the finest genuine ivory keys. They have overstrung strings in the bass and three strings to each note in the treble. They have full bronzed plates of the best plate metal. Sounding boards of the best mountain-grown spruce. Yet you can purchase a Thiery Piano for less than \$200.00 all freight paid and have from one to three years time to complete payment.

Hundreds of homes all over the United States are sending for Thiery Pianos just because they are exactly as advertised. No other piano ever sold direct to the purchaser has met with greater success. All middle profits are scratched out when you deal with me. I have no agents or representatives of any kind except my own customers.

I'll give you all the way from one to three years time to pay for a Thiery Piano if you do not wish to pay cash. I'll arrange payments to suit you in every way and if you don't want to pay monthly, you can pay quarterly, semi-annually or a dozen other different ways. You can pay a certain amount sixty or ninety days after you receive piano and the balance in two or three payments later on. In fact, I'll accept any payment plan that I can afford to accept and regardless of what payment plan you choose, the price will be just the same.

Don't close a deal anywhere for a piano of any kind until you get my Style Book and special prices. Just fill out the coupon below and mail it to me and I'll gladly send you my new Style Book with complete particulars of my proposition. You are under no obligation to accept any offer that I make to you. All I want is just the opportunity to prove to you that Thiery Pianos are just as advertised and that with one of them in your home, you will have the finest piano in your community at anywhere near my price.

Would You Like an Organ?

Thiery Organs are the real "Music-Makers" of all organs but they don't cost any more than the common organs, nor as much—that's why more Thiery Organs are being sold to particular homes all over the country than any other organ on the market. If you want an organ instead of a piano, I will gladly send you my color printed Organ Style Book, showing all Thiery Organs in colors with testimonial letters from buyers everywhere.

I'll ship the organ you choose on thirty days trial and you will be so pleased that you will decide to keep it before you have had it 10 days. Then you can pay for it in little by little payments if you don't want to pay cash. Altho Thiery Organs are known today as the finest instruments on the market, yet you can buy one for as little as \$2.50 a month or \$5.00 every two months until paid. The best Thiery Organ built can be purchased for \$4.00 a month. Of course every Thiery Organ is fully warranted—shipped direct to you—no agents' or middlemen's profits for you to pay—and if you're not glad you sent for it, you need not hesitate to return it at my expense. You can get a Thiery Organ now on little by little payments and a year or two after you have it paid for, I'll take the organ back as part payment on any Thiery Piano you wish. But just send for the organ book and price list with complete particulars and I'll gladly send it to you postpaid at once. Just fill out the coupon accordingly and everything will go to you immediately.

A Personal Message

To All Who Desire a
Better Method of Price-
Making and Marketing

By the President of the Farmers Society of Equity

The AMERICAN FARMERS FEDERATION was organized on August 18, 1914, at Kansas City, Kas.

Eighty-four people, from eight states, and representing the Farmers Society of Equity, the Grange, the Farmers Educational and Co-operative Union and numerous independent grain elevator, fruit and other associations, were in attendance as shown by the credential cards.

Representatives of all these associations are in the official directorate of the new organization and all of them are to carry the fact of there being a federation now, with an open door for all to enter for marketing, to state and national meetings of their respective organizations.

First let it be understood that the American Farmers Federation is primarily a federating movement. That is, its first aim is to assemble all the present local organizations in a working compact for the one purpose of at once improving the marketing system for farm crops and eventually taking control of crops and price making out of the hands of a middle class, largely speculators, and placing them in the hands of the farmers—producers—themselves. It is also authorized to organize where there is no organization now.

For instance, any local independent association of farmers, whether standing independent or a part of a national organization, can federate on the terms prescribed, which includes the payment of only \$5 regardless of how many members. The charge of \$5 is only nominal, but it was argued that all the members had paid their initiation fee to the organization they joined already, and should not be taxed much more. The idea is to build up the federation as rapidly as possible, knowing that money for support will come from the small commission charged on the business done.

New members to federated locals can join on the terms made by the local, except the entrance fee to the federation must not be omitted in such cases. It is 2 cents per acre for the land cultivated in all crops, including orchards, gardens and pastures, but no entrance fee shall be less than \$1.

In case of a new organization the entrance fee is 2 cents per acre and the federation fee \$5 for the local. This enters the farm, and once in the federation it is always in.

The business plan is almost identical to the one used by the F. S. E. We need not say much about this, because our readers should understand it.

This federation fills a long-felt want. It supplies to the independent associations and to the locals of the national associations what they have lacked—a marketing system that is so flexible as to take in all crops, so comprehensive as to meet the needs of marketing for the whole country and so helpful as to immediately give great benefits in more money for the crops. It should develop rapidly and be established all over the country and in Canada.

We do not recommend that organizers of the Farmers Society of Equity should change, but continue to organize that society. But any local can federate. At the next national convention of the F. S. E. the matter will come before the supreme body whether the F. S. E. shall continue or merge into the federation. If any local federates now or later it will continue under the old name—Farmers Society of Equity. And the same applies to any other organization.

The federation did not come to tear down any society, but to supply them with what should prove to be the greatest incentive for the membership to increase—superior marketing. Where possible the organizers of the A. F. F. must help organizers of other organizations to get all the producers into the locals and thus they come into the federation.

Through the American Farmers Federation a field is opened up for greatly increased benefits to those locals that have no marketing system, or a very imperfect one. All those farmers who heretofore have stood aloof from old organizations should now have confidence to enter into one of them. We feel that the organiza-

tion of this federation at this time is the natural sequence of all the years of experimenting, by farmers, going back about fifty years. The people at the meeting were enthusiastic and expressed themselves that they thought now the step had been taken that would lead direct to farmers' industrial freedom.

And this idea strengthens with time. Witness this letter from the vice-president-elect and who is also the master of a local Grange:

"Chanute, Kas., Aug. 22, 1914.

"J. A. Everitt, Pres., Indianapolis.

"Dear Sir:—After several days thought, and having talked the matter over with some of the best thinkers, I feel more than ever that the step we took at the Kansas City meeting, and the plans adopted, if carried out, will prove the most scientific that human ingenuity can devise. I can see where our federation plan will take hold of the farmers' problems at the root of the whole trouble. No other organization ever could reach and throttle the board of trade and produce exchange speculative system, the prime cause for about all the difficulties that have confronted farmers and prevented them from receiving a just share of the rewards from their toil."

So let all good friends of farmers' organization put forth a greater effort to build up the various societies and federate the local bodies. The door is open to all and the entrance fee is so small that none will find it a hardship to meet the terms.

REPORT OF CONVENTION

American Farmers Federation Is
Launched

Kansas City, Kas., August 17, 1914
MONDAY

Meeting called to order in the City Park Pavilion at 1 p. m. by J. A. Everitt of Indianapolis.

Call for the selection of a temporary chairman, resulted in the choice of Mr. J. A. Everitt.

Call for the selection of a temporary secretary resulted in Mr. Alfred Docking of Manhattan, Kans., being selected.

Moved that we proceed to select a credentials committee of three.

Carried.

Chair appointed C. D. Resler, Chanute, Kans.; B. F. Walton, Geneva, Neb., and C. W. Martin, Princeton, Kans.

While the credentials committee was at work general discussions were had.

Upon the report by the credentials committee and the seating of the delegates, it was moved that J. A. Everitt be elected permanent chairman of the meeting.

Seconded and carried.

It was moved and seconded that C. D. Resler be the permanent secretary of the meeting.

Seconded and carried.

The chairman called W. H. Mitchell to the chair and delivered the Keynote Address of the meeting.

After hearing the chairman's address it was moved by W. H. Mitchell and seconded by J. A. Hargrave, that it is the sense of this meeting that all farmers' associations should federate for marketing.

Motion seconded, put and carried.

Moved by Bailey, seconded by Longshore, that the following committees be appointed: Committee on organization or plans, committee on constitution and by-laws, committee on resolutions, and committee on publicity.

Seconded and carried.

Motion made to change our meeting place from the City Park to a hall and that a committee of one be appointed to make arrangements.

Seconded and carried.

The chairman appointed W. T. Hopkins to look after arrangements.

Motion made to adjourn until 8 a. m., Tuesday.

Seconded and carried.

TUESDAY MORNING SESSION

Meeting called to order by Chairman Everitt in the city hall auditorium.

W. T. Hopkins of the Kansas Grain Inspection Department delivered a very interesting address on Grain Inspection and referred to some of the practices of the buyers and handlers of grain in their present system. The address was well received. One point that was made was that the grain handlers expect that the inspection out, that is in selling, shall be one grade above the inspection in. Mr. Hopkins advised that wheat should be sold direct to millers and oats and corn direct to the consumers. He further attempted to show that the trading in "futures" was outrageously against the interest of both producers and consumers. Alfred Docking, chairman of the Grange committee on Statewide Co-operation, was

next introduced and spoke of advantages particularly through a federation of co-operative associations. He gave many examples of federated successes in European countries.

Mr. Docking's conclusions and the conclusions of his hearers also were the same, that community or district co-operation has comparatively little power contrasted with the power of the federation of all co-operative efforts.

Mr. C. W. Peckham of Haven, Kans., was then called upon to address the meeting and chose for his topic "Where Are We At." Mr. Peckham said that mistrust is one of the chief troubles of the farmer. He said: "I have been connected with every farmers' movement in Kansas for forty years. But all of our plans heretofore have been worked over by the speculators and eventually were controlled by them, because of fundamental weaknesses." Mr. Peckham made some interesting illustrations on comparative prices of wheat, flour, etc. He said that four and one-half bushels of wheat makes one barrel of flour, and at 66c per bushel, equals \$3.00 worth of wheat in a barrel of flour. But when this wheat is ground into flour and made into bread it is worth \$15.50, while the side product is worth 95c, a total of \$16.45. That is, for what the farmers receive \$3.00 after it is manufactured and reach the consumer it sells for \$16.45.

Messrs. Brochman, Tyson, Walton, and Weber spoke on marketing. They gave their personal experiences with the plan adopted as the federation plan and gave many vivid examples of profits realized through it for the farmers of their respective communities. These men also are enthusiastic for the federation plan as the quickest way to bring more crops under control for marketing, which operates to the benefit of all using the system. Mr. Walton was very emphatic in declaring that the new marketing system had made all of the farmers BUSINESS MEN.

Report of the committee on plan of co-operation was called for.

Committee reported their work unfinished and was given more time.

Report of the committee on constitution and by-laws was called for.

This committee also reported the work unfinished and was given more time.

Moved to adjourn until 1:30 p. m. Seconded and carried.

TUESDAY AFTERNOON

Mayor Green of Kansas City, Kans., was down for the address of welcome. The mayor, on account of pressing duties, was unable to address the farmers until this time. He was now introduced by the chairman.

The mayor in his address congratulated the farmers in their effort to form a federation of all organizations. He referred to the disparity of the price received by producers and that paid by consumers in which he said that both were injured because of

the bad and unbusinesslike marketing system that is in vogue. He predicted that through the federation movement that was about to be started by this meeting, that both would get great advantages. The mayor's address was well received and he was roundly applauded.

The response to the mayor's address of welcome was made by Mr. Resler. Mr. Resler in his address took occasion to say that the present movement was not antagonistic to any interest except the speculative

THE MARKET PLACE

As an additional help to MEMBERS OF THE FARMERS SOCIETY OF EQUITY in marketing their crops we have instituted this form of communicating what they have to sell to farmers and local clearing houses who may be in need of the things. Any reader of this paper, who is also a member of the Farmers Society of Equity, or will become a member, is entitled to report his crops to the National Clearing House and get this service. FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.

R. M. Tyson, manager, Tobias, Neb., is in need of potatoes, cabbage and onions and lots of fruit, including peaches.

C. W. Carter, Shelby, Mich., can market six to ten car loads of fine winter apples. Also write him regarding peaches that will be ripe in September.

COAL for Threshing and for Winter

Our mines will supply all your coal needs. Highest grades. Satisfaction guaranteed. Be sure to write us.
FARMERS COAL CO., Colorado Springs, Colo.

A. J. Speeg, secretary, Chamberlain, La., will have for sale after Sept. 1 10 car loads of corn in the ear and husk.

The local clearing houses at Vergas, Dent and Richville, Minn., have a lot of cord wood to sell. Farmers needing wood should not fail to get in touch with our members through Mr. L. H. Brochman, manager of the district clearing house, Parkers Prairie, Minn.

San Francisco, Cal. Portland, Ore.
Salt Lake City, Utah

Standard Goods Prompt Shipments Right Prices

The Ravalli County Clearing House, Hamilton, Mont. (C. M. Parr, secretary) has for sale the following: 50 cars of oats, new; 5 cars of Early Transparent and Duchess apples; 2 to 5 cars of Transcendent Crabs; 5 cars of cabbage; 75 cars of fall and winter apples, the McIntosh Reds, which made the Bitter Root famous. Try a box for Christmas. They are the only Christmas apples raised. Winter vegetables by the car lots; 100 cars of potatoes; corn and extracted honey in large and small quantities; pigs, sheep and cattle; dairy cows; horses and mules. We can supply you with anything raised on the farm in like climates. Good timothy hay; timothy, clover and red top mixed; good timothy and alfalfa mixed; first-class alfalfa. We want to do business with other locals and cut out the middleman where possible. Send in an order and try us. We guarantee everything as to quantity, quality and size. We will give 30 days time on shipments to responsible people. In other words, we will give our co-workers time to get the shipment and collect for sales made. We are in the business for the business and will treat other locals the same as wholesale houses treat the retailers. Now is the time to get together and do business for ourselves—C. M. Parr, Chairman Executive Committee.

W. D. Graves, secretary, Missoula, Mont., states that he will have eight or ten car loads of potatoes ready to market soon. Our locals in the middle west that are in the market for potatoes should get in communication with him at once.

Vital R. Hebert, Madawaska, Me., Box 9, has timothy hay, sheep, hogs, potatoes and turkeys for sale.

Charles A. Chenoweth, R. R. 1, Shelby, Mich., has about 700 bushels of fine winter apples for sale.

Joseph B. Idoux, R. F. D. 1, East St. Louis, Ill., has a car load of No. 1 prairie hay, also timothy and alfalfa hay, to market.

J. A. Harmon, secretary, Oklahoma State Union, Shawnee, Okla., states that he is having calls for the seed kafir corn, feterita, milo maize, millet, alfalfa, cane and sweet (winter) clover. All members in Oklahoma having these crops for sale get in touch with Mr. Harmon at once. He will also handle some seed wheat and rye and will be glad to help the northern members of this society to sell their potatoes this winter.

Dried Apricots Direct from California grower. Apricots, \$10 per 100 lbs.; peaches, \$6 per 100 lbs.; prunes and raisins, \$8 per 100 lbs. Price f. o. b. Kingsburg. Order now for fall shipment. Finest quality fruit. A. L. Cross, Kingsburg, Cal.

One hundred cars of Yellow Yam sweet potatoes will be marketed this coming season, beginning latter part of August, by Rufin Daniel, secretary, Star Hill, La. Locals in the northwest should get in touch with the secretary.

E. H. Brochman, secretary, Parkers Prairie, Minn., wants to get in touch with parties having a car load of posts 8 feet long and 4-inch top.

L. N. McFarland, Cassville, Mo., will have between two and three thousand bushels of winter apples, Mosby, Black Ben and Ben Davis. Apples have been sprayed. Can get 80 cars of apples in his neighborhood. Members, write to him.

Washington Red Cedar Shingles

We are offering straight cars at wholesale prices to members of F. S. E. Have your local clearing house write us for particulars and prices on all grades delivered to your station. We ship nothing but the best. We also furnish anything in Fir, Cedar, Spruce, Hemlock, Lumber.
ROBERT EMERSON CO., Box 1156, Tacoma, Wash.

Write L. H. Brochman, Parkers Prairie, Minn., for seed potatoes of Triumphs, Early Ohio and Early Rose varieties.

The Mack Mill Co., Moorefield, Ark., wants to buy a car of seed wheat, either Illinois, Missouri or Oklahoma grown preferred. They are also in the market for corn, wheat and oats. Send quotations and samples to them.

J. C. Alden, Ft. Lauderdale, Fla., reports that his local is in the market for mixed car of wheat (No. 4, for feed) and oats.

interest, and showed how, if the farmers would control their own crops until the real demand needed them, that prices could be made and maintained that would be steady and thus speculation must fall, because of no condition being present that would permit of speculation and gambling in the products of the farm.

The committee on constitution and by-laws, having reported that it had completed its work, was asked to make its report.

The meeting decided that it would have the report read complete first and then read paragraph by paragraph, which would be considered adopted as read unless objected to.

Reading of the "Objects" of the federation, which, in the report of the committee, provided that it should be both a federating organization and an organizing organization, met with objections by Messrs. Bideau and Docking. They contend that the organizing of new local associations must be left to the present societies and that only such local associations as are organized by societies in the field, or such as may be organized by them in the future, could become component parts of the federation. The objection led to a lively discussion.

Motion to recommit that part of the report was lost, but following it a motion to amend the object making it permissible for the organizers of the federation to work with the present societies and organizations to organize new local associations was carried. Later, in the evening session, the matter was brought up again and on motion to reconsider the objects this part was finally made as follows:

"To federate present farmers' associations that have for one of their objects, marketing of crops, and those that are established in the future, and to organize farmers into local and county or district bodies where no organization now exists."

Under the heading, "Finances, How Raised," a committee of three was appointed to consider the rates of commission to be charged on crops marketed. The chairman appointed Messrs. Brochman, Walton and Thompson as the committee.

Moved that further consideration of the constitution and by-laws be deferred until the next session.

Carried.

The report of the committee on plans of business was called for.

Report was read and on motion was adopted.

Motion to adjourn to meet at 8 p. m.

Motion seconded and prevailed.

EVENING SESSION—TUESDAY, 8 P. M.

Meeting called to order by chairman.

The committee appointed in the afternoon session to prepare a schedule of commission charged for marketing produce reported that they did not have time nor the data at hand and moved that the rates be left to be decided by the Board of Directors.

Seconded and carried.

Report of the committee on resolutions called for. Report made and accepted and committee discharged.

Continuing the report of the committee on constitution and by-laws, the matter of the official paper was left, on motion, to the Board of Directors to select it.

W. H. Mitchell called to the chair.

Motion made by Mr. Everitt that the membership fee to join the federation should not carry with it a subscription to the official paper, but that it should be optional with each member whether he subscribes to the official paper or not.

Motion seconded and prevailed.

Motion by Mr. Everitt that the part of the by-laws referring to "official paper" be changed to read "official papers," and that the board of directors be empowered to recommend any paper or papers to be taken by the members, that truly help to develop the American Farmers Federation.

Motion seconded and carried.

Motion made by Hargrave that the report of the committee on constitution and by-laws as now amended be adopted as a whole.

Motion seconded and carried.

Motion made by Mr. Everitt, that the price of the balance of the 1914 crop of wheat should be set at \$1.25 per bushel on the farm. In support of the motion Mr. Everitt said that the prospects were that, without any further effort on the part of the farmers and without any further prosecution of the Dollar Wheat Campaign, the price of wheat would be \$1 per bushel very soon; that the cost of producing wheat was not generally taken into account and very few farmers have any clear idea of what the cost is. Discussion of this point revealed that the opinion prevailed that the cost to produce wheat varied from 50 cents a bushel to over \$1 a bushel. Evidence was presented that agricultural experiment stations that conducted experiments in various parts of their states on different qualities of land found that the cost varied from 55 cents per bushel to over \$1 per bushel. Mr. Everitt explained that since we have free trade in wheat in this country from all countries except Canada, that the price of wheat can be made and maintained very uniform, regardless of whether it is grown in Pennsylvania or Illinois or Kansas or Minnesota or the Dakotas. This, because wheat from Argentina can be laid down in the eastern market cheaper than wheat grown west of the Mississippi river. Also it was stated that the world's crop was a short one, not even up to a full average, and that the prospects on the spring wheat crop were extremely bad in most cases. Also the Canadian crop has the poorest prospect for years. That price of wheat in the northwestern markets, Minneapolis, etc., is very much higher than

No War Prices

On Goodyear Tires. All advances—due to doubled cost of rubber—were withdrawn on August 19th. This applies to dealers and consumers.

We have secured from abroad sufficient rubber at former prices to warrant this announcement. Goodyear prices are now everywhere the same as they were before the war.

Sturdier Tires

In These Four Ways Excelling All the Rest

The tires which rule in Tiredom now are Goodyear tires—by long odds.

After men have used four millions of them, they lead in prestige and in sales.

The only reason is that motorists—hundreds of thousands of them—have proved these the sturdiest tires. They use them and tell other men to use them.

Where They Excel

Back of that super-service lie four exclusive features. They are these:

Our No-Rim-Cut feature. Time has proved it the only satisfactory way to completely wipe out rim-cutting.

Our "On-Air" cure. This exclusive process costs us \$1,500 daily, but it ends the chief cause of blow-outs.

Our rubber rivets. By a patent method, hundreds of these are formed in each tire to combat tread separation. They reduce this risk sixty per cent.

All-Weather treads—the matchless anti-skids. They are tough, double-thick and enduring. Resistless on wet roads with their deep, sharp grips; yet flat and smooth, so they run like a plain tread.

Upper Class Tires How to Get Them

These things make Goodyears the upper

class tires. No other maker employs them. And no other method combats one of these troubles in an equally efficient way.

These things mean safety, sturdiness and strength. They mean maximum mileage and minimum trouble.

When one tire gives them—and others don't—you should get the tire that does.

Any dealer will supply you if you say you want this tire. He will sell it to you at a price impossible were it not for our mammoth output.

It is up to you. Note again these extra features. Then ask some Goodyear user what it means to have such tires.

Find out why Goodyear leads.

High Grade Portrait On Trial

Strictly for advertising purposes and for a limited time, we will enlarge any small picture, in crayon or pastel, size 13x19 inches, for only \$1. We have decided to make this extremely low price now to introduce our portraits quickly to every family. Send coupon today to us direct. We have no agents.

Large Size

These portraits are 13x19 in., three-quarter life size, and splendidly display our high grade work. We will send enlarged portrait, together with a small picture from which it is made, direct to you by express or parcel post at our expense before the \$1 has to be paid. If you are satisfied with the likeness and quality, send us \$1 and keep the picture. If not pleased for any reason, pay us nothing and you will be under no obligation to this house and the transaction will end there.

The New Popular Style

Our enlargements are the very latest and extremely popular. Ask your neighbors to criticize the portrait when you get it. If they do not agree with you that the picture is a \$4.00 grade, you will not owe us a cent. Enlargement guaranteed to hold its color 25 years. Send your baby's picture or that of someone dear, living or dead, and allow us to make an enlargement to show you the fine quality of our work. Every family of pride has family portraits. This is a special opportunity for you. Send the coupon now.

Send No Money

See the enlargement we will make for you before you agree to pay us a cent. Send the small picture you want enlarged. If you desire the pastel portrait give the color of the eyes and hair. If convenient send a lock of the hair and a scrap of the dress when sending the small picture. Crayon portraits are made in black and white only. Pastel shows all colors. We will send the small picture back to you unharmed. The original picture will always remain yours. Remember if the enlargement does not please you, we will send postage for its return at our expense.

Send the Coupon

Send promptly to get the benefit of this very special limited price. We have been in business for about 20 years and are well and favorably known to the leading wholesale houses in Chicago. We refer you to the National Bank of the Republic of Chicago. Your own banker can find out how responsible we are. With the understanding that you will be thoroughly satisfied in every possible way, we ask you to send a picture to be promptly returned to me unharmed. You are to pay all shipping charges to me. I do not like enlargement for any reason, I will owe you nothing and you will pay return charges on enlargement. If I find the enlargement to be a true likeness of the small one, I will keep it and send you only \$1. Make the enlargement in: crayon or: pastel (put cross before etc. wanted). With this understanding, I am sending you a small picture which must in all cases be carefully returned free to me.

With this understanding, I am sending you a small picture which must in all cases be carefully returned free to me.

the price of winter wheat in Chicago. Further, it was brought out that as far as a good part of the wheat-producing section is concerned it was grown on ground that failed to produce a crop of corn last year, therefore the wheat crop is the result of two years' effort and should the farmers obtain \$1.25 a bushel for this wheat crop, many of them would be really getting only 62 1/2 cents a bushel on the basis of the crop in 1913 and 1914.

Motion finally put and carried. Motion made by Mr. Resler that the headquarters of the American Farmers Federation be at Kansas City, Kas.

The motion was argued and finally was amended to read Indianapolis, Ind.

Amended motion carried. Moved and seconded that we proceed to select officers.

Carried. Mr. Everitt nominated C. W. Peckham of Haven, Kas., for national president of the American Farmers Federation. Mr. Peckham in turn nominated Mr. Everitt. Mr. Everitt declined strenuously and pointed out that it would be absolutely inconsistent for him to accept the position in view of the fact that he is the president of the Farmers Society of Equity. Mr. Peckham in nominating Mr. Everitt declined to stand for election and Mr. Everitt, notwithstanding repeatedly urging the delegates to elect some other person, was chosen unanimously. Mr. C. D. Resler was then nominated for vice-president and elected unanimously. Mr. C. Hayes Taylor of Indianapolis was nominated for treasurer and elected.

The following were nominated as directors: C. R. Longshore, Ft. Scott, Kas.; L. H. Brochman, Parkers Prairie, Minn.; C. W. Peckham, Haven, Kas.; C. K. Bideau, Chanute, Kas.; G. W. Briggs, Lubbock, Tex.; R. M. Tyson, Tobias, Neb.; C. D. Thompson, Erie, Kas.; W. M. England, Callao, Mo.

The election was by ballot and resulted in the election of Bideau, Peckham, Brochman, Tyson, Briggs, England and Mitchell. Motion made to adjourn. Seconded and carried. The convention adjourned at 12:15 Wednesday morning, August 19.

WEDNESDAY MORNING, AUGUST 19
BOARD OF DIRECTORS MEETING

The board of directors met in the parlor of the Grand Hotel, Kansas City, Kas., at 8 a. m. Wednesday, August 19, 1914.

President Everitt presiding.

Members present, Tyson, Peckham, Brochman, Mitchell, England, Briggs, Everitt and Bideau.

It was moved that C. Hayes Taylor of Indianapolis, Ind., be national secretary of the American Farmers Federation.

Seconded and carried.

E. M. Black of Hutchinson, Kas., was nominated to be national organizer of the American Farmers Federation.

Seconded, and discussion followed which resulted in the decision that the matter of selecting a national organizer be deferred until some future time. In the meantime local and district organizers are to be put to work under the direction of the executive committee.

Moved that Everitt, Taylor and Mitchell be the executive committee.

Seconded and carried.

Motion that UP-TO-DATE FARMING, published at Indianapolis, Ind., be the present official paper of the American Farmers Federation, and that other papers be indorsed as soon as some were found that were working for the establishment of the federation.

Seconded and carried.

Moved that the salary of the president of the American Farmers Federation be placed at \$2,000 per year, limited to the time when the first annual convention will meet in December, 1914.

Seconded and carried.

Motion that the vice-president be paid \$5 per day when performing the duties of the president.

Motion to amend to \$3 instead of \$5 was made, seconded and carried. Moved that the salary of the secretary shall at present be \$25 per month, subject to revision by the board of directors.

Seconded and carried.

Motion made that Mr. Mitchell, the other member of the executive board, not included in salary provided for, shall be paid \$3 per day and expenses while in the service of the federation.

Seconded and carried.

Moved that the executive board prepare a schedule of commissions to be charged for the marketing of farm produce and submit it to the board of directors for approval or changes.

Seconded and carried.

Moved that the board of directors meet adjourn until called by the president.

Seconded and carried.

OUR MARKET REVIEW

Review of Crops, Markets and Trade with Advice

BRADSTREET'S summarizes the general business conditions of the country of August 22 as follows: Unsettled. American finance and business slowly winning its way. Stock (not live stock) markets still closed. Foreign exchange market resumes. Wheat exports increase. Financial problems attending crop marketing. National ships and insurance possible. Improved trade at west. Domestic goods supplanting foreign. Cancellations at south. Some reaction in war prices. Record index number. Clearings shrink largely at New York.

The unusual market conditions referred to two weeks ago have been further intensified in some directions and cleared in others. While exports were at a standstill then on account of a condition on the high seas produced by the war, our congress has afforded relief in temporarily changing the marine laws and assuming the insurance obligation. Exports are now heavy and the congested condition of many markets has been relieved. The war area has extended since our last report, with strong indications that other countries in Europe will be drawn into it before many more days elapse. No person has any business predicting when the awful war will end or how, but our opinion is it will not be a short one.

While every person normally constituted must deplore the terrible war and sympathize with the millions who will suffer financial loss, and, more than all else, the loss through death of relatives and dear friends, it behooves the people of this country to do their best to keep famine from adding its blight to the devastation of war. We might wish that the crops were so abundant in this country and that our farmers were so well organized and their disposition so equitable that we could feed the warring nations at normal prices. But there is no use to think of such a thing. Or we would like to see the farmers so well organized and so humanitarian that they would withhold our crops from the warring nations until they made peace. It is true that the people who control the food can, if they would, decide whether the war shall continue or end.

But this is not the time to sermonize or moralize. Human nature is the same now as it always was and the people who have the necessities of life are going to get what conditions make it possible for them to get. Prices have advanced very much since our last report. Prices on wheat and corn are very high. Oats is much higher, too. But remember this: The present high prices are not war prices. Considering the enormous waste that will result, the people who have gone to war and thus become non-productive of food commodities, and the fact that the 1914 crops, the world over, are under normal, we face a condition that eventually almost any price will be paid for wheat, corn and oats that the owner asks. The Kansas City convention that organized the American Farmers Federation said wheat was worth \$1.25 a bushel, considering cost to produce it, on the basis of supply and normal demand and to be in fair ratio with other things. If the American Farmers Federation controlled the wheat we would recommend that it be sold when \$1.25 would be paid and not ask more. This would be practicing equity as well as teaching it. But there is no power in the country that can persuade the farmers to all sell at any set price, so we expect those who hold for \$2 will get it.

The visible supply of wheat increased less than 5,000,000 bushels, compared with nearly 13,000,000 bushels in the corresponding period a year before. Corn shows a small decrease of visible, while oats made a big increase. At this writing the oats visible is much smaller because of liberal exporting.

The price of wheat advanced about 15c since our last report. Naturally we are glad that we advised farmers to hold, even before they had their wheat harvested. And we are glad to constantly be seeing the evidences that the readers of this paper quite generally act on our advice. Contrast this with the papers that refused to help in the higher price campaign, but advised their readers to market early for fear the price would go lower. There is not much change in corn from two weeks before, but oats is about 10c a bushel higher.

Rains have been better distributed lately, but there is an immense area that still suffers from drought. Notwithstanding reports are being circulated that the corn crop will be about an average, around 2,800,000,000 bushels, our opinion is that it will be much less and not much larger than last year. The spring wheat crop fell far short of early estimates in bushels and there is very much poor quality. The same can be said for the Canadian northwest crop. Spring wheat has led the price of winter wheat by about 15c a bushel for sometime and for awhile the Canadian prices were higher than any in this country. Potatoes are a splendid crop in practically all the northern heavy producing sections, with all conditions favoring excellent prices, providing dumping is not indulged in. Cotton estimates are over 14,000,000 bales. Cotton is the one crop that has been adversely affected by the war because of the difficulties surrounding the export and the stopping of foreign

mills. Conferences have been frequent seeking ways and means to relieve the situation. The price has declined from around 13½c to around 10c.

Advice

WHEAT—If willing to take an equitable price sell when it reaches \$1.25. You can probably get more if you hold it. **CORN**—Sell any surplus. **OATS**—Price will be higher. **POTATOES**—Control marketing. They should bring 60 cents at loading station. **HAY**—Market gradually, but be sure you sell so as to get the final market price less only freight and a fair commission for handling. **COTTON**—Hold it.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States, by Bradstreet's reports, on August 15, 1914, with comparisons, are shown in the following table: (The sign — before figures means decrease; X means increase).

	August 15, 1914	Change from two weeks before
WHEAT	40,388,000	X 4,959,000
CORN	3,617,000	— 785,000
OATS	18,243,000	X 10,181,000
BARLEY	1,512,000	— 26,000

The visible supply of wheat in Canada on the same date was 12,209,000 bushels. This is 711,000 bushels more than two weeks before and is 4,885,000 bushels more than a year before. The visible supply of oats was 1,930,000 bushels on the same date, which is 1,903,000 bushels less than two weeks before and is 4,352,000 bushels less than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Aug. 25, 1914, two weeks before and a year before as follows:

	Aug. 25, 1914	Two weeks before	A year before
Chicago	1.03 @ 1.06	88½ @ 91½	88 @ 88½
St. Louis	1.04 @ 1.07	90 @ 91½	90 @ 92½
Kansas City	99 @ 1.00½	82 @ 84½	84½ @ 85½
Cincinnati	90 @ 96	88½ @ 89½	90½ @ 91½
New York		94½	94 @ 95½

Minneapolis—Spring wheat: No. 1 hard, \$1.19½; No. 1 northern, \$1.12½ @ 1.13½. Two weeks before, \$1.12½ and \$1.08 @ 1.11½ respectively. A year before,

90c and 88 @ 89½ respectively.

CORN, NO. 2 WHITE

Chicago	82½ @ 82¾	82½ @ 83½	77½ @ 78
St. Louis	83 @ 83½	85	78½ @ 79
Kansas City	79	80	77½ @ 78½
Cincinnati	83½ @ 86	81 @ 81½	80 @ 81
New York		91	

CORN, NO. 2 WHITE

Chicago	47 @ 47½	36½ @ 38	43½ @ 44
St. Louis	47½	39	43½ @ 44
Kansas City	44½ @ 45	28	42½ @ 43
Cincinnati	43 @ 43½	26½ @ 27	44 @ 44½
New York		46½ @ 47	

Future Grain Prices

Chicago grain futures closed on Aug. 25, 1914, and two weeks before as follows: Wheat—September, \$1.03; December, \$1.07; May, \$1.13½. Two weeks before, 92½c, 97c and \$1.05½ respectively.

Corn—September, 80c; December, 70½c; May, 73½c. Two weeks before, 75½c, 68½c and 71½c respectively. Oats—September, 46½c; December, 48c; May, 50½c. Two weeks before, 39½c, 43½c and 45½c respectively. Winnipeg, Canada—Spring wheat: October, \$1.13½; December, \$1.11½. Two weeks before, \$1.10 and \$1.08½ respectively.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week.	Last week.	Last year.
Monday	75	145	40
Tuesday	30	85	76

Totals 105 230 116

Market was firm at Monday's advanced prices. Receivers tried to get further appreciations and this retarded the trade somewhat, but there was a good demand for Ohio at around 65c for bulk and Cobblers at 80c a bushel for bulk stock. Sales reported were: Per bushel, bulk, Cobblers—1 car at 80c; Minnesota Ohio—5 cars at 65c, 2 cars at 67c; sacked—1 car at 70c.

Per bushel, Minnesota, Early Ohio, bulk or sacked.....\$ 62 @ 70
Jersey Cobblers, bulk.....80
Jersey Giants.....75
Per sack, 2½ bu., Jersey Cobblers.....2.00 @ 2.25

SWEET POTATOES—Demand was reported as tame and supply good. An easy feeling exists.

BEANS—Remain quotably firm. Offerings are very meager. Stocks are in strong hands and in few hands. **HAY**—Receipts, 853 tons; shipments 82 tons. Timothy hay steady. Demand fair and offerings liberal. Prairie hay firm. Supply light and demand good.

Choice timothy hay is \$2 to \$2.50 a ton higher than two weeks before. Kansas, Iowa and Nebraska prairie is \$1 to \$1.50 per ton higher than two weeks before. Illinois and Wisconsin prairie is \$2 to \$3 a ton higher than two weeks before.

STRAW—Rye straw quotable at \$6.50 @ 7; oat straw at \$6.50 @ 7.50; wheat straw, \$6 @ 7.

Rye straw is 50c to \$1 a ton lower than two weeks before. Other kinds unchanged.

BROOM CORN—Continues in moderate demand and steady. There is no change from the quotations of two weeks before.

The 100,000-Mile Car

Reo the Fifth is built to render the utmost service that a car can give. It is built for men who buy cars to keep, and who want them to stay new.

We have tested these cars, again and again, by 10,000 miles of rough night-and-day driving. In all essentials the cars came out practically like new.

With proper care this super-car should run 100,000 miles.

That is due to R. E. Olds and his careful, costly methods. Built

by other standards this same car would cost us \$200 less.

The steels we use are made to formula. Each part has vast over-capacity. The car is built slowly, with countless tests and inspections. In every detail it marks the best men know.

It is the only car with the one-rod control, which every driver wants

Lower Price

We have now built tens of thousands of these cars. We have brought the cost down until the price is \$220 less than it used to be.

Now every man who buys a car in this class can afford this sturdy car.

See the latest model. See the beautiful lines and finish. Then see the countless hidden ways in which this car excels.

When you do that you will want your new car built as we build this.

We have dealers in 1155 towns. Ask for name of nearest. Also for Reo Magazine which shows the reasons for supremacy.

Helpful Hints for Homemakers

CANNING CORN ON AND OFF THE COB

THE following seasonable recipes for the canning of corn have proven both practical and economical for the housewife. The recipes have been worked out in the canning kitchen of the Department of Agriculture and the products tested for nearly two years.

These recipes have been used in connection with the five different types of canning devices and the corn has been put up in all types of containers, such as glass top, screw top, suction top and tin cans. The method employed is the cold-pack method, the same as is now being used in the best commercial factories of the world, requiring but one sterilization and turning out the product in better shape, with better color, texture and flavor than the fractional sterilization method. By following these recipes and method the family can have corn either on or off the cob throughout the year at a very reasonable expense of time, energy and money.

Corn off the Cob—Select sweet corn ears of uniform size and proper ripeness. If too ripe the corn will color while processing. (Processing is the canning term for sterilization or cooking.) If not ripe enough much of the food value is lost in cutting the corn from the cob. Use either glass jars or tin cans. For market purposes and greater safety in transportation use tin cans.

Remove husk, silk, shank, tips and injured or defective places. Blanch corn in boiling water or steam chest for from five to ten minutes. The time depends upon the stage of ripeness, size of ears and degree of freshness. Remove the ears and plunge quickly in cold water.

Cut the corn from the cob with a sharp, thin-bladed knife. Pack well in a glass jar or tin can, add hot water and a level teaspoon of salt to the quart or No. 3 can. Place rubber and glass jar top in place, not tight. If using tin, solder cap in place and fill vent hole, or seal completely. Process the corn from 180 to 240 minutes in the home-made or commercial hot-water commercial bath outfits, for 1 1/2 hours in the water-seal outfits, for 60 minutes when

using from five to ten pounds of steam pressure, with the steam-pressure canning devices, and 40 minutes when using the aluminum steam pressure-cooked outfit. After processing remove the jars, tighten covers, invert to test the joints and cool.

If using tin, inspect the soldered end caps for pin-hole leaks. Repair all leaks, allow to stand for twenty-four hours. If cans are still bulging at ends at the end of this time one of two things is true—the pack is too full or some live spores are still left in the can. If the latter, replace in sterilizer and process the second time from thirty minutes to one hour.

Canning Sweet Corn on the Cob—Blanch in boiling water five to ten minutes, according to ripeness, size and freshness; plunge quickly in cold water. Pack, alternating butts and tips; add just a little boiling water and one level teaspoonful of salt to each quart. Place rubber and top and partially tighten. (Cap and tip tins.) Process 180 to 240 minutes in hot-water bath, 1 1/2 hours in water-seal outfit, 60 minutes under five or more pounds of steam, 40 minutes in aluminum pressure cooker. Remove jars, tighten covers, invert and cool. (Heat up for table use in steamer, not in water. If corn seems flat or water-logged it has been overcooked or allowed to stand in too much water.)

Use one or two-quart glass jars if not needed for other products. Quart jars will hold two ears, two-quart jars will hold from three to five ears, according to size of ear. Do not can large ears. Half-gallon or gallon tin cans with large openings should be used in the canning of ear corn when idle glass jars are not available. Gallon tin cans will hold from six to twelve ears. They should be graded to uniform size.

In the average home a large number of glass jars are idle every year. The use of these idle jars is recommended, but if none are available the most economical and practical containers are the half-gallon and the gallon tin can.

The gallon tin cans, including soldered-hemmed caps, will cost about 6 cents apiece, but they will hold six to twelve ears of corn, which is enough for a good-sized family. If the corn is removed from can and steamed for a few minutes it can not be distinguished from the sweet corn removed from the husk in midsummer. The corn can be heated in the container before opening to serve.

An ear of sweet corn on the average dining car and hotel a la carte service costs 25 cents. Considering this, canning corn on the cob for the market might prove a very profitable investment for a thrifty housekeeper and bring to her considerable pin money.

One advantage of sweet corn canned on the cob over other canned corn is that all the best food values are kept with the cob. In cutting corn off the germ quality of the kernel, which keeps up its standard, is usually lost. This germ quality is the part of the corn that is sought by rats and mice when they look for food in the corn bin and is the most vital part. Much of the corn is also rendered mushy when it is cut from the cob.

In regard to the container for corn on the cob, it might be mentioned that for advertising and exhibition purposes glass is much more satisfactory than the tin can, but if corn on the cob were to be put up in large quantities as a business venture the glass would not be practical, being too expensive, but the tin cans would prove quite satisfactory.

How Women Can Tell When Jelly Will Jell

Every woman knows that when fruit juice doesn't "jell" there's a reason. But not every woman knows that the jelly-making juices are those which contain both pectin and acid. It is pectin that makes the jelly, but it will act only in the presence of an acid. Acid usually declares its presence, but pectin is not so self-assertive.

"A simple test for pectin," says Miss Cora E. Binzel, instructor in home economics, "can be made with grain alcohol. Put a few tablespoonfuls of hot fruit juice in a glass and add an equal quantity of the alcohol. On cooling the pectin will form a jelly-like mass which can be lifted up with a spoon."

Eight women's clubs in Wisconsin applied to the University of Wisconsin extension division within a fortnight for household study programs. Just now the every-summer matters are of special interest—for instance, jelly.

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE HOME and its beauties! There is no place on earth where there are greater opportunities for making the home and its surroundings beautiful than the home on the farm. It does not require great expenditure, for nature joins hands with the beauty lover, and the work may be accomplished not for this season only, but for many years. Near the window at which I am writing, in a country home, shrubs and plants are in bloom that were planted years ago by hands that are now still in the grave, but on almost every leaf and flower her name seems to be written. We urge our young friends to cultivate a love for the beautiful and to avail themselves of every opportunity to make the home prettier.

DEAR CADETS—I am an Oklahoma girl and would like to join the Cadets of Equity. I have been reading UP-TO-DATE for nearly a year. I am 14 and live in the country. My father owns a home and 365 acres of land near the North Canadian river. I like music and can play an organ. The leading crops in central Oklahoma are cotton, corn, oats and alfalfa. I would like to exchange cards with all the Cadet girls and boys.—Gertrude Troop, Wetumka, Okla.

DEAR CADETS—I am a boy 16 years old and, though not a farmer, live in the eastern part of the old North State. We have a large high school and I attend in the fall and winter, but I help my father in the store during the spring and summer. I would be delighted if the Cadet boys and girls would write me letters and cards. I will sure answer all I receive.—Dewey J. Davis, Kenly, N. C.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and like it fine. I am a farmer boy 15 years of age and live with my folks on a farm of 320 acres. Wyoming is a fine farming country. I would be glad to hear from all the Cadet girls and boys.—Harold Seaver, Egbert, Wyo.

DEAR CADETS—I am an Iowa girl, 17 years old, and would like to be a Cadet of Equity. I live on a farm of 106 acres six miles from the railroad. I have four sisters and three brothers. I would like to receive cards or letters from all the Cadet boys and girls and will answer all.—Jessie M. Rice, Guthrie Center, Ia.

DEAR CADETS—I am a farmer girl of 11 years and would like to join the Cadets. I am taking writing lessons now and would like to have a post card shower on my birthday, July 28. I will answer all I receive. I want to hear from children whose fathers have an auto.—Viola Schulze, Deer Plains, Ill.

DEAR CADETS—I am a boy away down here in south Florida and have lived on a farm all my life. I have been taking UP-TO-DATE two or three months. I sure do enjoy reading it and hope it will attain great success. I would like to hear from all the Cadet boys and girls. I will do my best to answer.—Nathan Cochran, Wauchula, Fla.

DEAR CADETS—I am a 16-year-old farmer boy and stay with a man who lives on a farm of 200 acres. I have no parents and I wish to say to the Cadets, be kind to your parents while you have them, for the time will come when you will wish you had a father and mother. We take UP-TO-DATE and like it fine. I never miss the Cadet page and I would be glad to correspond with the Cadets.—Willard F. Alrutz, Rea, Pa.

DEAR CADETS—I live on a farm of 27 acres and wish to join the Cadets of Equity. I am 11 years old and go to the Savannah public school. My mother and I both take UP-TO-DATE and we think it the best farm paper published. I like to read the Cadet letters. My father is an apple buyer and last summer he hired me to help pack apples at 5 cents an hour. I worked 42 hours during the season and made \$2.10, which I deposited in the bank. After finishing work for my father I picked and sold apples for a neighbor on the shares. I sold 35 pecks at 20 cents a peck and my share was \$3.90. This I also put in the bank and that made my bank account \$6. I am now carrying milk for a neighbor at 25 cents a month and hope soon to have a substantial increase in my bank account. I would like to exchange letters with the boys and girls and will answer all letters I receive.—Elbern H. Bright, Savannah, Mo.

DEAR CADETS—I am a boy from Moultonboro, N. H., and live on a farm ten miles from the railroad. We have 20 head of cattle, 4 horses and 60 hens. I think UP-TO-DATE is a nice paper. I would like to receive letters from the Cadets and will try to answer them all.—Maurice Whitehouse, Moultonboro, N. H.

DEAR CADETS—I am a northern Wisconsin boy and live on an 80-acre farm 28 miles from Superior, but right by a railroad. Our lucky number seems to be 3, for we have three horses, three cows, three calves and three cats, and my two brothers and myself make three of us farm boys at home. We raise potatoes and grain mostly. I have passed the graded school, but I don't think I will go to high school. I will be delighted to hear from the Cadet girls and boys and will answer all the letters if possible.—T. Johnson, Bennett, Wis.

DEAR CADETS—Here comes a jolly country girl who wishes to become a Cadet. I live in southern Indiana, six miles from the Ohio river. My father owns a farm of 80 acres and we raise wheat, oats and corn. I go to school during the winter. I am 13 years old and have four sisters. Two of them are in Evansville, one is married and the other stays at home. I would be glad to correspond with the Cadet boys and girls and will try to answer all that write to me.—Mamie Haaf, Rockport, Ind.

DEAR CADETS—I am from the good old state of Illinois, am 22 years old and live on a farm of 120 acres. I have lived on a farm all my life and think country life can not be beat. Our main crops are corn, wheat, oats, rye and vegetables. My father takes UP-TO-DATE and thinks it is a great benefit to the farmers. I am a lover of music and play in the band here, and I also play the violin in the orchestra. I would like to hear from all the Cadet boys and girls and will try to answer all.—Albert H. Staaf, Mendon, Ill.

DEAR CADETS—I am a Louisiana girl of 20 years and live on a small farm which my father owns. My mother takes UP-TO-DATE and we like it very much. Our nearest town is Boyce. I enjoy country life and am a dear lover of music. I would like to hear from the girls and boys of the different states.—Cora M. James, Hadnot, La.

DEAR CADETS—I am from the "show me" state and I live on a farm of 212 acres. We have been taking UP-TO-DATE for quite awhile and think it a fine paper. My brother made up a club and I expect to make one soon, we all like the paper so well. I too would like to become a Cadet. I would like to exchange letters and cards with all the Cadets.—Edith Francis, Lutesville, Mo.

DEAR CADETS—I am 14 years old and would like to join the Cadets. I love to read the Cadet page, especially letters from Virginia. I was born in West Virginia and my mother was born and raised there. I will answer those who write me and tell how we people make a living in Nebraska. Find enclosed 50 cents for a new subscriber for UP-TO-DATE.—Esther Bloom, Wood River, Neb.

DEAR CADETS—I always enjoy reading the Cadet letters and I think UP-TO-DATE FARMING is an expert farm paper. I am a girl 15 years old and live on a farm of 160 acres. I am fond of music and take piano lessons every week. I am in the third grade in music. I would like to receive letters and cards from the Cadet boys and girls and will certainly answer all I receive.—Edna Isaacson, Malmo, Neb.

DEAR CADETS—I am a girl from good old Michigan, where everything is fresh the year around. We have great times at our parties and I like to ride horseback on our western ponies. I live on a farm of 160 acres and am a great lover of outdoor sports, such as playing ball, and I like to watch the ball games, of which many are played around here. And I like to be around the horses and cows. I milk one cow every night. I would like to hear from the Cadet boys and girls and will answer all I receive.—Hattie Mae Lovell, Bentley, Mich.

DEAR CADETS—I am a reader of UP-TO-DATE FARMING and live in a town three miles from Spokane in the state of Washington. I am just 16 years old and am treasurer of the young people's class of the Vera Congregational Church. I will be glad to exchange letters with the boys and girls and promise to answer all.—Charles Patterson, Green Acres, Wash.

Some of the above letters were received as early as April, but we have been unable to use them until now.

NAME..... STREET.....

POST OFFICE STATE.....

If QUALITY and PRICE Count I'll Get YOUR Fall Order for ROOFING!!

I don't care who you buy from, no matter what quantity you purchase or what kind of roofing you select, I unqualifiedly guarantee to give you **BETTER** quality at **LESS** prices and in **QUICKER** time than you get it from any other house, dealer or factory. That's my statement, my personal assurance to you. Every roll of roofing that I sell is guaranteed acid-proof, water-proof, hail-proof and storm-proof, and I stake my business reputation, my name and honor, that I will, can and do keep every promise, pledge and guarantee that I make.

Signed
W. E. McCARRON, General Mgr.

Don't Buy a Roll of Roofing Until You Get My Big Book

If you do you will lose money. I can and will prove it in my Big Roofing Book. Therefore, before you read another line make up your mind to send for this book and Free Sample at once. You read my statement above, you know my guarantee and you also must realize that I would not dare to make such a broad, startling offer unless I knew that what I say is absolutely true, that I can give you better quality and save you money on Roofing.

I Have Been a Roofing Expert for Years

Devoting my entire time to the selling of prepared Rubber Roofing direct from Factory to user. I don't sell Steel Roofing. I tell you why further on in this ad, but I do sell the best Rubber Roofing at the lowest prices and can ship it to you quicker than any other dealer, factory or mail order house, because—

I Ship From 7 Factories

Located in Kansas City, St. Paul, Cincinnati, Scranton, Pittsburg, Chicago, San Francisco. I ship your order direct from the factory nearest your town, consequently saving time and freight charges. No other Roofing concern in the United States can sell you as good Roofing and save on the freight charges and time that I can.

Best Roofing As Low As 65c Per Roll

I sell every kind of Prepared Roofing, including Red and Green permanent color, natural crushed Slate, Mica, Central Glavo, Flint, Gravel, Marble, Asbestos, Burlap, etc. The price I quote per roll includes all necessary nails and cement to lay it. Any one who can use nails and hammer can lay my Roofing. Positively no previous experience necessary, and remember each roll is guaranteed hail-proof, water-proof, lightning-proof and storm-proof. The fact that I save you money I prove in my catalog. Just compare my prices with those quoted in any other catalog and you will readily see that I sell for less money than any one else.

I Don't Sell Steel Roofing Because—

My experience with Steel Roofing has taught me that it is not the best kind for you to use. In my Big Roofing Book I give facts and data that prove the claims I put forth, so even if you don't intend to buy Roofing at this time, you ought at least send for my Big Book and know the truth about Steel Roofing.

MY GUARANTEE

Every roll of first grade Roofing that I sell you carries with it my written guarantee covering a period of 20 years. If during that period the roof is damaged in any manner through the fault of the Roofing I will supply an entire new Roof without one cent additional charges. For your own benefit I tell you not to buy a Roll of Roofing from anybody else unless you get a written guarantee the same as I give you.

WARNING

Don't buy a roll of Roofing from any one, anywhere (including myself) until you get my Big Roofing Book and FREE Samples. And under no circumstances buy any kind of Roofing unless you get a written guarantee. Don't take anybody's word about quality until they prove their claims. I am perfectly willing to submit my Roofing in competition with any other, at any price, and let you be the sole judge whether I save you money, give you better quality and ship your order quicker.
(Signed) W. E. McCarron.

UP-TO-DATE FARMING

17th Year

September Fifteenth, 1914

Number 18

Look at this Picture

Note the varieties of wheat in the comparative test. Do you grow any of them? If you do, estimate what it will mean to you if you sow the Indiana Red Wave wheat this fall.. This illustration shows the yields of the various varieties of wheat at the Indiana Agricultural Experiment Station. It is official and authentic. The tests were made under exactly the same conditions and much care is observed in harvesting, threshing and weighing, so this test can be relied upon as revealing the comparative yielding ability of the different kinds. As applied to your own case, suppose you are thinking of sowing 50 acres of Rudy wheat, if you change to Red Wave you can expect over 40 per cent. more wheat next harvest.

But make your own calculations. We want to say that it matters not what variety of wheat you have, outside of Red Wave, you can change to the Red Wave and you will harvest several more bushels per acre. Every person who has grown the Red Wave wheat in competition with other varieties has had this experience. We have never known an exception. It is the heaviest yielding wheat in the country, and is much desired by millers for grinding.

The top bushels are profit. The Red Wave wheat will give you more bushels, above cost of production, than any other kind you can sow.

Indiana Red Wave wheat is very hardy to stand winters; a vigorous grower, straw grows tall and strong. The heads are long and thick closely set with meshes and large red grains. This wheat is without a peer for standing hard winters, severe droughts, and big yields, and we guarantee it against all varieties.

What We Say

About Red Wave Wheat is printed above. What Our Farmer Customers Say is printed below

We print only a few letters here, but we have a great many more in print equally as good that we will be pleased to send to any person desiring them. All letters are genuine. We would not dare print any other kind. We do not give full addresses because that would advertise our customers wheat to our loss.

Heads Six Inches Long

Red Wave is about 75 per cent. better than anything in my neighborhood. I had heads 6 inches long. I think it will yield two-thirds more than Red Turkey.—C. J. M., Ellis Co., Okla.

Doubles Others in Oregon

Red Wave looks as though it will double our other varieties in yield.—C. H. A., Yamhill Co., Ore.

Makes Poole Look Like 30c

Ind. Red Wave made my Poole wheat look like 30c. Red Wave heads were 4 1/2 to 5 inches long and contained a half more grains to the head than Poole. It is not threshed yet.—D. M., Co., O.

51 Bushels per Acre

On July 2 the first field, 6 acres and 18 rods, of Ind. Red Wave was threshed here. It made 51 bu. per acre, or 312 bu. for the field. It was accurately measured by tape line.—J. W., Taswell Co., Ill.

50 1/2 to 55 Bushels an Acre

I sowed 19 acres of Ind. Red Wave and threshed 1000 bu. One-half of the field averaged 50 1/2 bu. and the other half, fertilized, averaged 55 bu. per acre. The wheat is the finest I ever raised and tests 62 lbs.—J. H. C., Morgan Co., Ill.

31 Bushels Against 18 Bushels

If I would have sowed all Ind. Red Wave wheat last fall I would have had a couple of hundred more bushels of wheat now. The fact is my own seed made 18 bu. per acre, while Ind. Red Wave yielded 31 bu. per acre under the same conditions.—L. C. H., Madison Co., Ill.

Made 42 Bushels per Acre

Red Wave is certainly the greatest wheat I ever raised. It surprised us by yielding 42 bu. an acre, which is much better than any other wheat I raised.—J. C. B., Christian Co., Ill.

35 Bushels Against 15

The only variety of wheat I sowed last fall is the Ind. Red Wave. It is rather early to estimate it, but I put it at 35 bu. an acre. The wheat crop is not extra good in this locality, but I am well pleased with the Red Wave, and I believe if we would have had a favorable season that it would go 40 bu. an acre. My neighbor, who has wheat just over the fence, will do well as he gets 15 bu. an acre.—J. C. F., Marshall Co., Ind.

Best Yield on Record—42 Bu.

The Ind. Red Wave wheat received from you last fall made a yield of 42 bu. to the acre when threshed. This is the best yield of record for this county.—G. A. T., Monroe Co., Mich.

One Bag—60 Bushels

I sowed 2 1/2 bu. Ind. Red Wave on 12-3 acres and threshed 60 bu. (36 bu. an acre). I am entirely satisfied with it.—W. S. H., Calhoun Co., Mich.

Yield One-Third More

Ind. Red Wave stood the winter as well as Turkey Red, my other variety. There are one-third more grains to the head and the yield will be about a third more than Turkey Red.—W. E. J., Harrison Co., Mo.

60 Bushels per Acre

I will let you know how that Ind. Red Wave wheat has done for me, as we threshed yesterday. It turned out wonderfully. We got 60 bu. per acre and old farmers say it is the first time they have seen anything like it.—Mrs. A. B., Taswell Co., Ill.

Heads Eight Inches

The Ind. Red Wave I got from you was the finest seed I ever saw or planted. Stood the winter better than either Fultz or Canadian Red. We have heads that measure 8 inches in length. I am more than pleased with the field of wheat.—N. N. C., Chester Co., Pa.

Ahead of Others

It is no trouble to tell Red Wave wheat from other wheat by color and by weight. I am sure I could tell a bundle of Red Wave in the dark if given to lift with another bundle. Two bundles will thresh as much as three of Fulcaster, if not more.—D. V. S., Botetourt Co., Va.

50 Bushels per Acre

It is not threshed, but I have guessed it to make 50 bu. per acre. It is the best wheat I ever saw grow. We had a hard storm and some of it blew down, otherwise I believe I would have gotten 100 bu. from the 2 bu. sown. I am certainly glad that I sent for this seed. Already more people have spoken to me for seed than I will be able to supply.—R. B. W., Sullivan Co., Tenn.

45 to 50 Bushels

Ind. Red Wave had more grains to the head than our old wheat. It will yield 45 to 50 bu. I think the wheat is all right.—W. S., Montgomery Co., O.

100 Bu. From One Bag of Seed

I bought 1 bag of Ind. Red Wave seed wheat (2 1/2 bu.), and have just threshed 100 bu. of fine wheat from it. It is better than any other wheat I have seen.—J. E. G., Rowan Co., N. C.

40 Bushels per Acre

The Red Wave seed wheat I received from O. K. Seed Store looks like it would make about 40 bu. per acre and will out-yield my Fultz wheat about 15 bu. per acre.—H. H. S., Morrow Co., O.

60 Bushels per Acre

I let my Ind. Red Wave wheat get too ripe before I cut it. As a result a good deal of it was wasted. Notwithstanding this, when I threshed, I had 60 bu. per acre and a little over. It is the wheat for this state. I am going to sow 100 acres of it this fall.—A. J. S., Holt Co., Mo.

40 Bu. per Acre in Colorado

Ind. Red Wave I sowed alongside of the Improved Turkey Red and it will make 40 bu. per acre. It is away ahead of the Turkey Red. I have lots of heads 6 inches long with four grains to the mesh. I won't sow any other kind.—J. S. C., Arapaho Co., Colo.

You will see this advertisement just about the time you will be thinking about sowing your wheat crop. It will mean far more wheat for you next harvest if you sow your entire crop to Red Wave. But if you don't want to do that, then you should not let this season go by without sowing a good part of it. The cost will not be much. Sow 1 1/2 bushels per acre of this variety instead of 1 1/2 to 2 bushels, as is usually sown of other kinds. How many acres will you sow, and how much of your seed will you save, and what will be the extra cost? We look for common wheat to sell for \$1.50 or over soon. Figure it out.

LEWIS "VI"

Monarch of the Sixes

FARM owners often feel the call of the big city. Women on the farm often feel that they are so far from the big cities that they are almost lost to the world. You can change all this. You can make your farm the best place on earth to live if you own a Lewis Six. Don't think of an ordinary automobile when you think of the Lewis Six, but read the specifications; read about this great, big, six passenger beauty and you will join the throng in calling it

The Greatest Car Ever Built

16 to 18 miles per gallon of gasoline. Far greater economy than any similar sized car that has ever been built in America.

135 inch wheel base; larger than any similar car for even twice the price. The long wheel base prevents jarring on rough roads and gives true enjoyment to country riding.

Big, roomy interior so that no cramped positions are necessary. Large 22 inch doors make it easy to get in and out. Electric self starter. Electric generator. Electric lights. 56 inch underslung springs in rear. Full floating rear axle. Over-size tires. Silk mohair top with jiffy curtains. Stewart speedometer. True streamline body.

All operation controlled on dash—an arm's length away. So simple to operate that women and children drive the Lewis Six.

Small bore, long stroke, monobloc motor (3½ x 6). Generates more power than any similar sized motor made. Climbs any hill ever climbed by an automobile of any size.

Vacuum gasoline feed. Auxiliary supply which can only be used by turning safety valve. Left hand drive. Rain vision windshield. Demountable rims. Speed without shift—2 to 60 miles per hour. Deep, luxurious upholstery—hand buffed leather. Perfect distribution of weight, giving smallest tire expense possible.

Was there ever such a car for the money? We defy you to find one. Listen—We guarantee this car absolutely and send you a written guarantee with it.

International Harvester Manure Spreaders

YOU cannot point to one detail in International Harvester spreaders that will not do its work well in actual field and yard service. Every part is strong and durable, built for long life and good, even spreading.

Among the features that will interest you are these: Simple protected beater driving mechanism, all of steel; load carried on rear axle, insuring traction; reversible gear and worm; low, easily loaded box, with ample clearance underneath; end gate, preventing clogging of beater while driving to the field, etc.

All styles are in the I H C spreader line, high and low, endless and reverse apron, and various sizes for small and large farms. Our catalogues will tell you more. Write for them and let us tell you also where you may see I H C manure spreaders.

What We Want You to Know and Why

Being a Few Words on Particular Matters

Efficiency Farming in the Corn Belt

The United States Office of Farm Management is indefatigable in its investigating propensities. If there is a farmer who is doing the same old work in a brand new way to his greater profit he may rest assured that sooner or later one of Uncle Sam's investigators will be camping on his trail, eager to reduce his system of management to a bulletin for the benefit of the "average farmer."

According to some of the investigators, real efficiency farming in the corn belt calls for a plan whereby hogs will harvest much of their own feed, without waste. Efficiency farming, you understand, is that kind of farming where the minimum of effort produces the maximum returns, and as it is possible for a good farmer to raise a larger acreage of grain per man during the growing season than the same number of men can properly take care of during the harvesting period, real efficiency demands that he obtain cheap help in harvesting. The hog has been discovered to be able to supply that cheap labor.

The system is very simple indeed. Three different crops are grown in a four-year rotation. Corn, rye and a mixture of timothy and clover comprise the crops, rotated and harvested as follows: First year, corn (hogged down); second year, corn (crop cut and rye sown); third year, rye (pastured and hogged off); fourth year, clover and timothy (pastured and cut for hay). The hogs graze the rye from early spring to May 10, when they are turned in the clover until July 15, before which time the rye will have matured, and back they go to the rye field and clean up the rye and graze the young clover in it. Six 100-pound hogs to the acre will clean up the rye by September 1, and then as soon as they are brought up to a full feed on corn they are turned into the first-year corn field to "hog it down," when they are ready for market after having harvested three crops. The farmer harvests two and sows the rye. Good management should make a success of this plan, on the one-man farm especially.

The Bankers Place in the Better Farming Movement

The editor of a middle west agricultural paper declares that the overshadowing issue in every agricultural community is to make every acre of land pay the highest tribute to society of which it is capable, and that, in his opinion, nearly everything depends upon the local bankers of the country, and next to them upon the local business men. The banker, he declares, knows the community values, and its business abilities better than any other man, and has the most responsible and important dealings with the community, and also with the outside world. Moreover, the banker and the business men can quickly bring organized effort to bear upon any condition, and as soon as they realize that on the prosperity of the farms depends the prosperity of the business community, they will be able to do more toward building up farm prosperity than any other class.

With much of this we agree; but there is one principle that must not be lost sight of. Without the willing, organized co-operation of the farmers themselves, very little can be accomplished. If business takes up the work of improving itself through the improvement of farming conditions, they must help the farmers to do business in a business way, but not undertake to take the reins themselves. Let the farmers be organized, but we insist that they fully dominate and control their own organization. In this way they will be able to co-operate with organized business. And never lose sight of the fact that the most important thing to the farmer is selling his crop at a profit. Lend him a hand here. Help him to understand his marketing problems. Give him support in finding the best markets. Back him in his efforts to establish and maintain a better marketing system. Look at the farmers' problems as though you yourself were a farmer, Mr. Banker, and help him to do the things you would want done if you were. In this way great good might come of the Better Farming movement.

Suggestions for the Thoughtful Farmer

Doctor Cyril G. Hopkins, known throughout the country as one of our foremost agricultural experts, is always giving farmers something worth while to think about. In the following statements, selected from a recent article from his pen, is something every farmer should ponder over deeply. Get right down to it, Mr. Farmer, and start at thinking these matters over as you work at pitching hay or cutting corn.

"Soils differ chiefly in two particulars, texture and richness, or, in other words, physical composition and chemical composition. The greatest need of American agriculture today is for trustworthy information concerning the various soils; and if this information was secured, and properly utilized, the average crop yields of the United States could soon be doubled. Farmers know whether their soils are sand or clay or loam (and they know whether they produce abundantly or not—Ed), yet they do not know what stock of fertility they contain. Soil surveys should be followed by chemical investigation to determine the total stock of fertility contained in each type, including every important element of plant food, and this investigation should be followed by actual field experiments in which more definite information would be secured."

Years of study and practice in actual farm operations have led Dr. Hopkins to the above conclusions. It is an apparent fact that decades are likely to elapse before the average yield of the United States is doubled. Yet the individual farmer who earnestly makes the effort to determine the essential facts laid down by Dr. Hopkins can in a few years more than double the average yields of his own farm. After thinking it over, decide to make the attempt and your state experiment station will co-operate with you in making your efforts successful.

Roofing Bargains

Never again will you get a chance like the one in this advertisement. Read the wonderful offers we are making on galvanized and painted roofing, as well as on our high grade rubber surfaced roofing. We are the originators of roofing direct to the consumer. We control our own factories, and can at all times supply biggest roofing snaps.

Most Wonderful Roofing Advertisement Ever Published

RUBBER SURFACED ROOFING
100 SQ. FT.
49¢

PRICES S-M-A-S-H-E-D

Yes! absolutely smashed to pieces. While our regular prices are always lowest on best roofing materials, once in a while we run across something very special, even for us, and then—smash go all prices. Look at these two snaps of which we have but a limited amount to sell. ACT QUICKLY! Get your share of these Bargains. Lot No. D S-1 10,000 squares only of corrugated iron roofing; light weight, corrugated sheets about 2 ft. x 2 ft., unpainted. Price 97¢ for 100 square feet, f. o. b. cars, Chicago, not freight prepaid. Lot No. D S-2 8000 squares only, rubber surfaced roofing at 49¢ per square, f. o. b. cars Chicago, not freight prepaid. Roofing is 1-2 ply, weighs 28 lbs., mill lengths 2 to 4 pieces to roll. Nails and cement included.

FREIGHT PAID OFFER

GALVANIZED and METAL ROOFING

\$1.60 Buys our best open hearth 11-1/2 in. corrugated, unpainted, roofing and siding sheets. Sheets are 3, 4, 5, 6, 7 and 8 feet long by 22 inches wide. New and perfect. Also furnished in V crimped flat or standing seam. Painted 10¢ per square additional. Order by Lot No. DS-3. High grade pressed brick painted steel siding and beaded ceiling, \$1.70 per square. Order by Lot No. DS-10. **\$2.75** Buys best grade of brand new galvanized, 11-1/2 in. corrugated sheets 22 in. wide by 5 ft. Order this by Lot No. DS-4. We have other grades of galvanized roofing and siding. Roofing accessories of every kind priced low.

FREE CATALOG

This freight paid offer on the following roofing is provided your shipping point is east of Nebraska and Kansas and North of the Ohio River; your order to be for at least 3 squares. Prices to other points on application.

Chicago House Wrecking Company
Prominently known everywhere for 20 years as the "great price wreckers" have decided that their best interests require more prominent use of the present owners' names. In the future the four Harris brothers will advertise and sell their goods as

Balanced Rations

Improving the Quality increases the Price.

Barnyard manure and rock phosphate are the great fertility restorers. No livestock grows so quickly into ready money as the hog.

The dogs of war are loose in Europe and who turned them loose?

Oftentimes the best part of taking a trip is coming back home.

Taking good care of the manure is a sure sign of a successful farmer.

Are you ready to save seed corn that will add a bushel or more to your average yield per acre next year?

Every business, even to running an air-ship, should be built from the ground up. Yet, how about the well digger?

It is a mighty hard thing to always do things the best one knows how, for many times outside interference upsets our plans.

Germany met with her successes in the war by being ready before war came. Success in farming hinges on much the same principle.

While we are talking about standardizing products and packages, why not give some attention to the standardization of taxes?

First aid to the injured should be the prevention of injury. Watch the bull, fix the bridges, and never fool with a gun, empty or loaded.

There is always a time for everything and now is the time for the various agricultural organizations and associations to become federated.

Nothing worth while was ever done without first experimenting a little with the unknown, but temper the experiment with judgment.

When you hear of a barn having been burned it's ten to one there was no lightning rod on it. Seldom is a rodded barn struck by lightning.

If you would help to make yours an up-to-date farming community, the best thing you can do is to get all your neighbors to read UP-TO-DATE FARMING.

Why not settle international disputes in the prize-fighting ring. A decision could be reached far more easily, and besides, let those do the fighting who like to fight.

If we had to pay for all the advice we take, we'd all be in the poorhouse. We sometimes do pay for advice, however, and unfortunately its the worthless advice we pay most for.

Nowhere on earth is there so satisfactory a direct "field-to-table" service as on the farm. Roasting ears from the cornfield, vegetables right out of the garden, apples and peaches right off the trees, everything fresh and flavorful. The farm has its compensations.

Heretofore farming has depended principally upon the natural fertility of the soil, the weather and the industry of the farmer. Henceforth it must depend upon scientific management. Farming in the future cannot succeed on the same basis upon which it has been conducted in the past. Better send that boy to the agricultural college.

Hurrying Home to Dinner

What Others Say and What We Think of It

"Prosperity has been hanging in the balance like a fever patient."—Successful Farming. Yes, and like the goose it has been hanging high.

"It is a fact that thousands of farmers do not give their wives a fair chance."—Bayless Converse. Among other things, this may mean a chance to go to the fair.

"The farmer must look less to the increase in the acre-value of his land and more to the acre-value of his crops."—Jas. J. Hill, railroad king. If Yim means just what he says we are for Yim.

"Many a man has taken the life of another simply because he had a gun handy."—The Farmer and Stockman. And the same thing is true of nations. Let us work for the disarmament of all, for the peace of the homes.

"To the man behind the plow, and the woman at the broom handle, there often comes a feeling of discouragement that their work isn't worth while."—Farm Journal. Cheer up. It is far better to be behind the plow than in front of a cannon, and sweeping the floor is better than having no floor to sweep.

"It is quite evident that only men of exceptional ability can make a profit out of farming in this era of such unreasonably high prices for everything but the products of the farm."—Hoard's Dairyman. Yet we are told by many that the present high prices of some of the farm products should make this a land of rich farmers.

"Co-operative marketing, if it means anything, means putting the farmer in better position to fix the price on his products, instead of allowing somebody else to fix the price."—Successful Farming. And if co-operative marketing means that, it also means that farmers are in sore need of a co-operative marketing system. There is plenty of proof of both conclusions.

"Since the county fair is primarily a farmers' doings, since it is the farmer who brings the exhibits, and since farmers make the largest part of the crowd, it should be farmers largely who should control its policies. The program of the fair should be such as will appeal mostly to farmers, because it is their play-day, and they are the ones to be catered to."—Nebraska Farmer. Hear! Hear!

"One of the few grain farmers I know who have made money says the granary did it. 'If the price is right at threshing time I sell,' he says. 'If it isn't I store the grain until the price is right. That way I've made money it's the only way a man can make money raising grain.'"—Journal of Agriculture. This farmer has the principles, practices, and desired results of the Farmers Society of Equity and the marketing system advocated by this paper. In its completeness it means that every farmer can do better than this farmer has done—better because all will be working to the same end and there will be no long waits for results.

Federation of Farmers

THE more I study the work and plans of the Federation of Farmers the more heartily do I indorse them and the greater good do I see in them. It is the hardest matter in the world to get organizations of any kind—organizations as a whole—to join and co-operate with other organizations to accomplish any special purpose. Especially does this seem to be the case when organizations of farmers are concerned. Hence the meeting at Kansas City acted wisely in forming a federation, an organization of organizations, to accomplish the great marketing reform that now so strongly appeals to the whole world.

This federation goes actively into the work of organization, but its unit of membership is a local organization already formed. It is, therefore, not a rival of any existing society, nor does it matter to what organization the local belongs. It is eligible to membership in the federation, and thus joining the federation does not interfere in the least with its relations to the parent organization of which it is a part. It only takes upon itself the new federate relationship and becomes a part of the great working force that is inaugurating a new marketing system to take the place of that which has so long obstructed the sale of products, interfered with the supply of demands, made consumption less than it otherwise would have been and would be, discouraged production and exacted unwarranted profits from both producers and consumers.

In localities where there are no local organizations, as there are many such localities throughout the country, the federation will assist in organizing such, but it will not interfere in any way with the form the new local shall take or of what general organization it shall become a part. Or if there be no preference in the neighborhood where the new local is organized it may stand alone until it decides otherwise, as thousands of such organizations are now standing. The federation's only purpose is that the local thus organized shall become a part of the federation and, therefore, a factor in solving the marketing problem.

Thus the federation will not only not interfere with the organizations that already exist, north, east, south and west, but it will actually help them all to build up and increase their own strength under their own laws and rules and will accomplish the great work they are all eager to have done, bring better marketing to their people without special effort or complications on the part of the societies themselves.

I see in this a shorter road to success than has ever before been pointed out. It means the building up of all the farm organizations and the organization in one form or another of the whole country, and perfect concert in the greatest reform of the ages; the new marketing system to correct evils that have cursed the world of producers and consumers during all the ages.

JOHN P. STELLE,
Associate Editor.

EDITORIAL

Arbitrary Prices to Consumers

DURING ALL the years that we have been urging the necessity for a different system of marketing farm products, the schools, the press, the speakers and, with very slight exceptions the official life of the United States, have contended that there is and has been a lack of production, that farmers do not grow enough to properly supply the demand, and that the high prices to consumers is the result of a lack of supply for which the farmers are responsible. In vain have we called attention to the meager prices too often paid the farmers, to the products that are permitted to go to waste in the fields and orchards, and we have given proof after proof of the ruinous marketing system that enables a few to make the prices at both ends of the deal—low prices to the farmers and extortionately high prices to the consumers. It has been hard to get the sentiment-forming class to believe, or to admit, that such things can be. That class looks only to the farmers and sees, or pretends to see, no remedy except in the production of more stuff and lower prices to the producers.

A lesson has come, however, in such big display type that it seems to us none can any longer ignore it. We have contended that prices to consumers are arbitrarily made; that those who bought from the farmers, and in their own time and manner, sold to the consumers, made made their own prices and that they availed themselves of every excuse to make those prices higher and higher. The war in Europe afforded an excuse these profit-seeking buyers and sellers could not resist, and prices at once went down and up—down to the producers on the plea that American products could no longer be shipped to Europe, and consequently the demand was oversupplied, and up to the consumers on the plea that supplies could no longer be obtained from Europe, and prices must necessarily advance. But for once greed overreached itself. Prices, especially prices to consumers, were sometimes made so extortionately high that the whole country was shocked, and even the nation's official life was compelled to take notice. Investigations were started and are still in progress. Indictments have been found and prosecutions have been instituted, but how effective these may be we cannot tell. Judging by the past efforts of this kind things will be left about as they were found.

The most encouraging thing is what the public has learned. It can no longer be denied that there is an arbitrary price-making power somewhere. Take the double, and in some cases more than double the price put upon sugar "because of the war." We get no sugar from the war zone, nor from any country effected by the war. Our entire sugar supply, aside from our own product, comes from Cuba, the

Philippines and the dependencies, including Porto Rico and Hawaii. And our coffee comes from Brazil and the countries of Central America—none no nearer the war zone than we are, and not in the direction of the war. But an excuse was offered and eagerly seized in the hope of deceiving the people. We are glad to note that it is proving an eye-opener. "It is plain," says the Chicago News, "that the consumer is paying a heavy toll for the support of the present method of distributing his eatables." The price charged the consumer in Chicago is in some cases more than five times what the producer is paid. The Waco, Texas, News says: "War prices in the United States are unjustifiable and intolerable, and, if necessary, the government would be warranted in adopting even radical measures to prevent the whole country being victimized by a handful of greedy men." The Columbus, Ga., Ledger says: "The department of justice at Washington has learned that combinations of manufacturers, wholesalers and retailers exist in several cities, and they are using the war as a blind to raise prices beyond reason." It would be better to say the speculating buyer and seller, the present marketing system is doing that. The Milwaukee Evening Wisconsin says: "The impression is strong among the people that the great raise in prices is an attempt of speculators to exploit them, and the people are raising a howl of protest which seems likely to produce beneficial results." In a later issue, the same paper asks: "Why is it that when the best Wisconsin-grown potatoes are selling up north at sixty cents a bushel, Milwaukee consumers are obliged to pay that much a peck?" It then declares: "What has aroused indignation at the recent rise is that to all appearances it was due entirely to the machinations of speculators."

And so we might continue the quotations. Both press and people are becoming aroused. Yet nothing in this line exists now that has not existed for years. The speculative market control tried to grab too big a handful. That is all there is to it, and the remedy, so far as the farmers and those whom they supply are concerned, is better marketing from the fields outward. And it is coming. The teachings of this paper have been productive of results. The organization we have promoted has tested all those plans and proved them practical and effective. The plan for federation recently inaugurated at Kansas City will bring the producers everywhere together on this one great question, and Greed, with all its attendant extortions and evils, will step from between the farmers and those who consume and otherwise use their products. All whose eyes have been forced open by the recent grab that startled us all, should join with those who already saw the light and thus hasten the great accomplishment.

A Work For Farmers

THERE IS now a work for farmers to do that has not heretofore been so imperative and so urgent. We confess there is no diminution of the work necessary to production, to maintaining fertility and keeping the farm in order, to the beautifying and making the home more convenient and comfortable, but there is now before the farmers an opportunity to get better results from these ordinary labors. The work required in order to benefit by these opportunities is a work of study—of reading, investigation and independent thought and action. New fields must be entered. Farmers must

know what they are doing and why they are doing it, and they must know more of what other people are doing and why—people who are not farmers, but whose work, whose profits and success in life depends largely upon the work done by the farmers. Farmers must become better acquainted with their neighbors; study each others' aims and purposes, express themselves more freely, and thus get nearer together; more appreciative of each other, and reach a point where they can more nearly see things alike and act together.

We are not entailing any serious additional tasks on the farmers. Almost all these things being their own

reward in a consciousness of knowing more, of greater sociability, of seeing things in a clearer light, of a better understanding of production and its purposes, and finally, of the reward that belongs to all labor—a just and equitable share of its results.

This is all good, isn't it? And present developments make it necessary. Farming has never been an independent business; that is, those who have followed it have never controlled their output nor the reward it should bring them as those of other callings have. That is a fact, isn't it? But there is now an awakening on this subject all over the country, and that is what makes necessary the earnest study, the social activity, the uniformity of thought and purpose and action mentioned above. Will anyone now neglect this new field, not a field for sowing and planting, but a field of opportunities? Farming must have the rights and privileges so freely accorded by the business world to other callings, and the acquirement of them are now at our very doors. Grasp the opportunity of farm federation and organization. Choose the society most convenient or that you like the best, and then see to it that you become a part of the determined purpose to bring these just things to the farmers in a tried and sure marketing system that will accomplish all the farmers have heretofore lacked and at the same time benefit the consumers of their products. Now, dear readers, is the time to do it. Study and learn and ACT, and induce all your neighbors to do likewise. Will you? Here is our hand to pledge the accomplishment.

Farm Warehouses in Texas

WHAT ONE State can do others can do. Texas farmers have been educated to the necessity of controlling their own products. They are establishing warehouses in which cotton and other crops may be held beyond the reach of speculating buyers—held so that the farmers themselves may control the supply and on fair and reasonable terms meet the demands at fair and equitable prices.

There, as elsewhere, the farmers have been slow to act. At first they did not even want to join the organization. They felt that it was out of their line, as they were accustomed to look to others for the making of prices and the management of trade. But persistent work brought with it not only education, but action. The first warehouses and clearing houses were established eight or nine years ago, and the efficiency of their management has proved them a success.

The Governor of the State has now called a special meeting of the legislature to enact measures in aid of the movement and to make surer the efficiency of the warehouses, and we are induced to believe that Texas is leading the movement to control the marketing of farm crops in the interest of the farmers that produce them and the users that consume them. But, as we said in the beginning, what one State can do others can do. Push the work of education, which is sure to be followed by organization, and organization will be followed by co-operation, and that by success. The Federation of Farmers opens up the way to the long-sought opportunities, but it does not relieve any of the existing organizations from their responsibility in the work. Education and organization must be pushed to the uttermost and each must do its part. Membership must be increased. Local bodies must be organized everywhere, and co-operation must be the rule and the watchword. The toilers that produce the crops and the homes where they are consumed must be brought close together, and the interests of all must be guarded by a system of marketing that will bring assurance of justice and fair play. Though a year's supply must be harvested in a season, it can easily be arranged so that the de-

mands may be supplied as they are needed, with no extortion in it anywhere.

Inexcusable Neglect of Duty

SERVANTS of the people must learn to serve the people or there will be a day of reckoning sometime. The salary of congressmen amounts to \$25 a day, and their time thus paid for belongs to the people every day Congress is in session. It has long been a notorious fact that congressmen are reckless of their time. Persons employed in any private capacity that would be away from the place of their labor as much as many congressmen are would be discharged. Congress cannot do business unless a quorum is present, and absenteeism is so common that the entire work of congress is often stopped because of it. "We have been running here shorthanded for nearly three months," recently declared Representative Cox of Indiana, "and the highest number we have reached in these three months on the roll call is about 230 members out of a total of 435."

Where are these absent congressmen and what are they doing? We do not know, and the congressmen at their post of duty do not know. Some of them are back home, perhaps, attending to private business there, or working in the interest of party politics. Some are on the lecture platform getting extra pay for work the people never employed them to do. Others are absent for still other and possibly more trivial reasons.

But there is to be a change and we are glad of it. A resolution was adopted by those who "stick to business" by a vote of 213 to 27, declaring that for every day a congressman is absent, unless because of sickness of himself or family, \$21 shall be taken from his salary. That is right. Those who fail to do the work they are chosen to do are not entitled to pay, and hereafter there will be fewer delays in the work of Congress for lack of a quorum.

Smile Awhile

Knew It as He Learned It

"Six and four are how many?" asked the teacher.

"Eleven," answered Willie.

"No."

"Twelve."

"No."

"Thirteen."

"No, you are just guessing. Why couldn't you say six and four make ten?"

"Because it don't. It takes five and five to make ten. We had that in the lesson yesterday."

He Knew That

Judge—Where were you born?

Tramp—Sir?

Judge—Where were you born?

Tramp—Yer honor, I can't remember, but I think it was some place where my mother lived at the time.

Had Been Quite Honest

Parson—Did you come by dat water-mill honestly, Brudder Mose?

Mose—Indeed I did, pahson. I come by it every day for a week and nebbber teched it!

Would Fail as Fighters

"I see there is talk of women becoming soldiers both in Europe and in Mexico."

"Yes, but they'd be of no use in a battle."

"Why not?"

"They'd put the powder on their faces instead of in their guns."

Too Low

"What guttural notes that singer has."

"I guess they are, for they are below his stomach."

Barely Able to Carry It

Bobbie—Did you get your load home, Mr. Wabble?

Wabble—What do you mean?

Bobbie—Papa said he saw you last night and you were carrying an awful load.

Entering College at Thirty-seven Years of Age

A GREAT MANY of my readers may wonder how it came about that a man from the farm should choose to go to an agricultural college at the age of thirty-seven. I begin my reply by saying that I was not born on a farm, but spent my early life in the city. At twenty-five I married a farmer's daughter and settled on a farm. I had no precedents to follow and the whole business had to be learned from the ground up. I did not know how to hitch up a horse and had never seen any farm work done, but where there is a desire to learn there is always an opportunity. I learned all right and enjoyed every minute of each day of work on the farm. It was a grand life, though it was a big change for me from keeping books in a bank to hauling manure from a barn.

I soon got in touch with the farmers' institute and the experiment station and attended all the institutes that I could reach. Before very long I was going to the "two-weeks short course" at Urbana. The first time I was there I heard an address upon how to put in oats and immediately resolved to try it that spring. It worked fine and resulted in an average yield of twenty-

five bushels more per acre than the rest of the neighbors. My wife too had learned many things about domestic science that helped her in her housework, she having attended the institutes and the short terms with me, for she knew as little about life on a farm as did I. We "got the habit" and attended the short course each year after that. It was on one of these occasions that a prominent dairyman was giving his experience. He told how he had farmed for nearly thirty years and lived on the ragged edge of poverty and despair before he awakened to the fact that the college of agriculture taught real, practical, successful farming. After that things came easier. He dated his success from the time of this awakening and counted the previous years as all but lost. This talk set me to thinking. This man could well have afforded to have stopped and taken four years of college at any time during those thirty years and still have been dollars and cents ahead. The thought came that as I could see this man's mistake I could profit by it and take a special course in agriculture at the college, if not a full four-year course, which

would be more desirable. Wife and I talked it over at home and decided that we would work with this object in view. Wife wanted to take a course in domestic science. We were looking forward to the time when we could have enough ahead to go, no matter how old we should be.

Suddenly I found myself alone with a baby boy fifteen months old and eleven hundred dollars in money. My wife had passed away after a brief illness and our fine air castles were blown to the four winds and the clouds of the storm were dark indeed, and the world looked desolate and dull. But the great ambition did not die.

at 17½ cents an hour, with work at from 5 to 7 in the morning and 4 to 6 at night. This, with my scholarship from the farmers' institute, enabled me to get along very well. I found that by taking all the work the university would permit and by attending the summer school I could earn my necessary credits for graduation in three years. This is what I am trying to do. The dairy barn was good practice; besides, it afforded an opportunity for working through holidays and vacations. I came to college to learn and not to make money, so that after a year and a half at this job I found that I had enough money to carry me through. I stepped out to give some other poor student a better chance to earn his way. Besides, it gave me more time to study. The second year I more than doubled the

thing it would be for our country if our retired farmers, instead of moving to town to rust out, would come to the college and take a course as special students. They could then take back to the farm something that would be to their everlasting credit. They have the experience necessary to put in profitable practice the college training. Are retired farmers too old to go to college? Why, bless you, no! They are just ripe. No need to be a back number just because one has lived and worked for fifty, sixty or seventy years. We had one student who was eighty years old. He enjoyed his work and came out a better and broader man. I would invite all farmers who have the money to find out what great things agriculture has in store for the future. All the world should unite to honor the man who can pass on to his children not \$200 lands, but 100-bushel land. Not the money you have made, but the productivity of the soil is the measure of your legacy to future generations.

Equity's Progress in Nebraska

(By B. F. Walton, District Organizer)

The organized farmers of this section of Nebraska desire that all the readers of UP-TO-DATE FARMING should know what we are doing.

B. F. Walton

One year ago fifteen of us organized at Geneva the first local clearing house of the Farmers Society of Equity in this region. Today we have 115 members in the Geneva local and seventeen additional locals have been instituted nearby, and all these are united in a district clearing house.

The local at Geneva has been doing a good volume of business and we have not yet found it necessary to establish a store or invest any capital. The F. S. E. is a business organization for business men, and we have that right here.

We find all business (except the farmers') done behind the cost mark. When the farmer goes to buy any article from any merchant or dealer, he finds that the dealer has capital invested in the article and the amount is represented by letters, figures or other characters, so the dealer may know at a glance what the article cost him. Then he adds his profit and the farmer must pay the price.

When we organized we decided to avoid every unnecessary middleman and his profits. We selected one of our members to act as our agent, both in buying much of our supplies in and selling our produce, and we deal as nearly direct with the manufacturer and the ultimate consumer as possible. So far, under our system, we have made the producer about \$50 more money per car on his wheat. We are getting 30 cents per pound for butter fat, whereas the local dealers pay the unorganized farmer from 23 to 25 cents. It is plain that it pays to wake up to these facts and become business men, if we are farmers. We are getting coal for \$6 a ton which did cost us \$9 a ton. We have bought corn for feeding, by the car load, and saved 8 cents per bushel. We have done \$36,998.92 worth of business with only our farms, our homes, our heads and our hands invested, and those in co-operation instead of capital stock. We saved over \$3,000 on what binder twine we bought and used this year, and on the same basis expect to save \$9,000 next year on twine alone.

And why should the farmer work fifteen hours a day to feed and clothe the world and supply all business and commerce with the very substance of their existence and at the end of the year go to his banker to borrow money to meet his needs, because the price he received for his produce was at or below the cost of production?

Think this over, brother farmer, and let me tell you it is not necessary that he should. We have proven it since we united with the Farmers Society of Equity. I want every farmer who reads this, and feels that he too would like to become a better business man and become a part of this business organization, to write to me if he has doubts. The farmers can, if they will, become business men and do their own business. The Farmers Society of Equity has the plan.

B. F. WALTON, Geneva, Fillmore County, Nebraska.

[Editor's Note—Mr. Walton is one of the most successful organizers in the central west and his locals have invariably grasped the basic principles of the society and its plan in such a comprehensive way that they have been uniformly successful from the start.]

I placed my little boy in a children's home at Urbana, where he would be near to me, and started for the college. It took some searching among musty records of the past to find the old high school record and get the necessary grades for entrance. They were good, even though twenty years had passed since I had first received them.

This was the beginning. Eleven hundred dollars will not keep a student very long when expenses are about \$500 a year. I had to find some means of earning money while studying. Luckily for me I was past the age for military training, so that I was through with college at 4 o'clock each day. This enabled me to secure a place as a milker at the dairy barn

number of credits I had made the first and I am now on the last year.

I did not find it difficult to take up school work again. There were many things that had changed, but I am getting the latest and best knowledge in the science of agriculture. The call for trained men in all lines is growing each day and it is difficult to stay in college when the commercial world is continually offering all kinds of inducements to join its ranks. I have persistently turned a deaf ear to all offers and stayed to my purpose to graduate. Fortunately I have been in good health and the future looks promising.

I wish that farmers could realize that the agricultural colleges do teach practical agriculture. What a great
